可以说，一个优良政体最重要的就是对于政治激情的节制。这种节制意味着我们不要过度地热衷于对于平等、公平问题的偏执追求。因为城邦分成不同的部分，每一个部分都有着各自的对于平等的主张，如果不加以节制，那么城邦就会产生冲突和内乱。亚里士多德说，人们在一个政体中要求平等基本上依据三种理由：自由、财富、德性。分别对应于平民政体、寡头政体和贵族政体。在上一卷说过，这些理由都各自有各自的道理，也各自有各自的偏颇。因而切实可行的最好的政体其实就是将这三种标准结合在一个政体之中。同时考虑到自由、财富、德性这三者的是贵族政体。考虑到自由与财富两者的就是共和政体。共和制相比较来说又更加切实可行。

共和制融合了寡头制与平民制的因素，它寻求在两种极端中的一种中道。亚里士多德自然地将《尼各马可伦理学》中的中庸理论与之相联系起来。中庸的生活既是最优良的生活，也是人人都可以达到的生活。在城邦中最能符合中道的生活的就是中产阶层，中产阶层没有富人的傲慢，也没有穷人的卑贱。中产阶层总是具有自足与节制的美德。因而中产阶层强大的城邦，往往可以化解政治激情的戾气，使得人们真正的友

爱交往成为可能。 [1]

在第四卷的最后部分，亚里士多德开始详细地分析了官职的设置问题。他似乎是想表明，共和制是可以通过对寡头制、平民制在官职选拔等制度上的细微改造就能获得的。寡头制在某些官职选拔上可以制定有利于平民参与的制度，相反平民制的一些制度也可以设计得有利于富人。这样也就回应了本卷最开始亚里士多德所设定的问题。

Part I

In all arts and sciences which embrace the whole of any subject, and do not come into being in a fragmentary way, it is the province of a single art or science to consider all that appertains to a single subject. For example, the art of gymnastic considers not only the suitableness of different modes of training to different bodies (2), but what sort is absolutely the best (1); (for the absolutely best must suit that which is by nature best and best furnished with the means of life), and also what common form of training is adapted to the great majority of men (4). And if a man does not desire the best habit of body, or the greatest skill in gymnastics, which might be attained by him, still the trainer or the teacher of gymnastic should be able to impart any lower degree of either (3). The same principle equally holds in medicine and ship-building, and the making of clothes, and in the arts generally.

Hence it is obvious that government too is the subject of a single science, which has to consider what government is best and of what sort it must be, to be most in accordance with our aspirations, if there were no external impediment, and also what kind of government is adapted to particular states. For the best is often unattainable, and therefore the true legislator and statesman ought to be acquainted, not only with (1) that which is best in the abstract, but also with (2) that which is best relatively to circumstances. We should be able further to say how a state may be constituted under any given conditions (3); both how it is originally formed and, when formed, how it may be longest preserved; the supposed state being so far from having the best constitution that it is unprovided even with the conditions necessary for the best; neither is it the best under the circumstances, but of an inferior type.

He ought, moreover, to know (4) the form of government which is best suited to states in general; for political writers, although they have excellent ideas, are often unpractical. We should consider, not only what form of government is best, but also what is possible and what is easily attainable by all. There are some who would have none but the most perfect; for this many natural advantages are required. Others, again, speak of a more attainable form, and, although they reject the constitution under which they are living, they extol someone in particular, for example the Lacedaemonian. Any change of government which has to be introduced should be one which men, starting from their existing constitutions, will be both willing and able to adopt, since there is quite as much trouble in the reformation of an old constitution as in the establishment of a new one, just as to unlearn is as hard as to learn. And therefore, in addition to the qualifications of the statesman already mentioned, he should be able to find remedies for the defects of existing constitutions, as has been said before. This he cannot do unless he knows how many forms of government there are. It is often supposed that there is only one kind of democracy and one of oligarchy. But this is a mistake; and, in order to avoid such mistakes, we must ascertain what differences there are in the constitutions of states, and in how many ways they are combined. The same political insight will enable a man to know which laws are the best, and which are suited to different constitutions; for the laws are, and ought to be, relative to the constitution, and not the constitution to the laws. A constitution is the organization of offices in a state, and determines what is to be the governing body, and what is the end of each community. But laws are not to be confounded with the principles of the constitution; they are the rules according to which the magistrates should administer the state, and proceed against offenders.

So that we must know the varieties, and the number of varieties, of each form of government, if only with a view to making laws. For

the same laws cannot be equally suited to all oligarchies or to all democracies, since there is certainly more than one form both of democracy and of oligarchy.

Part II

In our original discussion about governments we divided them into three true forms: kingly rule, aristocracy, and constitutional government, and three corresponding perversions—tyranny, oligarchy, and democracy. Of kingly rule and of aristocracy, we have already spoken, for the inquiry into the perfect state is the same thing with the discussion of the two forms thus named, since both imply a principle of virtue provided with external means. We have already determined in what aristocracy and kingly rule differ from one another, and when the latter should be established. In what follows we have to describe the so-called constitutional government, which bears the common name of all constitutions, and the other forms, tyranny, oligarchy, and democracy.

It is obvious which of the three perversions is the worst, and which is the next in badness. That which is the perversion of the first and most divine is necessarily the worst. And just as a royal rule, if not a mere name, must exist by virtue of some great personal superiority in the king, so tyranny, which is the worst of governments, is necessarily the farthest removed from a well-constituted form; oligarchy is little better, for it is a long way from aristocracy, and democracy is the most tolerable of the three.

A writer^[2] who preceded me has already made these distinctions, but his point of view is not the same as mine. For he lays down the principle that when all the constitutions are good (the oligarchy and the rest being virtuous), democracy is the worst, but the best when all are bad. Whereas we maintain that they are in any case defective, and that one oligarchy is not to be accounted better than another, but only less bad.

Not to pursue this question further at present, let us begin by

determining (1) how many varieties of constitution there are (since of democracy and oligarchy there are several); (2) what constitution is the most generally acceptable, and what is eligible in the next degree after the perfect state; and besides this what other there is which is aristocratical and well-constituted, and at the same time adapted to states in general; (3) of the other forms of government to whom each is suited. For democracy may meet the needs of some better than oligarchy, and conversely. In the next place (4) we have to consider in what manner a man ought to proceed who desires to establish someone among these various forms, whether of democracy or of oligarchy; and lastly, (5) having briefly discussed these subjects to the best of our power, we will endeavor to ascertain the modes of ruin and preservation both of constitutions generally and of each separately, and to what causes they are to be attributed.

Part III

The reason why there are many forms of government is that every state contains many elements. In the first place we see that all states are made up of families, and in the multitude of citizen there must be some rich and some poor, and some in a middle condition; the rich are heavy-armed, and the poor not. Of the common people, some are husbandmen, and some traders, and some artisans. There are also among the notables differences of wealth and property—for example, in the number of horses which they keep, for they cannot afford to keep them unless they are rich. And therefore in old times the cities whose strength lay in their cavalry were oligarchies, and they used cavalry in wars against their neighbors; as was the practice of the Eretrians and Chalcidians, and also of the Magnesians on the river Maeander, and of other peoples in Asia. Besides differences of wealth there are differences of rank and merit, and there are some other elements which were mentioned by us when in treating of aristocracy we enumerated the essentials of a state. Of these elements, sometimes all, sometimes the lesser and sometimes the greater number, have a share in the government. It is evident then that there must be many forms of government, differing in kind, since the parts of which they are composed differ from each other in kind. For a constitution is an organization of offices, which all the citizens distribute among themselves, according to the power which different classes possess, for example the rich or the poor, or according to some principle of equality which includes both. There must therefore be as many forms of government as there are modes of arranging the offices, according to the superiorities and differences of the parts of the state.

There are generally thought to be two principal forms: as men say of the winds that there are but two—north and south, and that the rest of them are only variations of these, so of governments there are said

to be only two forms—democracy and oligarchy. For aristocracy is considered to be a kind of oligarchy, as being the rule of a few, and the so-called constitutional government to be really a democracy, just as among the winds we make the west a variation of the north, and the east of the south wind. Similarly of musical modes there are said to be two kinds, the Dorian and the Phrygian; the other arrangements of the scale are comprehended under one or other of these two. About forms of government this is a very favorite notion. But in either case the better and more exact way is to distinguish, as I have done, the one or two which are true forms, and to regard the others as perversions, whether of the most perfectly attempered mode or of the best form of government: we may compare the severer and more overpowering modes to the oligarchical forms, and the more relaxed and gentler ones to the democratic.

Part IV

It must not be assumed, as some are fond of saying, that democracy is simply that form of government in which the greater number are sovereign, for in oligarchies, and indeed in every government, the majority rules; nor again is oligarchy that form of government in which a few are sovereign. Suppose the whole population of a city to be 1,300, and that of these 1,000 are rich, and do not allow the remaining 300 who are poor, but free, and in all other respects their equals, a share of the government—no one will say that this is a democracy. In like manner, if the poor were few and the masters of the rich who outnumber them, no one would ever call such a government, in which the rich majority have no share of office, an oligarchy. Therefore we should rather say that democracy is the form of government in which the free are rulers, and oligarchy in which the rich; it is only an accident that the free are the many and the rich are the few. Otherwise a government in which the offices were given according to stature, as is said to be the case in Ethiopia, or according to beauty, would be an oligarchy; for the number of tall or good-looking men is small. And yet oligarchy and democracy are not sufficiently distinguished merely by these two characteristics of wealth and freedom. Both of them contain many other elements, and therefore we must carry our analysis further, and say that the government is not a democracy in which the freemen, being few in number, rule over the many who are not free, as at Apollonia, on the Ionian Gulf, and at Thera; (for in each of these states the nobles, who were also the earliest settlers, were held in chief honor, although they were but a few out of many). Neither is it a democracy when the rich have the government because they exceed in number; as was the case formerly at Colophon, where the bulk of the inhabitants were possessed of large property before the Lydian War. But the form of government is a democracy when the free, who are also poor and the

majority, govern, and an oligarchy when the rich and the noble govern, they being at the same time few in number.

I have said that there are many forms of government, and have explained to what causes the variety is due. Why there are more than those already mentioned, and what they are, and whence they arise, I will now proceed to consider, starting from the principle already admitted, which is that every state consists, not of one, but of many parts. If we were going to speak of the different species of animals, we should first of all determine the organs which are indispensable to every animal, as for example some organs of sense and the instruments of receiving and digesting food, such as the mouth and the stomach, besides organs of locomotion. Assuming now that there are only so many kinds of organs, but that there may be differences in them—I mean different kinds of mouths, and stomachs, and perceptive and locomotive organs—the possible combinations of these differences will necessarily furnish many variedes of animals. (For animals cannot be the same which have different kinds of mouths or of ears.) And when all the combinations are exhausted, there will be as many sorts of animals as there are combinations of the necessary organs. The same, then, is true of the forms of government which have been described; states, as I have repeatedly said, are composed, not of one, but of many elements. One element is the food-producing class, who are called husbandmen; a second, the class of mechanics who practice the arts without which a city cannot exist; of these arts some are absolutely necessary, others contribute to luxury or to the grace of life. The third class is that of traders, and by traders I mean those who are engaged in buying and selling, whether in commerce or in retail trade. A fourth class is that of the serfs or laborers. The warriors make up the fifth class, and they are as necessary as any of the others, if the country is not to be the slave of every invader. For how can a state which has any title to the name be of a slavish nature? The state is independent and self-sufficing, but a slave is the reverse of

independent. Hence we see that this subject, though ingeniously, has not been satisfactorily treated in the *Republic*. Socrates says that a state is made up of four sorts of people who are absolutely necessary; these are a weaver, a husbandman, a shoemaker, and a builder; afterwards, finding that they are not enough, he adds a smith, and again a herdsman, to look after the necessary animals; then a merchant, and then a retail trader. All these together form the complement of the first state, as if a state were established merely to supply the necessities of life, rather than for the sake of the good, or stood equally in need of shoemakers and of husbandmen. But he does not admit into the state a military class until the country has increased in size, and is beginning to encroach on its neighbor's land, whereupon they go to war. Yet even amongst his four original citizens, or whatever be the number of those whom he associates in the state, there must be some one who will dispense justice and determine what is just. And as the soul may be said to be more truly part of an animal than the body, so the higher parts of states, that is to say, the warrior class, the class engaged in the administration of justice, and that engaged in deliberation, which is the special business of political common sense—these are more essential to the state than the parts which minister to the necessities of life. Whether their several functions are the functions of different citizens, or of the same—for it may often happen that the same persons are both warriors and husbandmen—is immaterial to the argument. The higher as well as the lower elements are to be equally considered parts of the state, and if so, the military element at any rate must be included. There are also the wealthy who minister to the state with their property; these form the seventh^[3] class. The eighth class is that of magistrates and of officers; for the state cannot exist without rulers. And therefore some must be able to take office and to serve the state, either always or in turn. There only remains the class of those who deliberate and who judge between disputants; we were just now distinguishing them. If presence of all these elements, and their fair and equitable

organization, is necessary to states, then there must also be persons who have the ability of statesmen. Different functions appear to be often combined in the same individual; for example, the warrior may also be a husbandman, or an artisan; or, again, the councillor a judge. And all claim to possess political ability, and think that they are quite competent to fill most offices. But the same persons cannot be rich and poor at the same time. For this reason the rich and the poor are regarded in an especial sense as parts of a state. Again, because the rich are generally few in number, while the poor are many, they appear to be antagonistic, and as the one or the other prevails they form the government. Hence arises the common opinion that there are two kinds of government—democracy and oligarchy.

THE REPUBLIC

PLATO

《理想国》是古希腊著名哲学家柏拉图重要的对话体著作之一，涉及其哲学的各个方面，尤其对他的政治哲学、认识论等有详细的讨论。

I have already explained that there are many forms of constitution, and to what causes the variety is due. Let me now show that there are different forms both of democracy and oligarchy, as will indeed be evident from what has preceded. For both in the common people and in the notables various classes are included; of the common people, one class are husbandmen, another artisans; another traders, who are employed in buying and selling; another are the seafaring class, whether engaged in war or in trade, as ferrymen or as fishermen. (In many places any one of these classes forms quite a large population; for example, fishermen at Tarentum and Byzantium, crews of triremes at Athens, merchant seamen at Aegina and Chios, ferrymen at Tenedos.) To the classes already mentioned may be added day-laborers, and those who, owing to their needy circumstances, have no leisure, or those who are not of free birth on both sides; and there may be other classes as well. The notables again may be divided according to their wealth, birth, virtue, education, and similar differences.

Of forms of democracy first comes that which is said to be based strictly on equality. In such a democracy the law says that it is just for the poor to have no more advantage than the rich; and that neither should be masters, but both equal. For if liberty and equality, as is thought by some, are chiefly to be found in democracy, they will be best attained when all persons alike share in the government to the utmost. And since the people are the majority, and the opinion of the majority is decisive, such a government must necessarily be a democracy. Here then is one sort of democracy. There is another, in which the magistrates are elected according to a certain property qualification, but a low one; he who has the required amount of property has a share in the government, but he who loses his property loses his rights. Another kind is that in which all the citizens who are under no disqualification share in the government, but still the law is supreme. In another, everybody, if he be only a citizen, is admitted to

the government, but the law is supreme as before. A fifth form of democracy, in other respects the same, is that in which, not the law, but the multitude, have the supreme power, and supersede the law by their decrees. This is a state of affairs brought about by the demagogues. For in democracies which are subject to the law the best citizens hold the first place, and there are no demagogues; but where the laws are not supreme, there demagogues spring up. For the people becomes a monarch, and is many in one; and the many have the power in their hands, not as individuals, but collectively. Homer says that "it is not good to have a rule of many," but whether he means this corporate rule, or the rule of many individuals, is uncertain. At all events this sort of democracy, which is now a monarch, and no longer under the control of law, seeks to exercise monarchical sway, and grows into a despot; the flatterer is held in honor; this sort of democracy being relatively to other democracies what tyranny is to other forms of monarchy. The spirit of both is the same, and they alike exercise a despotic rule over the better citizens. The decrees of the demos correspond to the edicts of the tyrant; and the demagogue is to the one what the flatterer is to the other. Both have great power; the flatterer with the tyrant, the demagogue with democracies of the kind which we are describing. The demagogues make the decrees of the people override the laws, by referring all things to the popular assembly. And therefore they grow great, because the people have all things in their hands, and they hold in their hands the votes of the people, who are too ready to listen to them. Further, those who have any complaint to bring against the magistrates say, "Let the people be judges"; the people are too happy to accept the invitation; and so the authority of every office is undermined. Such a democracy is fairly open to the objection that it is not a constitution at all; for where the laws have no authority, there is no constitution. The law ought to be supreme over all, and the magistracies should judge of particulars, and only this should be considered a constitution. So that if democracy be a real form of government, the sort of system in which all things are

regulated by decrees is clearly not even a democracy in the true sense of the word, for decrees relate only to particulars.

These then are the different kinds of democracy.

Part V

Of oligarchies, too, there are different kinds: one where the property qualification for office is such that the poor, although they form the majority, have no share in the government, yet he who acquires a qualification may obtain a share. Another sort is when there is a qualification for office, but a high one, and the vacancies in the governing body are filled by co-optation. If the election is made out of all the qualified persons, a constitution of this kind inclines to an aristocracy, if out of a privileged class, to an oligarchy. Another sort of oligarchy is when the son succeeds the father. There is a fourth form, likewise hereditary, in which the magistrates are supreme and not the law. Among oligarchies this is what tyranny is among monarchies, and the last-mentioned form of democracy among democracies; and in fact this sort of oligarchy receives the name of a dynasty (or rule of powerful families).

These are the different sorts of oligarchies and democracies. It should, however, be remembered that in many states the constitution which is established by law, although not democratic, owing to the education and habits of the people may be administered democratically, and conversely in other states the established constitution may incline to democracy, but may be administered in an oligarchical spirit. This most often happens after a revolution: for governments do not change at once; at first the dominant party are content with encroaching a little upon their opponents. The laws which existed previously continue in force, but the authors of the revolution have the power in their hands.

Part VI

From what has been already said we may safely infer that there are so many different kinds of democracies and of oligarchies. For it is evident that either all the classes whom we mentioned must share in the government, or some only and not others. When the class of husbandmen and of those who possess moderate fortunes have the supreme power, the government is administered according to law. For the citizens being compelled to live by their labor have no leisure; and so they set up the authority of the law, and attend assemblies only when necessary. They all obtain a share in the government when they have acquired the qualification which is fixed by the law—the absolute exclusion of any class would be a step towards oligarchy; hence all who have acquired the property qualification are admitted to a share in the constitution. But leisure cannot be provided for them unless there are revenues to support them. This is one sort of democracy, and these are the causes which give birth to it. Another kind is based on the distinction which naturally comes next in order; in this, everyone to whose birth there is no objection is eligible, but actually shares in the government only if he can find leisure. Hence in such a democracy the supreme power is vested in the laws, because the state has no means of paying the citizens. A third kind is when all freemen have a right to share in the government, but do not actually share, for the reason which has been already given; so that in this form again the law must rule. A fourth kind of democracy is that which comes latest in the history of states. In our own day, when cities have far outgrown their original size, and their revenues have increased, all the citizens have a place in the government, through the great preponderance of the multitude; and they all, including the poor who receive pay, and therefore have leisure to exercise their rights, share in the administration. Indeed, when they are paid, the common people have the most leisure, for they are not hindered by the care of

their property, which often fetters the rich, who are thereby prevented from taking part in the assembly or in the courts, and so the state is governed by the poor, who are a majority, and not by the laws.

So many kinds of democracies there are, and they grow out of these necessary causes.

Of oligarchies, one form is that in which the majority of the citizens have some property, but not very much; and this is the first form, which allows to anyone who obtains the required amount the right of sharing in the government. The sharers in the government being a numerous body, it follows that the law must govern, and not individuals. For in proportion as they are further removed from a monarchical form of government, and in respect of property have neither so much as to be able to live without attending to business, nor so little as to need state support, they must admit the rule of law and not claim to rule themselves. But if the men of property in the state are fewer than in the former case, and own more property, there arises a second form of oligarchy. For the stronger they are, the more power they claim, and having this object in view, they themselves select those of the other classes who are to be admitted to the government; but, not being as yet strong enough to rule without the law, they make the law represent their wishes. When this power is intensified by a further diminution of their numbers and increase of their property, there arises a third and further stage of oligarchy, in which the governing class keep the offices in their own hands, and the law ordains that the son shall succeed the father. When, again, the rulers have great wealth and numerous friends, this sort of family despotism approaches a monarchy; individuals rule and not the law. This is the fourth sort of oligarchy, and is analogous to the last sort of democracy.

Part VII

There are still two forms besides democracy and oligarchy; one of them is universally recognized and included among the four principal forms of government, which are said to be (1) monarchy, (2) oligarchy, (3) democracy, and (4) the so-called aristocracy or government of the best. But there is also a fifth, which retains the generic name of polity or constitutional government; this is not common, and therefore has not been noticed by writers who attempt to enumerate the different kinds of government; like Plato, in their books about the state, they recognize four only. The term “aristocracy” is rightly applied to the form of government which is described in the first part of our treatise; for that only can be rightly called aristocracy which is a government formed of the best men absolutely, and not merely of men who are good when tried by any given standard. In the perfect state the good man is absolutely the same as the good citizen; whereas in other states the good citizen is only good relatively to his own form of government. But there are some states differing from oligarchies and also differing from the so-called polity or constitutional government; these are termed aristocracies, and in them the magistrates are certainly chosen, both according to their wealth and according to their merit. Such a form of government differs from each of the two just now mentioned, and is termed an aristocracy. For indeed in states which do not make virtue the aim of the community, men of merit and reputation for virtue may be found. And so where a government has regard to wealth, virtue, and numbers, as at Carthage, that is aristocracy; and also where it has regard only to two out of the three, as at Lacedaemon, to virtue and numbers, and the two principles of democracy and virtue temper each other. There are these two forms of aristocracy in addition to the first and perfect state, and there is a third form, viz., the constitutions which incline more than the so-called polity towards oligarchy.

Part VIII

I have yet to speak of the so-called polity and of tyranny. I put them in this order, not because a polity or constitutional government is to be regarded as a perversion any more than the above mentioned aristocracies. The truth is, that they all fall short of the most perfect form of government, and so they are reckoned among perversions, and the really perverted forms are perversions of these, as I said in the original discussion. Last of all I will speak of tyranny, which I place last in the series because I am inquiring into the constitutions of states, and this is the very reverse of a constitution.

Having explained why I have adopted this order, I will proceed to consider constitutional government; of which the nature will be clearer now that oligarchy and democracy have been defined. For polity or constitutional government may be described generally as a fusion of oligarchy and democracy; but the term is usually applied to those forms of government which incline towards democracy, and the term aristocracy to those which incline towards oligarchy, because birth and education are commonly the accompaniments of wealth. Moreover, the rich already possess the external advantages the want of which is a temptation to crime, and hence they are called noblemen and gentlemen. And inasmuch as aristocracy seeks to give predominance to the best of the citizens, people say also of oligarchies that they are composed of noblemen and gentlemen. Now it appears to be an impossible thing that the state which is governed not by the best citizens but by the worst should be well-governed, and equally impossible that the state which is ill-governed should be governed by the best. But we must remember that good laws, if they are not obeyed, do not constitute good government. Hence there are two parts of good government; one is the actual obedience of citizens to the laws, the other part is the goodness of the laws which they obey; they

may obey bad laws as well as good. And there may be a further subdivision; they may obey either the best laws which are attainable to them, or the best absolutely.

The distribution of offices according to merit is a special characteristic of aristocracy, for the principle of an aristocracy is virtue, as wealth is of an oligarchy, and freedom of a democracy. In all of them there of course exists the right of the majority, and whatever seems good to the majority of those who share in the government has authority. Now in most states the form called polity exists, for the fusion goes no further than the attempt to unite the freedom of the poor and the wealth of the rich, who commonly take the place of the noble. But as there are three grounds on which men claim an equal share in the government, freedom, wealth, and virtue (for the fourth or good birth is the result of the two last, being only ancient wealth and virtue), it is clear that the admixture of the two elements, that is to say, of the rich and poor, is to be called a polity or constitutional government; and the union of the three is to be called aristocracy or the government of the best, and more than any other form of government, except the true and ideal, has a right to this name.

Thus far I have shown the existence of forms of states other than monarchy, democracy, and oligarchy, and what they are, and in what aristocracies differ from one another, and polities from aristocracies—that the two latter are not very unlike is obvious.

Part IX

Next we have to consider how by the side of oligarchy and democracy the so-called polity or constitutional government springs up, and how it should be organized. The nature of it will be at once understood from a comparison of oligarchy and democracy; we must ascertain their different characteristics, and taking a portion from each, put the two together, like the parts of an indenture. Now there are three modes in which fusions of government may be affected. In the first mode we must combine the laws made by both governments, say concerning the administration of justice. In oligarchies they impose a fine on the rich if they do not serve as judges, and to the poor they give no pay; but in democracies they give pay to the poor and do not fine the rich. Now (1) the union of these two modes is a common or middle term between them, and is therefore characteristic of a constitutional government, for it is a combination of both. This is one mode of uniting the two elements. Or (2) a mean may be taken between the enactments of the two: thus democracies require no property qualification, or only a small one, from members of the assembly, oligarchies a high one; here neither of these is the common term, but a mean between them. (3) There is a third mode, in which something is borrowed from the oligarchical and something from the democratical principle. For example, the appointment of magistrates by lot is thought to be democratical, and the election of them oligarchical; democratical again when there is no property qualification, oligarchical when there is. In the aristocratical or constitutional state, one element will be taken from each—from oligarchy the principle of electing to offices, from democracy the disregard of qualification. Such are the various modes of combination.

There is a true union of oligarchy and democracy when the same state may be termed either a democracy or an oligarchy; those who

use both names evidently feel that the fusion is complete. Such a fusion there is also in the mean; for both extremes appear in it. The Lacedaemonian constitution, for example, is often described as a democracy, because it has many democratical features. In the first place the youth receive a democratical education. For the sons of the poor are brought up with the sons of the rich, who are educated in such a manner as to make it possible for the sons of the poor to be educated by them. A similar equality prevails in the following period of life, and when the citizens are grown up to manhood the same rule is observed; there is no distinction between the rich and poor. In like manner they all have the same food at their public tables, and the rich wear only such clothing as any poor man can afford. Again, the people elect to one of the two greatest offices of state, and in the other they share; for they elect the Senators and share in the Ephoralty. By others the Spartan constitution is said to be an oligarchy, because it has many oligarchical elements. That all offices are filled by election and none by lot, is one of these oligarchical characteristics; that the power of inflicting death or banishment rests with a few persons is another; and there are others. In a well attempted polity there should appear to be both elements and yet neither; also the government should rely on itself, and not on foreign aid, and on itself not through the good will of a majority—they might be equally well-disposed when there is a vicious form of government—but through the general willingness of all classes in the state to maintain the constitution.

Enough of the manner in which a constitutional government, and in which the so-called aristocracies ought to be framed.

Part X

Of the nature of tyranny I have still to speak, in order that it may have its place in our inquiry (since even tyranny is reckoned by us to be a form of government), although there is not much to be said about it. I have already in the former part of this treatise discussed royalty or kingship according to the most usual meaning of the term, and considered whether it is or is not advantageous to states, and what kind of royalty should be established, and from what source, and how.

When speaking of royalty we also spoke of two forms of tyranny, which are both according to law, and therefore easily pass into royalty. Among barbarians there are elected monarchs who exercise a despotic power; despotic rulers were also elected in ancient Hellas, called Aesymnetes or Dictators. These monarchies, when compared with one another, exhibit certain differences. And they are, as I said before, royal, in so far as the monarch rules according to law over willing subjects; but they are tyrannical in so far as he is despotic and rules according to his own fancy. There is also a third kind of tyranny, which is the most typical form, and is the counterpart of the perfect monarchy. This tyranny is just that arbitrary power of an individual which is responsible to no one, and governs all alike, whether equals or better, with a view to its own advantage, not to that of its subjects, and therefore against their will. No freeman, if he can escape from it, will endure such a government.

The kinds of tyranny are such and so many, and for the reasons which I have given.

Part XI

We have now to inquire what is the best constitution for most states, and the best life for most men, neither assuming a standard of virtue which is above ordinary persons, nor an education which is exceptionally favored by nature and circumstances, nor yet an ideal state which is an aspiration only, but having regard to the life in which the majority are able to share, and to the form of government which states in general can attain. As to those aristocracies, as they are called, of which we were just now speaking, they either lie beyond the possibilities of the greater number of states, or they approximate to the so-called constitutional government, and therefore need no separate discussion. And in fact the conclusion at which we arrive respecting all these forms rests upon the same grounds. For if what was said in the *Ethics* is true, that the happy life is the life according to virtue lived without impediment, and that virtue is a mean^[4], then the life which is in a mean, and in a mean attainable by everyone, must be the best. And the same principles of virtue and vice are characteristic of cities and of constitutions; for the constitution is in a figure the life of the city.

Now in all states there are three elements: one class is very rich, another very poor, and a third in a mean. It is admitted that moderation and the mean are best, and therefore it will clearly be best to possess the gifts of fortune in moderation; for in that condition of life men are most ready to follow rational principle. But he who greatly excels in beauty, strength, birth, or wealth, or on the other hand who is very poor, or very weak, or very much disgraced, finds it difficult to follow rational principle. Of these two the one sort grow into violent and great criminals, the others into rogues and petty rascals. And two sorts of offenses correspond to them, the one committed from violence, the other from roguery. Again, the middle

class is least likely to shrink from rule, or to be over-ambitious for it; both of which are injuries to the state. Again, those who have too much of the goods of fortune, strength, wealth, friends, and the like, are neither willing nor able to submit to authority. The evil begins at home; for when they are boys, by reason of the luxury in which they are brought up, they never learn, even at school, the habit of obedience. On the other hand, the very poor, who are in the opposite extreme, are too degraded. So that the one class cannot obey, and can only rule despotically; the other knows not how to command and must be ruled like slaves. Thus arises a city, not of freemen, but of masters and slaves, the one despising, the other envying; and nothing can be more fatal to friendship and good fellowship in states than this: for good fellowship springs from friendship; when men are at enmity with one another, they would rather not even share the same path. But a city ought to be composed, as far as possible, of equals and similars; and these are generally the middle classes. Wherefore the city which is composed of middle-class citizens is necessarily best constituted in respect of the elements of which we say the fabric of the state naturally consists. And this is the class of citizens which is most secure in a state, for they do not, like the poor, covet their neighbors' goods; nor do others covet theirs, as the poor covet the goods of the rich; and as they neither plot against others, nor are themselves plotted against, they pass through life safely. Wisely then did Phocylides pray—"Many things are best in the mean; I desire to be of a middle condition in my city."

Thus it is manifest that the best political community is formed by citizens of the middle class, and that those states are likely to be well-administered in which the middle class is large, and stronger if possible than both the other classes, or at any rate than either singly; for the addition of the middle class turns the scale, and prevents either of the extremes from being dominant. Great then is the good fortune of a state in which the citizens have a moderate and sufficient

property; for where some possess much, and the others nothing, there may arise an extreme democracy, or a pure oligarchy; or a tyranny may grow out of either extreme—either out of the most rampant democracy, or out of an oligarchy; but it is not so likely to arise out of the middle constitutions and those akin to them. I will explain the reason of this hereafter, when I speak of the revolutions of states. The mean condition of states is clearly best, for no other is free from faction; and where the middle class is large, there are least likely to be factions and dissensions. For a similar reason large states are less liable to faction than small ones, because in them the middle class is large; whereas in small states it is easy to divide all the citizens into two classes who are either rich or poor, and to leave nothing in the middle. And democracies are safer and more permanent than oligarchies, because they have a middle class which is more numerous and has a greater share in the government; for when there is no middle class, and the poor greatly exceed in number, troubles arise, and the state soon comes to an end. A proof of the superiority of the middle class is that the best legislators have been of a middle condition; for example, Solon, as his own verses testify; and Lycurgus, for he was not a king; and Charondas, and almost all legislators.

These considerations will help us to understand why most governments are either democratical or oligarchical. The reason is that the middle class is seldom numerous in them, and whichever party, whether the rich or the common people, transgresses the mean and predominates, draws the constitution its own way, and thus arises either oligarchy or democracy. There is another reason—the poor and the rich quarrel with one another, and whichever side gets the better, instead of establishing a just or popular government, regards political supremacy as the prize of victory, and the one party sets up a democracy and the other an oligarchy. Further, both the parties which had the supremacy in Hellas looked only to the interest of their own form of government, and established in states, the one, democracies,

and the other, oligarchies; they thought of their own advantage, of the public not at all. For these reasons the middle form of government has rarely, if ever, existed, and among a very few only. One man alone of all who ever ruled in Hellas was induced to give this middle constitution to states. But it has now become a habit among the citizens of states, not even to care about equality; all men are seeking for dominion, or, if conquered, are willing to submit.

What then is the best form of government, and what makes it the best, is evident; and of other constitutions, since we say that there are many kinds of democracy and many of oligarchy, it is not difficult to see which has the first and which the second or any other place in the order of excellence, now that we have determined which is the best. For that which is nearest to the best must of necessity be better, and that which is furthest from it worse, if we are judging absolutely and not relatively to given conditions: I say “relatively to given conditions,” since a particular government may be preferable, but another form may be better for some people.

Part XII

We have now to consider what and what kind of government is suitable to what and what kind of men. I may begin by assuming, as a general principle common to all governments, that the portion of the state which desires the permanence of the constitution ought to be stronger than that which desires the reverse. Now every city is composed of quality and quantity. By quality I mean freedom, wealth, education, good birth, and by quantity, superiority of numbers. Quality may exist in one of the classes which make up the state, and quantity in the other. For example, the meanly-born may be more in number than the well-born, or the poor than the rich, yet they may not so much exceed in quantity as they fall short in quality; and therefore there must be a comparison of quantity and quality. Where the number of the poor is more than proportioned to the wealth of the rich, there will naturally be a democracy, varying in form with the sort of people who compose it in each case. If, for example, the husbandmen exceed in number, the first form of democracy will then arise; if the artisans and laboring class, the last; and so with the intermediate forms. But where the rich and the notables exceed in quality more than they fall short in quantity, there oligarchy arises, similarly assuming various forms according to the kind of superiority possessed by the oligarchs.

The legislator should always include the middle class in his government; if he makes his laws oligarchical, to the middle class let him look; if he makes them democratical, he should equally by his laws try to attach this class to the state. There only can the government ever be stable where the middle class exceeds one or both of the others, and in that case there will be no fear that the rich will unite with the poor against the rulers. For neither of them will ever be willing to serve the other, and if they look for some form of

government more suitable to both, they will find none better than this, for the rich and the poor will never consent to rule in turn, because they mistrust one another. The arbiter is always the one trusted, and he who is in the middle is an arbiter. The more perfect the admixture of the political elements, the more lasting will be the constitution. Many even of those who desire to form aristocratical governments make a mistake, not only in giving too much power to the rich, but in attempting to overreach the people. There comes a time when out of a false good there arises a true evil, since the encroachments of the rich are more destructive to the constitution than those of the people.

Part XIII

The devices by which oligarchies deceive the people are five in number; they relate to (1) the assembly; (2) the magistracies; (3) the courts of law; (4) the use of arms; (5) gymnastic exercises. (1) The assemblies are thrown open to all, but either the rich only are fined for non-attendance, or a much larger fine is inflicted upon them. (2) to the magistracies, those who are qualified by property cannot decline office upon oath, but the poor may. (3) In the law-courts the rich, and the rich only, are fined if they do not serve, the poor are let off with impunity, or, as in the laws of Charondas, a larger fine is inflicted on the rich, and a smaller one on the poor. In some states all citizen who have registered themselves are allowed to attend the assembly and to try causes; but if after registration they do not attend either in the assembly or at the courts, heavy fines are imposed upon them. The intention is that through fear of the fines they may avoid registering themselves, and then they cannot sit in the law-courts or in the assembly. concerning (4) the possession of arms, and (5) gymnastic exercises, they legislate in a similar spirit. For the poor are not obliged to have arms, but the rich are fined for not having them; and in like manner no penalty is inflicted on the poor for non-attendance at the gymnasium, and consequently, having nothing to fear, they do not attend, whereas the rich are liable to a fine, and therefore they take care to attend.

These are the devices of oligarchical legislators, and in democracies they have counter devices. They pay the poor for attending the assemblies and the law-courts, and they inflict no penalty on the rich for non-attendance. It is obvious that he who would duly mix the two principles should combine the practice of both, and provide that the poor should be paid to attend, and the rich fined if they do not attend, for then all will take part; if there is no

such combination, power will be in the hands of one party only. The government should be confined to those who carry arms. As to the property qualification, no absolute rule can be laid down, but we must see what is the highest qualification sufficiently comprehensive to secure that the number of those who have the rights of citizens exceeds the number of those excluded. Even if they have no share in office, the poor, provided only that they are not outraged or deprived of their property, will be quiet enough.

But to secure gentle treatment for the poor is not an easy thing, since a ruling class is not always humane. And in time of war the poor are apt to hesitate unless they are fed; when fed, they are willing enough to fight. In some states the government is vested, not only in those who are actually serving, but also in those who have served; among the Malians, for example, the governing body consisted of the latter, while the magistrates were chosen from those actually on service. And the earliest government which existed among the Hellenes, after the overthrow of the kingly power, grew up out of the warrior class, and was originally taken from the knights (for strength and superiority in war at that time depended on cavalry; indeed, without discipline, infantry are useless, and in ancient times there was no military knowledge or tactics, and therefore the strength of armies lay in their cavalry). But when cities increased and the heavy armed grew in strength, more had a share in the government; and this is the reason why the states which we call constitutional governments have been hitherto called democracies. Ancient constitutions, as might be expected, were oligarchical and royal; their population being small they had no considerable middle class; the people were weak in numbers and organization, and were therefore more contented to be governed.

I have explained why there are various forms of government, and why there are more than is generally supposed; for democracy, as well

as other constitutions, has more than one form: also what their differences are, and whence they arise, and what is the best form of government, speaking generally and to whom the various forms of government are best suited; all this has now been explained.

Part XIV

Having thus gained an appropriate basis of discussion, we will proceed to speak of the points which follow next in order. We will consider the subject not only in general but with reference to particular constitutions. All constitutions have three elements, concerning which the good lawgiver has to regard what is expedient for each constitution. When they are well-ordered, the constitution is well-ordered, and as they differ from one another, constitutions differ. There is (1) one element which deliberates about public affairs; secondly (2) that concerned with the magistrates—the question being, what they should be, over what they should exercise authority, and what should be the mode of electing to them; and thirdly (3) that which has judicial power.

The deliberative element has authority in matters of war and peace, in making and unmaking alliances; it passes laws, inflicts death, exile, confiscation, elects magistrates and audits their accounts. These powers must be assigned either all to all the citizens or an to some of them (for example, to one or more magistracies, or different causes to different magistracies), or some of them to all, and others of them only to some. That all things should be decided by all is characteristic of democracy; this is the sort of equality which the people desire. But there are various ways in which all may share in the government; they may deliberate, not all in one body, but by turns, as in the constitution of Telecles the Milesian. There are other constitutions in which the boards of magistrates meet and deliberate, but come into office by turns, and are elected out of the tribes and the very smallest divisions of the state, until everyone has obtained office in his turn. The citizens, on the other hand, are assembled only for the purposes of legislation, and to consult about the constitution, and to hear the edicts of the magistrates. In another variety of democracy the

citizen form one assembly, but meet only to elect magistrates, to pass laws, to advise about war and peace, and to make scrutinies. Other matters are referred severally to special magistrates, who are elected by vote or by lot out of all the citizens. Or again, the citizens meet about election to offices and about scrutinies, and deliberate concerning war or alliances while other matters are administered by the magistrates, who, as far as is possible, are elected by vote. I am speaking of those magistracies in which special knowledge is required. A fourth form of democracy is when all the citizens meet to deliberate about everything, and the magistrates decide nothing, but only make the preliminary inquiries; and that is the way in which the last and worst form of democracy, corresponding, as we maintain, to the close family oligarchy and to tyranny, is at present administered. All these modes are democratical.

On the other hand, that some should deliberate about all is oligarchical. This again is a mode which, like the democratical, has many forms. When the deliberative class being elected out of those who have a moderate qualification are numerous and they respect and obey the prohibitions of the law without altering it, and anyone who has the required qualification shares in the government, then, just because of this moderation, the oligarchy inclines towards polity. But when only selected individuals and not the whole people share in the deliberations of the state, then, although, as in the former case, they observe the law, the government is a pure oligarchy. Or, again, when those who have the power of deliberation are self-elected, and son succeeds father, and they and not the laws are supreme—the government is of necessity oligarchical. Where, again, particular persons have authority in particular matters—for example, when the whole people decide about peace and war and hold scrutinies, but the magistrates regulate everything else, and they are elected by vote—there the government is an aristocracy. And if some questions are decided by magistrates elected by vote, and others by magistrates

elected by lot, either absolutely or out of select candidates, or elected partly by vote, partly by lot—these practices are partly characteristic of an aristocratical government, and partly of a pure constitutional government.

These are the various forms of the deliberative body; they correspond to the various forms of government. And the government of each state is administered according to one or other of the principles which have been laid down. Now it is for the interest of democracy, according to the most prevalent notion of it (I am speaking of that extreme form of democracy in which the people are supreme even over the laws), with a view to better deliberation to adopt the custom of oligarchies respecting courts of law. For in oligarchies the rich who are wanted to be judges are compelled to attend under pain of a fine, whereas in deinocracies the poor are paid to attend. And this practice of oligarchies should be adopted by democracies in their public assemblies, for they will advise better if they all deliberate together—the people with the notables and the notables with the people. It is also a good plan that those who deliberate should be elected by vote or by lot in equal numbers out of the different classes; and that if the people greatly exceed in number those who have political training, pay should not be given to all, but only to as many as would balance the number of the notables, or that the number in excess should be eliminated by lot. But in oligarchies either certain persons should be co-opted from the mass, or a class of officers should be appointed such as exist in some states who are termed probuli and guardians of the law; and the citizens should occupy themselves exclusively with matters on which these have previously deliberated; for so the people will have a share in the deliberations of the state, but will not be able to disturb the principles of the constitution. Again, in oligarchies either the people ought to accept the measures of the government, or not to pass anything contrary to them; or, if all are allowed to share in counsel, the

decision should rest with the magistrates. The opposite of what is done in constitutional governments should be the rule in oligarchies; the veto of the majority should be final, their assent not final, but the proposal should be referred back to the magistrates. Whereas in constitutional governments they take the contrary course; the few have the negative, not the affirmative power; the affirmation of everything rests with the multitude.

These, then, are our conclusions respecting the deliberative, that is, the supreme element in states.

Part XV

Next we will proceed to consider the distribution of offices; this too, being a part of politics concerning which many questions arise: What shall their number be? Over what shall they preside, and what shall be their duration? Sometimes they last for six months, sometimes for less; sometimes they are annual, while in other cases offices are held for still longer periods. Shall they be for life or for a long term of years; or, if for a short term only, shall the same persons hold them over and over again, or once only? Also about the appointment to them—from whom are they to be chosen, by whom, and how? We should first be in a position to say what are the possible varieties of them, and then we may proceed to determine which are suited to different forms of government. But what are to be included under the term “offices”? That is a question not quite so easily answered. For a political community requires many of-ficers; and not everyone who is chosen by vote or by lot is to be regarded as a ruler. In the first place there are the priests, who must be distinguished from political officers; masters of choruses and heralds, even ambassadors, are elected by vote. Some duties of superintendence again are political, extending either to all the citizens in a single sphere of action, like the office of the general who superintends them when they are in the field, or to a section of them only, like the inspectorships of women or of youth. Other offices are concerned with household management, like that of the corn measurers who exist in many states and are elected officers. There are also menial offices which the rich have executed by their slaves. Speaking generally, those are to be called offices to which the duties are assigned of deliberating about certain measures and of judging and commanding, especially the last; for to command is the especial duty of a magistrate. But the question is not of any importance in practice; no one has ever brought into court the meaning of the word, although such problems have a speculative

interest.

What kinds of offices, and how many, are necessary to the existence of a state, and which, if not necessary, yet conduce to its well-being are much more important considerations, affecting all constitutions, but more especially small states. For in great states it is possible, and indeed necessary, that every office should have a special function; where the citizens are numerous, many may hold office. And so it happens that some offices a man holds a second time only after a long interval, and others he holds once only; and certainly every work is better done which receives the sole, and not the divided attention of the worker. But in small states it is necessary to combine many offices in a few hands, since the small number of citizens does not admit of many holding office: for who will there be to succeed them? And yet small states at times require the same offices and laws as large ones; the difference is that the one want them often, the others only after long intervals. Hence there is no reason why the care of many offices should not be imposed on the same person, for they will not interfere with each other. When the population is small, offices should be like the spits which also serve to hold a lamp. We must first ascertain how many magistrates are necessary in every state, and also how many are not exactly necessary, but are nevertheless useful, and then there will be no difficulty in seeing what offices can be combined in one. We should also know over which matters several local tribunals are to have jurisdiction, and in which authority should be centralized: for example, should one person keep order in the market and another in some other place, or should the same person be responsible everywhere? Again, should offices be divided according to the subjects with which they deal, or according to the persons with whom they deal: I mean to say, should one person see to good order in general, or one look after the boys, another after the women, and so on? Further, under different constitutions, should the magistrates be the same or different? For example, in democracy, oligarchy, aristocracy,

monarchy, should there be the same magistrates, although they are elected, not out of equal or similar classes of citizen but differently under different constitutions—in aristocracies, for example, they are chosen from the educated, in oligarchies from the wealthy, and in democracies from the free—or are there certain differences in the offices answering to them as well, and may the same be suitable to some, but different offices to others? For in some states it may be convenient that the same office should have a more extensive, in other states a narrower sphere. Special offices are peculiar to certain forms of government: for example that of probuli, which is not a democratic office, although a boule or council is. There must be some body of men whose duty is to prepare measures for the people in order that they may not be diverted from their business; when these are few in number, the state inclines to an oligarchy: or rather the probuli must always be few, and are therefore an oligarchical element. But when both institutions exist in a state, the probuli are a check on the council; for the councilors is a democratic element, but the probuli are oligarchical. Even the power of the council disappears when democracy has taken that extreme form in which the people themselves are always meeting and deliberating about everything. This is the case when the members of the assembly receive abundant pay; for they have nothing to do and are always holding assemblies and deciding everything for themselves. A magistracy which controls the boys or the women, or any similar office, is suited to an aristocracy rather than to a democracy; for how can the magistrates prevent the wives of the poor from going out of doors? Neither is it an oligarchical office; for the wives of the oligarchs are too fine to be controlled.

Enough of these matters. I will now inquire into appointments to offices. The varieties depend on three terms, and the combinations of these give all possible modes: first, who appoints? Secondly, from whom? And thirdly, how? Each of these three admits of three

varieties: (A) All the citizens, or (B) only some, appoint. Either (1) the magistrates are chosen out of all or (2) out of some who are distinguished either by a property qualification, or by birth, or merit, or for some special reason, as at Megara only those were eligible who had returned from exile and fought together against the democracy. They may be appointed either (a) by vote or (b) by lot. Again, these several varieties may be coupled, I mean that (C) some officers may be elected by some, others by all, and (3) some again out of some, and others out of all, and (c) some by vote and others by lot. Each variety of these terms admits of four modes.

For either (A 1 a) all may appoint from all by vote, or (A 1 b) all from all by lot, or (A 2 a) all from some by vote, or (A 2 b) all from some by lot (and from all, either by sections, as, for example, by tribes, and wards, and phratries, until all the citizens have been gone through; or the citizens may be in all cases eligible indiscriminately); or again (A 1 c, A 2 c) to some offices in the one way, to some in the other. Again, if it is only some that appoint, they may do so either (B 1 a) from all by vote, or (B 1 b) from all by lot, or (B 2 a) from some by vote, or (B 2 b) from some by lot, or to some offices in the one way, to others in the other, i.e., (B 1 c) from all, to some offices by vote, to some by lot, and (B 2 c) from some, to some offices by vote, to some by lot. Thus the modes that arise, apart from two (C, 3) out of the three couplings, number twelve. Of these systems two are popular, that all should appoint from all (A 1 a) by vote or (A 1 b) by lot—or (A 1 c) by both. That all should not appoint at once, but should appoint from all or from some either by lot or by vote or by both, or appoint to some offices from all and to others from some (“by both” meaning to some offices by lot, to others by vote), is characteristic of a polity. And (B 1 c) that some should appoint from all, to some offices by vote, to others by lot, is also characteristic of a polity, but more oligarchical than the former method. And (A 3 a, b, c, B 3 a, b, c) to appoint from both, to some offices from all, to others from some,

is characteristic of a polity with a leaning towards aristocracy. That (B 2) some should appoint from some is oligarchical—even (B 2 b) that some should appoint from some by lot (and if this does not actually occur, it is none the less oligarchical in character), or (B 2 c) that some should appoint from some by both. (B 1 a) that some should appoint from all, and (A 2 a) that all should appoint from some, by vote, is aristocratic.

These are the different modes of constituting magistrates, and these correspond to different forms of government: which are proper to which, or how they ought to be established, will be evident when we determine the nature of their powers. By powers I mean such powers as a magistrate exercises over the revenue or in defense of the country; for there are various kinds of power: the power of the general, for example, is not the same with that which regulates contracts in the market.

Part XVI

Of the three parts of government, the judicial remains to be considered, and this we shall divide on the same principle. There are three points on which the varieties of law-courts depend: The persons from whom they are appointed, the matters with which they are concerned, and the manner of their appointment. I mean, (1) are the judges taken from all, or from some only? (2) how many kinds of law-courts are there? (3) are the judges chosen by vote or by lot?

First, let me determine how many kinds of law-courts there are. There are eight in number: One is the court of audits or scrutinies; a second takes cognizance of ordinary offenses against the state; a third is concerned with treason against the constitution; the fourth determines disputes respecting penalties, whether raised by magistrates or by private persons; the fifth decides the more important civil cases; the sixth tries cases of homicide, which are of various kinds, (a) premeditated, (b) involuntary, (c) cases in which the guilt is confessed but the justice is disputed; and there may be a fourth court (d) in which murderers who have fled from justice are tried after their return; such as the Court of Phreatto is said to be at Athens. But cases of this sort rarely happen at all even in large cities. The different kinds of homicide may be tried either by the same or by different courts. (7) There are courts for strangers: of these there are two subdivisions, (a) for the settlement of their disputes with one another, (b) for the settlement of disputes between them and the citizens. And besides all these there must be (8) courts for small suits about sums of a drachma up to five drachmas, or a little more, which have to be determined, but they do not require many judges.

Nothing more need be said of these small suits, nor of the courts for homicide and for strangers: I would rather speak of political cases,

which, when mismanaged, create division and disturbances in constitutions.

Now if all the citizens judge, in all the different cases which I have distinguished, they may be appointed by vote or by lot, or sometimes by lot and sometimes by vote. Or when a single class of causes are tried, the judges who decide them may be appointed, some by vote, and some by lot. These then are the four modes of appointing judges from the whole people, and there will be likewise four modes, if they are elected from a part only; for they may be appointed from some by vote and judge in all causes; or they may be appointed from some by lot and judge in all causes; or they may be elected in some cases by vote, and in some cases taken by lot, or some courts, even when judging the same causes, may be composed of members some appointed by vote and some by lot. These modes, then, as was said, answer to those previously mentioned.

Once more, the modes of appointment may be combined; I mean, that some may be chosen out of the whole people, others out of some, some out of both; for example, the same tribunal may be composed of some who were elected out of all, and of others who were elected out of some, either by vote or by lot or by both.

In how many forms law-courts can be established has now been considered. The first form, viz., that in which the judges are taken from all the citizens, and in which all causes are tried, is democratical; the second, which is composed of a few only who try all causes, oligarchical; the third, in which some courts are taken from all classes, and some from certain classes only, aristocratical and constitutional.

[2] 此处指的是柏拉图在《政治家篇》中的论述，302E10—303B5。

[3] 此处缺少第六部分。根据戴维斯（Michael Davis）的解释，在亚里士多德看来，武士既是第五部分又是第六部分。武士是一个特殊的职业，这个职业的出现意味着城邦作为一个共同体的自我意识的觉醒。参见[美]戴维斯：《哲学的政治》，79—81页，北京，华夏出版社，2012。

[4] Mean：在这里是指“中庸”，亚里士多德在《尼各马可伦理学》中表述的Golden mean一般在国内翻译为“中庸之道”，与孔子的教导经常比较。其具体内涵也与孔子的中庸之道思想类似。认为德性往往是在过度与不及之间所保持的适度。

BOOK FIVE

导 读

在第五卷中，亚里士多德主要关注的问题是政体的变更，也就是革命。亚里士多德分析了政体变更的一般原因，各种类型政体变更的特殊原因，以及防止政体变更、革命的方法。

亚里士多德首先指出，政体变动的基本原因就在于人们所遭受的不平等对待。所有的革命都是对平等的诉求，而人们对于平等的观念、标准往往不同，所以导致政体的变动成为非常常见的事情。人们虽然渴望、欲求平等，但是由于人类自身的一些缺陷，导致这种欲求总会转化为对现行政体的革命。对财物和名誉的贪婪、暴虐、恐惧、优越感、轻蔑等等因素都能够导致革命的出现。一个人要求平等对待实际上就是要求他人对自己地位、身份的承认，而这种承认被这个人认为是自己应得的。人们渴望这种承认，是因为人类是不自足的，人总是有一种缺乏感。正是这种缺乏感使人组成城邦，但也同样是这种缺乏感使得城邦毁灭。

这种缺乏感就是爱欲的本质。在第五卷里亚里士多德引用的一些政体变革原因的具体事例中，有很大一部分都与性有关。很多时候革命的爆发都是由于僭主或寡头们由于在性事上争风吃醋所导致的。这里所关注的性实际上就是对爱欲的隐喻。在柏拉图的《会饮》中，对爱欲有着非常详细的刻画。男与女的结合是因为人类渴望完整，爱欲引导着人们变得完整。但是爱欲也在某种程度上蒙蔽了人的理性，人在追求完整的过程中某种意义上会丧失自我，人往往在爱情中任意迁就对方而迷失自我。这种爱情中的关系就好比是人与城邦的关系。人为了得到自由而参与城邦，但是城邦生活本身就意味着人要限制自己的自由，服从城邦的法律与习俗。在自由与服从这一根本性矛盾无法得到解决的时候，人类的爱欲就会受挫，革命暴乱也就随之会发生。亚里士多德用这种隐喻展现了政治哲学中最根本的问题。^[1]

所以想要保证城邦的稳定，维持政体保持不变。就需要适当地节制

人类的这种爱欲。亚里士多德说唯一稳定的政体只会是建立在依据德性为标准而定的平等原则上的政体。而最大的德性就是中庸、不走极端。因而培育这种中庸的德性教育是维持政体最好的手段。但同时亚里士多德也承认，德性的人是很少的，我们不可能指望大部分人都具备这一德性。所以现实可行的办法还是在制度的设计上做一些文章。在寡头制中添加一些平民制色彩的制度，平民制中添加一些寡头制色彩的制度。这实际上就是上一卷中指出的共和制的做法。

但是亚里士多德也承认，虽然共和制由于调和了富人与穷人的矛盾，是一种比贵族制更稳定的政体，但是并不意味着共和政体一定不会发生变动。共和政体也可以因为违背自身的原则而出现革命。所以，共和政体一定不能偏向富人或穷人中的任何一方，一旦有偏向，那么其中一方的实力就会迅速增大，从而打破实力的均衡，使得政体发生变化。这似乎意味着，在人类无法完全节制爱欲的情况下，单单保持城邦中各阶层的势力均衡，也可以维持政体的稳定。

此外，亚里士多德还指出，很多革命的产生是起源于一些琐碎的小事。尤其是那些具有重大权力的人的一些私人恩怨，往往会导致城邦出现暴乱。所以亚里士多德也意识到了限制个人权力的重要性。应该通过法律来限制任何人拥有过大的权力。由于在僭主制中，僭主权力完全不受限制，罔顾法律，因而整个城邦的政治生活更容易受到其私人的肆意妄为的影响。因此僭主制是最容易变动的政体，很难持久。

但值得注意的是，亚里士多德虽然也说了最差的政体即僭主制中革命出现的概率更大，但是他没有像现代的政治学者那样分析革命的合法性问题，他反而给僭主制的维持办法提供了建议，其中还包括明显违背道德原则的建议。这似乎说明在亚里士多德看来，最坏的政体也要比不断的革命、城邦的不稳定要好。最后，亚里士多德实际给僭主提出的建议是，要尽量地伪善，把自己装扮得像君主一样，通过采取一些惠民的政策来笼络民心。但是如果僭主真的像其所建议的那么做了，至少外部上已经分不清其与君主制的差别了。这似乎也是亚里士多德能够容忍僭主制这一最坏政体的原因。

Part I

The design which we proposed to ourselves is now nearly completed. Next in order follow the causes of revolution in states, how many, and of what nature they are; what modes of destruction apply to particular states, and out of what, and into what they mostly change; also what are the modes of preservation in states generally, or in a particular state, and by what means each state may be best preserved: these questions remain to be considered.

In the first place we must assume as our starting-point that in the many forms of government which have sprung up there has always been an acknowledgment of justice and proportionate equality, although mankind fail attaining them, as I have already explained. Democracy, for example, arises out of the notion that those who are equal in any respect are equal in all respects; because men are equally free, they claim to be absolutely equal. Oligarchy is based on the notion that those who are unequal in one respect are in all respects unequal; being unequal, that is, in property, they suppose themselves to be unequal absolutely. The democrats think that as they are equal they ought to be equal in all things; while the oligarchs, under the idea that they are unequal, claim too much, which is one form of inequality. All these forms of government have a kind of justice, but, tried by an absolute standard, they are faulty; and, therefore, both parties, whenever their share in the government does not accord with their preconceived ideas, stir up revolution. Those who excel in virtue have the best right of all to rebel (for they alone can with reason be deemed absolutely unequal), but then they are of all men the least inclined to do so. There is also a superiority which is claimed by men of rank; for they are thought noble because they spring from wealthy and virtuous ancestors. Here then, so to speak, are opened the very springs and fountains of revolution; and hence arise two sorts of

changes in governments; the one affecting the constitution, when men seek to change from an existing form into some other, for example, from democracy into oligarchy, and from oligarchy into democracy, or from either of them into constitutional government or aristocracy, and conversely; the other not affecting the constitution, when, without disturbing the form of government, whether oligarchy, or monarchy, or any other, they try to get the administration into their own hands. Further, there is a question of degree; an oligarchy, for example, may become more or less oligarchical, and a democracy more or less democratical; and in like manner the characteristics of the other forms of government may be more or less strictly maintained. Or the revolution may be directed against a portion of the constitution only, e.g., the establishment or overthrow of a particular office: as at Sparta it is said that Lysander attempted to overthrow the monarchy, and King Pausanias, the Ephoralty. At Epidamnus, too, the change was partial. For instead of phylarchs or heads of tribes, a council was appointed; but to this day the magistrates are the only members of the ruling class who are compelled to go to the Heliaea when an election takes place, and the office of the single archon was another oligarchical feature. Everywhere inequality is a cause of revolution, but an inequality in which there is no proportion—for instance, a perpetual monarchy among equals; and always it is the desire of equality which rises in rebellion.

Now equality is of two kinds, numerical and proportional; by the first I mean sameness or equality in number or size; by the second, equality of ratios. For example, the excess of three over two is numerically equal to the excess of two over one; whereas four exceeds two in the same ratio in which two exceeds one, for two is the same part of four that one is of two, namely, the half. As I was saying before, men agree that justice in the abstract is proportion, but they differ in that some think that if they are equal in any respect they are equal absolutely, others that if they are unequal in any respect they

should be unequal in all. Hence there are two principal forms of government, democracy and oligarchy; for good birth and virtue are rare, but wealth and numbers are more common. In what city shall we find a hundred persons of good birth and of virtue? Whereas the rich everywhere abound. That a state should be ordered, simply and wholly, according to either kind of equality, is not a good thing; the proof is the fact that such forms of government never last. They are originally based on a mistake, and, as they begin badly, cannot fall to end badly. The inference is that both kinds of equality should be employed; numerical in some cases, and proportionate in others.

Still democracy appears to be safer and less liable to revolution than oligarchy. For in oligarchies there is the double danger of the oligarchs falling out among themselves and also with the people; but in democracies there is only the danger of a quarrel with the oligarchs. No dissension worth mentioning arises among the people themselves. And we may further remark that a government which is composed of the middle class more nearly approximates to democracy than to oligarchy, and is the safest of the imperfect forms of government.

Part II

In considering how dissensions and political revolutions^[2] arise, we must first of all ascertain the beginnings and causes of them which affect constitutions generally. They may be said to be three in number; and we have now to give an outline of each. We want to know (1) what is the feeling? (2) what are the motives of those who make them? (3) whence arise political disturbances and quarrels? The universal and chief cause of this revolutionary feeling has been already mentioned; viz., the desire of equality, when men think that they are equal to others who have more than themselves; or, again, the desire of inequality and superiority, when conceiving themselves to be superior they think that they have not more but the same or less than their inferiors; pretensions which may and may not be just. Inferiors revolt in order that they may be equal, and equals that they may be superior. Such is the state of mind which creates revolutions. The motives for making them are the desire of gain and honor, or the fear of dishonor and loss; the authors of them want to divert punishment or dishonor from themselves or their friends. The causes and reasons of revolutions, whereby men are themselves affected in the way described, and about the things which I have mentioned, viewed in one way may be regarded as seven, and in another as more than seven. Two of them have been already noticed; but they act in a different manner, for men are excited against one another by the love of gain and honor—not, as in the case which I have just supposed, in order to obtain them for themselves, but at seeing others, justly or unjustly, engrossing them. Other causes are insolence, fear, excessive predominance, contempt, disproportionate increase in some part of the state; causes of another sort are election intrigues, carelessness, neglect about trifles, dissimilarity of elements.

Part III

What share insolence and avarice have in creating revolutions, and how they work, is plain enough. When the magistrates are insolent and grasping they conspire against one another and also against the constitution from which they derive their power, making their gains either at the expense of individuals or of the public. It is evident, again, what an influence honor exerts and how it is a cause of revolution. Men who are themselves dishonored and who see others obtaining honors rise in rebellion; the honor or dishonor when undeserved is unjust; and just when awarded according to merit.

Again, superiority is a cause of revolution when one or more persons have a power which is too much for the state and the power of the government; this is a condition of affairs out of which there arises a monarchy, or a family oligarchy. And therefore, in some places, as at Athens and Argos, they have recourse to ostracism. But how much better to provide from the first that there should be no such preeminent individuals instead of letting them come into existence and then finding a remedy.

Another cause of revolution is fear. Either men have committed wrong, and are afraid of punishment, or they are expecting to suffer wrong and are desirous of anticipating their enemy. Thus at Rhodes the notables conspired against the people through fear of the suits that were brought against them. Contempt is also a cause of insurrection and revolution; for example, in oligarchies—when those who have no share in the state are the majority, they revolt, because they think that they are the stronger. Or, again, in democracies, the rich despise the disorder and anarchy of the state; at Thebes, for example, where, after the battle of Oenophyta, the bad administration of the democracy led to its ruin. At Megara the fall of the democracy was due to a defeat

occasioned by disorder and anarchy. And at Syracuse the democracy aroused contempt before the tyranny of Gelo arose; at Rhodes, before the insurrection.

Political revolutions also spring from a disproportionate increase in any part of the state. For as a body is made up of many members, and every member ought to grow in proportion, that symmetry may be preserved; but loses its nature if the foot be four cubits long and the rest of the body two spans; and, should the abnormal increase be one of quality as well as of quantity, may even take the form of another animal: even so a state has many parts, of which someone may often grow imperceptibly; for example, the number of poor in democracies and in constitutional states. And this disproportion may sometimes happen by an accident, as at Tarentum, from a defeat in which many of the notables were slain in a battle with the Iapygians just after the Persian War, the constitutional government in consequence becoming a democracy; or as was the case at Argos, where the Argives, after their army had been cut to pieces on the seventh day of the month by Cleomenes the Lacedaemonian, were compelled to admit to citizen some of their Perioeci; and at Athens, when, after frequent defeats of their infantry at the time of the Peloponnesian War, the notables were reduced in number, because the soldiers had to be taken from the roll of citizens. Revolutions arise from this cause as well, in democracies as in other forms of government, but not to so great an extent. When the rich grow numerous or properties increase, the form of government changes into an oligarchy or a government of families. Forms of government also change—sometimes even without revolution, owing to election contests, as at Heraea (where, instead of electing their magistrates, they took them by lot, because the electors were in the habit of choosing their own partisans); or owing to carelessness, when disloyal persons are allowed to find their way into the highest offices, as at Oreum, where, upon the accession of Heracleodorus to office, the

oligarchy was overthrown, and changed by him into a constitutional and democratical government.

Again, the revolution may be facilitated by the slightness of the change; I mean that a great change may sometimes slip into the constitution through neglect of a small matter; at Ambracia, for instance, the qualification for office, small at first, was eventually reduced to nothing. For the Ambraciots thought that a small qualification was much the same as none at all.

Another cause of revolution is difference of races which do not at once acquire a common spirit; for a state is not the growth of a day, any more than it grows out of a multitude brought together by accident. Hence the reception of strangers in colonies, either at the time of their foundation or afterwards, has generally produced revolution; for example, the Achaeans who joined the Troezenians in the foundation of Sybaris, becoming later the more numerous, expelled them; hence the curse fell upon Sybaris. At Thurii the Sybarites quarrelled with their fellow-colonists; thinking that the land belonged to them, they wanted too much of it and were driven out. At Byzantium the new colonists were detected in a conspiracy, and were expelled by force of arms; the people of Antissa, who had received the Chian exiles, fought with them, and drove them out; and the Zancleans, after having received the Samians, were driven by them out of their own city. The citizens of Apollonia on the Euxine, after the introduction of a fresh body of colonists, had a revolution; the Syracusans, after the expulsion of their tyrants, having admitted strangers and mercenaries to the rights of citizenship, quarrelled and came to blows; the people of Amphipolis, having received Chalcidian colonists, were nearly all expelled by them.

Now, in oligarchies the masses make revolution under the idea that they are unjustly treated, because, as I said before, they are equals, and have not an equal share, and in democracies the notables

revolt, because they are not equals, and yet have only an equal share.

Again, the situation of cities is a cause of revolution when the country is not naturally adapted to preserve the unity of the state. For example, the Chytians at Clazomenae did not agree with the people of the island; and the people of Colophon quarrelled with the Notians; at Athens too, the inhabitants of the Piraeus are more democratic than those who live in the city. For just as in war the impediment of a ditch, though ever so small, may break a regiment, so every cause of difference, however slight, makes a breach in a city. The greatest opposition is confessedly that of virtue and vice; next comes that of wealth and poverty; and there are other antagonistic elements, greater or less, of which one is this difference of place.

Part IV

In revolutions the occasions may be trifling, but great interests are at stake. Even trifles are most important when they concern the rulers, as was the case of old at Syracuse; for the Syracusan constitution was once changed by a love-quarrel of two young men, who were in the government. The story is that while one of them was away from home his beloved was gained over by his companion, and he to revenge himself seduced the other's wife. They then drew the members of the ruling class into their quarrel and so split all the people into portions. We learn from this story that we should be on our guard against the beginnings of such evils, and should put an end to the quarrels of chiefs and mighty men. The mistake lies in the beginning—as the proverb says—"Well begun is half done"; so an error at the beginning, though quite small, bears the same ratio to the errors in the other parts. In general, when the notables quarrel, the whole city is involved, as happened in Hesdaea after the Persian War. The occasion was the division of an inheritance; one of two brothers refused to give an account of their father's property and the treasure which he had found: so the poorer of the two quarrelled with him and enlisted in his cause the popular party, the other, who was very rich, the wealthy classes.

At Delphi, again, a quarrel about a marriage was the beginning of all the troubles which followed. In this case the bridegroom, fancying some occurrence to be of evil omen, came to the bride, and went away without taking her. Whereupon her relations, thinking that they were insulted by him, put some of the sacred treasure among his offerings while he was sacrificing, and then slew him, pretending that he had been robbing the temple. At Mytilene, too, a dispute about heiresses was the beginning of many misfortunes, and led to the war with the Athenians in which Paches took their city. A wealthy citizen, named

Timophanes, left two daughters; Dexander, another citizen, wanted to obtain them for his sons; but he was rejected in his suit, whereupon he stirred up a revolution, and instigated the Athenians (of whom he was proxenus) to interfere. A similar quarrel about an heiress arose at Phocis between Mnaseas the father of Mnason, and Euthykrates the father of Onomarchus; this was the beginning of the Sacred War. A marriage-quarrel was also the cause of a change in the government of Epidamnus. A certain man betrothed his daughter to a person whose father, having been made a magistrate, fined the father of the girl, and the latter, stung by the insult, conspired with the unenfranchised classes to overthrow the state.

Governments also change into oligarchy or into democracy or into a constitutional government because the magistrates, or some other section of the state, increase in power or renown. Thus at Athens the reputation gained by the court of the Areopagus, in the Persian War, seemed to tighten the reins of government. On the other hand, the victory of Salamis, which was gained by the common people who served in the fleet, and won for the Athenians the empire due to command of the sea, strengthened the democracy. At Argos, the notables, having distinguished themselves against the Lacedaemonians in the battle of Mantinea, attempted to put down the democracy. At Syracuse, the people, having been the chief authors of the victory in the war with the Athenians, changed the constitutional government into democracy. At Chalcis, the people, uniting with the notables, killed Phoxus the tyrant, and then seized the government. At Ambracia, the people, in like manner, having joined with the conspirators in expelling the tyrant Periander, transferred the government to themselves. And generally it should be remembered that those who have secured power to the state, whether private citizens, or magistrates, or tribes, or any other part or section of the state, are apt to cause revolutions. For either envy of their greatness draws others into rebellion, or they themselves, in their pride of

superiority, are unwilling to remain on a level with others.

Revolutions also break out when opposite parties, e.g., the rich and the people, are equally balanced, and there is little or no middle class; for, if either party were manifestly superior, the other would not risk an attack upon them. And, for this reason, those who are eminent in virtue usually do not stir up insurrections, always being a minority. Such are the beginnings and causes of the disturbances and revolutions to which every form of government is liable.

Revolutions are effected in two ways, by force and by fraud. Force may be applied either at the time of making the revolution or afterwards. Fraud, again, is of two kinds; for (1) sometimes the citizens are deceived into acquiescing in a change of government, and afterwards they are held in subjection against their will. This was what happened in the case of the Four Hundred, who deceived the people by telling them that the king would provide money for the war against the Lacedaemonians, and, having cheated the people, still endeavored to retain the government. (2) In other cases the people are persuaded at first, and afterwards, by a repetition of the persuasion, their goodwill and allegiance are retained. The revolutions which effect constitutions generally spring from the above-mentioned causes.

Part V

And now, taking each constitution separately, we must see what follows from the principles already laid down.

Revolutions in democracies are generally caused by the intemperance of demagogues, who either in their private capacity lay information against rich men until they compel them to combine (for a common danger unites even the bitterest enemies), or coming forward in public stir up the people against them. The truth of this remark is proved by a variety of examples. At Cos the democracy was overthrown because wicked demagogues arose, and the notables combined. At Rhodes the demagogues not only provided pay for the multitude, but prevented them from making good to the trierarchs the sums which had been expended by them; and they, in consequence of the suits which were brought against them, were compelled to combine and put down the democracy. The democracy at Heraclea was overthrown shortly after the foundation of the colony by the injustice of the demagogues, which drove out the notables, who came back in a body and put an end to the democracy. Much in the same manner the democracy at Megara was overturned; there the demagogues drove out many of the notables in order that they might be able to confiscate their property. At length the exiles, becoming numerous, returned, and, engaging and defeating the people, established the oligarchy. The same thing happened with the democracy of Cyme, which was overthrown by Thrasymachus. And we may observe that in most states the changes have been of this character. For sometimes the demagogues, in order to curry favor with the people, wrong the notables and so force them to combine; either they make a division of their property, or diminish their incomes by the imposition of public services, and sometimes they bring accusations against the rich that they may have their wealth to

confiscate.

Of old, the demagogue was also a general, and then democracies changed into tyrannies. Most of the ancient tyrants were originally demagogues. They are not so now, but they were then; and the reason is that they were generals and not orators, for oratory had not yet come into fashion. Whereas in our day, when the art of rhetoric has made such progress, the orators lead the people, but their ignorance of military matters prevents them from usurping power; at any rate instances to the contrary are few and slight. Tyrannies were more common formerly than now, for this reason also, that great power was placed in the hands of individuals; thus a tyranny arose at Miletus out of the office of the Prytanis, who had supreme authority in many important matters. Moreover, in those days, when cities were not large, the people dwelt in the fields, busy at their work; and their chiefs, if they possessed any military talent, seized the opportunity, and winning the confidence of the masses by professing their hatred of the wealthy, they succeeded in obtaining the tyranny. Thus at Athens Peisistratus led a faction against the men of the plain, and Theagenes at Megara slaughtered the cattle of the wealthy, which he found by the river side, where they had put them to graze in land not their own. Dionysius, again, was thought worthy of the tyranny because he denounced Daphnaeus and the rich; his enmity to the notables won for him the confidence of the people. Changes also take place from the ancient to the latest form of democracy; for where there is a popular election of the magistrates and no property qualification, the aspirants for office get hold of the people, and contrive at last even to set them above the laws. A more or less complete cure for this state of things is for the separate tribes, and not the whole people, to elect the magistrates.

These are the principal causes of revolutions in democracies.

Part VI

There are two patent causes of revolutions in oligarchies: (1) First, when the oligarchs oppress the people, for then anybody is good enough to be their champion, especially if he be himself a member of the oligarchy, as Lygdamis at Naxos, who afterwards came to be tyrant. But revolutions which commence outside the governing class may be further subdivided. Sometimes, when the government is very exclusive, the revolution is brought about by persons of the wealthy class who are excluded, as happened at Massalia and Istros and Heraclea, and other cities. Those who had no share in the government created a disturbance, until first the elder brothers, and then the younger, were admitted; for in some places father and son, in others elder and younger brothers, do not hold office together. At Massalia the oligarchy became more like a constitutional government, but at Istros ended in a democracy, and at Heraclea was enlarged to 600. At Cnidos, again, the oligarchy underwent a considerable change. For the notables fell out among themselves, because only a few shared in the government; there existed among them the rule already mentioned, that father and son could not hold office together, and, if there were several brothers, only the eldest was admitted. The people took advantage of the quarrel, and choosing one of the notables to be their leader, attacked and conquered the oligarchs, who were divided, and division is always a source of weakness. The city of Erythrae, too, in old times was ruled, and ruled well, by the Basilidae, but the people took offense at the narrowness of the oligarchy and changed the constitution.

(2) Of internal causes of revolutions in oligarchies one is the personal rivalry of the oligarchs, which leads them to play the demagogue. Now, the oligarchical demagogue is of two sorts: either (a) he practices upon the oligarchs themselves (for, although the

oligarchy are quite a small number, there may be a demagogue among them, as at Athens Charicles' party won power by courting the Thirty, that of Phrynichus by courting the Four Hundred); or (b) the oligarchs may play the demagogue with the people. This was the case at Larissa, where the guardians of the citizens endeavored to gain over the people because they were elected by them; and such is the fate of all oligarchies in which the magistrates are elected, as at Abydos, not by the class to which they belong, but by the heavy-armed or by the people, although they may be required to have a high qualification, or to be members of a political club; or, again, where the law-courts are composed of persons outside the government, the oligarchs flatter the people in order to obtain a decision in their own favor, and so they change the constitution; this happened at Heraclea in Pontus. Again, oligarchies change whenever any attempt is made to narrow them; for then those who desire equal rights are compelled to call in the people. Changes in the oligarchy also occur when the oligarchs waste their private property by extravagant living; for then they want to innovate, and either try to make themselves tyrants, or install someone else in the tyranny, as Hipparinus did Dionysius at Syracuse, and as at Amphipolis a man named Cleotimus introduced Chalcidian colonists, and when they arrived, stirred them up against the rich. For a like reason in Aegina the person who carried on the negotiation with Chares endeavored to revolutionize the state. Sometimes a party among the oligarchs try directly to create a political change; sometimes they rob the treasury, and then either the thieves or, as happened at Apollonia in Pontus, those who resist them in their thieving quarrel with the rulers. But an oligarchy which is at unity with itself is not easily destroyed from within; of this we may see an example at Pharsalus, for there, although the rulers are few in number, they govern a large city, because they have a good understanding among themselves.

Oligarchies, again, are overthrown when another oligarchy is

created within the original one, that is to say, when the whole governing body is small and yet they do not all share in the highest offices. Thus at Elis the governing body was a small senate; and very few ever found their way into it, because the senators were only ninety in number, and were elected for life and out of certain families in a manner similar to the Lacedaemonian elders. Oligarchy is liable to revolutions alike in war and in peace; in war because, not being able to trust the people, the oligarchs are compelled to hire mercenaries, and the general who is in command of them often ends in becoming a tyrant, as Timophanes did at Corinth; or if there are more generals than one they make themselves into a company of tyrants. Sometimes the oligarchs, fearing this danger, give the people a share in the government because their services are necessary to them. And in time of peace, from mutual distrust, the two parties hand over the defense of the state to the army and to an arbiter between the two factions, who often ends the master of both. This happened at Larissa when Simos the Aleuad had the government, and at Abydos in the days of Iphiades and the political clubs. Revolutions also arise out of marriages or lawsuits which lead to the overthrow of one party among the oligarchs by another. Of quarrels about marriages I have already mentioned some instances; another occurred at Eretria, where Diagoras overturned the oligarchy of the knights because he had been wronged about a marriage. A revolution at Heraclea, and another at Thebes, both arose out of decisions of law-courts upon a charge of adultery; in both cases the punishment was just, but executed in the spirit of party, at Heraclea upon Eurytion, and at Thebes upon Archias; for their enemies were jealous of them and so had them pilloried in the agora. Many oligarchies have been destroyed by some members of the ruling class taking offense at their excessive despotism; for example, the oligarchy at Cnidus and at Chios.

Changes of constitutional governments, and also of oligarchies

which limit the office of counselor, judge, or other magistrate to persons having a certain money qualification, often occur by accident. The qualification may have been originally fixed according to the circumstances of the time, in such a manner as to include in an oligarchy a few only, or in a constitutional government the middle class. But after a time of prosperity, whether arising from peace or some other good fortune, the same property becomes many times as valuable, and then everybody participates in every office; this happens sometimes gradually and insensibly, and sometimes quickly. These are the causes of changes and revolutions in oligarchies.

We must remark generally both of democracies and oligarchies, that they sometimes change, not into the opposite forms of government, but only into another variety of the same class; I mean to say, from those forms of democracy and oligarchy which are regulated by law into those which are arbitrary, and conversely.

Part VII

In aristocracies revolutions are stirred up when a few only share in the honors of the state; a cause which has been already shown to affect oligarchies; for an aristocracy is a sort of oligarchy, and, like an oligarchy, is the government of a few, although few not for the same reason; hence the two are often confounded. And revolutions will be most likely to happen, and must happen, when the mass of the people are of the high-spirited kind, and have a notion that they are as good as their rulers. Thus at Lacedaemon the so-called Partheniae, who were the [illegitimate] sons of the Spartan peers, attempted a revolution, and, being detected, were sent away to colonize Tarentum. Again, revolutions occur when great men who are at least of equal merit are dishonored by those higher in office, as Lysander was by the kings of Sparta; or, when a brave man is excluded from the honors of the state, like Cinadon, who conspired against the Spartans in the reign of Agesilaus; or, again, when some are very poor and others very rich, a state of society which is most often the result of war, as at Lacedaemon in the days of the Messenian War; this is proved from the poem of Tyrtaeus, entitled "Good Order"; for he speaks of certain citizens who were ruined by the war and wanted to have a redistribution of the land. Again, revolutions arise when an individual who is great, and might be greater, wants to rule alone, as, at Lacedaemon, Pausanias, who was general in the Persian War, or like Hanno at Carthage.

Constitutional governments and aristocracies are commonly overthrown owing to some deviation from justice in the constitution itself; the cause of the downfall is, in the former, the ill-mingling of the two elements, democracy and oligarchy; in the latter, of the three elements, democracy, oligarchy, and virtue, but especially democracy and oligarchy. For to combine these is the endeavor of constitutional

governments; and most of the so-called aristocracies have a like aim, but differ from polities in the mode of combination; hence some of them are more and some less permanent. Those which incline more to oligarchy are called aristocracies, and those which incline to democracy constitutional governments. And therefore the latter are the safer of the two; for the greater the number, the greater the strength, and when men are equal they are contented. But the rich, if the constitution gives them power, are apt to be insolent and avaricious; and, in general, whichever way the constitution inclines, in that direction it changes as either party gains strength, a constitutional government becoming a democracy, an aristocracy an oligarchy. But the process may be reversed, and aristocracy may change into democracy. This happens when the poor, under the idea that they are being wronged, force the constitution to take an opposite form. In like manner constitutional governments change into oligarchies. The only stable principle of government is equality according to proportion, and for every man to enjoy his own.

What I have just mentioned actually happened at Thurii, where the qualification for office, at first high, was therefore reduced, and the magistrates increased in number. The notables had previously acquired the whole of the land contrary to law; for the government tended to oligarchy, and they were able to encroach.... But the people, who had been trained by war, soon got the better of the guards kept by the oligarchs, until those who had too much gave up their land.

Again, since all aristocratical governments incline to oligarchy, the notables are apt to be grasping; thus at Lacedaemon, where property tends to pass into few hands, the notables can do too much as they like, and are allowed to marry whom they please. The city of Locri was ruined by a marriage connection with Dionysius, but such a thing could never have happened in a democracy, or in a well-balanced aristocracy.

I have already remarked that in all states revolutions are occasioned by trifles. In aristocracies, above all, they are of a gradual and imperceptible nature. The citizens begin by giving up some part of the constitution, and so with greater ease the government change something else which is a little more important, until they have undermined the whole fabric of the state. At Thurii there was a law that generals should only be reelected after an interval of five years, and some young men who were popular with the soldiers of the guard for their military prowess, despising the magistrates and thinking that they would easily gain their purpose, wanted to abolish this law and allow their generals to hold perpetual commands; for they well knew that the people would be glad enough to elect them. Whereupon the magistrates who had charge of these matters, and who are called councillors, at first determined to resist, but they afterwards consented, thinking that, if only this one law was changed, no further inroad would be made on the constitution. But other changes soon followed which they in vain attempted to oppose; and the state passed into the hands of the revolutionists, who established a dynastic oligarchy.

All constitutions are overthrown either from within or from without; the latter, when there is some government close at hand having an opposite interest, or at a distance, but powerful. This was exemplified in the old times of the Athenians and the Lacedaemonians; the Athenians everywhere put down the oligarchies, and the Lacedaemonians the democracies.

I have now explained what are the chief causes of revolutions and dissensions in states.

Part VIII

We have next to consider what means there are of preserving constitutions in general, and in particular cases. In the first place it is evident that if we know the causes which destroy constitutions, we also know the causes which preserve them; for opposites produce opposites, and destruction is the opposite of preservation.

In all well-tempered governments there is nothing which should be more jealously maintained than the spirit of obedience to law, more especially in small matters; for transgression creeps in unperceived and at last ruins the state, just as the constant recurrence of small expenses in time eats up a fortune. The expense does not take place at once, and therefore is not observed; the mind is deceived, as in the fallacy which says that “if each part is little, then the whole is little.” this is true in one way, but not in another, for the whole and the all are not little, although they are made up of littles.

In the first place, then, men should guard against the beginning of change, and in the second place they should not rely upon the political devices of which I have already spoken invented only to deceive the people, for they are proved by experience to be useless. Further, we note that oligarchies as well as aristocracies may last, not from any inherent stability in such forms of government, but because the rulers are on good terms both with the unenfranchised and with the governing classes, not maltreating any who are excluded from the government, but introducing into it the leading spirits among them. They should never wrong the ambitious in a matter of honor, or the common people in a matter of money; and they should treat one another and their fellow citizen in a spirit of equality. The equality which the friends of democracy seek to establish for the multitude is not only just but likewise expedient among equals. Hence, if the

governing class are numerous, many democratic institutions are useful; for example, the restriction of the tenure of offices to six months, that all those who are of equal rank may share in them. Indeed, equals or peers when they are numerous become a kind of democracy, and therefore demagogues are very likely to arise among them, as I have already remarked. The short tenure of office prevents oligarchies and aristocracies from falling into the hands of families; it is not easy for a person to do any great harm when his tenure of office is short, whereas long possession begets tyranny in oligarchies and democracies. For the aspirants to tyranny are either the principal men of the state, who in democracies are demagogues and in oligarchies members of ruling houses, or those who hold great offices, and have a long tenure of them.

Constitutions are preserved when their destroyers are at a distance, and sometimes also because they are near, for the fear of them makes the government keep in hand the constitution. Wherefore the ruler who has a care of the constitution should invent terrors, and bring distant dangers near, in order that the citizens may be on their guard, and, like sentinels in a night watch, never relax their attention. He should endeavor too by help of the laws to control the contentions and quarrels of the notables, and to prevent those who have not hitherto taken part in them from catching the spirit of contention. No ordinary man can discern the beginning of evil, but only the true statesman.

As to the change produced in oligarchies and constitutional governments by the alteration of the qualification, when this arises, not out of any variation in the qualification but only out of the increase of money, it is well to compare the general valuation of property with that of past years, annually in those cities in which the census is taken annually and in larger cities every third or fifth year. If the whole is many times greater or many times less than when the

ratings recognized by the constitution were fixed, there should be power given by law to raise or lower the qualification as the amount is greater or less. Where this is not done a constitutional government passes into an oligarchy, and an oligarchy is narrowed to a rule of families; or in the opposite case constitutional government becomes democracy, and oligarchy either constitutional government or democracy.

It is a principle common to democracy, oligarchy, and every other form of government not to allow the disproportionate increase of any citizen but to give moderate honor for a long time rather than great honor for a short time. For men are easily spoiled; not every one can bear prosperity. But if this rule is not observed, at any rate the honors which are given all at once should be taken away by degrees and not all at once. Especially should the laws provide against anyone having too much power, whether derived from friends or money; if he has, he should be sent clean out of the country. And since innovations creep in through the private life of individuals also, there ought to be a magistracy which will have an eye to those whose life is not in harmony with the government, whether oligarchy or democracy or any other. And for a like reason an increase of prosperity in any part of the state should be carefully watched. The proper remedy for this evil is always to give the management of affairs and offices of state to opposite elements; such opposites are the virtuous and the many, or the rich and the poor. Another way is to combine the poor and the rich in one body, or to increase the middle class: thus an end will be put to the revolutions which arise from inequality.

But above all every state should be so administered and so regulated by law that its magistrates cannot possibly make money. In oligarchies special precautions should be used against this evil. For the people do not take any great offense at being kept out of the government—indeed they are rather pleased than otherwise at having

leisure for their private business—but what irritates them is to think that their rulers are stealing the public money; then they are doubly annoyed; for they lose both honor and profit. If office brought no profit, then and then only could democracy and aristocracy be combined; for both notables and people might have their wishes gratified. All would be able to hold office, which is the aim of democracy, and the notables would be magistrates, which is the aim of aristocracy. And this result may be accomplished when there is no possibility of making money out of the offices; for the poor will not want to have them when there is nothing to be gained from them—they would rather be attending to their own concerns; and the rich, who do not want money from the public treasury, will be able to take them; and so the poor will keep to their work and grow rich, and the notables will not be governed by the lower class. In order to avoid speculation of the public money, the transfer of the revenue should be made at a general assembly of the citizens, and duplicates of the accounts deposited with the different brotherhoods, companies, and tribes. And honors should be given by law to magistrates who have the reputation of being incorruptible. In democracies the rich should be spared; not only should their property not be divided, but their incomes also, which in some states are taken from them imperceptibly, should be protected. It is a good thing to prevent the wealthy citizens, even if they are willing from undertaking expensive and useless public services, such as the giving of choruses, torch-races, and the like. In an oligarchy, on the other hand, great care should be taken of the poor, and lucrative offices should go to them; if any of the wealthy classes insult them, the offender should be punished more severely than if he had wronged one of his own class. Provision should be made that estates pass by inheritance and not by gift, and no person should have more than one inheritance; for in this way properties will be equalized, and more of the poor rise to competency. It is also expedient both in a democracy and in an oligarchy to assign to those who have less share in the government (i.e., to the rich in a

democracy and to the poor in an oligarchy) an equality or preference in all but the principal offices of state. The latter should be entrusted chiefly or only to members of the governing class.

Part IX

There are three qualifications required in those who have to fill the highest offices—(1) first of all, loyalty to the established constitution; (2) the greatest administrative capacity; (3) virtue and justice of the kind proper to each form of government; for, if what is just is not the same in all governments, the quality of justice must also differ. There may be a doubt, however, when all these qualities do not meet in the same person, how the selection is to be made; suppose, for example, a good general is a bad man and not a friend to the constitution, and another man is loyal and just, which should we choose? In making the election ought we not to consider two points? what qualities are common, and what are rare. Thus in the choice of a general, we should regard his skill rather than his virtue; for few have military skill, but many have virtue. In any office of trust or stewardship, on the other hand, the opposite rule should be observed; for more virtue than ordinary is required in the holder of such an office, but the necessary knowledge is of a sort which all men possess.

It may, however, be asked what a man wants with virtue if he have political ability and is loyal, since these two qualities alone will make him do what is for the public interest. But may not men have both of them and yet be deficient in self-control? If, knowing and loving their own interests, they do not always attend to them, may they not be equally negligent of the interests of the public?

Speaking generally, we may say that whatever legal enactments are held to be for the interest of various constitutions, all these preserve them. And the great preserving principle is the one which has been repeatedly mentioned—to have a care that the loyal citizen should be stronger than the disloyal. Neither should we forget the mean, which at the present day is lost sight of in perverted forms of

government; for many practices which appear to be democratical are the ruin of democracies, and many which appear to be oligarchical are the ruin of oligarchies. Those who think that all virtue is to be found in their own party principles push matters to extremes; they do not consider that disproportion destroys a state. A nose which varies from the ideal of straightness to a hook or snub may still be of good shape and agreeable to the eye; but if the excess be very great, all symmetry is lost, and the nose at last ceases to be a nose at all on account of some excess in one direction or defect in the other; and this is true of every other part of the human body. The same law of proportion equally holds in states. Oligarchy or democracy, although a departure from the most perfect form, may yet be a good enough government, but if anyone attempts to push the principles of either to an extreme, he will begin by spoiling the government and end by having none at all. Wherefore the legislator and the statesman ought to know what democratical measures save and what destroy a democracy, and what oligarchical measures save or destroy an oligarchy. For neither the one nor the other can exist or continue to exist unless both rich and poor are included in it. If equality of property is introduced, the state must of necessity take another form; for when by laws carried to excess one or other element in the state is ruined, the constitution is ruined.

There is an error common both to oligarchies and to democracies: in the latter the demagogues, when the multitude are above the law, are always cutting the city in two by quarrels with the rich, whereas they should always profess to be maintaining their cause; just as in oligarchies the oligarchs should profess to maintaining the cause of the people, and should take oaths the opposite of those which they now take. For there are cities in which they swear—"I will be an enemy to the people, and will devise all the harm against them which I can"; but they ought to exhibit and to entertain the very opposite feeling; in the form of their oath there should be an express

declaration—"I will do no wrong to the people."

But of all the things which I have mentioned that which most contributes to the permanence of constitutions is the adaptation of education to the form of government, and yet in our own day this principle is universally neglected. The best laws, though sanctioned by every citizen of the state, will be of no avail unless the young are trained by habit and education in the spirit of the constitution, if the laws are democratical, democratically or oligarchically, if the laws are oligarchical. For there may be a want of self-discipline in states as well as in individuals. Now, to have been educated in the spirit of the constitution is not to perform the actions in which oligarchs or democrats delight, but those by which the existence of an oligarchy or of a democracy is made possible. Whereas among ourselves the sons of the ruling class in an oligarchy live in luxury, but the sons of the poor are hardened by exercise and toil, and hence they are both more inclined and better able to make a revolution. And in democracies of the more extreme type there has arisen a false idea of freedom which is contradictory to the true interests of the state.

For two principles are characteristic of democracy, the government of the majority and freedom. Men think that what is just is equal; and that equality is the supremacy of the popular will; and that freedom means the doing what a man likes. In such democracies every one lives as he pleases, or in the words of Euripides, "according to his fancy." But this is all wrong; men should not think it slavery to live according to the rule of the constitution; for it is their salvation.

I have now discussed generally the causes of the revolution and destruction of states, and the means of their preservation and continuance.

Part X

I have still to speak of monarchy, and the causes of its destruction and preservation. What I have said already respecting forms of constitutional government applies almost equally to royal and to tyrannical rule. For royal rule is of the nature of an aristocracy, and a tyranny is a compound of oligarchy and democracy in their most extreme forms; it is therefore most injurious to its subjects, being made up of two evil forms of government, and having the perversions and errors of both. These two forms of monarchy are contrary in their very origin. The appointment of a king is the resource of the better classes against the people, and he is elected by them out of their own number, because either he himself or his family excel in virtue and virtuous actions; whereas a tyrant is chosen from the people to be their protector against the notables, and in order to prevent them from being injured. History shows that almost all tyrants have been demagogues who gained the favor of the people by their accusation of the notables. At any rate this was the manner in which the tyrannies arose in the days when cities had increased in power. Others which were older originated in the ambition of kings wanting to overstep the limits of their hereditary power and become despots. Others again grew out of the class which were chosen to be chief magistrates; for in ancient times the people who elected them gave the magistrates, whether civil or religious, a long tenure. Others arose out of the custom which oligarchies had of making some individual supreme over the highest offices. In any of these ways an ambitious man had no difficulty, if he desired, in creating a tyranny, since he had the power in his hands already, either as king or as one of the officers of state. Thus Pheidon at Argos and several others were originally kings, and ended by becoming tyrants; Phalaris, on the other hand, and the Ionian tyrants, acquired the tyranny by holding great offices. Whereas Panaetius at Leontini, Cypselus at Corinth, Peisistratus at Athens,

Dionysius at Syracuse, and several others who afterwards became tyrants, were at first demagogues.

And so, as I was saying, royalty ranks with aristocracy, for it is based upon merit, whether of the individual or of his family, or on benefits conferred, or on these claims with power added to them. For all who have obtained this honor have benefited, or had in their power to benefit, states and nations; some, like Codrus, have prevented the state from being enslaved in war; others, like Cyrus, have given their country freedom, or have settled or gained a territory, like the Lacedaemonian, Macedonian, and Molossian kings. The idea of a king is to be a protector of the rich against unjust treatment, of the people against insult and oppression. Whereas a tyrant, as has often been repeated, has no regard to any public interest, except as conducive to his private ends; his aim is pleasure, the aim of a king, honor. Wherefore also in their desires they differ; the tyrant is desirous of riches, the king, of what brings honor. And the guards of a king are citizens, but of a tyrant mercenaries.

That tyranny has all the vices both of democracy and oligarchy is evident. As of oligarchy so of tyranny, the end is wealth; (for by wealth only can the tyrant maintain either his guard or his luxury). Both mistrust the people, and therefore deprive them of their arms. Both agree too in injuring the people and driving them out of the city and dispersing them. From democracy tyrants have borrowed the art of making war upon the notables and destroying them secretly or openly, or of exiling them because they are rivals and stand in the way of their power; and also because plots against them are contrived by men of this class, who either want to rule or to escape subjection. Hence Periander advised Thrasybulus by cutting off the tops of the tallest ears of corn, meaning that he must always put out of the way the citizens who overtop the rest. And so, as I have already intimated, the beginnings of change are the same in monarchies as in forms of

constitutional government; subjects attack their sovereigns out of fear or contempt, or because they have been unjustly treated by them. And of injustice, the most common form is insult, another is confiscation of property.

The ends sought by conspiracies against monarchies, whether tyrannies or royalties, are the same as the ends sought by conspiracies against other forms of government. Monarchs have great wealth and honor, which are objects of desire to all mankind. The attacks are made sometimes against their lives, sometimes against the office; where the sense of insult is the motive, against their lives. Any sort of insult (and there are many) may stir up anger, and when men are angry, they commonly act out of revenge, and not from ambition. For example, the attempt made upon the Peisistratidae arose out of the public dishonor offered to the sister of Harmodius and the insult to himself. He attacked the tyrant for his sister's sake, and Aristogeiton joined in the attack for the sake of Harmodius. A conspiracy was also formed against Periander, the tyrant of Ambracia, because, when drinking with a favorite youth, he asked him whether by this time he was not with child by him. Philip, too, was attacked by Pausanias because he permitted him to be insulted by Attalus and his friends, and Amyntas the little, by Derdas, because he boasted of having enjoyed his youth. Evagoras of Cyprus, again, was slain by the eunuch to revenge an insult; for his wife had been carried off by Evagoras's son. Many conspiracies have originated in shameful attempts made by sovereigns on the persons of their subjects. Such was the attack of Crataeas upon Archelaus; he had always hated the connection with him, and so, when Archelaus, having promised him one of his two daughters in marriage, did not give him either of them, but broke his word and married the elder to the king of Elymeia, when he was hard pressed in a war against Sirrhas and Arrhabaeus, and the younger to his own son Amyntas, under the idea that Amyntas would then be less likely to quarrel with his son by Cleopatra—Crataeas made this slight

a pretext for attacking Archelaus, though even a less reason would have sufficed, for the real cause of the estrangement was the disgust which he felt at his connection with the king. And from a like motive Hellonocrates of Larissa conspired with him; for when Archelaus, who was his lover, did not fulfill his promise of restoring him to his country, he thought that the connection between them had originated, not in affection, but in the wantonness of power. Pytho, too, and Heracleides of Aenos, slew Cotys in order to avenge their father, and Adamas revolted from Cotys in revenge for the wanton outrage which he had committed in mutilating him when a child.

Many, too, irritated at blows inflicted on the person which they deemed an insult, have either killed or attempted to kill officers of state and royal princes by whom they have been injured. Thus, at Mytilene, Megacles and his friends attacked and slew the Pentilidae, as they were going about and striking people with clubs. At a later date Smerdis, who had been beaten and torn away from his wife by Penthilus, slew him. In the conspiracy against Archelaus, Decamnichus stimulated the fury of the assassins and led the attack; he was enraged because Archelaus had delivered him to Euripides to be scourged; for the poet had been irritated at some remark made by Decamnichus on the foulness of his breath. Many other examples might be cited of murders and conspiracies which have arisen from similar causes.

Fear is another motive which, as we have said, has caused conspiracies as well in monarchies as in more popular forms of government. Thus Artapanes conspired against Xerxes and slew him, fearing that he would be accused of hanging Darius against his orders—he having been under the impression that Xerxes would forget what he had said in the middle of a meal, and that the offense would be forgiven.

Another motive is contempt, as in the case of Sardanapalus, whom someone saw carding wool with his women, if the storytellers

say truly; and the tale may be true, if not of him, of someone else. Dion attacked the younger Dionysius because he despised him, and saw that he was equally despised by his own subjects, and that he was always drunk. Even the friends of a tyrant will sometimes attack him out of contempt; for the confidence which he reposes in them breeds contempt, and they think that they will not be found out. The expectation of success is likewise a sort of contempt; the assailants are ready to strike, and think nothing of the danger, because they seem to have the power in their hands. Thus generals of armies attack monarchs; as, for example, Cyrus attacked Astyages, despising the effeminacy of his life, and believing that his power was worn out. Thus again, Seuthes the Thracian conspired against Amadocus, whose general he was.

And sometimes men are actuated by more than one motive, like Mithridates, who conspired against Ariobarzanes, partly out of contempt and partly from the love of gain.

Bold natures, placed by their sovereigns in a high military position, are most likely to make the attempt in the expectation of success; for courage is emboldened by power, and the union of the two inspires them with the hope of an easy victory.

Attempts of which the motive is ambition arise in a different way as well as in those already mentioned. There are men who will not risk their lives in the hope of gains and honors however great, but who nevertheless regard the killing of a tyrant simply as an extraordinary action which will make them famous and honorable in the world; they wish to acquire, not a kingdom, but a name. It is rare, however, to find such men; he who would kill a tyrant must be prepared to lose his life if he fail. He must have the resolution of Dion, who, when he made war upon Dionysius, took with him very few troops, saying "that whatever measure of success he might attain would be enough for him, even if he were to die the moment he

landed; such a death would be welcome to him.” this is a temper to which few can attain.

Once more, tyrannies, like all other governments, are destroyed from without by some opposite and more powerful form of government. That such a government will have the will to attack them is clear; for the two are opposed in principle; and all men, if they can, do what they will. Democracy is antagonistic to tyranny, on the principle of Hesiod, “Potter hates Potter,” because they are nearly akin, for the extreme form of democracy is tyranny; and royalty and aristocracy are both alike opposed to tyranny, because they are constitutions of a different type. And therefore the Lacedaemonians put down most of the tyrannies, and so did the Syracusans during the time when they were well governed.

Again, tyrannies are destroyed from within, when the reigning family are divided among themselves, as that of Gelo was, and more recently that of Dionysius; in the case of Gelo because Thrasybulus, the brother of Hiero, flattered the son of Gelo and led him into excesses in order that he might rule in his name. Whereupon the family got together a party to get rid of Thrasybulus and save the tyranny; but those of the people who conspired with them seized the opportunity and drove them all out. In the case of Dionysius, Dion, his own relative, attacked and expelled him with the assistance of the people; he afterwards perished himself.

There are two chief motives which induce men to attack tyrannies—hatred and contempt. Hatred of tyrants is inevitable, and contempt is also a frequent cause of their destruction. Thus we see that most of those who have acquired, have retained their power, but those who have inherited, have lost it, almost at once; for, living in luxurious ease, they have become contemptible, and offer many opportunities to their assailants. Anger, too, must be included under hatred, and produces the same effects. It is often times even more ready to strike

—the angry are more impetuous in making an attack, for they do not follow rational principle. And men are very apt to give way to their passions when they are insulted. To this cause is to be attributed the fall of the Peisistratidae and of many others. Hatred is more reasonable, for anger is accompanied by pain, which is an impediment to reason, whereas hatred is painless.

In a word, all the causes which I have mentioned as destroying the last and most unmixed form of oligarchy, and the extreme form of democracy, may be assumed to affect tyranny; indeed the extreme forms of both are only tyrannies distributed among several persons. Kingly rule is little affected by external causes, and is therefore lasting; it is generally destroyed from within. And there are two ways in which the destruction may come about; (1) when the members of the royal family quarrel among themselves, and (2) when the kings attempt to administer the state too much after the fashion of a tyranny, and to extend their authority contrary to the law. Royalties do not now come into existence; where such forms of government arise, they are rather monarchies or tyrannies. For the rule of a king is over voluntary subjects, and he is supreme in all important matters; but in our own day men are more upon an equality, and no one is so immeasurably superior to others as to represent adequately the greatness and dignity of the office. Hence mankind will not, if they can help, endure it, and anyone who obtains power by force or fraud is at once thought to be a tyrant. In hereditary monarchies a further cause of destruction is the fact that kings often fall into contempt, and, although possessing not tyrannical power, but only royal dignity, are apt to outrage others. Their overthrow is then readily effected; for there is an end to the king when his subjects do not want to have him, but the tyrant lasts, whether they like him or not.

The destruction of monarchies is to be attributed to these and the like causes.

Part XI

And they are preserved, to speak generally, by the opposite causes; or, if we consider them separately, (1) royalty is preserved by the limitation of its powers. The more restricted the functions of kings, the longer their power will last unimpaired; for then they are more moderate and not so despotic in their ways; and they are less envied by their subjects. This is the reason why the kingly office has lasted so long among the Molossians. And for a similar reason it has continued among the Lacedaemonians, because there it was always divided between two, and afterwards further limited by Theopompus in various respects, more particularly by the establishment of the Ephoralty. He diminished the power of the kings, but established on a more lasting basis the kingly office, which was thus made in a certain sense not less, but greater. There is a story that when his wife once asked him whether he was not ashamed to leave to his sons a royal power which was less than he had inherited from his father, "No indeed," he replied, "for the power which I leave to them will be more lasting."

As to (2) tyrannies, they are preserved in two most opposite ways. One of them is the old traditional method in which most tyrants administer their government. Of such arts Periander of Corinth is said to have been the great master, and many similar devices may be gathered from the Persians in the administration of their government. There are firstly the prescriptions mentioned some distance back, for the preservation of a tyranny, in so far as this is possible; viz., that the tyrant should lop off those who are too high; he must put to death men of spirit; he must not allow common meals, clubs, education, and the like; he must be upon his guard against anything which is likely to inspire either courage or confidence among his subjects; he must prohibit literary assemblies or other meetings for discussion, and he

must take every means to prevent people from knowing one another (for acquaintance begets mutual confidence). Further, he must compel all persons staying in the city to appear in public and live at his gates; then he will know what they are doing: if they are always kept under, they will learn to be humble. In short, he should practice these and the like Persian and barbaric arts, which all have the same object. A tyrant should also endeavor to know what each of his subjects says or does, and should employ spies, like the “female detectives” at Syracuse, and the eavesdroppers whom Hiero was in the habit of sending to any place of resort or meeting; for the fear of informers prevents people from speaking their minds, and if they do, they are more easily found out. Another art of the tyrant is to sow quarrels among the citizens; friends should be embroiled with friends, the people with the notables, and the rich with one another. Also he should impoverish his subjects; he thus provides against the maintenance of a guard by the citizen and the people, having to keep hard at work, are prevented from conspiring. The Pyramids of Egypt afford an example of this policy; also the offerings of the family of Cypselus, and the building of the temple of Olympian Zeus by the Peisistratidae, and the great Polycratean monuments at Samos; all these works were alike intended to occupy the people and keep them poor. Another practice of tyrants is to multiply taxes, after the manner of Dionysius at Syracuse, who contrived that within five years his subjects should bring into the treasury their whole property. The tyrant is also fond of making war in order that his subjects may have something to do and be always in want of a leader.

And whereas the power of a king is preserved by his friends, the characteristic of a tyrant is to distrust his friends, because he knows that all men want to overthrow him, and they above all have the power.

Again, the evil practices of the last and worst form of democracy

are all found in tyrannies. Such are the power given to women in their families in the hope that they will inform against their husbands, and the license which is allowed to slaves in order that they may betray their masters; for slaves and women do not conspire against tyrants; and they are of course friendly to tyrannies and also to democracies, since under them they have a good time. For the people too would fain be a monarch, and therefore by them, as well as by the tyrant, the flatterer is held in honor; in democracies he is the demagogue; and the tyrant also has those who associate with him in a humble spirit, which is a work of flattery.

Hence tyrants are always fond of bad men, because they love to be flattered, but no man who has the spirit of a freeman in him will lower himself by flattery; good men love others, or at any rate do not flatter them. Moreover, the bad are useful for bad purposes; "nail knocks out nail," as the proverb says. It is characteristic of a tyrant to dislike every one who has dignity or independence; he wants to be alone in his glory, but anyone who claims a like dignity or asserts his independence encroaches upon his prerogative, and is hated by him as an enemy to his power. Another mark of a tyrant is that he likes foreigners better than citizens, and lives with them and invites them to his table; for the one are enemies, but the Others enter into no rivalry with him.

Such are the notes of the tyrant and the arts by which he preserves his power; there is no wickedness too great for him. All that we have said may be summed up under three heads, which answer to the three aims of the tyrant. These are, (1) the humiliation of his subjects; he knows that a mean-spirited man will not conspire against anybody; (2) the creation of mistrust among them; for a tyrant is not overthrown until men begin to have confidence in one another; and this is the reason why tyrants are at war with the good; they are under the idea that their power is endangered by them, not only because

they would not be ruled despotically but also because they are loyal to one another, and to other men, and do not inform against one another or against other men; (3) the tyrant desires that his subjects shall be incapable of action, for no one attempts what is impossible, and they will not attempt to overthrow a tyranny, if they are powerless. Under these three heads the whole policy of a tyrant may be summed up, and to one or other of them all his ideas may be referred: (1) he sows distrust among his subjects; (2) he takes away their power; (3) he humbles them.

This then is one of the two methods by which tyrannies are preserved; and there is another which proceeds upon an almost opposite principle of action. The nature of this latter method may be gathered from a comparison of the causes which destroy kingdoms, for as one mode of destroying kingly power is to make the office of king more tyrannical, so the salvation of a tyranny is to make it more like the rule of a king. But of one thing the tyrant must be careful; he must keep power enough to rule over his subjects, whether they like him or not, for if he once gives this up he gives up his tyranny. But though power must be retained as the foundation, in all else the tyrant should act or appear to act in the character of a king. In the first place he should pretend a care of the public revenues, and not waste money in making presents of a sort at which the common people get excited when they see their hard-won earnings snatched from them and lavished on courtesans and strangers and artists. He should give an account of what he receives and of what he spends (a practice which has been adopted by some tyrants); for then he will seem to be a steward of the public rather than a tyrant; nor need he fear that, while he is the lord of the city, he will ever be in want of money. Such a policy is at all events much more advantageous for the tyrant when he goes from home, than to leave behind him a hoard, for then the garrison who remain in the city will be less likely to attack his power; and a tyrant, when he is absent from home, has more reason to fear

the guardians of his treasure than the citizens, for the one accompany him, but the others remain behind. In the second place, he should be seen to collect taxes and to require public services only for state purposes, and that he may form a fund in case of war, and generally he ought to make himself the guardian and treasurer of them, as if they belonged, not to him, but to the public. He should appear, not harsh, but dignified, and when men meet him they should look upon him with reverence, and not with fear. Yet it is hard for him to be respected if he inspires no respect, and therefore whatever virtues he may neglect, at least he should maintain the character of a great soldier, and produce the impression that he is one. Neither he nor any of his associates should ever be guilty of the least offense against modesty towards the young of either sex who are his subjects, and the women of his family should observe a like self-control towards other women; the insolence of women has ruined many tyrannies. In the indulgence of pleasures he should be the opposite of our modern tyrants, who not only begin at dawn and pass whole days in sensuality, but want other men to see them, that they may admire their happy and blessed lot. In these things a tyrant should if possible be moderate, or at any rate should not parade his vices to the world; for a drunken and drowsy tyrant is soon despised and attacked; not so he who is temperate and wide awake. His conduct should be the very reverse of nearly everything which has been said before about tyrants. He ought to adorn and improve his city, as though he were not a tyrant, but the guardian of the state. Also he should appear to be particularly earnest in the service of the Gods; for if men think that a ruler is religious and has a reverence for the Gods, they are less afraid of suffering injustice at his hands, and they are less disposed to conspire against him, because they believe him to have the very Gods fighting on his side. At the same time his religion must not be thought foolish. And he should honor men of merit, and make them think that they would not be held in more honor by the citizens if they had a free government. The honor he should distribute himself, but the

punishment should be inflicted by officers and courts of law. It is a precaution which is taken by all monarchs not to make one person great; but if one, then two or more should be raised, that they may look sharply after one another. If after all some one has to be made great, he should not be a man of bold spirit; for such dispositions are ever most inclined to strike. And if any one is to be deprived of his power, let it be diminished gradually, not taken from him all at once. The tyrant should abstain from all outrage; in particular from personal violence and from wanton conduct towards the young. He should be especially careful of his behavior to men who are lovers of honor; for as the lovers of money are offended when their property is touched, so are the lovers of honor and the virtuous when their honor is affected. Therefore a tyrant ought either not to commit such acts at all; or he should be thought only to employ fatherly correction, and not to trample upon others—and his acquaintance with youth should be supposed to arise from affection, and not from the insolence of power, and in general he should compensate the appearance of dishonor by the increase of honor.

Of those who attempt assassination they are the most dangerous, and require to be most carefully watched, who do not care to survive, if they effect their purpose. Therefore special precaution should be taken about any who think that either they or those for whom they care have been insulted; for when men are led away by passion to assault others they are regardless of themselves. As Heracleitus says, "It is difficult to fight against anger; for a man will buy revenge with his soul."

And whereas states consist of two classes, of poor men and of rich, the tyrant should lead both to imagine that they are preserved and prevented from harming one another by his rule, and whichever of the two is stronger he should attach to his government; for, having this advantage, he has no need either to emancipate slaves or to

disarm the citizens; either party added to the force which he already has, will make him stronger than his assailants.

But enough of these details; what should be the general policy of the tyrant is obvious. He ought to show himself to his subjects in the light, not of a tyrant, but of a steward and a king. He should not appropriate what is theirs, but should be their guardian; he should be moderate, not extravagant in his way of life; he should win the notables by companionship, and the multitude by flattery. For then his rule will of necessity be nobler and happier, because he will rule over better men whose spirits are not crushed, over men to whom he himself is not an object of hatred, and of whom he is not afraid. His power too will be more lasting. His disposition will be virtuous, or at least half virtuous; and he will not be wicked, but half wicked only.

Part XII

Yet no forms of government are so short-lived as oligarchy and tyranny. The tyranny which lasted longest was that of Orthagoras and his sons at Sicyon; this continued for a hundred years. The reason was that they treated their subjects with moderation, and to a great extent observed the laws; and in various ways gained the favor of the people by the care which they took of them. Cleisthenes, in particular, was respected for his military ability. If report may be believed, he crowned the judge who decided against him in the games; and, as some say, the sitting statue in the Agora of Sicyon is the likeness of this person. (A similar story is told of Peisistratus, who is said on one occasion to have allowed himself to be summoned and tried before the Areopagus.)

Next in duration to the tyranny of Orthagoras was that of the Cypselidae at Corinth, which lasted seventy-three years and six months: Cypselus reigned thirty years, Periander forty and a half, and Psammetichus the son of Gorgus three. Their continuance was due to similar causes: Cypselus was a popular man, who during the whole time of his rule never had a bodyguard; and Periander, although he was a tyrant, was a great soldier. Third in duration was the rule of the Peisistratidae at Athens, but it was interrupted; for Peisistratus was twice driven out, so that during three and thirty years he reigned only seventeen; and his sons reigned eighteen—altogether thirty-five years. Of other tyrannies, that of Hiero and Gelo at Syracuse was the most lasting. Even this, however, was short, not more than eighteen years in all; for Gelo continued tyrant for seven years, and died in the eighth; Hiero reigned for ten years, and Thrasybulus was driven out in the eleventh month. In fact, tyrannies generally have been of quite short duration.

I have now gone through almost all the causes by which constitutional governments and monarchies are either destroyed or preserved.

In the *Republic* of Plato, Socrates treats of revolutions, but not well, for he mentions no cause of change which peculiarly affects the first, or perfect state. He only says that the cause is that nothing is abiding, but all things change in a certain cycle; and that the origin of the change consists in those numbers “of which 4 and 3, married with 5, furnish two harmonies” (he means when the number of this figure becomes solid); he conceives that nature at certain times produces bad men who will not submit to education; in which latter particular he may very likely be not far wrong, for there may well be some men who cannot be educated and made virtuous. But why is such a cause of change peculiar to his ideal state, and not rather common to all states, nay, to everything which comes into being at all? And is it by the agency of time, which, as he declares, makes all things change, that things which did not begin together, change together? For example, if something has come into being the day before the completion of the cycle, will it change with things that came into being before? Further, why should the perfect state change into the Spartan? For governments more often take an opposite form than one akin to them. The same remark is applicable to the other changes; he says that the Spartan constitution changes into an oligarchy, and this into a democracy, and this again into a tyranny. And yet the contrary happens quite as often; for a democracy is even more likely to change into an oligarchy than into a monarchy. Further, he never says whether tyranny is, or is not, liable to revolutions, and if it is, what is the cause of them, or into what form it changes. And the reason is, that he could not very well have told: for there is no rule; according to him it should revert to the first and best, and then there would be a complete cycle. But in point of fact a tyranny often changes into a tyranny, as that at Sicyon changed from the tyranny of Myron into

that of Cleisthenes; into oligarchy, as the tyranny of Antileon did at Chalcis; into democracy, as that of Gelo's family did at Syracuse; into aristocracy, as at Carthage, and the tyranny of Charilaus at Lacedaemon. Often an oligarchy changes into a tyranny, like most of the ancient oligarchies in Sicily; for example, the oligarchy at Leontini changed into the tyranny of Panaetius; that at Gela into the tyranny of Cleander; that at Rhegium into the tyranny of Anaxilaus; the same thing has happened in many other states. And it is absurd to suppose that the state changes into oligarchy merely because the ruling class are lovers and makers of money, and not because the very rich think it unfair that the very poor should have an equal share in the government with themselves. Moreover, in many oligarchies there are laws against making money in trade. But at Carthage, which is a democracy. there is no such prohibition; and yet to this day the Carthaginians have never had a revolution. It is absurd too for him to say that an oligarchy is two cities, one of the rich, and the other of the poor. Is not this just as much the case in the Spartan constitution, or in any other in which either all do not possess equal property, or all are not equally good men? Nobody need be any poorer than he was before, and yet the oligarchy may change an the same into a democracy, if the poor form the majority; and a democracy may change into an oligarchy, if the wealthy class are stronger than the people, and the one are energetic, the other indifferent. Once more, although the causes of the change are very numerous, he mentions only one, which is, that the citizens become poor through dissipation and debt, as though he thought that all, or the majority of them, were originally rich. This is not true: though it is true that when any of the leaders lose their property they are ripe for revolution; but, when anybody else, it is no great matter, and an oligarchy does not even then more often pass into a democracy than into any other form of government. Again, if men are deprived of the honors of state, and are wronged, and insulted, they make revolutions, and change forms of government, even although they have not wasted their substance

because they might do what they liked—of which extravagance he declares excessive freedom to be the cause.

Finally, although there are many forms of oligarchies and democracies, Socrates speaks of their revolutions as though there were only one form of either of them.

[2] Revolution：革命，Metabolai，这个词除“革命”之外，还有“改变，运动”的意思。亚里士多德是想指出，城邦发生革命、政体的更替，就像自然物体的运动一样是自然的、不可避免的。这是由于人的爱欲对整全的追求以及人的片面性的事实之间的张力决定的。正因为如此，任何一种偶然事故都能导致革命的发生。

BOOK SIX

导 读

在第六卷中，亚里士多德更加具体地分析了平民制与寡头制的各种问题，因而像是对前几卷已经讨论过的内容的进一步补充。平民制是以自由为标准对平等、公平进行定义，而自由本身又是人类建立城邦、参与公共生活的目的。因而在亚里士多德看来，以额外的一卷内容再对平民制进行分析是不坏的选择。而当我们弄清了平民制，寡头制也就对我们不再难懂了，因为寡头制正好是与平民制相对立的形式。与自由相对立的就是服从，因而自由与服从依然是第六卷最为关注的问题。

平民制以自由为目的，但平民制毕竟也是一种政体，而只要是政体就涉及统治与被统治的问题。因而在亚里士多德看来自由就有两种含义。一种是随心所欲的生活。一种是轮流统治与被统治。人是自由的，所以没有任何一人可以将自己的意志强加于人。但是只要是在城邦生活中，就需要决策，在人民无法达成集体一致的情况下，就只能遵照多数人的意志行事。既然大家都是自由平等的，那么决策结果只能以数量而不是某种特定的价值取胜。但问题是，在一个城邦中，穷人往往占了大多数，因而平民制的结果往往不是自由人的统治而是穷人的统治。平民制的基本原则——自由，在这里就仅仅变成是一部分人的自由而非全体人的自由了。也就是说，多数决策原则本来是为了实现平等的一个手段，但是这个手段本身却与平等所要追求的目的——自由——存在着冲突。由此可以看出，即便是最为强调自由的平民制也不能避免自由与服从之间的矛盾，那么其他的政体更加无法避免。

自由总意味着选择一种自己喜爱的生活方式，而任何一种生活方式都必须是与他人一起生活的生活方式即集体的生活方式，任何一种集体的生活方式都要涉及对自己在集体中的定位，即对自我的评价与对他人的评价。而这种对他人的评价总会在某种程度上与他人的自我评价相违背。因而自由必然是一种积极的自由。这其实就暗示着，人类不可能获得完全意义上的、自己原本想要的自由。人类建立、参与城邦生活是为

了获得自足、自由，但是参与城邦本身就意味着人要放弃自己的一部分自由。这是人类不可避免的命运。^[1]

接下来，亚里士多德谈到了最好的平民制的形式，跟上一卷中提到的一样，以农民为主要组成部分的平民制是最好的平民制。其次是以游牧民为主的平民制。再次是以商贩、工匠为主的。最差的是具有所有上述特点并且平民数量众多的平民制。我们可以发现，在这样一个从最好到最差的谱系中，最好的是那种最简单的、最素朴的生活方式，农民总是靠天吃饭的，最依赖于自然和运气，也就意味着农民的自由更加受到自然的主宰。但恰恰是因为农民的自由更加受到自然的主宰，他们在政治生活中更能心满意足，因为他们只关心收成而不关心荣誉和地位。而在那些出现了工匠商贩的更加复杂的贸易分工体系的城邦中，人们虽然物质财富上获得了更大的丰富，从而一定程度上摆脱了自然和运气的主宰，但是人们的自由却更有可能受到政治统治带来的限制。政治对人的统治取代了自然对人的统治。人们想控制自己的命运的结果却是进一步被命运所控制。

为了避免这种悲剧式的命运。人们必须某种程度上反思政治生活本身的意义。人类虽然是政治的动物，城邦存在的目的虽然是为了培育人的德性尤其是政治德性。但是人的政治动物的这一本性无限制的发展往往会导致政体的变革，从而危及城邦本身的稳定。所以这就要求我们对于城邦的稳定给予更大的重视。从对人的关注转向对城邦的关注。保持城邦稳定最佳的办法就是依靠法律，而最好的法律是政治中立的，它不关心是采取平民制的制度还是寡头制的制度，它能够包容各种政体的制度，只要能够维持城邦的稳定。不管是任何一种政体的原则，一旦经过时间的积淀成为了习惯，就会被人们自愿地服从，于是也就形成了法治，一种远离政治的激情的社会秩序。

在本卷中，亚里士多德也多次提到了官职的问题。通过对官职在选拔、任期等问题上的法律规定，某种意义上就可以避免人治的因素。它告诉公民，不是某个人在进行统治，而是被法律所设立的官职在进行统治。亚里士多德似乎是想告诉我们，通过某种巧妙的制度设计，我们也是可以在一定程度上解决自由与服从这个根本矛盾的。由于官职的设置和制度总是多种多样的，而政体的问题最终都可还原为官职的问题，因

而对各种政体的改革都是可能的，且改革的余地也是很大的。

Part I

We have now considered the varieties of the deliberative or supreme power in states, and the various arrangements of law-courts and state offices, and which of them are adapted to different forms of government. We have also spoken of the destruction and preservation of constitutions, how and from what causes they arise.

Of democracy and all other forms of government there are many kinds; and it will be well to assign to them severally the modes of organization which are proper and advantageous to each, adding what remains to be said about them. Moreover, we ought to consider the various combinations of these modes themselves; for such combinations make constitutions overlap one another, so that aristocracies have an oligarchical character, and constitutional governments incline to democracies.

When I speak of the combinations which remain to be considered, and thus far have not been considered by us, I mean such as these: when the deliberative part of the government and the election of officers is constituted oligarchically, and the law-courts aristocratically, or when the courts and the deliberative part of the state are oligarchical, and the election to office aristocratical, or when in any other way there is a want of harmony in the composition of a state.

I have shown already what forms of democracy are suited to particular cities, and what of oligarchy to particular peoples, and to whom each of the other forms of government is suited. Further, we must not only show which of these governments is the best for each state, but also briefly proceed to consider how these and other forms of government are to be established.

First of all let us speak of democracy, which will also bring to light the opposite form of government commonly called oligarchy. For the purposes of this inquiry we need to ascertain all the elements and characteristics of democracy, since from the combinations of these the varieties of democratic government arise. There are several of these differing from each other, and the difference is due to two causes. One (1) has been already mentioned—differences of population; for the popular element may consist of husbandmen, or of mechanics, or of laborers, and if the first of these be added to the second, or the third to the two others, not only does the democracy become better or worse, but its very nature is changed. A second cause (2) remains to be mentioned: the various properties and characteristics of democracy, when variously combined, make a difference. For one democracy will have less and another will have more, and another will have all of these characteristics. There is an advantage in knowing them all, whether a man wishes to establish some new form of democracy, or only to remodel an existing one. Founders of states try to bring together all the elements which accord with the ideas of the several constitutions; but this is a mistake of theirs, as I have already remarked when speaking of the destruction and preservation of states. We will now set forth the principles, characteristics, and aims of such states.

Part II

The basis of a democratic state is liberty; which, according to the common opinion of men, can only be enjoyed in such a state; this they affirm to be the great end of every democracy. One principle of liberty is for all to rule and be ruled in turn, and indeed democratic justice is the application of numerical not proportionate equality; whence it follows that the majority must be supreme, and that whatever the majority approve must be the end and the just. Every citizen, it is said, must have equality, and therefore in a democracy the poor have more power than the rich, because there are more of them, and the will of the majority is supreme. This, then, is one note of liberty which all democrats affirm to be the principle of their state. Another is that a man should live as he likes. This, they say, is the privilege of a freeman, since, on the other hand, not to live as a man likes is the mark of a slave. This is the second characteristic of democracy, whence has arisen the claim of men to be ruled by none, if possible, or, if this is impossible, to rule and be ruled in turns; and so it contributes to the freedom based upon equality.

Such being our foundation and such the principle from which we start, the characteristics of democracy are as follows the election of officers by all out of all; and that all should rule over each, and each in his turn over all; that the appointment to all offices, or to all but those which require experience and skill, should be made by lot; that no property qualification should be required for offices, or only a very low one; that a man should not hold the same office twice, or not often, or in the case of few except military offices: that the tenure of all offices, or of as many as possible, should be brief, that all men should sit in judgment, or that judges selected out of all should judge, in all matters, or in most and in the greatest and most important—such as the scrutiny of accounts, the constitution, and private

contracts; that the assembly should be supreme over all causes, or at any rate over the most important, and the magistrates over none or only over a very few. Of all magistracies, a council is the most democratic when there is not the means of paying all the citizens, but when they are paid even this is robbed of its power; for the people then draw all cases to themselves, as I said in the previous discussion. The next characteristic of democracy is payment for services; assembly, law courts, magistrates, everybody receives pay, when it is to be had; or when it is not to be had for all, then it is given to the law-courts and to the stated assemblies, to the council and to the magistrates, or at least to any of them who are compelled to have their meals together. And whereas oligarchy is characterized by birth, wealth, and education, the notes of democracy appear to be the opposite of these—low birth, poverty, mean employment. Another note is that no magistracy is perpetual, but if any such have survived some ancient change in the constitution it should be stripped of its power, and the holders should be elected by lot and no longer by vote. These are the points common to all democracies; but democracy and demos in their truest form are based upon the recognized principle of democratic justice, that all should count equally; for equality implies that the poor should have no more share in the government than the rich, and should not be the only rulers, but that all should rule equally according to their numbers. And in this way men think that they will secure equality and freedom in their state.

Part III

Next comes the question, how is this equality to be obtained? Are we to assign to a thousand poor men the property qualifications of five hundred rich men? And shall we give the thousand a power equal to that of the five hundred? Or, if this is not to be the mode, ought we, still retaining the same ratio, to take equal numbers from each and give them the control of the elections and of the courts?—Which, according to the democratical notion, is the juster form of the constitution—this or one based on numbers only? Democrats say that justice is that to which the majority agree, oligarchs that to which the wealthier class; in their opinion the decision should be given according to the amount of property. In both principles there is some inequality and injustice. For if justice is the will of the few, any one person who has more wealth than all the rest of the rich put together, ought, upon the oligarchical principle, to have the sole power—but this would be tyranny; or if justice is the will of the majority, as I was before saying, they will unjustly confiscate the property of the wealthy minority. To find a principle of equality in which they both agree we must inquire into their respective ideas of justice.

Now they agree in saying that whatever is decided by the majority of the citizens is to be deemed law. Granted: but not without some reserve; since there are two classes out of which a state is composed—the poor and the rich—that is to be deemed law, on which both or the greater part of both agree; and if they disagree, that which is approved by the greater number, and by those who have the higher qualification. For example, suppose that there are ten rich and twenty poor, and some measure is approved by six of the rich and is disapproved by fifteen of the poor, and the remaining four of the rich join with the party of the poor, and the remaining five of the poor with that of the rich; in such a case the will of those whose

qualifications, when both sides are added up, are the greatest, should prevail. If they turn out to be equal, there is no greater difficulty than at present, when, if the assembly or the courts are divided, recourse is had to the lot, or to some similar expedient. But, although it may be difficult in theory to know what is just and equal, the practical difficulty of inducing those to forbear who can, if they like, encroach, is far greater, for the weaker are always asking for equality and justice, but the stronger care for none of these things.

Part IV

Of the four kinds of democracy, as was said in the previous discussion, the best is that which comes first in order; it is also the oldest of them all. I am speaking of them according to the natural classification of their inhabitants. For the best material of democracy is an agricultural population; there is no difficulty in forming a democracy where the mass of the people live by agriculture or tending of cattle. Being poor, they have no leisure, and therefore do not often attend the assembly, and not having the necessities of life they are always at work, and do not covet the property of others. Indeed, they find their employment pleasanter than the cares of government or office where no great gains can be made out of them, for the many are more desirous of gain than of honor. A proof is that even the ancient tyrannies were patiently endured by them, as they still endure oligarchies, if they are allowed to work and are not deprived of their property; for some of them grow quickly rich and the others are well enough off. Moreover, they have the power of electing the magistrates and calling them to account; their ambition, if they have any, is thus satisfied; and in some democracies, although they do not all share in the appointment of offices, except through representatives elected in turn out of the whole people, as at Mantinea; yet, if they have the power of deliberating, the many are contented. Even this form of government may be regarded as a democracy, and was such at Mantinea. Hence it is both expedient and customary in the aforementioned type of democracy that all should elect to offices, and conduct scrutinies, and sit in the law-courts, but that the great offices should be filled up by election and from persons having a qualification; the greater requiring a greater qualification, or, if there be no offices for which a qualification is required, then those who are marked out by special ability should be appointed. Under such a form of government the citizens are sure to be governed well (for the offices

will always be held by the best persons; the people are willing enough to elect them and are not jealous of the good). The good and the notables will then be satisfied, for they will not be governed by men who are their inferiors, and the persons elected will rule justly, because others will call them to account. Every man should be responsible to others, nor should anyone be allowed to do just as he pleases; for where absolute freedom is allowed, there is nothing to restrain the evil which is inherent in every man. But the principle of responsibility secures that which is the greatest good in states; the right persons rule and are prevented from doing wrong, and the people have their due. It is evident that this is the best kind of democracy, and why? Because the people are drawn from a certain class. Some of the ancient laws of most states were, all of them, useful with a view to making the people husbandmen. They provided either that no one should possess more than a certain quantity of land, or that, if he did, the land should not be within a certain distance from the town or the acropolis. Formerly in many states there was a law forbidding any one to sell his original allotment of land. There is a similar law attributed to Oxylus, which is to the effect that there should be a certain portion of every man's land on which he could not borrow money. A useful corrective to the evil of which I am speaking would be the law of the Aphytaeans, who, although they are numerous, and do not possess much land, are all of them husbandmen. For their properties are reckoned in the census; not entire, but only in such small portions that even the poor may have more than the amount required.

Next best to an agricultural, and in many respects similar, are a pastoral people, who live by their flocks; they are the best trained of any for war, robust in body and able to camp out. The people of whom other democracies consist are far inferior to them, for their life is inferior; there is no room for moral excellence in any of their employments, whether they be mechanics or traders or laborers.

Besides, people of this class can readily come to the assembly, because they are continually moving about in the city and in the agora; whereas husbandmen are scattered over the country and do not meet, or equally feel the want of assembling together. Where the territory also happens to extend to a distance from the city, there is no difficulty in making an excellent democracy or constitutional government; for the people are compelled to settle in the country, and even if there is a town population the assembly ought not to meet, in democracies, when the country people cannot come. We have thus explained how the first and best form of democracy should be constituted; it is clear that the other or inferior sorts will deviate in a regular order, and the population which is excluded will at each stage be of a lower kind.

The last form of democracy, that in which all share alike, is one which cannot be borne by all states, and will not last long unless well regulated by laws and customs. The more general causes which tend to destroy this or other kinds of government have been pretty fully considered. In order to constitute such a democracy and strengthen the people, the leaders have been in the habit including as many as they can, and making citizens not only of those who are legitimate, but even of the illegitimate, and of those who have only one parent a citizen, whether father or mother; for nothing of this sort comes amiss to such a democracy. This is the way in which demagogues proceed. Whereas the right thing would be to make no more additions when the number of the commonalty exceeds that of the notables and of the middle class—beyond this not to go. When in excess of this point, the constitution becomes disorderly, and the notables grow excited and impatient of the democracy, as in the insurrection at Cyrene; for no notice is taken of a little evil, but when it increases it strikes the eye. Measures like those which Cleisthenes passed when he wanted to increase the power of the democracy at Athens, or such as were taken by the founders of popular government at Cyrene, are useful in the

extreme form of democracy. Fresh tribes and brotherhoods should be established; the private rites of families should be restricted and converted into public ones; in short, every contrivance should be adopted which will mingle the citizens with one another and get rid of old connections. Again, the measures which are taken by tyrants appear all of them to be democratic; such, for instance, as the license permitted to slaves (which may be to a certain extent advantageous) and also that of women and children, and the allowing everybody to live as he likes. Such a government will have many supporters, for most persons would rather live in a disorderly than in a sober manner.

Part V

The mere establishment of a democracy is not the only or principal business of the legislator, or of those who wish to create such a state, for any state, however badly constituted, may last one, two, or three days; a far greater difficulty is the preservation of it. The legislator should therefore endeavor to have a firm foundation according to the principles already laid down concerning the preservation and destruction of states; he should guard against the destructive elements, and should make laws, whether written or unwritten, which will contain all the preservatives^[2] of states. He must not think the truly democratical or oligarchical measure to be that which will give the greatest amount of democracy or oligarchy, but that which will make them last longest. The demagogues of our own day often get property confiscated in the law-courts in order to please the people. But those who have the welfare of the state at heart should counteract them, and make a law that the property of the condemned should not be public and go into the treasury but be sacred. Thus offenders will be as much afraid, for they will be punished all the same, and the people, having nothing to gain, will not be so ready to condemn the accused. Care should also be taken that state trials are as few as possible, and heavy penalties should be inflicted on those who bring groundless accusations; for it is the practice to indict, not members of the popular party, but the notables, although the citizens ought to be all attached to the constitution as well, or at any rate should not regard their rulers as enemies.

Now, since in the last and worst form of democracy the citizens are very numerous, and can hardly be made to assemble unless they are paid, and to pay them when there are no revenues presses hardly upon the notables (for the money must be obtained by a property tax and confiscations and corrupt practices of the courts, things which

have before now overthrown many democracies); where, I say, there are no revenues, the government should hold few assemblies, and the law-courts should consist of many persons, but sit for a few days only. This system has two advantages: first, the rich do not fear the expense, even although they are unpaid themselves when the poor are paid; and secondly, causes are better tried, for wealthy persons, although they do not like to be long absent from their own affairs, do not mind going for a few days to the law-courts. Where there are revenues the demagogues should not be allowed after their manner to distribute the surplus; the poor are always receiving and always wanting more and more, for such help is like water poured into a leaky cask. Yet the true friend of the people should see that they be not too poor, for extreme poverty lowers the character of the democracy; measures therefore should be taken which will give them lasting prosperity; and as this is equally the interest of all classes, the proceeds of the public revenues should be accumulated and distributed among its poor, if possible, in such quantities as may enable them to purchase a little farm, or, at any rate, make a beginning in trade or husbandry. And if this benevolence cannot be extended to all, money should be distributed in turn according to tribes or other divisions, and in the meantime the rich should pay the fee for the attendance of the poor at the necessary assemblies; and should in return be excused from useless public services. By administering the state in this spirit the Carthaginians retain the affections of the people; their policy is from time to time to send some of them into their dependent towns, where they grow rich. It is also worthy of a generous and sensible nobility to divide the poor amongst them, and give them the means of going to work. The example of the people of Tarentum is also well deserving of imitation, for, by sharing the use of their own property with the poor, they gain their good will. Moreover, they divide all their offices into two classes, some of them being elected by vote, the others by lot; the latter, that the people may participate in them, and the former, that the state may be better administered. A like result may be gained by dividing the

same offices, so as to have two classes of magistrates, one chosen by vote, the other by lot.

柏拉图与亚里士多德

Enough has been said of the manner in which democracies ought to be constituted.

Part VI

From these considerations there will be no difficulty in seeing what should be the constitution of oligarchies. We have only to reason from opposites and compare each form of oligarchy with the corresponding form of democracy.

The first and best attempered of oligarchies is akin to a constitutional government. In this there ought to be two standards of qualification; the one high, the other low—the lower qualifying for the humbler yet indispensable offices and the higher for the superior ones. He who acquires the prescribed qualification should have the rights of citizenship. The number of those admitted should be such as will make the entire governing body stronger than those who are excluded, and the new citizen should be always taken out of the better class of the people. The principle, narrowed a little, gives another form of oligarchy; until at length we reach the most cliquish and tyrannical of them all, answering to the extreme democracy, which, being the worst, requires vigilance in proportion to its badness. For as healthy bodies and ships well provided with sailors may undergo many mishaps and survive them, whereas sickly constitutions and rotten ill-manned ships are ruined by the very least mistake, so do the worst forms of government require the greatest care. The populousness of democracies generally preserves them (for number is to democracy in the place of justice based on proportion); whereas the preservation of an oligarchy clearly depends on an opposite principle, viz., good order.

Part VII

As there are four chief divisions of the common people—husbandmen, mechanics, retail traders, laborers; so also there are four kinds of military forces—the cavalry, the heavy infantry, the light armed troops, the navy. When the country is adapted for cavalry, then a strong oligarchy is likely to be established. For the security of the inhabitants depends upon a force of this sort, and only rich men can afford to keep horses. The second form of oligarchy prevails when the country is adapted to heavy infantry; for this service is better suited to the rich than to the poor. But the light-armed and the naval element are wholly democratic; and nowadays, where they are numerous, if the two parties quarrel, the oligarchy are often worsted by them in the struggle. A remedy for this state of things may be found in the practice of generals who combine a proper contingent of light-armed troops with cavalry and heavy-armed. And this is the way in which the poor get the better of the rich in civil contests; being lightly armed, they fight with advantage against cavalry and heavy infantry. An oligarchy which raises such a force out of the lower classes raises a power against itself. And therefore, since the ages of the citizens vary and some are older and some younger, the fathers should have their own sons, while they are still young, taught the agile movements of light-armed troops; and these, when they have been taken out of the ranks of the youth, should become light-armed warriors in reality. The oligarchy should also yield a share in the government to the people, either, as I said before, to those who have a property qualification, or, as in the case of Thebes, to those who have abstained for a certain number of years from mean employments, or, as at Massalia, to men of merit who are selected for their worthiness, whether previously citizens or not. The magistracies of the highest rank, which ought to be in the hands of the governing body, should have expensive duties attached to them, and then the people will not desire them and will

take no offense at the privileges of their rulers when they see that they pay a heavy fine for their dignity. It is fitting also that the magistrates on entering office should offer magnificent sacrifices or erect some public edifice, and then the people who participate in the entertainments, and see the city decorated with votive offerings and buildings, will not desire an alteration in the government, and the notables will have memorials of their munificence. This, however, is anything but the fashion of our modern oligarchs, who are as covetous of gain as they are of honor; oligarchies like theirs may be well described as petty democracies. Enough of the manner in which democracies and oligarchies should be organized.

Part VIII

Next in order follows the right distribution of offices, their number, their nature, their duties, of which indeed we have already spoken. No state can exist not having the necessary offices, and no state can be well administered not having the offices which tend to preserve harmony and good order. In small states, as we have already remarked, there must not be many of them, but in larger there must be a larger number, and we should carefully consider which offices may properly be united and which separated.

First among necessary offices is that which has the care of the market; a magistrate should be appointed to inspect contracts and to maintain order. For in every state there must inevitably be buyers and sellers who will supply one another's wants; this is the readiest way to make a state self-sufficing and so fulfill the purpose for which men come together into one state. A second office of a similar kind undertakes the supervision and embellishment of public and private buildings, the maintaining and repairing of houses and roads, the prevention of disputes about boundaries, and other concerns of a like nature. This is commonly called the office of City Warden, and has various departments, which, in more populous towns, are shared among different persons, one, for example, taking charge of the walls, another of the fountains, a third of harbors. There is another equally necessary office, and of a similar kind, having to do with the same matters without the walls and in the country—the magistrates who hold this office are called Wardens of the country, or Inspectors of the woods. Besides these three there is a fourth office of receivers of taxes, who have under their charge the revenue which is distributed among the various departments; these are called Receivers or Treasurers. Another officer registers all private contracts, and decisions of the courts, all public indictments, and also all preliminary proceedings.

This office again is sometimes subdivided, in which case one officer is appointed over all the rest. These officers are called Recorders or Sacred Recorders, Presidents, and the like.

Next to these comes an office of which the duties are the most necessary and also the most difficult, viz., that to which is committed the execution of punishments, or the exaction of fines from those who are posted up according to the registers; and also the custody of prisoners. The difficulty of this office arises out of the odium which is attached to it; no one will undertake it unless great profits are to be made, and anyone who does is loath to execute the law. Still the office is necessary; for judicial decisions are useless if they take no effect; and if society cannot exist without them, neither can it exist without the execution of them. It is an office which, being so unpopular, should not be entrusted to one person, but divided among several taken from different courts. In like manner an effort should be made to distribute among different persons the writing up of those who are on the register of public debtors. Some sentences should be executed by the magistrates also, and in particular penalties due to the outgoing magistrates should be exacted by the incoming ones; and as regards those due to magistrates already in office, when one court has given judgement, another should exact the penalty; for example, the wardens of the city should exact the fines imposed by the wardens of the agora, and others again should exact the fines imposed by them. For penalties are more likely to be exacted when less odium attaches to the exaction of them; but a double odium is incurred when the judges who have passed also execute the sentence, and if they are always the executioners, they will be the enemies of all.

In many places, while one magistracy executes the sentence, another has the custody of the prisoners, as, for example, "the Eleven" at Athens. It is well to separate off the jailorship also, and try by some device to render the office less unpopular. For it is quite as necessary

as that of the executioners; but good men do all they can to avoid it, and worthless persons cannot safely be trusted with it; for they themselves require a guard, and are not fit to guard others. There ought not therefore to be a single or permanent officer set apart for this duty; but it should be entrusted to the young, wherever they are organized into a band or guard, and different magistrates acting in turn should take charge of it.

These are the indispensable officers, and should be ranked first; next in order follow others, equally necessary, but of higher rank, and requiring great experience and fidelity. Such are the officers to which are committed the guard of the city, and other military functions. Not only in time of war but of peace their duty will be to defend the walls and gates, and to muster and marshal the citizens. In some states there are many such offices; in others there are a few only, while small states are content with one; these officers are called generals or commanders. Again, if a state has cavalry or light-armed troops or archers or a naval force, it will sometimes happen that each of these departments has separate officers, who are called admirals, or generals of cavalry or of light-armed troops. And there are subordinate officers called naval captains, and captains of light-armed troops and of horse; having others under them: all these are included in the department of war. Thus much of military command.

But since many, not to say all, of these offices handle the public money, there must of necessity be another office which examines and audits them, and has no other functions. Such officers are called by various names—Scrutineers, Auditors, Accountants, Controllers. Besides all these offices there is another which is supreme over them, and to this is often entrusted both the introduction and the ratification of measures, or at all events it presides, in a democracy, over the assembly. For there must be a body which convenes the supreme authority in the state. In some places they are called “probuli,”

because they hold previous deliberations, but in a democracy more commonly “councillors.” These are the chief political offices.

Another set of officers is concerned with the maintenance of religion; priests and guardians see to the preservation and repair of the temples of the Gods and to other matters of religion. One office of this sort may be enough in small places, but in larger ones there are a great many besides the priesthood; for example, superintendents of public worship, guardians of shrines, treasurers of the sacred revenues. Nearly connected with these there are also the officers appointed for the performance of the public sacrifices, except any which the law assigns to the priests; such sacrifices derive their dignity from the public hearth of the city. They are sometimes called archons, sometimes kings, and sometimes prytanes.

These, then, are the necessary offices, which may be summed up as follows: offices concerned with matters of religion, with war, with the revenue and expenditure, with the market, with the city, with the harbors, with the country; also with the courts of law, with the records of contracts, with execution of sentences, with custody of prisoners, with audits and scrutinies and accounts of magistrates; lastly, there are those which preside over the public deliberations of the state. There are likewise magistracies characteristic of states which are peaceful and prosperous, and at the same time have a regard to good order: such as the offices of guardians of women, guardians of the law, guardians of children, and directors of gymnastics; also superintendents of gymnastic and Dionysiac contests, and of other similar spectacles. Some of these are clearly not democratic offices; for example, the guardianships of women and children—the poor, not having any slaves, must employ both their women and children as servants.

Once more: there are three offices according to whose directions the highest magistrates are chosen in certain states—guardians of the

law, probuli, councillors—of these, the guardians of the law are an aristocratical, the probuli an oligarchical, the council a democratical institution. Enough of the different kinds of offices.

[2] Preservatives：这里指的是法律应该包含那些能够维护政体存续的因素，而不要考虑这种因素是平民主义还是贵族主义的。这是在呼应前面提到的共和政体的思想，即最现实可行的优良政体就是将平民制的制度与贵族制的制度融合起来。

BOOK SEVEN

导 读

自由与服从、善与正义的矛盾既然是不可避免的，那么回答最优良的政体这一问题就必须先回答最值得选取的生活是什么，以及个人最值得选取的生活与城邦最优良的政体是否同一。

亚里士多德首先表明，灵魂的善要高于外在的善和身体的善。灵魂的善即德性，无需借助外在诸善如财富来获得，有德性的行为本身就是一种自足的幸福，因为他符合人的本性。具有至福的神就是丝毫不假于外，也就是说不依赖于任何偶然性和外部条件。最好的人与最好的城邦肯定都以追求德性为目的。

一个人认为的最值得选取的生活必须反映在政体中，在这种意义上个人认为最好的生活肯定与其认为最好的政体是同一的。喜欢财富的人就希望城邦充满财富，并且以财富多少来定义正义。喜欢统治的人则肯定认为在自己身为僭主的政体中最为幸福，并且会认为正义实际上就是强者的利益。由此可以看出，一个人对于幸福的定义会天然地涉及对正义的定义，每一个人——作为政治的动物——在追求自身幸福的时候就不得不带有外部性，即把自己对于幸福的标准强加于别人，并推广到整个城邦。也就是说一个人的自由总是对他人自由的限定。这种限定是政治生活的本质，虽然不算不公正，但是毕竟给人完全无碍的舒心生活添加了障碍。因而就会有人认为最值得选取的生活不可能是政治的集体生活，而应该是独立自足的、逍遥自在的、与他人老死不相往来的生活。但是这种消极无为的生活某种意义上也不可能是幸福的，因为幸福本身就不可能脱离开行为，即德性的实践。可是实践行为并不一定是与他人相关的行为，思考、沉思其实也是一种实践行为。沉思是以自身完美为目的的一种实践。而思想是一种高于外部行为的最高级的行为，因为灵魂的善要高于外在的善和身体的善，不假于外界的闲暇中的沉思生活是一种接近于神的生活。这种生活实际上就是哲学的生活。如果哲学生活是最值得选取的生活，那么最好的城邦可以被设想为是一个孤立无邻的

幸福城邦，这个城邦只有城邦各个部分之间的活动，但是没有与外界的联系。不依赖于对外贸易，也不会发生与外邦之间的战争。

但是在现实之中，这种孤立无邻的城邦是不存在的。一个优良的城邦必须具有相应的生存手段。接下来亚里士多德谈论了一大堆优良城邦存在的前提条件，如适当的人口、合适大小的疆域、有利的地形、海外贸易以及作为备战的军队。这些前提条件能否满足完全凭借于偶然的运气。这似乎与亚里士多德本卷刚开始时说到的不依赖于外在诸善的原则不相符。可以说现实中最优良的城邦并不是真正意义上最优良的。城邦存在本身就意味着一种依赖。后面亚里士多德甚至认为最优良的城邦需要更多的奴隶来从事农业、手工业这些低贱的职位，保证公民有更多的闲暇。为了战争的需要，我们在规划城邦的建筑时必须将美学上的追求妥协。甚至为了保证人口规模合适必须采取严格的计划生育，对公民的性事做出严格的控制。也就是说政治必然要侵害人的爱欲。我们在追求一个目的时所采取的手段，会与这个目的本身相违背。人类想要获得自由，就必须先得学会服从。因而亚里士多德才会接着说在最优良的城邦中，统治者与被统治者接受同样的教育，他们都懂得如何统治、如何服从这两种知识。因此公民们都轮流地进行统治与被统治。^[1]

虽然在实际中自由与服从不可分割，但是在理论上，我们能够区分开二者哪个更为优先。手段总是要服务于目的的，战争是为了和平，劳动是为了闲暇，必需的事物是为了高尚的事物。因而自由从根本上优先于服从。我们需要服从是迫于必然，就如同公正的判决和刑罚，只是建立在恶存在的前提下，它低于慷慨、荣誉这样的美德。我们迫于必然的大多数行为都是为了获得闲暇，而在闲暇中人类最高贵的活动就是进行哲学思考。因而在亚里士多德看来哲学生活是根本上优于政治生活的。

哲学生活是个人最值得选择的生活，但是如同最优良的城邦一样，需要借助于一些外在条件。哲学生活必须依赖于政治生活。希腊人优越之处就是将激情与思想二者结合在了一起。从而使得友爱在城邦中成为可能。这说明哲学生活在政治生活中其实也能获得。哲学与政治要相互服务，同时保持张力。要能够协调好二者，就需要对公民进行教育，将公民的本性、习惯和理性三者协调一致。而这种公民教育本身就一部分是哲学的，一部分是政治的。

Part I

He who would duly inquire about the best form of a state ought first to determine which is the most eligible life; while this remains uncertain the best form of the state must also be uncertain; for, in the natural order of things, those may be expected to lead the best life who are governed in the best manner of which their circumstances admit. We ought therefore to ascertain, first of all, which is the most generally eligible life, and then whether the same life is or is not best for the state and for individuals.

Assuming that enough has been already said in discussions outside the school concerning the best life, we will now only repeat what is contained in them. Certainly no one will dispute the propriety of that partition of goods which separates them into three classes, viz., external goods, goods of the body, and goods of the soul, or deny that the happy man must have all three. For no one would maintain that he is happy who has not in him a particle of courage or temperance or justice or prudence, who is afraid of every insect which flutters past him, and will commit any crime, however great, in order to gratify his lust of meat or drink, who will sacrifice his dearest friend for the sake of half-a-farthing, and is as feeble and false in mind as a child or a madman. These propositions are almost universally acknowledged as soon as they are uttered, but men differ about the degree or relative superiority of this or that good. Some think that a very moderate amount of virtue is enough, but set no limit to their desires of wealth, property, power, reputation, and the like. To whom we reply by an appeal to facts, which easily prove that mankind do not acquire or preserve virtue by the help of external goods, but external goods by the help of virtue, and that happiness, whether consisting in pleasure or virtue, or both, is more often found with those who are most highly cultivated in their mind and in their character, and have only a

moderate share of external goods, than among those who possess external goods to a useless extent but are deficient in higher qualities; and this is not only matter of experience, but, if reflected upon, will easily appear to be in accordance with reason. For, whereas external goods have a limit, like any other instrument, and all things useful are of such a nature that where there is too much of them they must either do harm, or at any rate be of no use, to their possessors, every good of the soul, the greater it is, is also of greater use, if the epithet useful as well as noble is appropriate to such subjects. No proof is required to show that the best state of one thing in relation to another corresponds in degree of excellence to the interval between the natures of which we say that these very states are states: so that, if the soul is more noble than our possessions or our bodies, both absolutely and in relation to us, it must be admitted that the best state of either has a similar ratio to the other. Again, it is for the sake of the soul that goods external and goods of the body are eligible at all, and all wise men ought to choose them for the sake of the soul, and not the soul for the sake of them.

Let us acknowledge then that each one has just so much of happiness as he has of virtue and wisdom, and of virtuous and wise action. God is a witness to us of this truth, for he is happy and blessed, not by reason of any external good, but in himself and by reason of his own nature. And herein of necessity lies the difference between good fortune and happiness; for external goods come of themselves, and chance is the author of them, but no one is just or temperate by or through chance. In like manner, and by a similar train of argument, the happy state may be shown to be that which is best and which acts rightly; and rightly it cannot act without doing right actions, and neither individual nor state can do right actions without virtue and wisdom. Thus the courage, justice, and wisdom of a state have the same form and nature as the qualities which give the individual who possesses them the name of just, wise, or temperate.

Thus much may suffice by way of preface: for I could not avoid touching upon these questions, neither could I go through all the arguments affecting them; these are the business of another science.

Let us assume then that the best life, both for individuals and states, is the life of virtue, when virtue has external goods enough for the performance of good actions. If there are any who controvert our assertion, we will in this treatise pass them over, and consider their objections hereafter.

Part II

There remains to be discussed the question whether the happiness of the individual is the same as that of the state, or different. Here again there can be no doubt—no one denies that they are the same. For those who hold that the well-being of the individual consists in his wealth, also think that riches make the happiness of the whole state, and those who value most highly the life of a tyrant deem that city the happiest which rules over the greatest number; while they who approve an individual for his virtue say that the more virtuous a city is, the happier it is. Two points here present themselves for consideration: first (1), which is the more eligible life, that of a citizen who is a member of a state, or that of an alien who has no political ties; and again (2), which is the best form of constitution or the best condition of a state, either on the supposition that political privileges are desirable for all, or for a majority only?

Since the good of the state and not of the individual is the proper subject of political thought and speculation, and we are engaged in a political discussion, while the first of these two points has a secondary interest for us, the latter will be the main subject of our inquiry.

Now it is evident that the form of government is best in which every man, whoever he is, can act best and live happily. But even those who agree in thinking that the life of virtue is the most eligible raise a question, whether the life of business and politics is or is not more eligible than one which is wholly independent of external goods, I mean than a contemplative life, which by some is maintained to be the only one worthy of a philosopher. For these two lives—the life of the philosopher and the life of the statesman—appear to have been preferred by those who have been most keen in the pursuit of virtue, both in our own and in other ages. Which is the better is a question of

no small moment; for the wise man, like the wise state, will necessarily regulate his life according to the best end. There are some who think that while a despotic rule over others is the greatest injustice, to exercise a constitutional rule over them, even though not unjust, is a great impediment to a man's individual well-being. Others take an opposite view; they maintain that the true life of man is the practical and political, and that every virtue admits of being practiced, quite as much by statesmen and rulers as by private individuals. Others, again, are of opinion that arbitrary and tyrannical rule alone consists with happiness; indeed, in some states the entire aim both of the laws and of the constitution is to give men despotic power over their neighbors. And, therefore, although in most cities the laws may be said generally to be in a chaotic state, still, if they aim at anything, they aim at the maintenance of power: thus in Lacedaemon and Crete the system of education and the greater part of the laws are framed with a view to war. And in all nations which are able to gratify their ambition military power is held in esteem, for example among the Scythians and Persians and Thracians and Celts.

In some nations there are even laws tending to stimulate the warlike virtues, as at Carthage, where we are told that men obtain the honor of wearing as many armlets as they have served campaigns. There was once a law in Macedonia that he who had not killed an enemy should wear a halter, and among the Scythians no one who had not slain his man was allowed to drink out of the cup which was handed round at a certain feast. Among the Iberians, a warlike nation, the number of enemies whom a man has slain is indicated by the number of obelisks which are fixed in the earth round his tomb; and there are numerous practices among other nations of a like kind, some of them established by law and others by custom. Yet to a reflecting mind it must appear very strange that the statesman should be always considering how he can dominate and tyrannize over others, whether they will or not. How can that which is not even lawful be the

business of the statesman or the legislator? Unlawful it certainly is to rule without regard to justice, for there may be might where there is no right. The other arts and sciences offer no parallel; a physician is not expected to persuade or coerce his patients, nor a pilot the passengers in his ship. Yet most men appear to think that the art of despotic government is statesmanship, and what men affirm to be unjust and inexpedient in their own case they are not ashamed of practicing towards others; they demand just rule for themselves, but where other men are concerned they care nothing about it. Such behavior is irrational; unless the one party is, and the other is not, born to serve, in which case men have a right to command, not indeed all their fellows, but only those who are intended to be subjects; just as we ought not to hunt mankind, whether for food or sacrifice, but only the animals which may be hunted for food or sacrifice, this is to say, such wild animals as are eatable. And surely there may be a city happy in isolation, which we will assume to be well-governed (for it is quite possible that a city thus isolated might be well-administered and have good laws); but such a city would not be constituted with any view to war or the conquest of enemies—all that sort of thing must be excluded. Hence we see very plainly that warlike pursuits, although generally to be deemed honorable, are not the supreme end of all things, but only means. And the good lawgiver should inquire how states and races of men and communities may participate in a good life, and in the happiness which is attainable by them. His enactments will not be always the same; and where there are neighbors he will have to see what sort of studies should be practiced in relation to their several characters, or how the measures appropriate in relation to each are to be adopted. The end at which the best form of government should aim may be properly made a matter of future consideration.

Part III

Let us now address those who, while they agree that the life of virtue is the most eligible, differ about the manner of practicing it. For some renounce political power, and think that the life of the freeman is different from the life of the statesman and the best of all; but others think the life of the statesman best. The argument of the latter is that he who does nothing cannot do well, and that virtuous activity is identical with happiness. To both we say: “you are partly right and partly wrong.” first class are right in affirming that the life of the freeman is better than the life of the despot; for there is nothing grand or noble in having the use of a slave, in so far as he is a slave; or in issuing commands about necessary things. But it is an error to suppose that every sort of rule is despotic like that of a master over slaves, for there is as great a difference between the rule over freemen and the rule over slaves as there is between slavery by nature and freedom by nature, about which I have said enough at the commencement of this treatise. And it is equally a mistake to place inactivity above action, for happiness is activity, and the actions of the just and wise are the realization of much that is noble.

But perhaps some one, accepting these premises, may still maintain that supreme power is the best of all things, because the possessors of it are able to perform the greatest number of noble actions. if so, the man who is able to rule, instead of giving up anything to his neighbor, ought rather to take away his power; and the father should make no account of his son, nor the son of his father, nor friend of friend; they should not bestow a thought on one another in comparison with this higher object, for the best is the most eligible and “doing eligible” and “doing well” is the best. There might be some truth in such a view if we assume that robbers and plunderers attain the chief good. But this can never be; their hypothesis is false. For the

actions of a ruler cannot really be honorable, unless he is as much superior to other men as a husband is to a wife, or a father to his children, or a master to his slaves. And therefore he who violates the law can never recover by any success, however great, what he has already lost in departing from virtue. For equals the honorable and the just consist in sharing alike, as is just and equal. But that the unequal should be given to equals, and the unlike to those who are like, is contrary to nature, and nothing which is contrary to nature is good. If, therefore, there is anyone superior in virtue and in the power of performing the best actions, him we ought to follow and obey, but he must have the capacity for action as well as virtue.

If we are right in our view, and happiness is assumed to be virtuous activity, the active life will be the best, both for every city collectively, and for individuals. Not that a life of action must necessarily have relation to others, as some persons think, nor are those ideas only to be regarded as practical which are pursued for the sake of practical results, but much more the thoughts and contemplations^[2] which are independent and complete in themselves; since virtuous activity, and therefore a certain kind of action, is an end, and even in the case of external actions the directing mind is most truly said to act. Neither, again, is it necessary that states which are cut off from others and choose to live alone should be inactive; for activity, as well as other things, may take place by sections; there are many ways in which the sections of a state act upon one another. The same thing is equally true of every individual. If this were otherwise, God and the universe, who have no external actions over and above their own energies, would be far enough from perfection. Hence it is evident that the same life is best for each individual, and for states and for mankind collectively.

Part IV

Thus far by way of introduction. In what has preceded I have discussed other forms of government; in what remains the first point to be considered is what should be the conditions of the ideal or perfect state; for the perfect state cannot exist without a due supply of the means of life. And therefore we must presuppose many purely imaginary conditions, but nothing impossible. There will be a certain number of citizens, a country in which to place them, and the like. As the weaver or shipbuilder or any other artisan must have the material proper for his work (and in proportion as this is better prepared, so will the result of his art be nobler), so the statesman or legislator must also have the materials suited to him.

First among the materials required by the statesman is population: he will consider what should be the number and character of the citizens, and then what should be the size and character of the country. Most persons think that a state in order to be happy ought to be large; but even if they are right, they have no idea what is a large and what a small state. For they judge of the size of the city by the number of the inhabitants; whereas they ought to regard, not their number, but their power. A city too, like an individual, has a work to do; and that city which is best adapted to the fulfillment of its work is to be deemed greatest, in the same sense of the word great in which Hippocrates might be called greater, not as a man, but as a physician, than someone else who was taller. And even if we reckon greatness by numbers, we ought not to include everybody, for there must always be in cities a multitude of slaves and sojourners and foreigners; but we should include those only who are members of the state, and who form an essential part of it. The number of the latter is a proof of the greatness of a city; but a city which produces numerous artisans and comparatively few soldiers cannot be great, for a great city is not to be

confounded with a populous one. Moreover, experience shows that a very populous city can rarely, if ever, be well governed; since all cities which have a reputation for good government have a limit of population. We may argue on grounds of reason, and the same result will follow. For law is order, and good law is good order; but a very great multitude cannot be orderly: to introduce order into the unlimited is the work of a divine power—of such a power as holds together the universe. Beauty is realized in number and magnitude, and the state which combines magnitude with good order must necessarily be the most beautiful. To the size of states there is a limit, as there is to other things, plants, animals, implements; for none of these retain their natural power when they are too large or too small, but they either wholly lose their nature, or are spoiled. For example, a ship which is only a span long will not be a ship at all, nor a ship a quarter of a mile long; yet there may be a ship of a certain size, either too large or too small, which will still be a ship, but bad for sailing. In like manner a state when composed of too few is not, as a state ought to be, self-sufficing; when of too many, though self-sufficing in all mere necessities, as a nation may be, it is not a state, being almost incapable of constitutional government. For who can be the general of such a vast multitude, or who the herald, unless he have the voice of a Stentor?

A state, then, only begins to exist when it has attained a population sufficient for a good life in the political community: it may indeed, if it somewhat exceed this number, be a greater state. But, as I was saying, there must be a limit. What should be the limit will be easily ascertained by experience. For both governors and governed have duties to perform; the special functions of a governor are to command and to judge. But if the citizens of a state are to judge and to distribute offices according to merit, then they must know each other's characters; where they do not possess this knowledge, both the election to offices and the decision of lawsuits will go wrong. When

the population is very large they are manifestly settled at haphazard, which clearly ought not to be. Besides, in an over-populous state foreigners and metics will readily acquire the rights of citizens, for who will find them out? Clearly then the best limit of the population of a state is the largest number which suffices for the purposes of life, and can be taken in at a single view. Enough concerning the size of a state.

Part V

Much the same principle will apply to the territory of the state: everyone would agree in praising the territory which is most entirely self-sufficing; and that must be the territory which is all-producing, for to have all things and to want nothing is sufficiency. In size and extent it should be such as may enable the inhabitants to live at once temperately and liberally in the enjoyment of leisure. Whether we are right or wrong in laying down this limit we will inquire more precisely hereafter, when we have occasion to consider what is the right use of property and wealth: a matter which is much disputed, because men are inclined to rush into one of two extremes, some into meanness, others into luxury.

It is not difficult to determine the general character of the territory which is required (there are, however, some points on which military authorities should be heard); it should be difficult of access to the enemy, and easy of egress to the inhabitants. Further, we require that the land as well as the inhabitants of whom we were just now speaking should be taken in at a single view, for a country which is easily seen can be easily protected. As to the position of the city, if we could have what we wish, it should be well situated in regard both to sea and land. This then is one principle, that it should be a convenient center for the protection of the whole country: the other is, that it should be suitable for receiving the fruits of the soil, and also for the bringing in of timber and any other products that are easily transported.

Part VI

Whether a communication with the sea is beneficial to a well-ordered state or not is a question which has often been asked. It is argued that the introduction of strangers brought up under other laws, and the increase of population, will be adverse to good order; the increase arises from their using the sea and having a crowd of merchants coming and going, and is inimical to good government. Apart from these considerations, it would be undoubtedly better, both with a view to safety and to the provision of necessities, that the city and territory should be connected with the sea; the defenders of a country, if they are to maintain themselves against an enemy, should be easily relieved both by land and by sea; and even if they are not able to attack by sea and land at once, they will have less difficulty in doing mischief to their assailants on one element, if they themselves can use both. Moreover, it is necessary that they should import from abroad what is not found in their own country, and that they should export what they have in excess; for a city ought to be a market, not indeed for others, but for herself.

Those who make themselves a market for the world only do so for the sake of revenue, and if a state ought not to desire profit of this kind it ought not to have such an emporium. Nowadays we often see in countries and cities dockyards and harbors very conveniently placed outside the city, but not too far off; and they are kept in dependence by walls and similar fortifications. Cities thus situated manifestly reap the benefit of intercourse with their ports; and any harm which is likely to accrue may be easily guarded against by the laws, which will pronounce and determine who may hold communication with one another, and who may not.

There can be no doubt that the possession of a moderate naval

force is advantageous to a city; the city should be formidable not only to its own citizens but to some of its neighbors, or, if necessary, able to assist them by sea as well as by land. The proper number or magnitude of this naval force is relative to the character of the state; for if her function is to take a leading part in politics, her naval power should be commensurate with the scale of her enterprises. The population of the state need not be much increased, since there is no necessity that the sailors should be citizens: the marines who have the control and command will be freemen, and belong also to the infantry; and wherever there is a dense population of Perioeci and husbandmen, there will always be sailors more than enough. Of this we see instances at the present day. The city of Heraclea, for example, although small in comparison with many others, can man a considerable fleet. Such are our conclusions respecting the territory of the state, its harbors, its towns, its relations to the sea, and its maritime power.

Part VII

Having spoken of the number of the citizens, we will proceed to speak of what should be their character. This is a subject which can be easily understood by anyone who casts his eye on the more celebrated states of Hellas, and generally on the distribution of races in the habitable world. Those who live in a cold climate and in Europe are full of spirit, but wanting in intelligence and skill; and therefore they retain comparative freedom, but have no political organization, and are incapable of ruling over others. Whereas the natives of Asia are intelligent and inventive, but they are wanting in spirit, and therefore they are always in a state of subjection and slavery. But the Hellenic race, which is situated between them, is likewise intermediate in character, being high-spirited and also intelligent. Hence it continues free, and is the best-governed of any nation, and, if it could be formed into one state, would be able to rule the world. There are also similar differences in the different tribes of Hellas; for some of them are of a one-sided nature, and are intelligent or courageous only, while in others there is a happy combination of both qualities. And clearly those whom the legislator will most easily lead to virtue may be expected to be both intelligent and courageous. Some say that the guardians should be friendly towards those whom they know, fierce towards those whom they do not know. Now, passion is the quality of the soul which begets friendship and enables us to love; notably the spirit within us is more stirred against our friends and acquaintances than against those who are unknown to us, when we think that we are despised by them; for which reason Archilochus, complaining of his friends, very naturally addresses his soul in these words:

“For surely thou art plagued on account of friends.”

The power of command and the love of freedom are in all men

based upon this quality, for passion is commanding and invincible. Nor is it right to say that the guardians should be fierce towards those whom they do not know, for we ought not to be out of temper with anyone; and a lofty spirit is not fierce by nature, but only when excited against evil-doers. And this, as I was saying before, is a feeling which men show most strongly towards their friends if they think they have received a wrong at their hands: as indeed is reasonable; for, besides the actual injury, they seem to be deprived of a benefit by those who owe them one. Hence the saying:

“Cruel is the strife of brethren,”

and again:

“They who love in excess also hate in excess.”

Thus we have nearly determined the number and character of the citizens of our state, and also the size and nature of their territory. I say “nearly,” for we ought not to require the same minuteness in theory as in the facts given by perception.

Part VIII

As in other natural compounds the conditions of a composite whole are not necessarily organic parts of it, so in a state or in any other combination forming a unity not everything is a part, which is a necessary condition. The members of an association have necessarily some one thing the same and common to all, in which they share equally or unequally; for example, food or land or any other thing. But where there are two things of which one is a means and the other an end, they have nothing in common except that the one receives what the other produces. Such, for example, is the relation in which workmen and tools stand to their work; the house and the builder have nothing in common, but the art of the builder is for the sake of the house. And so states require property, but property, even though living beings are included in it, is no part of a state; for a state is not a community of living beings only, but a community of equals, aiming at the best life possible. Now, whereas happiness is the highest good, being a realization and perfect practice of virtue, which some can attain, while others have little or none of it, the various qualities of men are clearly the reason why there are various kinds of states and many forms of government; for different men seek after happiness in different ways and by different means, and so make for themselves different modes of life and forms of government. We must see also how many things are indispensable to the existence of a state, for what we call the parts of a state will be found among the indispensables. Let us then enumerate the functions of a state, and we shall easily elicit what we want:

First, there must be food; secondly, arts, for life requires many instruments; thirdly, there must be arms, for the members of a community have need of them, and in their own hands, too, in order to maintain authority both against disobedient subjects and against

external assailants; fourthly, there must be a certain amount of revenue, both for internal needs, and for the purposes of war; fifthly, or rather first, there must be a care of religion, which is commonly called worship; sixthly, and most necessary of all, there must be a power of deciding what is for the public interest, and what is just in men's dealings with one another.

These are the services which every state may be said to need. For a state is not a mere aggregate of persons, but a union of them sufficing for the purposes of life; and if any of these things be wanting, it is as we maintain impossible that the community can be absolutely self-sufficing. A state then should be framed with a view to the fulfillment of these functions. There must be husbandmen to procure food, and artisans, and a warlike and a wealthy class, and priests, and judges to decide what is necessary and expedient.

Part IX

Having determined these points, we have in the next place to consider whether all ought to share in every sort of occupation. Shall every man be at once husbandman, artisan, councillor, judge, or shall we suppose the several occupations just mentioned assigned to different persons? Or, thirdly, shall some employments be assigned to individuals and others common to all? The same arrangement, however, does not occur in every constitution; as we were saying, all may be shared by all, or not all by all, but only some by some; and hence arise the differences of constitutions, for in democracies all share in all, in oligarchies the opposite practice prevails. Now, since we are here speaking of the best form of government, i.e., that under which the state will be most happy (and happiness, as has been already said, cannot exist without virtue), it clearly follows that in the state which is best governed and possesses men who are just absolutely, and not merely relatively to the principle of the constitution, the citizens must not lead the life of mechanics or tradesmen, for such a life is ignoble, and inimical to virtue. Neither must they be husbandmen, since leisure is necessary both for the development of virtue and the performance of political duties.

Again, there is in a state a class of warriors, and another of councillors, who advise about the expedient and determine matters of law, and these seem in an especial manner parts of a state. Now, should these two classes be distinguished, or are both functions to be assigned to the same persons? Here again there is no difficulty in seeing that both functions will in one way belong to the same, in another, to different persons. To different persons in so far as these employments are suited to different primes of life, for the one requires wisdom and the other strength. But on the other hand, since it is an impossible thing that those who are able to use or to resist force

should be willing to remain always in subjection, from this point of view the persons are the same; for those who carry arms can always determine the fate of the constitution. It remains therefore that both functions should be entrusted by the ideal constitution to the same persons, not, however, at the same time, but in the order prescribed by nature, who has given to young men strength and to older men wisdom. Such a distribution of duties will be expedient and also just, and is founded upon a principle of conformity to merit. Besides, the ruling class should be the owners of property, for they are citizens, and the citizens of a state should be in good circumstances; whereas mechanics or any other class which is not a producer of virtue have no share in the state. This follows from our first principle, for happiness cannot exist without virtue, and a city is not to be termed happy in regard to a portion of the citizens, but in regard to them all. And clearly property should be in their hands, since the husbandmen will of necessity be slaves or barbarian *Perioeci*.

Of the classes enumerated there remain only the priests, and the manner in which their office is to be regulated is obvious. No husbandman or mechanic should be appointed to it; for the Gods should receive honor from the citizens only. Now since the body of the citizen is divided into two classes, the warriors and the councillors, and it is befitting that the worship of the Gods should be duly performed, and also a rest provided in their service for those who from age have given up active life, to the old men of these two classes should be assigned the duties of the priesthood.

We have shown what are the necessary conditions, and what the parts of a state: husbandmen, craftsmen, and laborers of all kinds are necessary to the existence of states, but the parts of the state are the warriors and councillors. And these are distinguished severally from one another, the distinction being in some cases permanent, in others not.

Part X

It is not a new or recent discovery of political philosophers that the state ought to be divided into classes, and that the warriors should be separated from the husbandmen. The system has continued in Egypt and in Crete to this day, and was established, as tradition says, by a law of Sesostris in Egypt and of Minos in Crete. The institution of common tables also appears to be of ancient date, being in Crete as old as the reign of Minos, and in Italy far older. The Italian historians say that there was a certain Italus, king of Oenotria, from whom the Oenotrians were called Italians, and who gave the name of Italy to the promontory of Europe lying within the Scylletic and Lametic Gulfs, which are distant from one another only half a day's journey. They say that this Italus converted the Oenotrians from shepherds into husbandmen, and besides other laws which he gave them, was the founder of their common meals; even in our day some who are derived from him retain this institution and certain other laws of his. On the side of Italy towards Tyrrhenia dwelt the Opici, who are now, as of old, called Ausones; and on the side towards Iapygia and the Ionian Gulf, in the district called Siritis, the Chones, who are likewise of Oenotrian race. From this part of the world originally came the institution of common tables; the separation into castes from Egypt, for the reign of Sesostris is of far greater antiquity than that of Minos. It is true indeed that these and many other things have been invented several times over in the course of ages, or rather times without number; for necessity may be supposed to have taught men the inventions which were absolutely required, and when these were provided, it was natural that other things which would adorn and enrich life should grow up by degrees. And we may infer that in political institutions the same rule holds. Egypt witnesses to the antiquity of all these things, for the Egyptians appear to be of all people the most ancient; and they have laws and a regular

constitution existing from time immemorial. We should therefore make the best use of what has been already discovered, and try to supply defects.

I have already remarked that the land ought to belong to those who possess arms and have a share in the government, and that the husbandmen ought to be a class distinct from them; and I have determined what should be the extent and nature of the territory. Let me proceed to discuss the distribution of the land, and the character of the agricultural class; for I do not think that property ought to be common, as some maintain, but only that by friendly consent there should be a common use of it; and that no citizen should be in want of subsistence.

As to common meals, there is a general agreement that a well ordered city should have them; and we will hereafter explain what are our own reasons for taking this view. They ought, however, to be open to all the citizens. And yet it is not easy for the poor to contribute the requisite sum out of their private means, and to provide also for their household. The expense of religious worship should likewise be a public charge. The land must therefore be divided into two parts, one public and the other private, and each part should be subdivided, part of the public land being appropriated to the service of the Gods, and the other part used to defray the cost of the common meals; while of the private land, part should be near the border, and the other near the city, so that, each citizen having two lots, they may all of them have land in both places; there is justice and fairness in such a division, and it tends to inspire unanimity among the people in their border wars. Where there is not this arrangement, some of them are too ready to come to blows with their neighbors, while others are so cautious that they quite lose the sense of honor. Wherefore there is a law in some places which forbids those who dwell near the border to take part in public deliberations about wars with neighbors, on the

ground that their interests will pervert their judgment. For the reasons already mentioned, then, the land should be divided in the manner described. The very best thing of all would be that the husbandmen should be slaves taken from among men who are not all of the same race and not spirited, for if they have no spirit they will be better suited for their work, and there will be no danger of their making a revolution. The next best thing would be that they should be Perioeci of foreign race, and of a like inferior nature; some of them should be the slaves of individuals, and employed in the private estates of men of property, the remainder should be the property of the state and employed on the common land. I will hereafter explain what is the proper treatment of slaves, and why it is expedient that liberty should be always held out to them as the reward of their services.

Part XI

We have already said that the city should be open to the land and to the sea, and to the whole country as far as possible. In respect of the place itself our wish would be that its situation should be fortunate in four things. The first, health—this is a necessity: cities which lie towards the east, and are blown upon by winds coming from the east, are the healthiest; next in healthfulness are those which are sheltered from the north wind, for they have a milder winter. The site of the city should likewise be convenient both for political administration and for war. With a view to the latter it should afford easy egress to the citizens, and at the same time be inaccessible and difficult of capture to enemies. There should be a natural abundance of springs and fountains in the town, or, if there is a deficiency of them, great reservoirs may be established for the collection of rainwater, such as will not fail when the inhabitants are cut off from the country by war. Special care should be taken of the health of the inhabitants, which will depend chiefly on the healthiness of the locality and of the quarter to which they are exposed, and secondly, on the use of pure water; this latter point is by no means a secondary consideration. For the elements which we use most and oftenest for the support of the body contribute most to health, and among these are water and air. Wherefore, in all wise states, if there is a want of pure water, and the supply is not all equally good, the drinking water ought to be separated from that which is used for other purposes.

As to strongholds, what is suitable to different forms of government varies: thus an acropolis is suited to an oligarchy or a monarchy, but a plain to a democracy; neither to an aristocracy, but rather a number of strong places. The arrangement of private houses is considered to be more agreeable and generally more convenient, if the streets are regularly laid out after the modern fashion which

Hippodamus introduced, but for security in war the antiquated mode of building, which made it difficult for strangers to get out of a town and for assailants to find their way in, is preferable. A city should therefore adopt both plans of building: it is possible to arrange the houses irregularly, as husbandmen plant their vines in what are called "clumps." The whole town should not be laid out in straight lines, but only certain quarters and regions; thus security and beauty will be combined.

As to walls, those who say that cities making any pretension to military virtue should not have them, are quite out of date in their notions; and they may see the cities which prided themselves on this fancy confuted by facts. True, there is little courage shown in seeking for safety behind a rampart when an enemy is similar in character and not much superior in number; but the superiority of the besiegers may be and often is too much both for ordinary human valor and for that which is found only in a few; and if they are to be saved and to escape defeat and outrage, the strongest wall will be the truest soldierly precaution, more especially now that missiles and siege engines have been brought to such perfection. To have no walls would be as foolish as to choose a site for a town in an exposed country, and to level the heights; or as if an individual were to leave his house unwalled, lest the inmates should become cowards. Nor must we forget that those who have their cities surrounded by walls may either take advantage of them or not, but cities which are unwalled have no choice.

If our conclusions are just, not only should cities have walls, but care should be taken to make them ornamental, as well as useful for warlike purposes, and adapted to resist modern inventions. For as the assailants of a city do all they can to gain an advantage, so the defenders should make use of any means of defense which have been already discovered, and should devise and invent others, for when men are well prepared no enemy even thinks of attacking them.

Part XII

As the walls are to be divided by guard-houses and towers built at suitable intervals, and the body of citizens must be distributed at common tables, the idea will naturally occur that we should establish some of the common tables in the guard-houses. These might be arranged as has been suggested; while the principal common tables of the magistrates will occupy a suitable place, and there also will be the buildings appropriated to religious worship except in the case of those rites which the law or the Pythian oracle has restricted to a special locality. The site should be a spot seen far and wide, which gives due elevation to virtue and towers over the neighborhood. Below this spot should be established an agora, such as that which the Thessalians call the "freemen's agora"; from this all trade should be excluded, and no mechanic, husbandman, or any such person allowed to enter, unless he be summoned by the magistrates. It would be a charming use of the place, if the gymnastic exercises of the elder men were performed there. For in this noble practice different ages should be separated, and some of the magistrates should stay with the boys, while the grown-up men remain with the magistrates; for the presence of the magistrates is the best mode of inspiring true modesty and ingenuous fear. There should also be a traders' agora, distinct and apart from the other, in a situation which is convenient for the reception of goods both by sea and land.

But in speaking of the magistrates we must not forget another section of the citizens, viz., the priests, for whom public tables should likewise be provided in their proper place near the temples. The magistrates who deal with contracts, indictments, summonses, and the like, and those who have the care of the agora and of the city, respectively, ought to be established near an agora and some public place of meeting; the neighborhood of the traders' agora will be a

suitable spot; the upper agora we devote to the life of leisure, the other is intended for the necessities of trade.

The same order should prevail in the country, for there too the magistrates, called by some “Inspectors of Forests” and by others “Wardens of the Country,” must have guard-houses and common tables while they are on duty; temples should also be scattered throughout the country, dedicated, some to Gods, and some to heroes.

But it would be a waste of time for us to linger over details like these. The difficulty is not in imagining but in carrying them out. We may talk about them as much as we like, but the execution of them will depend upon fortune. Wherefore let us say no more about these matters for the present.

Part XIII

Returning to the constitution itself, let us seek to determine out of what and what sort of elements the state which is to be happy and well-governed should be composed. There are two things in which all which all well-being consists: one of them is the choice of a right end and aim of action, and the other the discovery of the actions which are means towards it; for the means and the end may agree or disagree. Sometimes the right end is set before men, but in practice they fail to attain it; in other cases they are successful in all the means, but they propose to themselves a bad end; and sometimes they fail in both. Take, for example, the art of medicine; physicians do not always understand the nature of health, and also the means which they use may not effect the desired end. In all arts and sciences both the end and the means should be equally within our control.

The happiness and well-being which all men manifestly desire, some have the power of attaining, but to others, from some accident or defect of nature, the attainment of them is not granted; for a good life requires a supply of external goods, in a less degree when men are in a good state, in a greater degree when they are in a lower state. Others again, who possess the conditions of happiness, go utterly wrong from the first in the pursuit of it. But since our object is to discover the best form of government, that, namely, under which a city will be best governed, and since the city is best governed which has the greatest opportunity of obtaining happiness, it is evident that we must clearly ascertain the nature of happiness.

We maintain, and have said in the *Ethics*, if the arguments there adduced are of any value, that happiness is the realization and perfect exercise of virtue, and this not conditional, but absolute. And I used the term “conditional” to express that which is indispensable, and

“absolute” to express that which is good in itself. Take the case of just actions; just punishments and chastisements do indeed spring from a good principle, but they are good only because we cannot do without them—it would be better that neither individuals nor states should need anything of the sort—but actions which aim at honor and advantage are absolutely the best. The conditional action is only the choice of a lesser evil; whereas these are the foundation and creation of good. A good man may make the best even of poverty and disease, and the other ills of life; but he can only attain happiness under the opposite conditions (for this also has been determined in accordance with ethical arguments, that the good man is he for whom, because he is virtuous, the things that are absolutely good are good; it is also plain that his use of these goods must be virtuous and in the absolute sense good). This makes men fancy that external goods are the cause of happiness, yet we might as well say that a brilliant performance on the lyre was to be attributed to the instrument and not to the skill of the performer.

It follows then from what has been said that some things the legislator must find ready to his hand in a state, others he must provide. And therefore we can only say: May our state be constituted in such a manner as to be blessed with the goods of which fortune disposes (for we acknowledge her power): whereas virtue and goodness in the state are not a matter of chance but the result of knowledge and purpose. A city can be virtuous only when the citizens who have a share in the government are virtuous, and in our state all the citizens share in the government; let us then inquire how a man becomes virtuous. For even if we could suppose the citizen body to be virtuous, without each of them being so, yet the latter would be better, for in the virtue of each the virtue of all is involved.

There are three things which make men good and virtuous; these are nature, habit, rational principle. In the first place, everyone must

be born a man and not some other animal; so, too, he must have a certain character, both of body and soul. But some qualities there is no use in having at birth, for they are altered by habit, and there are some gifts which by nature are made to be turned by habit to good or bad. Animals lead for the most part a life of nature, although in lesser particulars some are influenced by habit as well. Man has rational principle, in addition, and man only. Wherefore nature, habit, rational principle must be in harmony with one another; for they do not always agree; men do many things against habit and nature, if rational principle persuades them that they ought. We have already determined what natures are likely to be most easily molded by the hands of the legislator. An else is the work of education; we learn some things by habit and some by instruction.

Part XIV

Since every political society is composed of rulers and subjects, let us consider whether the relations of one to the other should interchange or be permanent. For the education of the citizens will necessarily vary with the answer given to this question. Now, if some men excelled others in the same degree in which gods and heroes are supposed to excel mankind in general (having in the first place a great advantage even in their bodies, and secondly in their minds), so that the superiority of the governors was undisputed and patent to their subjects, it would clearly be better that once for all the one class should rule and the other serve. But since this is unattainable, and kings have no marked superiority over their subjects, such as Scylax affirms to be found among the Indians, it is obviously necessary on many grounds that all the citizens alike should take their turn of governing and being governed. Equality consists in the same treatment of similar persons, and no government can stand which is not founded upon justice. For if the government be unjust everyone in the country unites with the governed in the desire to have a revolution, and it is an impossibility that the members of the government can be so numerous as to be stronger than all their enemies put together. Yet that governors should excel their subjects is undeniable. How all this is to be effected, and in what way they will respectively share in the government, the legislator has to consider. The subject has been already mentioned. Nature herself has provided the distinction when she made a difference between old and young within the same species, of whom she fitted the one to govern and the other to be governed. No one takes offense at being governed when he is young, nor does he think himself better than his governors, especially if he will enjoy the same privilege when he reaches the required age.

We conclude that from one point of view governors and governed are identical, and from another different. And therefore their education must be the same and also different. For he who would learn to command well must, as men say, first of all learn to obey. As I observed in the first part of this treatise, there is one rule which is for the sake of the rulers and another rule which is for the sake of the ruled; the former is a despotic, the latter a free government. Some commands differ not in the thing commanded, but in the intention with which they are imposed.

Wherefore, many apparently menial offices are an honor to the free youth by whom they are performed; for actions do not differ as honorable or dishonorable in themselves so much as in the end and intention of them. But since we say that the virtue of the citizen and ruler is the same as that of the good man, and that the same person must first be a subject and then a ruler, the legislator has to see that they become good men, and by what means this may be accomplished, and what is the end of the perfect life.

Now the soul of man is divided into two parts, one of which has a rational principle in itself, and the other, not having a rational principle in itself, is able to obey such a principle. And we call a man in any way good because he has the virtues of these two parts. In which of them the end is more likely to be found is no matter of doubt to those who adopt our division; for in the world both of nature and of art the inferior always exists for the sake of the better or superior, and the better or superior is that which has a rational principle. This principle, too, in our ordinary way of speaking, is divided into two kinds, for there is a practical and a speculative principle. This part, then, must evidently be similarly divided. And there must be a corresponding division of actions; the actions of the naturally better part are to be preferred by those who have it in their power to attain to two out of the three or to all, for that is always to everyone the

most eligible which is the highest attainable by him. The whole of life is further divided into two parts, business and leisure, war and peace, and of actions some aim at what is necessary and useful, and some at what is honorable. And the preference given to one or the other class of actions must necessarily be like the preference given to one or other part of the soul and its actions over the other; there must be war for the sake of peace, business for the sake of leisure, things useful and necessary for the sake of things honorable. All these points the statesman should keep in view when he frames his laws; he should consider the parts of the soul and their functions, and above all the better and the end; he should also remember the diversities of human lives and actions. For men must be able to engage in business and go to war, but leisure and peace are better; they must do what is necessary and indeed what is useful, but what is honorable is better. On such principles children and persons of every age which requires education should be trained. Whereas even the Hellenes of the present day who are reputed to be best governed, and the legislators who gave them their constitutions, do not appear to have framed their governments with a regard to the best end, or to have given them laws and education with a view to all the virtues, but in a vulgar spirit have fallen back on those which promised to be more useful and profitable. Many modern writers have taken a similar view: they commend the Lacedaemonian constitution, and praise the legislator for making conquest and war his sole aim, a doctrine which may be refuted by argument and has long ago been refuted by facts. For most men desire empire in the hope of accumulating the goods of fortune; and on this ground Thibron and all those who have written about the Lacedaemonian constitution have praised their legislator, because the Lacedaemonians, by being trained to meet dangers, gained great power. But surely they are not a happy people now that their empire has passed away, nor was their legislator right. How ridiculous is the result, if, when they are continuing in the observance of his laws and no one interferes with them, they have lost the better part of life!

These writers further err about the sort of government which the legislator should approve, for the government of freemen is nobler and implies more virtue than despotic government. Neither is a city to be deemed happy or a legislator to be praised because he trains his citizens to conquer and obtain dominion over their neighbors, for there is great evil in this. On a similar principle any citizen who could, should obviously try to obtain the power in his own state—the crime which the Lacedaemonians accuse king Pausanias of attempting, although he had so great honor already. No such principle and no law having this object is either statesmanlike or useful or right. For the same things are best both for individuals and for states, and these are the things which the legislator ought to implant in the minds of his citizens.

Neither should men study war with a view to the enslavement of those who do not deserve to be enslaved; but first of all they should provide against their own enslavement, and in the second place obtain empire for the good of the governed, and not for the sake of exercising a general despotism, and in the third place they should seek to be masters only over those who deserve to be slaves. Facts, as well as arguments, prove that the legislator should direct all his military and other measures to the provision of leisure and the establishment of peace. For most of these military states are safe only while they are at war, but fall when they have acquired their empire; like unused iron they lose their temper in time of peace. And for this the legislator is to blame, he never having taught them how to lead the life of peace.

Part XV

Since the end of individuals and of states is the same, the end of the best man and of the best constitution must also be the same; it is therefore evident that there ought to exist in both of them the virtues of leisure; for peace, as has been often repeated, is the end of war, and leisure of toil. But leisure and cultivation may be promoted, not only by those virtues which are practiced in leisure, but also by some of those which are useful to business. For many necessities of life have to be supplied before we can have leisure. Therefore a city must be temperate and brave, and able to endure: for truly, as the proverb says, "There is no leisure for slaves," and those who cannot face danger like men are the slaves of any invader. Courage and endurance are required for business and philosophy for leisure, temperance and justice for both, and more especially in times of peace and leisure, for war compels men to be just and temperate, whereas the enjoyment of good fortune and the leisure which comes with peace tend to make them insolent. Those then who seem to be the best-off and to be in the possession of every good, have special need of justice and temperance—for example, those (if such there be, as the poets say) who dwell in the Islands of the Blest; they above all will need philosophy and temperance and justice, and all the more the more leisure they have, living in the midst of abundance. There is no difficulty in seeing why the state that would be happy and good ought to have these virtues. If it be disgraceful in men not to be able to use the goods of life, it is peculiarly disgraceful not to be able to use them in time of leisure—to show excellent qualities in action and war, and when they have peace and leisure to be no better than slaves. Wherefore we should not practice virtue after the manner of the Lacedaemonians. For they, while agreeing with other men in their conception of the highest goods, differ from the rest of mankind in thinking that they are to be obtained by the practice of a single virtue. And since they think these

goods and the enjoyment of them greater than the enjoyment derived from the virtues ... and that it should be practiced for its own sake, is evident from what has been said; we must now consider how and by what means it is to be attained.

We have already determined that nature and habit and rational principle are required, and, of these, the proper nature of the citizens has also been defined by us. But we have still to consider whether the training of early life is to be that of rational principle or habit, for these two must accord, and when in accord they will then form the best of harmonies. The rational principle may be mistaken and fail in attaining the highest ideal of life, and there may be a like evil influence of habit. Thus much is clear in the first place, that, as in all other things, birth implies an antecedent beginning, and that there are beginnings whose end is relative to a further end. Now, in men rational principle and mind are the end towards which nature strives, so that the birth and moral discipline of the citizens ought to be ordered with a view to them. In the second place, as the soul and body are two, we see also that there are two parts of the soul, the rational and the irrational, and two corresponding states—reason and appetite. And as the body is prior in order of generation to the soul, so the irrational is prior to the rational. The proof is that anger and wishing and desire are implanted in children from their very birth, but reason and understanding are developed as they grow older. Wherefore, the care of the body ought to precede that of the soul, and the training of the appetitive part should follow: none the less our care of it must be for the sake of the reason, and our care of the body for the sake of the soul.

Part XVI

Since the legislator should begin by considering how the frames of the children whom he is rearing may be as good as possible, his first care will be about marriage—at what age should his citizens marry, and who are fit to marry? In legislating on this subject he ought to consider the persons and the length of their life, that their procreative life may terminate at the same period, and that they may not differ in their bodily powers, as will be the case if the man is still able to beget children while the woman is unable to bear them, or the woman able to bear while the man is unable to beget, for from these causes arise quarrels and differences between married persons. Secondly, he must consider the time at which the children will succeed to their parents; there ought not to be too great an interval of age, for then the parents will be too old to derive any pleasure from their affection, or to be of any use to them. Nor ought they to be too nearly of an age; to youthful marriages there are many objections—the children will be wanting in respect to the parents, who will seem to be their contemporaries, and disputes will arise in the management of the household. Thirdly, and this is the point from which we digressed, the legislator must mold to his will the frames of newly-born children. Almost all these objects may be secured by attention to one point. Since the time of generation is commonly limited within the age of seventy years in the case of a man, and of fifty in the case of a woman, the commencement of the union should conform to these periods. The union of male and female when too young is bad for the procreation of children; in all other animals the offspring of the young are small and undeveloped, and with a tendency to produce female children, and therefore also in man, as is proved by the fact that in those cities in which men and women are accustomed to marry young, the people are small and weak; in childbirth also younger women suffer more, and more of them die; some persons say that this was the

meaning of the response once given to the Troezenians—the oracle really meant that many died because they married too young; it had nothing to do with the ingathering of the harvest. It also conduces to temperance not to marry too soon; for women who marry early are apt to be wanton; and in men too the bodily frame is stunted if they marry while the seed is growing (for there is a time when the growth of the seed, also, ceases, or continues to but a slight extent). Women should marry when they are about eighteen years of age, and men at seven and thirty; then they are in the prime of life, and the decline in the powers of both will coincide. Further, the children, if their birth takes place soon, as may reasonably be expected, will succeed in the beginning of their prime, when the fathers are already in the decline of life, and have nearly reached their term of three-score years and ten.

Thus much of the age proper for marriage: the season of the year should also be considered; according to our present custom, people generally limit marriage to the season of winter, and they are right. The precepts of physicians and natural philosophers about generation should also be studied by the parents themselves; the physicians give good advice about the favorable conditions of the body, and the natural philosophers about the winds; of which they prefer the north to the south.

What constitution in the parent is most advantageous to the offspring is a subject which we will consider more carefully when we speak of the education of children, and we will only make a few general remarks at present. The constitution of an athlete is not suited to the life of a citizen, or to health, or to the procreation of children, any more than the valetudinarian or exhausted constitution, but one which is in a mean between them. A man's constitution should be inured to labor, but not to labor which is excessive or of one sort only, such as is practiced by athletes; he should be capable of all the actions

of a freeman. These remarks apply equally to both parents.

Women who are with child should be careful of themselves; they should take exercise and have a nourishing diet. The first of these prescriptions the legislator will easily carry into effect by requiring that they shall take a walk daily to some temple, where they can worship the gods who preside over birth. Their minds, however, unlike their bodies, they ought to keep quiet, for the offspring derive their natures from their mothers as plants do from the earth.

As to the exposure and rearing of children, let there be a law that no deformed child shall live, but that on the ground of an excess in the number of children, if the established customs of the state forbid this (for in our state population has a limit), no child is to be exposed, but when couples have children in excess, let abortion be procured before sense and life have begun; what may or may not be lawfully done in these cases depends on the question of life and sensation.

And now, having determined at what ages men and women are to begin their union, let us also determine how long they shall continue to beget and bear offspring for the state; men who are too old, like men who are too young, produce children who are defective in body and mind; the children of very old men are weakly. The limit then, should be the age which is the prime of their intelligence, and this in most persons, according to the notion of some poets who measure life by periods of seven years, is about fifty; at four or five years or later, they should cease from having families; and from that time forward only cohabit with one another for the sake of health; or for some similar reason.

As to adultery, let it be held disgraceful, in general, for any man or woman to be found in any way unfaithful when they are married, and called husband and wife. If during the time of bearing children anything of the sort occur, let the guilty person be punished with a

loss of privileges in proportion to the offense.

Part XVII

After the children have been born, the manner of rearing them may be supposed to have a great effect on their bodily strength. It would appear from the example of animals, and of those nations who desire to create the military habit, that the food which has most milk in it is best suited to human beings; but the less wine the better, if they would escape diseases. Also all the motions to which children can be subjected at their early age are very useful. But in order to preserve their tender limbs from distortion, some nations have had recourse to mechanical appliances which straighten their bodies. To accustom children to the cold from their earliest years is also an excellent practice, which greatly conduces to health, and hardens them for military service. Hence many barbarians have a custom of plunging their children at birth into a cold stream; others, like the Celts, clothe them in a light wrapper only. For human nature should be early habituated to endure all which by habit it can be made to endure; but the process must be gradual. And children, from their natural warmth, may be easily trained to bear cold. Such care should attend them in the first stage of life.

The next period lasts to the age of five; during this no demand should be made upon the child for study or labor, lest its growth be impeded; and there should be sufficient motion to prevent the limbs from being inactive. This can be secured, among other ways, by amusement, but the amusement should not be vulgar or tiring or effeminate. The Directors of Education, as they are termed, should be careful what tales or stories the children hear, for all such things are designed to prepare the way for the business of later life, and should be for the most part imitations of the occupations which they will hereafter pursue in earnest. Those are wrong who in their laws attempt to check the loud crying and screaming of children, for these

contribute towards their growth, and, in a manner, exercise their bodies. Straining the voice has a strengthening effect similar to that produced by the retention of the breath in violent exertions. The Directors of Education should have an eye to their bringing up, and in particular should take care that they are left as little as possible with slaves. For until they are seven years old they must live at home; and therefore, even at this early age, it is to be expected that they should acquire a taint of meanness from what they hear and see. Indeed, there is nothing which the legislator should be more careful to drive away than indecency of speech; for the light utterance of shameful words leads soon to shameful actions. The young especially should never be allowed to repeat or hear anything of the sort. A freeman who is found saying or doing what is forbidden, if he be too young as yet to have the privilege of reclining at the public tables, should be disgraced and beaten, and an elder person degraded as his slavish conduct deserves. And since we do not allow improper language, clearly we should also banish pictures or speeches from the stage which are indecent. Let the rulers take care that there be no image or picture representing unseemly actions, except in the temples of those Gods at whose festivals the law permits even ribaldry, and whom the law also permits to be worshipped by persons of mature age on behalf of themselves, their children, and their wives. But the legislator should not allow youth to be spectators of iambi or of comedy until they are of an age to sit at the public tables and to drink strong wine; by that time education will have armed them against the evil influences of such representations.

We have made these remarks in a cursory manner—they are enough for the present occasion; but hereafter we will return to the subject and after a fuller discussion determine whether such liberty should or should not be granted, and in what way granted, if at all. Theodorus, the tragic actor, was quite right in saying that he would not allow any other actor, not even if he were quite second-rate, to

enter before himself, because the spectators grew fond of the voices which they first heard. And the same principle applies universally to association with things as well as with persons, for we always like best whatever comes first. And therefore youth should be kept strangers to all that is bad, and especially to things which suggest vice or hate. When the five years have passed away, during the two following years they must look on at the pursuits which they are hereafter to learn. There are two periods of life with reference to which education has to be divided, from seven to the age of puberty, and onwards to the age of one and twenty. The poets who divide ages by sevens are in the main right: but we should observe the divisions actually made by nature; for the deficiencies of nature are what art and education seek to fill up.

Let us then first inquire if any regulations are to be laid down about children, and secondly, whether the care of them should be the concern of the state or of private individuals, which latter is in our own day the common custom, and in the third place, what these regulations should be.

[2] *Contemplations*：这里指哲学的沉思、思辨的生活。将之与城邦中的生活对立。城邦生活中所要求的美德是需要直接与他人相关的、直接作用于他人的。因而某种意义上这种美德是不能自足的，必须得到他人的认可才行。而哲学家的沉思生活是一种不直接涉及他人的、个体内在的自省的实践。虽然这种沉思的实践不以直接作用于他人为目标，但是沉思依然是一种最高贵的人类实践行为，其后亚里士多德甚至拿神的存在方式进行比喻。在亚里士多德的理论中，神作为不动的始动者，通过其自身的完美，吸引着万物趋向他而运动。

BOOK EIGHT

导 读

在《政治学》的最后一卷，亚里士多德讨论了教育问题，而教育之中又主要谈到了音乐的教育。在亚里士多德看来，音乐有某种特殊的优势，可以更好地胜任教育这一任务。

在第八卷刚开始，亚里士多德就表明教育青少年的重要性。他指出没有重视青少年教育的城邦的政体都受到了危害。因而教育的一个最重要的功能就是要为政体服务，即让每一个公民都应该适应、欢迎其所生活的城邦的独特政体原则。通过教育，就能培养出公民对于政体的习惯性的服从，也就保证了政体的稳定。这里蕴含的原则就是，教育应该是属于城邦公共领域的问题，而不是私人问题。这样才能保证每一个被教育出来的公民能够更好地作为城邦整体的一部分，服务于城邦的利益。

接下来，亚里士多德又谈到教育的具体内容。应该是以实用为目的还是以培养德性为目的，或者是以某种特殊的卓越为目的。亚里士多德认为公民的教育自然应该以培养德性为主要目的，任何诸如工匠这样的实用技能知识都只是一种贱业，无益于德性的培养，因而不能包括在教育之中。

更进一步，亚里士多德又说闲暇是人类活动的本源，思考人在闲暇中应该做些什么是十分重要的问题，只有在闲暇中，人的活动才可能是一种不出于必然性的活动、一种以自身为目的行动。闲暇中的活动带给人们的快乐，并不是一种娱乐性的嬉戏，嬉戏只是在辛苦劳作后的一种放松。而闲暇中人们活动所带来的是一种纯粹的快乐，有益于人培养自身高尚的情操。音乐就是这种人类在闲暇中的高尚的活动。音乐是一种寓教于乐的教育方式，音乐保证了对于青少年的教育不是出于实用目的或者迫于必然，而是为了培养人自由而高贵的情操。虽然对于青少年的教育肯定要有一些实用的课程，但是这种实用本身不是目的，而是将孩子们带入更广阔天地的一种手段。处处寻求实用是对人的自由和大度的一种歪曲。

不以实用为目的自由教育，可以避免培养出狭隘的公民。如果仅以某种单一的德性为目标进行教育，就很可能导致这种狭隘出现。就好比斯巴达人的教育，由于过于强调勇气的培养，因而斯巴达人的勇气常常与残暴结合在一起。这种勇气更类似于猛兽的凶恶。而自由的教育会注意孩子的全面发展，将勇气、节制、智慧等各种德性协调起来。只有经过这样的协调，人类才可能真正地具有勇敢这一品德，因为只有善良的人为了一个高尚的事业而慷慨赴险，勇敢才能成为一个可贵的品性。在缺乏自由和闲暇的条件下，人们不得不注重某种实用的知识，比如在频繁战争的情况下，城邦只能把教育的重心全部放在培养战士的技巧上，重视孩子的身体素质教育而非灵魂的教育，因而培养出的人才更有可能作为一种工具来完成城邦的任务。

将勇敢、智慧、节制等德性协调起来的最好的办法同样是借助音乐教育。音乐的特殊性就在于，它可以通过旋律曲调来模仿人的喜怒哀乐等人的诸多性情。人类可以通过聆听各种音乐来反复经历各种各样的人的内心感受。这种反复经历也就成了一种练习。当人们在长时间欣赏了起伏跌宕的音乐时，人也就培养出了一种适应、克制起伏跌宕的激情的能力。而最好的是，人在进行这种练习时，本身就能自然地获得一种怡然的快乐。其中原因是由音乐欣赏本身的特性决定的，就好像我们在欣赏一首哀伤的音乐曲调时，我们内心虽然感同身受，焕发一种哀伤的心情，但同时我们也是在欣赏这一哀伤本身，也就是说在哀伤之上我们依然是获得了一种快乐。音乐本身就具有一种在矛盾中达成统一的能力，用一种差异的音调组成一首悦耳的和谐乐章。因而音乐在这里就像一种对于完美政治追求的隐喻。政治的最高目的也是要在自由与服从这一矛盾中达成统一。

在本卷也是全书的最后，亚里士多德谈到了教育的最终标准，即中庸、可能的目标与适当的目标。这三者都和审慎、适度有关，看来这也是亚里士多德对于政治的根本态度。正是因为人天生就是政治的动物，我们只有在政治生活中才可能学会如何在矛盾冲突中达成和解、寻求和谐。而一旦我们达到了这种中庸的境界，又会有利于政治生活。

Part I

No one will doubt that the legislator should direct his attention above all to the education of youth; for the neglect of education does harm to the constitution. The citizen should be molded to suit the form of government under which he lives. For each government has a peculiar character which originally formed and which continues to preserve it. The character of democracy creates democracy, and the character of oligarchy creates oligarchy; and always the better the character, the better the government.

Again, for the exercise of any faculty or art a previous training and habituation are required; clearly therefore for the practice of virtue. And since the whole city has one end, it is manifest that education should be one and the same for all, and that it should be public, and not private—not as at present, when every one looks after his own children separately, and gives them separate instruction of the sort which he thinks best; the training in things which are of common interest should be the same for all. Neither must we suppose that any one of the citizens belongs to himself, for they all belong to the state, and are each of them a part of the state, and the care of each part is inseparable from the care of the whole. In this particular as in some others the Lacedaemonians are to be praised, for they take the greatest pains about their children, and make education the business of the state.

Part II

That education should be regulated by law and should be an affair of state is not to be denied, but what should be the character of this public education, and how young persons should be educated, are questions which remain to be considered. As things are, there is disagreement about the subjects. For mankind are by no means agreed about the things to be taught, whether we look to virtue or the best life. Neither is it clear whether education is more concerned with intellectual or with moral virtue. The existing practice is perplexing; no one knows on what principle we should proceed—should the useful in life, or should virtue, or should the higher knowledge, be the aim of our training; all three opinions have been entertained. Again, about the means there is no agreement; for different persons, starting with different ideas about the nature of virtue, naturally disagree about the practice of it. There can be no doubt that children should be taught those useful things which are really necessary, but not all useful things; for occupations are divided into liberal and illiberal; and to young children should be imparted only such kinds of knowledge as will be useful to them without vulgarizing them. And any occupation, art, or science, which makes the body or soul or mind of the freeman less fit for the practice or exercise of virtue, is vulgar; wherefore we call those arts vulgar which tend to deform the body, and likewise all paid employments, for they absorb and degrade the mind. There are also some liberal arts quite proper for a freeman to acquire, but only in a certain degree, and if he attend to them too closely, in order to attain perfection in them, the same evil effects will follow.

The object also which a man sets before him makes a great difference; if he does or learns anything for his own sake or for the sake of his friends, or with a view to excellence the action will not appear illiberal; but if done for the sake of others, the very same

action will be thought menial and servile. The received subjects of instruction, as I have already remarked, are partly of a liberal and party of an illiberal character.

Part III

The customary branches of education are in number four; they are—(1) reading and writing, (2) gymnastic exercises, (3) music, to which is sometimes added (4) drawing. Of these, reading and writing and drawing are regarded as useful for the purposes of life in a variety of ways, and gymnastic exercises are thought to infuse courage. Concerning music a doubt may be raised—in our own day most men cultivate it for the sake of pleasure, but originally it was included in education, because nature herself, as has been often said, requires that we should be able, not only to work well, but to use leisure well; for, as I must repeat once again, the first principle of all action is leisure. Both are required, but leisure is better than occupation and is its end; and therefore the question must be asked, what ought we to do when at leisure? Clearly we ought not to be amusing ourselves, for then amusement would be the end of life. But if this is inconceivable, and amusement is needed more amid serious occupations than at other times (for he who is hard at work has need of relaxation, and amusement gives relaxation, whereas occupation is always accompanied with exertion and effort), we should introduce amusements only at suitable times, and they should be our medicines, for the emotion which they create in the soul is a relaxation, and from the pleasure we obtain rest. But leisure of itself gives pleasure and happiness and enjoyment of life, which are experienced, not by the busy man, but by those who have leisure. For he who is occupied has in view some end which he has not attained; but happiness is an end, since all men deem it to be accompanied with pleasure and not with pain. This pleasure, however, is regarded differently by different persons, and varies according to the habit of individuals; the pleasure of the best man is the best, and springs from the noblest sources. It is clear then that there are branches of learning and education which we must study merely with a view to leisure spent in intellectual activity,

and these are to be valued for their own sake; whereas those kinds of knowledge which are useful in business are to be deemed necessary, and exist for the sake of other things. And therefore our fathers admitted music into education, not on the ground either of its necessity or utility, for it is not necessary, nor indeed useful in the same manner as reading and writing, which are useful in money-making, in the management of a household, in the acquisition of knowledge and in political life, nor like drawing, useful for a more correct judgment of the works of artists, nor again like gymnastic, which gives health and strength; for neither of these is to be gained from music. There remains, then, the use of music for intellectual enjoyment in leisure; which is in fact evidently the reason of its introduction, this being one of the ways in which it is thought that a freeman should pass his leisure; as Homer says,

“But he who alone should be called to the pleasant feast,”and afterwards he speaks of others whom he describes as inviting

“The bard who would delight them all.”

And in another place Odysseus says there is no better way of passing life than when men's hearts are merry and

“The banqueters in the hall, sitting in order, hear the voice of the minstrel.”

It is evident, then, that there is a sort of education in which parents should train their sons, not as being useful or necessary, but because it is liberal or noble. Whether this is of one kind only, or of more than one, and if so, what they are, and how they are to be imparted, must hereafter be determined. Thus much we are now in a position to say, that the ancients witness to us; for their opinion may be gathered from the fact that music is one of the received and traditional branches of education. Further, it is clear that children should be instructed in some useful things—for example, in reading

and writing—not only for their usefulness, but also because many other sorts of knowledge are acquired through them. With a like view they may be taught drawing, not to prevent their making mistakes in their own purchases, or in order that they may not be imposed upon in the buying or selling of articles, but perhaps rather because it makes them judges of the beauty of the human form. To be always seeking after the useful does not become free and exalted souls. Now it is clear that in education practice must be used before theory, and the body be trained before the mind; and therefore boys should be handed over to the trainer, who creates in them the proper habit of body, and to the wrestling-master, who teaches them their exercises.

Part IV

Of those states which in our own day seem to take the greatest care of children, some aim at producing in them an athletic habit, but they only injure their forms and stunt their growth. Although the Lacedaemonians have not fallen into this mistake, yet they brutalize their children by laborious exercises which they think will make them courageous. But in truth, as we have often repeated, education should not be exclusively, or principally, directed to this end. And even if we suppose the Lacedaemonians to be right in their end, they do not attain it. For among barbarians and among animals courage is found associated, not with the greatest ferocity, but with a gentle and lion-like temper. There are many races who are ready enough to kill and eat men, such as the Achaeans and Heniochi, who both live about the Black Sea; and there are other mainland tribes, as bad or worse, who all live by plunder, but have no courage. It is notorious that the Lacedaemonians themselves, while they alone were assiduous in their laborious drill, were superior to others, but now they are beaten both in war and gymnastic exercises. For their ancient superiority did not depend on their mode of training their youth, but only on the circumstance that they trained them when their only rivals did not. Hence we may infer that what is noble, not what is brutal, should have the first place; no wolf or other wild animal will face a really noble danger; such dangers are for the brave man. And parents who devote their children to gymnastics while they neglect their necessary education, in reality vulgarize them; for they make them useful to the art of statesmanship in one quality only, and even in this the argument proves them to be inferior to others. We should judge the Lacedaemonians not from what they have been, but from what they are; for now they have rivals who compete with their education; formerly they had none.

It is an admitted principle, that gymnastic exercises should be employed in education, and that for children they should be of a lighter kind, avoiding severe diet or painful toil, lest the growth of the body be impaired. The evil of excessive training in early years is strikingly proved by the example of the Olympic victors; for not more than two or three of them have gained a prize both as boys and as men; their early training and severe gymnastic exercises exhausted their constitutions. When boyhood is over, three years should be spent in other studies; the period of life which follows may then be devoted to hard exercise and strict diet. Men ought not to labor at the same time with their minds and with their bodies; for the two kinds of labor are opposed to one another; the labor of the body impedes the mind, and the labor of the mind the body.

Part V

Concerning music there are some questions which we have already raised; these we may now resume and carry further; and our remarks will serve as a prelude to this or any other discussion of the subject. It is not easy to determine the nature of music, or why anyone should have a knowledge of it. Shall we say, for the sake of amusement and relaxation, like sleep or drinking, which are not good in themselves, but are pleasant, and at the same time “care to cease,” as Euripides says? And for this end men also appoint music, and make use of all three alike—sleep, drinking, music—to which some add dancing. Or shall we argue that music conduces to virtue, on the ground that it can form our minds and habituate us to true pleasures as our bodies are made by gymnastic to be of a certain character? Or shall we say that it contributes to the enjoyment of leisure and mental cultivation, which is a third alternative? Now obviously youths are not to be instructed with a view to their amusement, for learning is no amusement, but is accompanied with pain. Neither is intellectual enjoyment suitable to boys of that age, for it is the end, and that which is imperfect cannot attain the perfect or end. But perhaps it may be said that boys learn music for the sake of the amusement which they will have when they are grown up. If so, why should they learn themselves, and not, like the Persian and Median kings, enjoy the pleasure and instruction which is derived from hearing others? (for surely persons who have made music the business and profession of their lives will be better performers than those who practice only long enough to learn). If they must learn music, on the same principle they should learn cookery, which is absurd. And even granting that music may form the character, the objection still holds: why should we learn ourselves? Why cannot we attain true pleasure and form a correct judgment from hearing others, like the Lacedaemonians?—for they, without learning music, nevertheless can correctly judge, as they

say, of good and bad melodies. Or again, if music should be used to promote cheerfulness and refined intellectual enjoyment, the objection still remains—why should we learn ourselves instead of enjoying the performances of others? We may illustrate what we are saying by our conception of the Gods; for in the poets Zeus does not himself sing or play on the lyre. Nay, we call professional performers vulgar; no freeman would play or sing unless he were intoxicated or in jest. But these matters may be left for the present.

The first question is whether music is or is not to be a part of education. Of the three things mentioned in our discussion, which does it produce?—Education or amusement or intellectual enjoyment, for it may be reckoned under all three, and seems to share in the nature of all of them. Amusement is for the sake of relaxation, and relaxation is of necessity sweet, for it is the remedy of pain caused by toil; and intellectual enjoyment is universally acknowledged to contain an element not only of the noble but of the pleasant, for happiness is made up of both. All men agree that music is one of the pleasantest things, whether with or without songs; as Musaeus says:

“Song to mortals of all things the sweetest.”

Hence and with good reason it is introduced into social gatherings and entertainments, because it makes the hearts of men glad: so that on this ground alone we may assume that the young ought to be trained in it. For innocent pleasures are not only in harmony with the perfect end of life, but they also provide relaxation. And whereas men rarely attain the end, but often rest by the way and amuse themselves, not only with a view to a further end, but also for the pleasure's sake, it may be well at times to let them find a refreshment in music. It sometimes happens that men make amusement the end, for the end probably contains some element of pleasure, though not any ordinary or lower pleasure; but they mistake the lower for the higher, and in seeking for the one find the other, since every pleasure has a likeness

to the end of action. For the end is not eligible for the sake of any future good, nor do the pleasures which we have described exist for the sake of any future good but of the past, that is to say, they are the alleviation of past toils and pains. And we may infer this to be the reason why men seek happiness from these pleasures.

But music is pursued, not only as an alleviation of past toil, but also as providing recreation. And who can say whether, having this use, it may not also have a nobler one? In addition to this common pleasure, felt and shared in by all (for the pleasure given by music is natural, and therefore adapted to all ages and characters), may it not have also some influence over the character and the soul? It must have such an influence if characters are affected by it. And that they are so affected is proved in many ways, and not least by the power which the songs of Olympus exercise; for beyond question they inspire enthusiasm, and enthusiasm is an emotion of the ethical part of the soul. Besides, when men hear imitations, even apart from the rhythms and tunes themselves, their feelings move in sympathy. Since then music is a pleasure, and virtue consists in rejoicing and loving and hating aright, there is clearly nothing which we are so much concerned to acquire and to cultivate as the power of forming right judgments, and of taking delight in good dispositions and noble actions. Rhythm and melody supply imitations of anger and gentleness, and also of courage and temperance, and of all the qualities contrary to these, and of the other qualities of character, which hardly fall short of the actual affections, as we know from our own experience, for in listening to such strains our souls undergo a change. The habit of feeling pleasure or pain at mere representations is not far removed from the same feeling about realities; for example, if any one delights in the sight of a statue for its beauty only, it necessarily follows that the sight of the original will be pleasant to him. The objects of no other sense, such as taste or touch, have any resemblance to moral qualities; in visible objects there is only a little,

for there are figures which are of a moral character, but only to a slight extent, and all do not participate in the feeling about them. Again, figures and colors are not imitations, but signs, of moral habits, indications which the body gives of states of feeling. The connection of them with morals is slight, but in so far as there is any, young men should be taught to look, not at the works of Pauson, but at those of Polygnotus, or any other painter or sculptor who expresses moral ideas. On the other hand, even in mere melodies there is an imitation of character, for the musical modes differ essentially from one another, and those who hear them are differently affected by each. Some of them make men sad and grave, like the so-called Mixolydian, others enfeeble the mind, like the relaxed modes, another, again, produces a moderate and settled temper, which appears to be the peculiar effect of the Dorian; the Phrygian inspires enthusiasm. The whole subject has been well treated by philosophical writers on this branch of education, and they confirm their arguments by facts. The same principles apply to rhythms; some have a character of rest, others of motion, and of these latter again, some have a more vulgar, others a nobler movement. Enough has been said to show that music has a power of forming the character, and should therefore be introduced into the education of the young. The study is suited to the stage of youth, for young persons will not, if they can help, endure anything which is not sweetened by pleasure, and music has a natural sweetness. There seems to be in us a sort of affinity to musical modes and rhythms, which makes some philosophers say that the soul is a tuning, others, that it possesses tuning.

Part VI

And now we have to determine the question which has been already raised, whether children should be themselves taught to sing and play or not. Clearly there is a considerable difference made in the character by the actual practice of the art. It is difficult, if not impossible, for those who do not perform to be good judges of the performance of others. Besides, children should have something to do, and the rattle of Archytas, which people give to their children in order to amuse them and prevent them from breaking anything in the house, was a capital invention, for a young thing cannot be quiet. The rattle is a toy suited to the infant mind, and education is a rattle or toy for children of a larger growth. We conclude then that they should be taught music in such a way as to become not only critics but performers.

The question what is or is not suitable for different ages may be easily answered; nor is there any difficulty in meeting the objection of those who say that the study of music is vulgar. We reply (1) in the first place, that they who are to be judges must also be performers, and that they should begin to practice early, although when they are older they may be spared the execution; they must have learned to appreciate what is good and to delight in it, thanks to the knowledge which they acquired in their youth. As to (2) the vulgarizing effect which music is supposed to exercise, this is a question which we shall have no difficulty in determining, when we have considered to what extent freemen who are being trained to political virtue should pursue the art, what melodies and what rhythms they should be allowed to use, and what instruments should be employed in teaching them to play; for even the instrument makes a difference. The answer to the objection turns upon these distinctions; for it is quite possible that certain methods of teaching and learning music do really have a

degrading effect. It is evident then that the learning of music ought not to impede the business of riper years, or to degrade the body or render it unfit for civil or military training, whether for bodily exercises at the time or for later studies.

The right measure will be attained if students of music stop short of the arts which are practiced in professional contests, and do not seek to acquire those fantastic marvels of execution which are now the fashion in such contests, and from these have passed into education. Let the young practice even such music as we have prescribed, only until they are able to feel delight in noble melodies and rhythms, and not merely in that common part of music in which every slave or child and even some animals find pleasure.

From these principles we may also infer what instruments should be used. The flute, or any other instrument which requires great skill, as for example the harp, ought not to be admitted into education, but only such as will make intelligent students of music or of the other parts of education. Besides, the flute is not an instrument which is expressive of moral character; it is too exciting. The proper time for using it is when the performance aims not at instruction, but at the relief of the passions. And there is a further objection; the impediment which the flute presents to the use of the voice detracts from its educational value. The ancients therefore were right in forbidding the flute to youths and freemen, although they had once allowed it. For when their wealth gave them a greater inclination to leisure, and they had loftier notions of excellence, being also elated with their success, both before and after the Persian War, with more zeal than discernment they pursued every kind of knowledge, and so they introduced the flute into education. At Lacedaemon there was a choragus who led the chorus with a flute, and at Athens the instrument became so popular that most freemen could play upon it. The popularity is shown by the tablet which Thrasippus dedicated

when he furnished the chorus to Ecphantides. Later experience enabled men to judge what was or was not really conducive to virtue, and they rejected both the flute and several other old-fashioned instruments, such as the Lydian harp, the many-stringed lyre, the "heptagon," "triangle," "sambuca," the like—which are intended only to give pleasure to the hearer, and require extraordinary skill of hand. There is a meaning also in the myth of the ancients, which tells how Athene invented the flute and then threw it away. It was not a bad idea of theirs, that the Goddess disliked the instrument because it made the face ugly; but with still more reason may we say that she rejected it because the acquirement of flute-playing contributes nothing to the mind, since to Athene we ascribe both knowledge and art.

Thus then we reject the professional instruments and also the professional mode of education in music (and by professional we mean that which is adopted in contests), for in this the performer practices the art, not for the sake of his own improvement, but in order to give pleasure, and that of a vulgar sort, to his hearers. For this reason the execution of such music is not the part of a freeman but of a paid performer, and the result is that the performers are vulgarized, for the end at which they aim is bad. The vulgarity of the spectator tends to lower the character of the music and therefore of the performers; they look to him—he makes them what they are, and fashions even their bodies by the movements which he expects them to exhibit.

Part VII

We have also to consider rhythms and modes, and their use in education. Shall we use them all or make a distinction? and shall the same distinction be made for those who practice music with a view to education, or shall it be some other? Now we see that music is produced by melody and rhythm, and we ought to know what influence these have respectively on education, and whether we should prefer excellence in melody or excellence in rhythm. But as the subject has been very well treated by many musicians of the present day, and also by philosophers who have had considerable experience of musical education, to these we would refer the more exact student of the subject; we shall only speak of it now after the manner of the legislator, stating the general principles.

We accept the division of melodies proposed by certain philosophers into ethical melodies, melodies of action, and passionate or inspiring melodies, each having, as they say, a mode corresponding to it. But we maintain further that music should be studied, not for the sake of one, but of many benefits, that is to say, with a view to (1) education, (2) purgation (the word “purgation” we use at present without explanation, but when hereafter we speak of poetry, we will treat the subject with more precision); music may also serve (3) for enjoyment, for relaxation, and for recreation after exertion. It is clear, therefore, that all the modes must be employed by us, but not all of them in the same manner. In education the most ethical modes are to be preferred, but in listening to the performances of others we may admit the modes of action and passion also. For feelings such as pity and fear, or, again, enthusiasm, exist very strongly in some souls, and have more or less influence over all. Some persons fall into a religious frenzy, whom we see as a result of the sacred melodies—when they have used the melodies that excite the soul to mystic frenzy—restored

as though they had found healing and purgation. Those who are influenced by pity or fear, and every emotional nature, must have a like experience, and others in so far as each is susceptible to such emotions, and all are in a manner purged and their souls lightened and delighted. The purgative melodies likewise give an innocent pleasure to mankind. Such are the modes and the melodies in which those who perform music at the theater should be invited to compete. But since the spectators are of two kinds—the one free and educated, and the other a vulgar crowd composed of mechanics, laborers, and the like—there ought to be contests and exhibitions instituted for the relaxation of the second class also. And the music will correspond to their minds; for as their minds are perverted from the natural state, so there are perverted modes and highly strung and unnaturally colored melodies. A man receives pleasure from what is natural to him, and therefore professional musicians may be allowed to practice this lower sort of music before an audience of a lower type. But, for the purposes of education, as I have already said, those modes and melodies should be employed which are ethical, such as the Dorian, as we said before; though we may include any others which are approved by philosophers who have had a musical education. The Socrates of the *Republic* is wrong in retaining only the Phrygian mode along with the Dorian, and the more so because he rejects the flute; for the Phrygian is to the modes what the flute is to musical instruments—both of them are exciting and emotional. Poetry proves this, for Bacchic frenzy and all similar emotions are most suitably expressed by the flute, and are better set to the Phrygian than to any other mode. The dithyramb, for example, is acknowledged to be Phrygian, a fact of which the connoisseurs of music offer many proofs, saying, among other things, that Philoxenus, having attempted to compose his *Mysians* as a dithyramb in the Dorian mode, found it impossible, and fell back by the very nature of things into the more appropriate Phrygian. All men agree that the Dorian music is the gravest and manliest. And whereas we say that the extremes should be avoided and the mean followed,

and whereas the Dorian is a mean between the other modes, it is evident that our youth should be taught the Dorian music.

Two principles have to be kept in view, what is possible, what is becoming: at these every man ought to aim. But even these are relative to age; the old, who have lost their powers, cannot very well sing the high-strung modes, and nature herself seems to suggest that their songs should be of the more relaxed kind. Wherefore the musicians likewise blame Socrates, and with justice, for rejecting the relaxed modes in education under the idea that they are intoxicating, not in the ordinary sense of intoxication (for wine rather tends to excite men), but because they have no strength in them. And so, with a view also to the time of life when men begin to grow old, they ought to practice the gentler modes and melodies as well as the others, and, further, any mode, such as the Lydian above all others appears to be, which is suited to children of tender age, and possesses the elements both of order and of education. Thus it is clear that education should be based upon three principles— the mean, the possible, the becoming, these three.

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本文库编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

杰斐逊像

托马斯·杰斐逊（Thomas Jefferson，1743—1826）是美国独立战争和战后初期杰出的资产阶级政治家和启蒙思想家，美国民主传统的奠基者，《独立宣言》的主要起草人，美国第三任总统（1801—1809）。他出生于弗吉尼亚州阿尔贝马尔县一个种植园主家庭，幼年接受家庭教育，学习拉丁文、希腊文、历史、文学和自然科学。1760年，17岁的杰斐逊进入威廉玛丽学院学习，毕业后跟随弗吉尼亚最杰出的法

律学家乔治·威思学习5年法律，1767年开始做律师。1769至1775年，任弗吉尼亚州下院议员，1775年代表该州参加第二届大陆会议，被推选为《独立宣言》5人起草委员会成员^[2]之一。1776至1779年任弗吉尼亚州参议院议员，被任命为法律修改委员会委员之一，先后提出了《废除限嗣继承法》、《废除长子继承法》、《宗教自由法案》、《奴隶问题法案》等。1779至1781年任弗吉尼亚州州长。1785至1789年出任美国驻法国公使。1790至1793年任美国首任国务卿。^[3]从任国务卿开始，他与以汉密尔顿为首的联邦党人的反民主思想展开了激烈的斗争。^[4]1791年他和麦迪逊等人组建共和党^[5]（1794年改称民主共和党）。1797年，任美国哲学学会会长。1797至1801年，任副总统。1801至1809年，连任两届总统。在他任总统期间，1803年美国从法国手里购买了路易斯安那，使得美国领土面积几乎增加了一倍。任期届满后，杰斐逊遵循华盛顿的不竞选第三届总统的原则，回到家乡从事哲学、语言、文学、自然科学及建筑学的研究^[6]，并创办了弗吉尼亚大学。1826年去世，享年83岁。

这本选集收录了杰斐逊的自传以及他在不同时期撰写的杂记、旅行日记、论著、法案、政府文件和大量书信，从中可以窥见杰斐逊民主思想的全貌及其对美国民主制度的贡献。

杰斐逊纪念堂

杰斐逊的民主思想主要体现在以下几个方面：

(1) 人权思想。杰斐逊的人权思想主要体现在：第一，人权是天赋的，其主要内容有自由、平等和追求幸福。杰斐逊在《独立宣言》中写道：“一切人生来平等；造物主赋予他们某些不可剥夺的权利，其中包括生命、自由和追求幸福。”第二，一切社会权利和权力均根源和服务于天赋人权，人们参加社会和建立政府的目的是为了能够更好地享受和保护人权。《独立宣言》中写道，“为了巩固这些权利，在人民中建立了政府，政府的正当权力来自被统治者的同意；无论什么时候一个政府破坏了这些目的，人民就有权改变这个政府或把它废除，并建立新的政府，这个政府所根据的原则及组织权力的方式在人民看来最可能实现他们的安全和幸福。”杰斐逊认为，英国在北美的统治，毫不尊重美国人民的正当权利。他在《独立宣言》中列举了英国殖民统治的25条罪状之后，宣布人民有权利也有义务来推翻这样的政府。^[7] 在写给范·德·肯普的信中，杰斐逊写道：“建立政府的唯一传统目的是为那些联合在政府之下的人民群众谋求最大程度的幸福。”^[8]

(2) 人民主权思想。在杰斐逊看来，政府的权力来自人民，也属于人民。他说，人民的良知永远是最强大的军队，人民是统治者唯一的审查者；甚至他们的错误也有助于使统治者遵守其体制的真正原则。杰斐逊认为，人类社会存在于三种大相径庭的形势下：第一，存在于没有政府的状态下，比如印第安人的社会；第二，存在于有政府的状态，其中每个人的意志都有一定影响，例如较小程度在英国，较大程度在美国；第三，存在于强权政府下，例如在其他一切君主国以及大多数共和国。最后一种形式，是狼对羊的统治。而第一种形式不管是不是最好，都不能与较多的人口相容。第二种形式有很多好处，能够使多数人享受到较大程度的自由和幸福。但这种形式也有弊病，最大的弊病是容易发生骚乱。但杰斐逊说，他“宁爱有危险的自由也不愿自由自在地做奴隶”。他认为，这种弊病也有好处，能防止政府蜕化堕落，促进人民对国家大事的关心。造反是对于政府的健康必不可少的良药。

(3) 分权制衡。杰斐逊发展了孟德斯鸠以来的分权制衡思想。他认为，任何国家权力都不能集中于一个主体，否则会导致权力膨胀、人民的自由和权利就会被毁灭，暴政就会出现。要想有一个良好和安全的政府，其方法不是把所有事情都委托给一个人，而是要在许多

中进行分配，把每个人所能胜任的职务分配给他。第一，在中央，立法、司法、行政机关要分开。早在邦联政府期间，杰斐逊就建议行政部门从立法部门独立出来，保证国会本身只处理立法事务。他认为，同一权力交给国会本身，就再没有更高的权力来履行同一职责。对于中央三机关来讲，不能使任何一个机关权力过大。议会的权力过大就会产生暴政，行政首脑的权力过大是导致暴政的最大危险，而总统的终身制势必会使其权力膨胀。因此杰斐逊坚决反对1787年宪法中关于总统连选连任的规定，他认为这无异于确立了总统的终身制。^[9]杰斐逊也反对法官作为宪法问题的最后裁判者，认为这十分危险，会把法院凌驾于议会和总统之上。^[10]第二，中央要与地方分权，实行联邦制。杰斐逊倡议建立权力十分有限的联邦政权，将大部分权力留给州政府。他说，让全国政府处理国防以及外交和联邦关系，州政府处理公民权利、法律、治安以及与州有关的事务，县政府处理县的地方性事务，区政府处理区的事务。中央政府和州政府分权的要点在于，在对外事务上团结起来，在对内事务方面则各行其是。

杰斐逊不仅是一名思想家，也是一名杰出的政治家。他身体力行，对美国的民主制度做出了卓越的贡献：

（1）《英属美利坚权利概述》和《独立宣言》

1774年杰斐逊为弗吉尼亚议会起草的《英属美利坚权利概述》，提出了一个毫不妥协的论据，即天赋的移居和征服权利使得美国殖民地不受英国议会管辖，它们唯一的联系是殖民地自愿服从“同一个共同的最高统治者”——英国国王。这是美国独立以前杰斐逊对独立革命事业最突出的贡献。这本小册子的出版使得他获得了被英国议会列入公敌名单的“荣誉”。

杰斐逊为大陆会议起草的《独立宣言》共分为两个部分。在第一部分，宣言重述了约翰·洛克的国家契约理论，即政府的存在是为了保护人民的生命权、自由权和财产权。杰斐逊引用时将财产权改为追求幸福的权利，使这种理论更具有了理想色彩。为巩固这些权利，在人民中建立政府，政府的正当权力来自被统治者的同意；无论什么时候，一个政府破坏了这些目的，人民就有权改变这个政府或把它废除。宣言的第二部

分列举了国王在议会支持下所犯的罪行：他违反了与殖民者的“契约”，因而失去了殖民地的忠诚。《独立宣言》中“人人生而平等”^[11] 的口号后来成为美国国内外各类解放运动和改革运动的基本口号。《独立宣言》的发表开创了美国历史的新纪元，^[12]也给杰斐逊带来了不朽的名声。

（2）联邦宪法

1787年费城制宪会议召开时，杰斐逊作为美国驻法国公使常驻巴黎，没有参加制宪会议。但是，他在与国内人士（如约翰·亚当斯和詹姆斯·麦迪逊）的通信中多次谈论这次会议制定的新宪法。他明确表明自己对新宪法的态度，赞成什么、不赞成什么，反复强调应该增加权利法案，修改总统任期的规定，等等。合众国宪法于1789年增加了前十条修正案（统称《人权法案》），这离不开杰斐逊的努力。

（3）《建立宗教自由法案》

1779年，杰斐逊提出了《建立宗教自由法案》，该法案是杰斐逊民主思想在宗教上的体现。该法案中，杰斐逊宣称：宗教自由是人的天赋权利，公民对宗教信仰与否是公民的选择自由；教会的和非教会的立法者和统治者，把自己的见解和思想方式当做唯一正确和绝对不会错的而强加于他人，是对他人宗教信仰自由的侵犯；不得强迫任何人进行任何宗教礼拜仪式，或资助任何圣地或牧师，也不得由于其宗教见解或信仰而对其人身或财产施加限制、强制或折磨；一切人均可自由表明并通过说理坚持其宗教见解，决不可因此缩小、扩大或影响其公民权。

（4）《弗吉尼亚笔记》

《弗吉尼亚笔记》是杰斐逊唯一的一部长篇专著，写这本书主要是为了回答当时驻费城的法国公使巴尔·马布瓦侯爵向他提出的一些问题。书中不仅介绍了弗吉尼亚州的边界、河流、海港、山脉、矿藏、动植物分布、人口、气候，也介绍了该州的法律、宗教、生活方式、政府组成及运作，等等。在《弗吉尼亚笔记》

中，杰斐逊重申了他的民主思想：文官政府是组成社会的唯一目的，政府的管理要取得人民的同意；在政府内部，议会、司法和行政要进行权

力划分，各自权力不得超出法律的规定，彼此还要相互制约。《弗吉尼亚笔记》在法国出版后，对法国政界产生了极大的影响，法国自由主义者对论述共和政治自由体制的那部分特别关心。

（5）对教育的贡献

杰斐逊特别强调知识的作用。他认为，在人民中间普及知识，是维护自由和幸福最扎实的基础。他说，每个国家的人民是其本身权利的唯一保卫者，也是唯一能被用来破坏这些权利的工具。他们要是没有受骗，当然绝不会同意被这样利用。为了避免他们受骗，应当使他们受一定程度的教育。

早在1776年任弗吉尼亚州参议院议员期间，杰斐逊就提出了一个系统的普通教育计划，并为此提出了三个法案，建议实行涉及一切阶层的三种不同等级的教育：一切儿童，不分贫富都受到初等教育；对一般生活有用，为一切经济宽裕的人们所向往的中等教育；教授最高级科学的高等教育。杰斐逊还曾强有力地呼吁一场全国性的“反无知运动”，并在他担任总统期间努力推行这些教育计划。^[13] 虽然共和国初期的教育制度与杰斐逊的理想相去甚远，但是“人人具有平等接受教育的机会”的思想开始深入人心，并成为后来几十年全民公共教育制度的重要动力。

（6）政党政治

杰斐逊在任国务卿时期，与时任财政部长的汉密尔顿在政府职能、经济和外交等一系列政策问题上发生了严重分歧，最终形成了以汉密尔顿为首的联邦派和以杰斐逊、麦迪逊为首的共和派。他们都认为自己代表着人民的最佳利益，双方均不愿承认自己是一个政党，都否认对方存在的权力。^[14] 这种制度化的宗派主义被学者们称作“最初党派制”^[15]，为日后的两党政治奠定了基础。杰斐逊1800年当选为总统后，极力缩小两党的差距，尽量调和大选导致的情感冲突。在第一次就职演说中，他说，“我们都是共和党人，我们都是联邦党人。”

杰斐逊知识渊博，兴趣广泛，“大概比美国历史上任何一个公众人物都具有更广泛的兴趣和突出的成就”^[16]，除精通拉丁文、希腊语、意大利语、法语、西班牙语外，还是许多科学门类的开拓者，特别是古生物

学、地理学和植物学等领域。他还将业余时间贡献在收集史前时期动物骨骼、为全国最大的私人图书馆^[17] 收集藏书之上。在阅读他的私人书信的过程中，我们处处可以领略到他的风采和人生哲学。

二

《杰斐逊选集》全面反映了托马斯·杰斐逊的思想，共包括八种形式的文件：自传、杂记、旅行日记^[18]、论文、名人生平速写^[19]、笔记、政府文件和书信。其中，书信所占的篇幅最多。

（一）自传和杂记

《自传》部分描写了杰斐逊从出生到1790年3月他出任乔治·华盛顿的国务卿为止的生活；而杂记实际上就是从他出任国务卿第二年开始到任总统最后一年为止（1791—1809）的《自传》的续篇。^[20] 因此，笔者对这两部分内容进行了梳理、整合，以避免不必要的重复，也希冀读者能借此对杰斐逊的生平形成全面的认识。

1、从出生到律师（1743—1769）

杰斐逊于1743年4月13日出生于沙德韦尔——他父亲彼得·杰斐逊在弗吉尼亚拥有的许多烟草种植园中的一个。彼得·杰斐逊是个体力旺盛和有灵性的人，虽然没有受过教育，却通过自学成了一个出色的勘测员、富足的地主，还当上了弗吉尼亚下议院议员，代表阿尔贝马尔县。他的妻子简·伦道夫出身于弗吉尼亚最显赫的名门望族，其家谱可以追溯到英格兰和苏格兰的历史记载。杰斐逊是他们的长子，5岁进英语学校，9岁进拉丁语学校，1760年春进入威廉玛丽学院读了两年，深受当时的数理教授威廉·斯莫尔博士喜爱。1762年斯莫尔博士介绍杰斐逊与总督福基尔（福基尔是一位标准的绅士，也是艺术资助人）认识，并让自己最亲密的朋友乔治·威思（弗吉尼亚最杰出的律师）接收杰斐逊作为他指导下的法律学生。这四个人形成了一个四人集团，经常在聚会上畅谈思想、政

治、文学和音乐。经过5年的学习，杰斐逊成为一名出色的律师，一直干到革命爆发、殖民地法院关门为止。

2、在弗吉尼亚州的政治活动（1769—1783）

1769年，杰斐逊被所在的县选举为议会议员，开始了他的政治生涯。

（1）1769至1775年，任弗吉尼亚州下议院议员。杰斐逊参加了议会反对英国殖民统治的斗争。1769年5月，总督巴特图特勋爵召开议会会议。会议获知1768至1769年英国议会两院关于马萨诸塞事件的联合决议和给国王的呈文，议会在几乎无人反对的情况下通过了反决议以及给国王的请愿书，清楚地表明把马萨诸塞的利益看做共同的利益。总督将议会解散。第二天，议员们志愿成立了一个代表大会，草拟了一个反对一切英国进口商品的联合条例，签署了条例，然后返回各县，重新当选为议员。之后，杰斐逊、亨利先生、理查德·亨利·李等召开秘密会议，商讨局势。他们认识到，所有措施中最紧要的一条，是与所有殖民地达成共识，把对英问题当做所有殖民地的共同事业，并采取一致行动；为了达到这个目的，每个殖民地成立一个通讯委员会将是相互沟通的最好办法。^[21] 波士顿茶叶事件发生后，英国议会通过了四项法案，关闭波士顿港，大量削减该殖民地的自治权利。为了声援马萨诸塞，弗吉尼亚州议会将6月1日规定为禁食、蒙耻和祈祷的日子。1774年，杰斐逊完成了《英属美利坚权利概述》（文件列在政府文件中，因此将在下面详细介绍其内容），这本书也使得他被英国议会列入公敌名单。

（2）1775年代表弗吉尼亚州参加第二届大陆会议，被推选为《独立宣言》5人起草委员会成员之一。杰斐逊起草了《独立宣言》的大部分，本杰明·富兰克林和约翰·亚当斯帮助修改。^[22] 1776年7月4日，议会通过了《独立宣言》。7月22日，大陆会议改为委员会，对《邦联条例》进行研究。杰斐逊在《自传》中详细记载了委员会关于规定每个州应向共同国库交纳款项的比例或份额以及国会投票方式的条款进行的辩论。关于前者的争论如下：蔡斯先生认为，份额不应按照各种身份的居民数规定，而应按照“白人居民”数规定，因为黑人是财产，不能将其与那些几乎没有奴隶的州所拥有的土地或动产区别开来。因此，他建议，

南方诸州按照人口数及其财产两个标准征税，而北方诸州按照其人口数征税。约翰·亚当斯先生认为，这个条款里，人口数被当做州的财富的标志，而不是作为征税的对象。因此，无论你管你的人民叫什么，自由民也好，奴隶也好，都无关紧要。哈里逊先生提出一个折中方法，把两名奴隶当一个自由民计算。威尔逊先生认为，如果做出这样的修改，则南部殖民地将会获得奴隶的一切利益，而北部殖民地则将挑起这个重担。佩恩先生极力主张通过大陆会议原来的决议，把税款按各州的人口摊派。约翰·威瑟斯庞先生反对佩恩先生的主张，认为：现在再订立一个新的契约，应该站在新的立场上，土地和房屋才是财富的真正标记；而现在提出的建议是不完善的，在各州之间是不平等的。8月1日，修正案被否决。

关于国会投票方式的条款，草案规定，在表决问题时，每个殖民地一票。蔡斯先生认为，这一条最容易引起大州和小州之间的分歧，因此在大陆会议面临的众多问题上应区别对待：小州在一切有关生命或自由的问题上应该得到保障，大州则在一切有关财产的问题上得到保障；因此他建议，在就金钱问题进行投票时，每个殖民地的投票数应与其人口数相称。富兰克林博士则认为，在任何情况下，投票数都应与其人口数相称。威瑟斯庞博士则反对对这一条作任何修改。约翰·亚当斯赞成按人口比例投票。拉什博士认为，人们都承认议会里代表权是平等的，那么为什么大陆会议里面代表权就没有必要平等呢？为什么不能按照多数数来解决问题呢？威尔逊先生认为，税应该与财产相称，但是代表权应该与自由民的数目一致。

（3）1776年北美殖民地宣布独立后，杰斐逊辞去大陆会议代表的职务，回到弗吉尼亚州任州参议员。他10月7日就任，11日提出了一个成立最高刑事法院的议案，获得通过；12日提出一个法案，规定继承土地可不受特定身份的限制，完全废除限定继承法，获得通过；在要求建立司法制度的议案中，杰斐逊提出，在衡平法院中对一切事实问题和普通法院一样实行陪审团审判；^[23] 1778年，杰斐逊提出一个关于制止进一步输入奴隶的法案，没有遭到反对就获得通过；1776年10日，杰斐逊提议将州政府所在地从威廉斯堡迁移，1779年被议会批准；1779年5月，他提出了一个法案，该法案宣布什么人应被认为是公民，维护移居

国外的天赋权利，并且规定了行使这种权利的方式和方法，后获得通过；1779年提出《建立宗教自由法案》，1786年初获得通过。在州议会任职期间，杰斐逊提出了一项修改法律的议案，获得通过后，他被指派成立一个委员会来执行这项工作。他尽最大努力使法律现代化，并把其中某些明显累赘的词句删去。此外，他对整个教育界进行了考察，提出了一个系统性的全州范围教育计划：一切儿童，不分贫富都受到初等教育；对一般生活有用、为一切经济宽裕的人们所向往的中等教育；教授最高级科学的高等教育。

（4）1779至1781年出任州长。1779年6月1日，杰斐逊被任命为州长，同时当选为威廉玛丽学院的督察员，对该学院进行了改组。这部分内容，杰斐逊在《自传》中谈得很少，他认为这一段生活可以参考吉拉丁先生的《弗吉尼亚史（续编）》。

（5）1783年任弗吉尼亚州邦联国会代表。在此期间，杰斐逊见证了邦联国会的软弱和争吵不休。在流通货币方面，杰斐逊批评了拟议中的通货制度，提出了一种更为合理的结算方式，即用美元作为结算和支付单位，角和分一律用10进位。在《自传》中，杰斐逊详细介绍了《巴黎和约》^[24]在邦联国会的批准过程。

3、任美国驻法国公使时期（1785—1789）

1784年5月7日，杰斐逊被任命为美利坚合众国全权公使，协助已先去欧洲磋商贸易协定的本杰明·富兰克林和约翰·亚当斯进行工作。1785年，富兰克林返回美国，杰斐逊被任命为驻法国宫廷全权公使。他被公认为理性的、共和主义的美国的象征以及弗吉尼亚绅士风度的代表。在驻法国期间，杰斐逊结识了拉法叶特等朋友，并见证了法国大革命的发生。^[25]在结束任期回到美国时，大家一致认为他作为驻法国大使已经取得了杰出的成功。就连最爱挑剔的《爱丁堡评论》也承认，他就他寓居法国期间发生的各种具有国家意义的问题进行辩论时所表现的技能和知识，即使与富兰克林的外交才能相比也毫不逊色。

在此期间，美国制宪会议召开，杰斐逊虽然人在国外，却时刻关注着制宪会议的进展。他在给友人，特别是麦迪逊和华盛顿的信中，直率地表明赞成什么、反对什么。他认为宪法草案缺乏保证宗教自由、言论

自由、人身保护法连续不断保护下的人身自由以及刑事案件和民事案件一律实行陪审团审判的明确规定。此外，他也极不赞成总统可以连选连任的规定。但杰斐逊认为，难就难在如何把好的东西保留、坏的东西去掉，如果把它交给一个新的制宪会议去研究，则有全部丧失的危险。因此他主张先通过宪法，以后再通过修正案的方式进行修改。

4、任首任国务卿时期（1790—1793）

联邦宪法于1788年生效，按照宪法规定1789年初举行大选。乔治·华盛顿得到了总统选举人的所有选票，联邦派领袖约翰·亚当斯当选副总统。华盛顿在1789年4月30日宣誓就职。第一届国会建立了三个部门——国务院、财政部和战争部——并设立了首席检察长和邮电部部长。杰斐逊被任命为国务卿，亚历山大·汉密尔顿担任财政部部长。

在宪法通过后的最初12年，对宪政前所未有的激烈攻击成为美国政治的突出特点。一派以汉密尔顿为核心，主张中央集权、综合商业经济；另一派以杰斐逊和麦迪逊为领导核心，他们认为美国应保持乡村化和农业化的特点，中央政府应该在规模上有所限制、权力上有所制约，大多数权力应交由各州和人民保留。前者被称为联邦派或联邦党，后者自称为共和党。在《杂记》中，杰斐逊记录了两党之间的斗争和纠葛。《选集》中摘录的几篇杂记，主要反映了他对汉密尔顿几项政策的反对，包括新政府负责支付全部国债，并承担各州在独立战争时期所欠的债务^[26]，建立国家银行，等等。

5、任副总统时期（1797—1801）

1793年8月，杰斐逊在解决了“公民热内事件”^[27]后成功引退，1796年受共和党推举竞选总统。经过激烈的竞争，约翰·亚当斯当选总统，杰斐逊以3票之差当选副总统。联邦党人利用1789年人民的战争热相继通过了把外国激进党和自由党、宣传者和鼓动者驱逐出境的《外侨法》以及抑制新闻界“越轨行为”的《煽动叛乱法》。杰斐逊著名的《肯塔基决议》在此背景下提出，它与麦迪逊的《弗吉尼亚决议》一道，宣布《外侨法》和

《煽动叛乱法》为非法，因为它们违反宪法，是精心炮制出来制止政治反对派侵犯总统权利的。《肯塔基决议》体现了杰斐逊一贯坚持的政治

信条：保证美国自由公民的人身自由、思想行为自由以及财产自由。

6、任总统时期（1801—1809）

1801年杰斐逊当选总统后，他的第一个计划就是根除美国当时沾染上的不容异说。1802年杰斐逊政府说服国会废除所有国内税收，政府收入只剩下关税和西部土地销售。财政部长也大幅度削减政府开支，将本来人数不多的政府部门再度削减到最低限度。杰斐逊还削减了军费开支。他这个时期最引人注目的成就是，促使美国从法国手中购买了路易斯安那，从而使得美国领土几乎增加一倍。

7、退休后的岁月（1809—1826）

第二届总统任期结束后，杰斐逊回到蒙蒂塞洛。在最后几年里，他主要关心的是教育和教育学。他认为，从个人角度来讲，知识不仅仅是一种达到目的的手段，其本身就是一个目的，为了知识而享受知识；而从社会角度说，知识既是获得幸福的关键，也是培养高尚情操的关键，知识是自治的必备条件。本着这种理念，杰斐逊创建了弗吉尼亚大学。

（二）论文

对盎格鲁—撒克逊语来说，杰斐逊是个先驱者和创始人。在盎格鲁—撒克逊语被普遍忽视的年代，他提倡在美国的专科学校和大学里学习它，并规定在他创办的弗吉尼亚大学讲授。他还就这个问题写了一本书，这就是《论盎格鲁-撒克逊语》，《选集》刊载了其中的一部分。

杰斐逊认为，盎格鲁-撒克逊语可以恰当地被称为全英格兰的语言，从6世纪撒克逊人占有那个国家到13世纪亨利三世时代都讲这种语言。他认为，纯粹的盎格鲁-撒克逊语是他们正在使用的语言的基础。它的词汇对现存艺术和生活条件下的社会的用途来说，是够丰富的。它的丰富性大大归功于它能够把原始的词组合起来以产生任何所需要的概念的变化。接着，杰斐逊从字母、拼字法、发音和语法四个方面分析了盎格鲁-撒克逊语被忽视的原因及补救方法。（1）字母。盎格鲁-撒克逊语共有

26个字母，其中约一半是拉丁字母，其余是撒克逊语特有的形式。撒克逊字母看起来有一种粗糙、笨拙和骇人的外表，而且学习一个新的字母表必须花很多时间，这是学习盎格鲁-撒克逊语的第一个障碍。杰斐逊认为，要解决这个障碍，可以用罗马字体代替盎格鲁-撒克逊字体。（2）拼字法。盎格鲁-撒克逊语并没有定规的拼字法，存在元音字母的滥用，这使得字典不得不增加篇幅。杰斐逊认为，既然盎格鲁-撒克逊语没有精密的拼写标准，各人随心所欲地按照自己的方法把字母组合起来，那么也可以随意地采取任何一种方式，只要这种方式能建立统一、更符合字母音值、符合当时语言由习惯用法确定的拼字法。（3）发音。要确定盎格鲁-撒克逊语的发音，可以借助当时普遍使用的发音以及最有助于达到推断盎格鲁-撒克逊语发音目的的做法。（4）语法。杰斐逊认为，对盎格鲁-撒克逊语语法稍加评论，就可以使它变得容易。杰斐逊从四个方面进行了分析：一个名词要按照它的性、格和数来考虑，语法上的性与生理上的性同义；格的规则是不同的；数，有单数和复数，却没有双数；动词，语气，希克斯博士给盎格鲁-撒克逊语的动词规定了六种语气。杰斐逊还分析了盎格鲁-撒克逊语中的动名词。

（三）弗吉尼亚笔记

杰斐逊的《弗吉尼亚笔记》是他唯一的一部长篇专著，写这本书主要是为了回答当时驻费城的法国公使巴尔·马布瓦侯爵向他提出的一些问题。《弗吉尼亚笔记》1784年由杰斐逊在巴黎自费匿名出版。在以后的5年内，相继出了法国、英国、德国和美国的版本，有些是作者授权的，有些是作者未授权的。这部著作以问题为顺序进行了编排，共收录了23个问题。它之所以重要，不仅在于它是对美国科学领域的一个杰出贡献（系统地阐述了科学的地理原则）^[28]，而且它对法国政界产生了极大的影响，法国自由主义者们对论述共和政治自由体制的那部分特别关心。

.....

问题八：它的人口有多少？杰斐逊回答，在殖民地早期，战争、人口输入等意外情况使得人口波动没有规律。但是，到了1654年，人口增

长变得相当有规律，人口输入因公司解散而多半停止，但因人口较多，所以也没有受到与印第安人战争的影响。从那时起到1772年止，交什一税的人从7 209人增加到15.3万人，在这个时期内人口每27.25年翻一番。杰斐逊对美国当前想靠尽可能多地输入外国人来迅速增加人口的做法提出了质疑。他认为，在看到人口输入的好处时也要看到它的坏处，最大的坏处就在于大量外国人口的输入会破坏政府的共和原则，因为他们很难摆脱从小就接受的原则。当然，杰斐逊认为，引入技工是个例外，必须要不惜一切代价去获得技工，他们能教会美国人做一些不会做的事。欧洲劳动力丰富，他们的目的是充分利用他们的土地，而美洲土地十分丰富，目的是充分利用劳动力。杰斐逊非常赞同议会永远禁止输入奴隶的法令，认为这会在一定程度上制止这个巨大的政治和道德祸害的扩大，公民的思想将逐步成熟，以使人性获得彻底的解放。

问题九：民兵及正规部队的人数和状况以及他们的薪金如何？杰斐逊回答，体格健全、年龄在16到50岁之间的自由民都必须参加民兵。每个县的民兵组成若干连，再根据该县的人口数编成一个或多个营，由该县的县军官指挥，没有常设指挥官。州长既是行政长官又是军事长官。法律要求每一个民兵自备正规军中常用的武器，但实际情况是州南部地区完全没有武装，中部地区1/4或1/5的民兵持有消灭害兽的火枪，蓝岭西面地区民兵一般用来复枪武装。

.....

问题十一：请谈谈定居在该州的印第安人的情况好吗？杰斐逊介绍，当弗吉尼亚州第一个居民点在1607年建立时，有40多个印第安人部落，最强大的是波瓦坦部落、马纳霍克部落和莫纳卡部落。在这些部落中，唯一控制他们行为的只是他们的生活方式以及构成每个人本性一部分的是非感，违反这些是要受到惩罚的，惩罚的方法是团体对他的轻视或逐出团体。比较了印第安人无法律的状态和欧洲人法律太多的状态后，杰斐逊提出了一个问题，那就是没有法律还是太多法律哪一种情况给人带来最大的祸害呢？他认为是后者。但是大的社会没有政府不能生存，因此印第安人把大的社会分成许多小的社会。杰斐逊认为，印第安人不存在文物，最可观的遗迹是用于土地排水的公共沟渠，再就是古坟。接着，杰斐逊分析了美洲土著是从哪里来的。他从语言的角度分

析，认为美洲的语言比亚洲的语言更古老，从而否定了美洲印第安人是亚洲人后裔的可能性。

.....

问题十三：州宪法及其特许状呢？杰斐逊介绍，1607年3月9日，詹姆斯国王向托马斯·盖茨爵士等人颁发赠与证书，根据该证书，同年在沿海的詹姆斯敦建立起北美第一块定居点。该证书被1609年5月23日詹姆斯国王发给萨里斯伯利伯爵等人的特许状所取代。特许状允许他们以“伦敦市冒险家与殖民者第一块弗吉尼亚殖民地司库及公司”的名义注册，向他们及他们的继承人赠与从波因特康福特起沿海岸向北200英里、向南200英里的土地，以及从该地区海岸向西及西北陆地延伸的所有空间，包括距离海岸100英里的土地。特许状还规定在英国成立一个委员会来领导这个冒险事业，并授予该公司把任何愿意去殖民地的人运送到那里，永远豁免他们的一切赋税以及对殖民地输入或输出的任何货物或商品所征收的税，5%的关税除外。特许状还授予公司对那些滋扰他们的人进行战争，授予殖民地居民以本土子民的一切权利，并且宣布这些特许状如有疑问，应按照最有利于被授予者的方式予以解释。1612年3月12日，国王又颁发特许状，把位于北纬30°与41°之间及距过去赠与司库和公司的任何地区300里格以内的土地赠与该公司。1650年英国议会通过了一个禁止殖民地和外国通商的法令，开了议会干预殖民地事务的先例。1651年殖民地与英国议会达成了一项协议，以保证他们的最基本权利。但此协议的每一条规定都遭到了英国国王和议会的破坏，殖民地人民拿起武器进行反抗，取得独立后，建立了新的政府体制。

新的政府体制大致如下：行政权掌握在州长手里，州长每年改选一次，七年内不得任职三年以上；司法权由若干法院掌管；立法权由议会两院行使，众议院由每个县各派两名议员组成，议员每年由公民选出，参议员由二十四名成员组成，每四年改选一次。一项法律通过必须获得两院同意，州长及其参议会、最高法院法官、审计员、检察总长、司库、土地登记员以及国会代表均由两院任命。

杰斐逊认为，州宪法是在毫无经验的基础上制定的，存在许多严重的缺点：第一，投票权对财产的规定导致投票权集中在一小部分人手

中；第二，在那些分享代表权的人中间，分享的份额很不平等，大县和小县享有同样的代表权；第三，参议院就其体制来说，和众议院十分相似，不能达到立法机关成立两院的目的：使不同的利益或不同的原则发生影响；第四，政府的全部立法权、行政权和司法权都归结到立法机关；第五，常任立法机关可以对宪法本身予以修改；第六，议会行使确定法律制定机构法定人数的权力，而不是按照习惯上的“多数裁定原则”。新宪法的基本原则是，州应该按照共和国的方式来治理。杰斐逊认为，现存宪法的上述问题会导致对共和原则的背离，希望能够采取适当的补救办法，即召开一个代表会议来修改宪法，纠正它的缺点，用法律使几个政府部门各司其职，代表会议还要使诉诸人民成为不必要。

问题十四：请说明一下审判和法律工作好吗？州划分为若干县，每个县都有委派的地方行政官，称为治安官，数目按照县的大小而定，通常从8个到30个或40个。治安官由同事提名，由州长委任，工作没有报酬。他们掌握刑事及民事裁判权，法律问题由他们自行裁决，而事实问题由陪审团裁决。任何一个案件，除叛国罪外，州长都有赦免权，叛国罪只能由州议会予以赦免。在民事案件中，法官对于一切不属于海事法范围的任何价值的案件都有裁判权。

弗吉尼亚州采用的是英国法律。1661年议会会有一个法令，明确宣布采用英国法律，除非“情况不同”使这些法律不能适用。在采用英国法律时，法院的准则是：英国的习惯法，以及詹姆斯在位第四年以前的一般法规在这里生效，但是以后的法规无效。后来还增加了君主国时期议会通过的许多法令以及共和国成立以来大陆会议与议会制定的法令。接着，杰斐逊详细说明了同英国模式的差异：债务人如无力偿还债务，交出全部家产及以后的收入，即可免于监禁；贫民不能自食其力者，由向他们教区内什一税缴纳者征税来养活；婚礼必须按宗教仪式举行；外国人只要移居本国并宣誓效忠，即可加入国籍；土地转让必须在土地所在县的法院或州法院进行登记，否则无效；奴隶和土地一样可以作为遗产和嫁妆继承；赌债无效；烟草、面粉、猪肉、牛肉、柏油、沥青和松脂出口前必须由公开任命之人加以检查；法律致力于维护和改进动物的品种，消灭有害的动物；法律还致力于保护公民免受传染病的侵袭……共和国成立后召开的第一届议会成立了一个专门委员会来修改全部法典，

这项工作已由三位先生完成（杰斐逊、威思和彭德尔顿），并向议会提交报告。修改的办法以英国的习惯法为基础。全部英国法规及议会法令中被认为应予以保留的，总共分为126个新的法令。其中，最重大的改动包括：修改遗产继承的法律原则，废除长子继承制；全部公共开支都按照公民财产进行摊派；雇用工人保养公路，给新辟道路所经过土地的所有人补偿；精确制定外国人入籍和公民入外国籍的规则；在最广泛的基础上建立宗教自由；解放所有在法案通过后出生的奴隶^[29]；修改宪法来帮助公共教育^[30]；提出了一个法案，建议成立公共图书馆和美术馆。

问题十五：高等院校和公共机构及公路、建筑物，等等。威廉玛丽学院是本州唯一的一所公立高等学府。它是威廉国王和玛丽女王在位时创建，每年收入3 000多英镑，收入来源主要是土地、烟草税以及对进口酒和出口皮毛的征税。学院由20名监督员管理，有1名院长和6名教授。教授职务根据特许状只能是6名，因此，独立革命后，监督员改变了教授职位的设置，但无权增设教授职位。

公路由县法院管理，但是受州法院控制。县的居民划分成许多管区，每个管区负责保养一部分公路。渡口只准在法律特别指定的地点设立，摆渡费由法律规定。旅馆由法院颁发许可证，收费标准由法院随时调整。

私人房屋大多数使用小块木材和木板造成，样式难看，不舒服，且容易毁坏。唯一值得一提的公共建筑是州议会大厦、王宫、学院以及疯人院，它们都在威廉斯堡。

问题十六：对于通称“亲英分子”的叛徒的地产和财产采取什么措施？杰斐逊介绍，一个亲英分子被正确地定性为思想上而不是行动上的卖国贼。法律要打击的唯一一类人是拒绝宣誓效忠者，或拒绝宣誓效忠本州的人。这类人有时要交双倍税，有时要交三倍税，但是多收的钱最后都退还给他们。对于英国人在弗吉尼亚州的财产，议会通过许多法律来保护。

问题十七：请介绍一下该州接受的各种宗教好吗？杰斐逊介绍，弗吉尼亚州的第一批定居者是来自英国的移民，信奉英国国教。他们掌握

这个地区大约一个世纪，实行宗教压迫，后来其他的宗教逐渐出现。独立革命前，大约2/3的人成为反对国教的新教徒。大陆会议1776年10月废除了英国议会制定的一切使得在宗教问题上持其他见解、不去教堂和进行其他礼拜方式俱为犯罪的法令，并且暂时停止向教士发薪金，1779年10月将暂时停止改为永久停止。目前弗吉尼亚州仍然保留的只是那些由习惯法或者议会制定的法令所施加的压迫。杰斐逊建议，实行宗教宽容政策，废除这些压迫，保护宗教自由。

问题十八：该州的特殊风俗习惯和生活方式如何？杰斐逊认为，要确定一个民族的生活方式据以考验的标准，无论是普遍还是特殊，都是困难的，尤其是当人身处其中时。他认为，奴隶制度的存在肯定对人民的生活方式产生了不良影响：把一半人变成了暴君，另一半人变为敌人；败坏一部分人的道德，消除另一部分人的爱国心。但他希望奴隶的全面解放是在奴隶主的同意下按部就班地进行，而不是把奴隶主彻底消灭掉。

问题十九：制造业、商业、内贸和外贸现状如何？杰斐逊认为，他们从未有过任何值得重视的国内贸易，对外贸易从独立战争以来遭到严重的损失。他认为，欧洲必须依靠制造业来养活过剩的人口，而美洲有无限的土地供人民耕种。在任何一个国家，其他各阶级公民总数与农民总数之比，就是不健康部分与健康部分之比，并且是反映腐化程度的理想指标。

.....

问题二十二：政府的收支情况如何？.....杰斐逊认为，在还清债务后，美国应该努力发展与每一个国家的和平友谊，与它们互相敞开贸易的大门，大力发展相互间的贸易。海洋对于美国来说是天然的屏障，使得其他国家的入侵变得不容易，因此美国没有必要发展强大的海军。

问题二十三：可否谈谈州的历史、在其殖民地时期以其名义出版的年表以及与它的现在或过去内外事务有关的小册子？杰斐逊介绍，关于州的历史的小册子，主要有：（1）被视为殖民地创建人的史密斯船长写的弗吉尼亚历史，他写的历史几乎是了解弗吉尼亚州初期情况的唯一原始资料；（2）威廉·斯太茨牧师写过同一时期的历史，但是过于琐

细，让人无法忍受；（3）贝弗利写的历史从沃尔特·雷利爵士最初提出建议起到1700年止，篇幅只及斯太茨写第四个时期所用篇幅的1%；

（4）沃尔特·基思爵士从殖民地最早时期写到1725年为止。

1764年，弗吉尼亚议会和议会给国王的请愿书、给英国上议院的备忘录以及给下议院的进谏书揭开了反英斗争的序幕，从那时起到1776年《独立宣言》发表，议会议事录充满了关于人民权利的强硬声明。弗吉尼亚州出版的小册有：1776年，《英国殖民地权利探讨》，理查德·布兰德著；1769年，《诫谕信》，亚瑟·李博士著；1774年，《英属美利坚权利概观》，杰斐逊著；1774年，《多思集》，罗伯特·卡特·尼古拉斯著。

（四）政府文件

人们一致认为，杰斐逊作为政府文件的组织者和写作者的才能是他的政治家地位的牢固支柱之一。当杰斐逊1775年进入大陆会议时，约翰·亚当斯说他“带来了文学和科学的美名以及卓越的写作天才”，这种卓越的写作天才似乎为杰斐逊博得了比他同时代的任何一个人撰写更多的议案、报告和官方文件的角色。杰斐逊起草的政府文件包括从他作为弗吉尼亚议会、弗吉尼亚代表大会及大陆会议的成员时写的那些文件，直至他担任弗吉尼亚州长、驻法国公使、国务卿、副总统以及最后任总统时写的文件。杰斐逊的文体杰作就是《独立宣言》，但这部分内容在《自传》部分进行了全文刊登，所以政府文件这部分就未将其收录进来。另一个著作《英属美利坚权利概观》与《权利宣言》相比，虽然知名度差一些，但是对于美国革命几乎是同样伟大的文学贡献。这部分还收录了《建立宗教自由法案》、两次就职演说、几份国务卿意见、几份年度咨文以及其他一些文件。这里将挑选比较重要的、最能体现杰斐逊政治思想的几篇作重点介绍。

《英属美利坚权利概观》写于1774年，是杰斐逊对出席第一次殖民地代表大会的弗吉尼亚代表的训令。它提出一个毫不妥协的论据，即天赋的移居和征服权利使得美国殖民地不受英国议会管辖，它们唯一的联系是殖民地自愿服从“同一个共同的最高统治者”——英国国王。首先，

杰斐逊分析了英国议会通过的强权法案，并提出严重和坚决的抗议。接着，他分析了英国国王超越职权的行为，包括：拒不对议会两院通过的强权法律行使否决权，而对美利坚立法机关却恣意行使这种权力（比如国王一直否决殖民地禁止奴隶贸易的努力）；给弗吉尼亚总督下敕令，禁止他批准建立县的法案，除非这个新建立的县同意在议会没有代表；土地所有制也是一个错误，国王没有权利由他本人来分赠土地，而应该由殖民地人民集体来做或由他们授予最高权力的立法机关来做；国王向殖民地派遣军队是没有正当法律根据的，除非经过殖民地议会批准。这些决议被议员们认为在当时的形势下过于大胆，没有予以批准，但是他们把它印成了小册子，予以出版。

1779年，杰斐逊提出了《建立宗教自由法案》，该法案直到1786年才被弗吉尼亚州议会通过。该法案中，杰斐逊宣称宗教自由是人的天赋权利，人的心灵是自由的，一切用世俗的惩罚或负担或剥夺公民资格来影响心灵的企图，只会养成虚伪和卑鄙的习俗，违反宗教的本来目的。教会的和非教会的立法者和统治者，把自己的见解和思想方式作为唯一正确和绝对不会错的而强加于他人，是对他人宗教信仰自由的侵犯。因此，不得强迫任何人进行任何宗教礼拜仪式，或资助任何圣地或牧师，也不得由于其宗教见解或信仰而对其人身或财产施加限制、强制或折磨。一切人均可自由表明并通过说理坚持其宗教见解，决不可因此缩小、扩大或影响其公民权。《建立宗教自由法案》要求政教彻底分离，使得弗吉尼亚州走在其他州的前列。

《关于西部土地组建的报告》写于1784年3月22日，主要解决西部新移民州的问题。独立战争之后合众国政府面临西部边疆土地的管理问题。杰斐逊在报告中提出，西部土地应分成若干州，组成临时政府，采取任何一个老州的宪法和法律，有权向国会派出一名列席议员，有辩论权，但是没有表决权。当该州的自由民达到2万的时候，可以制定一部永久性的宪法，成立一个永久性的政府。当该州的自由民数与当时13个老州中人口最少的一个州相等时，该州可派代表进入合众国国会，并享有与13个老州平等的地位。但无论是临时政府还是永久性政府，都必须建立在以下原则之上：是美利坚合众国的一部分；同老州一样在人身、财产和领土方面服从美利坚合众国政府及邦联条例；分摊邦联债务；奉

行共和制；1800年后，不得有奴隶或强迫劳役。

第一次就职演说是典型的杰斐逊政治思想，是民主原则的持久定义。在演说中，杰斐逊重申了政府的基本原则：平等公正地对待一切人，而不问其地位或宗教信仰或政治信仰；与所有国家保持和平、通商和真挚的友谊，但不与任何国家结盟；支持州政府的一切权利，把州政府当做管理内部事务最有效的行政机关以及抵制反共和倾向的最牢固屏障；保持全国政府的全部宪法效力，作为国内和平与对外安全的最后依靠；小心维护人民的选举权；绝对服从多数的决定，这是共和政府的主要原则；纪律严明的民兵——和平时期及战争时期正规军接替之前的主要靠山；文权高于军权；节省国帑以减轻人民负担；诚实地清偿债务，郑重地维护公众信心；鼓励农业并扶助商业为农业服务；传播知识并在公众理智法庭上审讯一切坏事；保障宗教自由和新闻出版自由，并按照人身保护法令保障人身自由；由公正地选出的陪审团进行审判。

（五）书信

杰斐逊一生写下了数目惊人的信，总数大致在5万封到7.5万封之间。这些信题材广泛，不仅再现了他那个时代一位多才多艺的美国人的风采，而且也再现了他生活于其中的那个时代的面貌。《选集》收录的书信共计225封，时间跨度从1760年到1826年，涵盖了杰斐逊一生的大部分重要时光。这些书信涉及教育、音乐、建筑、法律等问题，当然谈得最多的是政治问

题。^[31] 这里我们重点分析书信中所反映的杰斐逊的政治思想，当然这并不否认其他书信的重要性。^[32]

1、政治理想

作为著名的政治哲学家，杰斐逊的政治理想是建立一个由殷实、独立的自耕农构成的幸福社会，没有手工作坊，没有工业重镇。在写给约翰·杰伊（1785年8月23日）的信中，杰斐逊阐述了自己的农业理想。他认为，农民是最有价值的公民；他们最活跃、最独立、最道德高尚，被最持久的纽带与国家联系在一起，与国家的自由和利益融为一体。而工

匠是助长罪恶的人，是被用来全面颠覆国家一切自由的公民。只要能在农业中找到工作，就不应该把农民变成海员、工匠或任何其他人，除非他们的数目和生产的产品供过于求。海员是仅次于农民的有价值的公民。国家必须在商品运输、捕鱼权利以及海洋的其他方面不遗余力地为他们维护平等的权利。但这毫无疑问会带来战争。唯一的办法就是美国拥有自己的力量以惩罚引起不公平战争的国家，软弱只会招致攻击和伤害，而有了惩罚力量才能防止，这就要求必须拥有海军。

在给霍金杜普（1785年10月13日）的信中，杰斐逊表达了同样的重视农业的观点。但他认为，这仅是个人的意见，是不能被美国的公仆们随意采纳的。人民对航运和贸易情有独钟，因此美国希望打开所有的通商门户，消除一切阻挠，但对美国施加限制的国家，也要在美国的港口对他们施加同样的限制。

2、独立战争

独立战争是杰斐逊书信中的一项重要内容。《选集》收录的信件中，给威廉·斯莫尔博士（1775年5月7日）、约翰·伦道夫（1775年11月29日）和弗朗西斯·埃泼斯（1776年7月15日）的三封信中都提到了独立战争。杰斐逊认为，战争本来是可以避免、可以调和的，但是英国国王和议会的傲慢态度和做法使得殖民地人民义愤填膺，他们除了奋起反抗外，别无他路可走。

3、联邦宪法

1787年5月至8月，美国召开制宪会议，制定了1787年宪法。此时，杰斐逊作为美国驻法国公使远在巴黎，但他对制宪会议和新宪法非常关注。在给友人的信件中，他多次谈到自己对这部新宪法的观点。

在写给约翰·亚当斯（1787年11月13日）的信中，他谈到：联邦众议院无论管理对外事务还是联邦事务都不合适；总统可以连选连任的规定，相当于使得行政首脑终身任职。在稍后写给麦迪逊（1787年12月20日）的信中，杰斐逊更详细地阐述了自己的观点。他明确表示赞成宪法的下列内容：赋予立法机关征税权；将大州和小州的要求折中的做法（大州要求比例代表制，小州要求平等代表制）；取消按州投票方法而

改为按人投票方法；赋予总统否决权。但他也态度鲜明地表明他不喜欢的内容：首先是缺少权利法案的内容；第二，在一切情况下放弃官职轮换的原则，尤其是总统一职。在写给卡林顿上校

（1788年5月27日）的信中，杰斐逊提到，大家对那个被视为总统的人无限信任^[33]，所以我们的警惕性才睡大觉。但他卸任以后，水平差的人可能会接替他任总统，我们才会认识到他的功绩把我们引入的危险境地。

在写给亚·唐纳德先生（1788年2月7日）的信中，杰斐逊说，他希望九个最早批准宪法的会议接受新宪法，好处是巨大而重要的。但是他又希望四个最晚批准宪法的会议在新宪法附加一个权利宣言之前不要接受它，这样也许会争取到一个更好的宣言，从而使整部宪法达到任何一部宪法所未达到过的完善程度。

写给穆斯捷侯爵（1788年5月17日）的信中，杰斐逊提到，新宪法确实也有一些缺点，起初很使他反感。但他说，我们必须满足于逐步走向完善，必须满足于这部宪法将会使我们获得一个基础，等有利时机到来时再纠正其中的不足。

4、谢斯暴动

1786年夏，马萨诸塞州发生了“谢斯暴动”，这件事无疑也成为杰斐逊信件的内容。在给爱德华·卡林顿上校（1787年1月16日）、麦迪逊（1787年1月30日）和史密斯上校（1787年11月13日）的信中，杰斐逊谈到他对这次骚乱的看法。他认为，人类社会存在于三种大相径庭的形势下：（1）存在于没有政府的状态下，比如印第安人的社会；（2）存在于有政府的状态，其中每个人的意志都有一定影响，例如较小程度在英国，较大程度在美国；（3）存在于强权政府下，例如在其他一切君主国以及大多数共和国中。最后一种形式，是狼对羊的统治。而第一种形式不管是不是最好，都不能与较多的人口相容。第二种形式有很多好处，多数人享受很大程度的自由和幸福。但这种形式也有弊病，最大的弊病是容易发生骚乱。但杰斐逊说，他“宁爱有危险的自由也不愿自由自在地做奴隶”。他认为，这种弊病也有好处，能防止政府蜕化堕落，促进人民对国家大事的关心。造反是对于政府的健康必不可少的良药。鲜血

是自由之树的天然肥料。

杰斐逊希望这些制造骚乱的人不要受到政府的严厉惩罚。因为人民是统治者唯一的审查者，甚至他们的错误也有助于使统治者遵守其体制的真正原则。过分严厉地惩罚这些错误就等于镇压公众自由的唯一保障。要珍视人民的精神，使他们继续保持警惕，对他们所犯的错误就不能从严处分，而应该教育开导。那么如何防止人民进行不正当干预呢？杰斐逊认为，应该通过报纸让人民充分了解国家大事。由于政府的基础是人民的舆论，所以要保持舆论的正确性。杰斐逊在这里强调，他所谓保持舆论的正确性，不过是要每个人都应该收到报纸，而且能够阅读报纸。

5、奴隶制度

奴隶问题是美国建国初期一个非常重要的问题。尽管杰斐逊一生都拥有奴隶，但是这并没有妨碍他对奴隶问题的看法。

理查德·普赖斯是英国的伦理学家和政治学家，曾在英国捍卫美国的独立事业。他写信给杰斐逊询问他的作品^[34]在美国产生的影响。杰斐逊在回信（1785年8月7日）中做了详细的分析：从切萨皮克以南，只有少数读者会在奴隶问题上产生共鸣；从切萨皮克河口到上游地带，多数人会在理论上表示赞同，只有少数人准备在实践中予以接受，大多数人虽深感良心不安，但是没有勇气使他们的家庭放弃一笔财产；在切萨皮克河以北，则会偶然发现有人反对，在这个地区奴隶比较少，解放奴隶将按部就班地进行。杰斐逊认为，要不了几年，马里兰以北就没有奴隶了。这实际上为我们勾勒了奴隶制度在美国的存在情况。

在给约翰·霍姆斯（1820年4月22日）的信中，杰斐逊再次谈到奴隶问题。他说：“我们是抓着狼的耳朵，既不能捉牢它，又不能大胆地放它走。天平的一头是正义，另一头是自我保存。”他认为，《密苏里协定》只是暂时解决了这个问题。

6、其他

（1）人民是维护自由的唯一靠山

在给威思先生（1786年8月13日）的信中，杰斐逊认为，人民是维护自由的唯一靠山，人民的良知永远是最强大的军队。要教育全体人民，使他们了解情况，让他们懂得维护和平与秩序对他们有利，这样他们就会维护。在人民中间普及知识，是维护自由和幸福的最扎实的基础。

在给约翰·威奇（1809年5月19日）的信中，杰斐逊强调了同样的观点。他说，每个国家的人民是其本身权利的唯一保卫者，也是唯一能被用来破坏这些权利的工具。他们要是没有受骗，当然绝不会同意被这样利用。为了避免他们受骗，应当使他们受一定程度的教育。

（2）个人权利

杰斐逊在给门罗（1782年5月20日）的信中阐述了对权利的看法：认为自己的权利少，而邻人应有的权利多，这种想法是荒谬的，也是违反人情的，这是奴役，而不是《人权法案》所要保护的自由。

杰斐逊坚决支持共和主义的多数原则，在给威廉·贝奇博士（1800年2月2日）的信中，他强调，“要反复教育少数派必须承认多数派的意见，多数派必须尊重少数派的权利。”

（3）对州权的维护

杰斐逊倡议建立权力十分有限的联邦政权，将大部分权力留给州政府。在写给麦迪逊（1786年12月16日）的信中，杰斐逊谈到，中央政府和州政府分权的要点在于，在对外事务上团结得如同一个国家，在对内事务方面则各行其是。

在给约瑟夫·卡·卡贝尔（1816年2月2日）的信中，杰斐逊提到，要想有一个良好和安全的政府，其方法不是把所有事情都委托给一个人，而是要在许多中进行分配，把每个人所能胜任的职务分配给他。让全国政府处理国防以及外交和联邦关系；州政府处理公民权利、法律、治安以及与州有关的事务；县政府处理县的地方性事务，区政府处理区的事务。

（4）三权分立

在写给麦迪逊（1786年12月16日、1787年6月20日）的两封信中，杰斐逊谈到：为使邦联政府最有效地行使分配给它的权力，应当像州政府一样实行三权分立。立法、司法部分已经独立了，行政部门也应该独立。杰斐逊建议，各州委员会在国会休会期间成立一个执行委员会，在国会开会期间则任命一个委员会来接受和分派一切行政事务，国会本身只处理立法事务。同一权力交给国会本身，就再没有更高的权力来履行同一职责。

（5）信仰自由

在给本杰明·拉什（1803年4月21日）的信中，杰斐逊谈了自己对基督教的想法，他列出了“基督教教义和其他教义功过相比较估计提纲”。他认为，每一个人在自己的信仰自由受到侵犯的时候都绝不应该作出让步，不应该回答一些关于信仰的问题；这只是上帝和他本人之间的事情，任何人不得干预。他同时强调，每一个珍视信仰自由的人在别人的信仰自由遭到侵犯时，都必须予以抵制；否则，随着环境的改变，别人的命运有可能会落到他自己头上。

（6）新闻自由

在给约翰·泰勒法官（1804年6月28日）的信中，杰斐逊提到，人类可以靠理性和真理来统治，因此第一个目标是使所有通往真理的道路为人类开放。迄今为止所找到的最有效的道路就是新闻自由。

（7）对外关系

在对外关系上，杰斐逊主张，不要卷入欧洲事务，但应该对欧洲事务有所了解（《致E.卡林顿》，1787年12月21日）。在给门罗总统（1823年10月24日）的信中，他强调了这条准则，并且又加入了一条准则，那就是决不容忍欧洲干涉大西洋这边的事务。

作为美国驻法国公使，杰斐逊对法国的政治问题和局势变化一直密切关注。在一系列信件中，他谈了自己对法国的社会问题及法国大革命的看法，并详细介绍了法国革命局势的变化情况。^[35] 在法国的社会问题上，杰斐逊谈了财富分配不均的问题，这个问题在给大主教麦迪逊

(1785年10月28日)的信中提到。在法国,国家财富完全集中在少数人手里,而大多数人都处于苦难中,找不到工作。他认为,要想消除这种苦难,把财产平均分配是不现实的,立法者只能设法改进再分配的部分:让每一种财产由全体子女继承,或者让所有的兄弟姐妹或辈分相同的其他亲属继承;在某一个征税点以下全部免税,超出征税点按几何级数征税,收入越高,税也越重,这是一种逐渐缩小财富不均的办法;为失业者提供工作,如果不能提供工作,就恢复失业者种地的基本权利。

2013年3月

强梅梅,中国人民大学法学理论博士。现为中国法学会法律信息部助理研究员。主要研究领域为西方法律思想史、比较法学、法社会学等。

[1] 王国维:《书辜氏汤生英译〈中庸〉后》,见傅杰编校:《王国维论学集》,473~474页,昆明,云南人民出版社,2008。

[2] 委员会的成员是约翰·亚当斯、本杰明·富兰克林、罗杰·谢尔曼、罗伯特·利文斯顿和托马斯·杰斐逊。

[3] 1789年,美国联邦政府成立后,国会通过了《重建外交部法案》,外交部成为美国联邦政府组建的第一个部,它不但负有处理外交事务的责任,还兼管货币管理、人口统计、掌管国玺等内政事务。由于职能广泛,国会将其改名为国务院,将外交部长改名为国务卿。依照美国宪法规定,国务卿是仅次于正、副总统的第三号行政官员,也是次于副总统、参众两院议长的总统第四顺位继承人,还是国家安全委员会成员,这种地位是其他部长难以企及的。参见董春岭,《国务卿是个什么样的官》,载《环球》,2013年第2期。

[4] 不要因此将杰斐逊划入反联邦党人的队伍。杰斐逊并不反对新宪法,而是反对汉密尔顿一系列意图加强中央集权的措施,包括发行国债、建立国家银行等。在共和党人看来,汉密尔顿的一系列举措意在建立一种危险而独裁的权力结构。

[5] 此共和党并非是现代共和党的直接始祖，现代共和党诞生于19世纪50年代。参见[美]艾伦·布林克利著，《美国史（1492—1997）》，邵旭东译，海口，海南出版社，2009年12月第1版，第171页。

[6] 杰斐逊被认为是美国早期杰出的建筑学家之一。弗吉尼亚大学中心校园的主题建筑就是他亲自设计完成的。他设计的华盛顿总统官邸在匿名竞赛中位居第二。

[7] 《独立宣言》由杰斐逊执笔完成，因此可以说它也在很大程度上体现了杰斐逊的思想和观点，尽管杰斐逊说，只有文章是他的，思想是全体美国人的。

[8] 见《杰斐逊选集》（以下简称《选集》）的书信部分，《致范·德·肯普》，1812年3月22日。（此处给出的是信件名称的中文译文，读者可根据日期找到信件原文。全书此类同。）

[9] 杰斐逊主张实行总统一任制，后来才同意最多任两届，并身体力行。由于华盛顿和他的示范，除第二次世界大战期间罗斯福总统任期四届外，其他人均未超过两届。1951年，美国通过第22条宪法修正案，明确规定，无论何人不得当选总统职务两次以上。

[10] 具有讽刺意味的是，在杰斐逊担任总统伊始便发生了美国历史上最重要的司法案件——“马伯里诉麦迪逊”案，开创了美国最高法院司法审查的先河。

[11] 这句话并不是杰斐逊的首创，而是从他的弗吉尼亚老乡乔治·梅森早期的文章中借用的。

[12] 《独立宣言》大胆地宣称美利坚殖民地是一个主权国家，这使得革命斗争得到了越来越多的外国援助，为法国的支持和援助铺平了道路，还使美国“爱国者”继续战斗——不获独立，决不和解。

[13] 在担任总统期间，他还推行了对印第安人的教育计划，希望通过学校教育和白人文化的熏陶使印第安人部落得以驯化和“提高”。

[14]美国联邦宪法中并没有提到建立政党，这种省略并不是一种疏忽。大多数自耕农，特别是乔治·华盛顿，相信结党十分危险，应该尽力避免。多数立国者认为，人们在具体问题上存在分歧是不可避免的，但这种分歧不足以，而且不应该导致永久性的派别的建立。这也是为什么联邦党和共和党都否认自己是一个政党的原因。

[15] 参见[美]艾伦·布林克利著，《美国史（1492—1997）》，邵旭东译，海口，海南出版社，2009年12月第1版，第171页。

[16] 参见[美]艾伦·布林克利著，《美国史（1492—1997）》，邵旭东译，海口，海南出版社，2009年12月第1版，第197页。

[17] 其私人图书馆后来成为“国会图书馆”的前身。

[18]杰斐逊任美国驻法国公使期间，只有少数几次离开巴黎去外地旅行：一次是1786年3月和4月去英国，在这次旅行中，他觐见了英国国王，凭吊了莎士比亚墓，让马瑟·布朗给他画了像；一次是1787年的3月至6月去法国南部和意大利北部；再有一次是1788年2月至4月去阿姆斯特丹和斯特拉斯堡。《选集》收录了他第二次在法国和意大利旅行的几篇日记以及为两个美国同胞写的有意义的旅行须知。日记涉及的地方比较多，但每个都是寥寥数笔，主要勾画了当地的风土人情，因此，这部分内容不再单独作介绍。杰斐逊在旅行中，特别重视农业方面的观察，“他把稻和刺山果、无花果和橄榄树的栽培资料寄回家中，并把美国不出产的许多牧草、橄榄以及意大利稻的种子寄回美国。他也从来不错过听夜莺唱歌，从来不忘记把泥土和天空的色彩记录下来”。

[19]杰斐逊是美国的开国元勋之一，同多数与美国早期历史有关的杰出人物关系密切，经常有历史学家和传记作者要求他提供材料，特别是在他晚年。《选集》收录了三个人的故事：乔治·华盛顿、本杰明·富兰克林和乔治·威思。这部分内容较简单，也不再单独作介绍。

[20]这里需要特别说明的是，《选集》收录的杂记内容比较少，仅仅包括杰斐逊1818年2月4日写的长篇说明以及三四则轶事。编者认为，这些轶事表现了全部杂记的格调和情绪的特色。杂记主要是杰斐逊就联邦党人和共和党人之间的斗争和纠葛所做的笔记。这些笔记是在感情强

烈的高峰年代写的，数年后由杰斐逊本人加以修订，目的是把任何一个可能“不正确、可疑或仅仅是个人的或不公开的”资料去掉。

[21] 弗吉尼亚州建立了第一个跨殖民地通信委员会，促进了殖民地间的继续合作。

[22] 用杰斐逊自己的话说，就是“……草稿被交给了那两位先生，他们每人都仅仅做了两三处简短的口头更改，但即使这些更改也仅仅对文章做了不应有的强调，因为只有文章是我的，思想是全体美国人的……”（见《选集》的书信部分，《致约瑟夫·德拉普兰》，1817年4月12日于蒙蒂塞洛）

[23] 彭德尔顿先生给加上了“如任何一方要求”几个字，使得这项议案形成虚设。

[24] 这里的《巴黎和约》指的是美国和英国为结束美国独立战争而缔结的和平条约，又称《美英凡尔赛和约》，1783年9月3日签订于巴黎附近的凡尔赛。和约共10条，主要内容有：英国正式承认美国为自由、自主和独立国家，放弃对美国的统治和领土主权的一切要求；确认美国疆界东起大西洋沿岸，西止密西西比河，北接加拿大五大湖区，南至佛罗里达北界；两国人民从此永久和平，停止在海上、陆上的一切敌对行动并互释战俘；英国从美国境内所有港口、地区、港湾撤出全部军队和舰只。该和约的签订使美国获得完全独立。

[25] 对于法国大革命，杰斐逊并非袖手旁观。他为拉法叶特出谋划策，但是一旦触及作为外交家的中立立场时，则按照礼节退避一旁，保持沉默。

[26] 汉密尔顿的这项提议遇到了很大的阻力。为了获得通过，他与杰斐逊达成协议，以弗吉尼亚赞同债务接受案为交换条件，使北方各州同意首都南迁，在弗吉尼亚州和马里兰州交界的波托马可河河岸建立都城，具体位置由华盛顿本人决定。

[27] 1793年英国及其同盟国向法国宣战，美国总统和国会一致同意

采取措施使美国保持中立。法国将埃德蒙·热内（被广泛称为“公民热内”）送到美国宣传大革命。他在查尔斯顿上岸，计划借美国港口装备法国战船，鼓励美国船主充当掠私船。热内所做的一切都有意蔑视华盛顿的政策，肆意违反“中立法”。

[28] 20世纪著名的科学历史学家还称赞它是一个美国人所写的最有影响的科学著作。这部著作也为杰斐逊奠定了作为世界学者的基础。

[29] 杰斐逊认为，黑人在精神和肉体上都比白人差，因此解放后的奴隶应该被移送到不至于发生混血的地方。

[30] 杰斐逊提出了一个系统性的全州范围教育计划：一切儿童，不分贫富都受到初等教育；对一般生活有用、为一切经济宽裕的人们所向往的中等教育；教授最高级科学的高等教育。杰斐逊认为，教育的目的不仅在于在人民中广泛传播知识，而且在于使人民成为本身自由的、可靠的而且是最终的保卫者。

[31] 限于篇幅，我们把书信按照不同的主题进行介绍。读者可以根据收信人和日期找到对应的信件。

[32] 建议读者，尤其是法律专业的学生，重点阅读以下信件：《致小班尼斯特》（1795年10月15日）、《致小伦道夫》（1787年7月6日）、《致彼得·卡尔》（1787年8月10日）、《致托马斯·曼·伦道夫》（1790年5月30日）、《致约翰·加兰·杰斐逊》（1790年6月11日）。这些信件里面，杰斐逊给收信人提出了如何安排学习、尤其是如何学习法律的建议。

[33] 这里指的是乔治·华盛顿。在制宪会议上，在拟定总统职务的过程中，所有人都一致认为华盛顿会当选第一届总统。并且，只要他愿意，他可以一直干下去。

[34] 《选集》只刊登了杰斐逊的回信，但从回信中并不能看出普赖斯博士的作品名称，在网上搜索也没有找到普赖斯博士的相应资料。但从杰斐逊的回信可以推断，这部作品是关于解放奴隶问题的。

[35] 由于篇幅限制，关于法国大革命的信件这里不再作介绍，读者

可从多种渠道获得相关信息与杰斐逊的信件相对照。

Autobiography

The Autobiography of Thomas Jefferson

January 6, 1821

At the age of 77, I begin to make some memoranda, and state some recollections of dates and facts concerning myself, for my own more ready reference, and for the information of my family.

The tradition in my father's family was, that their ancestor came to this country from Wales, and from near the mountain of Snowdon, the highest in Great Britain. I noted once a case from Wales, in the law reports, where a person of our name was either plaintiff or defendant; and one of the same name was secretary to the Virginia Company. These are the only instances in which I have met with the name in that country. I have found it in our early records; but the first particular information I have of any ancestor was of my grandfather, who lived at the place in Chesterfield called Osborne's, and owned the lands afterwards the glebe of the parish. He had three sons; Thomas who died young, Field who settled on the waters of Roanoke and left numerous descendants, and Peter, my father, who settled on the lands I still own, called Shadwell, adjoining my present residence. He was born February 29, 1707-8, and intermarried 1739, with Jane Randolph, of the age of 19, daughter of Isham Randolph, one of the seven sons of that name and family, settled at Dungeoness in Goochland. They trace their pedigree far back in England and Scotland, to which let every one ascribe the faith and merit he chooses.

My father's education had been quite neglected; but being of a strong mind, sound judgment, and eager after information, he read much and improved himself, insomuch that he was chosen, with

Joshua Fry, Professor of Mathematics in William and Mary College, to continue the boundary line between Virginia and North Carolina, which had been begun by Colonel Byrd; and was afterwards employed with the same Mr. Fry, to make the first map of Virginia which had ever been made, that of Captain Smith being merely a conjectural sketch. They possessed excellent materials for so much of the country as is below the Blue Ridge; little being then known beyond that ridge. He was the third or fourth settler, about the year 1737, of the part of the country in which I live. He died, August 17th, 1757, leaving my mother a widow, who lived till 1776, with six daughters and two sons, myself the elder. To my younger brother he left his estate on James River, called Snowdon, after the supposed birth-place of the family: to myself, the lands on which I was born and live.

威廉玛丽学院

He placed me at the English school at five years of age; and at the Latin at nine, where I continued until his death. My teacher, Mr. Douglas, a clergyman from Scotland, with the rudiments of the Latin and Greek languages, taught me the French; and on the death of my father, I went to the Reverend Mr. Maury, a correct classical scholar, with whom I continued two years; and then, to wit, in the spring of

1760, went to William and Mary college, where I continued two years. It was my great good fortune, and what probably fixed the destinies of my life, that Dr. William Small of Scotland, was then Professor of Mathematics, a man profound in most of the useful branches of science, with a happy talent of communication, correct and gentlemanly manners, and an enlarged and liberal mind. He, most happily for me, became soon attached to me, and made me his daily companion when not engaged in the school; and from his conversation I got my first views of the expansion of science, and of the system of things in which we are placed. Fortunately, the philosophical chair became vacant soon after my arrival at college, and he was appointed to fill it per interim: and he was the first who ever gave, in that college, regular lectures in Ethics, Rhetoric and Belles Lettres. He returned to Europe in 1762, having previously filled up the measure of his goodness to me, by procuring for me, from his most intimate friend, George Wythe, a reception as a student of law, under his direction, and introduced me to the acquaintance and familiar table of Governor Fauquier, the ablest man who had ever filled that office. With him, and at his table, Dr. Small and Mr. Wythe, his amici omnium horarum^[1], and myself, formed a partie quarée, and to the habitual conversations on these occasions I owed much instruction. Mr. Wythe continued to be my faithful and beloved mentor in youth, and my most affectionate friend through life. In 1767, he led me into the practice of the law at the bar of the General court, at which I continued until the Revolution shut up the courts of justice.

In 1769, I became a member of the legislature by the choice of the county in which I live, and so continued until it was closed by the Revolution. I made one effort in that body for the permission of the emancipation of slaves, which was rejected: and indeed, during the regal government, nothing liberal could expect success. Our minds were circumscribed within narrow limits, by an habitual belief that it was our duty to be subordinate to the mother country in all matters of

government, to direct all our labors in subservience to her interests, and even to observe a bigoted intolerance for all religions but hers. The difficulties with our representatives were of habit and despair, not of reflection and conviction. Experience soon proved that they could bring their minds to rights, on the first summons of their attention. But the King's Council, which acted as another house of legislature, held their places at will, and were in most humble obedience to that will: the Governor too, who had a negative on our laws, held by the same tenure, and with still greater devotedness to it: and, last of all, the Royal negative closed the last door to every hope of amelioration.

On the 1st of January, 1772, I was married to Martha Skelton, widow of Bathurst Skelton, and daughter of John Wayles, then twenty-three years old. Mr. Wayles was a lawyer of much practice, to which he was introduced more by his great industry, punctuality, and practical readiness, than by eminence in the science of his profession. He was a most agreeable companion, full of pleasantry and good humor, and welcomed in every society. He acquired a handsome fortune, and died in May, 1773, leaving three daughters: the portion which came on that event to Mrs. Jefferson, after the debts should be paid, which were very considerable, was about equal to my own patrimony, and consequently doubled the ease of our circumstances.

When the famous Resolutions of 1765, against the Stamp-act, were proposed, I was yet a student of law in Williamsburg. I attended the debate, however, at the door of the lobby of the House of Burgesses, and heard the splendid display of Mr. Henry's talents as a popular orator. They were great indeed; such as I have never heard from any other man. He appeared to me to speak as Homer wrote. Mr. Johnson, a lawyer, and member from the Northern Neck, seconded the resolutions, and by him the learning and the logic of the case were chiefly maintained. My recollections of these transactions may be seen on page 60 of the life of Patrick Henry, by Wirt, to whom I furnished

them.

In May, 1769, a meeting of the General Assembly was called by the Governor, Lord Botetourt. I had then become a member; and to that meeting became known the joint resolutions and address of the Lords and Commons, of 1768-9, on the proceedings in Massachusetts. Counter-resolutions, and an address to the King by the House of Burgesses, were agreed to with little opposition, and a spirit manifestly displayed itself of considering the cause of Massachusetts as a common one. The Governor dissolved us: but we met the next day in the Apollo [public room] of the Raleigh tavern, formed ourselves into a voluntary convention, drew up articles of association against the use of any merchandise imported from Great Britain, signed and recommended them to the people, repaired to our several counties, and were re-elected without any other exception than of the very few who had declined assent to our proceedings.

Nothing of particular excitement occurring for a considerable time, our countrymen seemed to fall into a state of insensibility to our situation; the duty on tea, not yet repealed, and the declaratory act of a right in the British Parliament to bind us by their laws in all cases whatsoever, still suspended over us. But a court of inquiry held in Rhode Island in 1762, with a power to send persons to England to be tried for offences committed here, was considered, at our session of the spring of 1773, as demanding attention. Not thinking our old and leading members up to the point of forwardness and zeal which the times required, Mr. Henry, Richard Henry Lee, Francis L. Lee, Mr. Carr and myself agreed to meet in the evening, in a private room of the Raleigh, to consult on the state of things. There may have been a member or two more whom I do not recollect. We were all sensible that the most urgent of all measures was that of coming to an understanding with all the other colonies, to consider the British claims as a common cause to all, and to produce a unity of action:

and, for this purpose, that a committee of correspondence in each colony would be the best instrument of intercommunication: and that their first measure would probably be, to propose a meeting of deputies from every colony, at some central place, who should be charged with the direction of the measures which should be taken by all. We, therefore, drew up the resolutions which may be seen in Wirt, page 87. The consulting members proposed to me to move them, but I urged that it should be done by Mr. Carr, my friend and brother-in-law, then a new member, to whom I wished an opportunity should be given of making known to the house his great worth and talents. It was so agreed; he moved them, they were agreed to nem. con.^[2], and a committee of correspondence appointed, of whom Peyton Randolph, the speaker, was chairman. The Governor (then Lord Dunmore) dissolved us, but the committee met the next day, prepared a circular letter to the speakers of the other colonies, inclosing to each a copy of the resolutions, and left it in charge with their chairman to forward them by expresses.

波士顿倾茶事件

The origination of these committees of correspondence between the colonies has been since claimed for Massachusetts, and Marshall has given into this error, although the very note of his appendix to which he refers, shows that their establishment was confined to their

own towns. This matter will be seen clearly stated in a letter of Samuel Adams Wells to me of April 2nd, 1819, and my answer of May 12th. I was corrected by the letter of Mr. Wells in the information I had given Mr. Wirt, as stated in his note, page 87, that the messenger of Massachusetts and Virginia crossed each other on the way, bearing similar propositions; for Mr. Wells shows that Massachusetts did not adopt the measure, but on the receipt of our proposition, delivered at their next session. Their message, therefore, which passed ours, must have related to something else, for I well remember Peyton Randolph's informing me of the crossing of our messengers.

The next event which excited our sympathies for Massachusetts, was the Boston port bill, by which that port was to be shut up on the 1st of June, 1774. This arrived while we were in session in the spring of that year. The lead in the House, on these subjects, being no longer left to the old members, Mr. Henry, R. H. Lee, Fr. L. Lee, three or four other members, whom I do not recollect, and myself, agreeing that we must boldly take an unequivocal stand in the line with Massachusetts, determined to meet and consult on the proper measures, in the council-chamber, for the benefit of the library in that room. We were under conviction of the necessity of arousing our people from the lethargy into which they had fallen, as to passing events; and thought that the appointment of a day of general fasting and prayer would be most likely to call up and alarm their attention. No example of such a solemnity had existed since the days of our distresses in the war of '55, since which a new generation had grown up. With the help, therefore, of Rushworth, whom we rummaged over for the revolutionary precedents and forms of the Puritans of that day, preserved by him, we cooked up a resolution, somewhat modernizing their phrases, for appointing the 1st day of June, on which the port bill was to commence, for a day of fasting, humiliation, and prayer, to implore Heaven to avert from us the evils of civil war, to inspire us with firmness in support of our rights, and to turn the hearts of the

King and Parliament to moderation and justice. To give greater emphasis to our proposition, we agreed to wait the next morning on Mr. Nicholas, whose grave and religious character was more in unison with the tone of our resolution, and to solicit him to move it. We accordingly went to him in the morning. He moved it the same day; the 1st of June was proposed; and it passed without opposition. The Governor dissolved us, as usual. We retired to the Apollo, as before, agreed to an association, and instructed the committee of correspondence to propose to the corresponding committees of the other colonies, to appoint deputies to meet in Congress at such place, annually, as should be convenient, to direct, from time to time, the measures required by the general interest: and we declared that an attack on any one colony, should be considered as an attack on the whole. This was in May. We further recommended to the several counties to elect deputies to meet at Williamsburg, the 1st of August en-suing, to consider the state of the colony, and particularly to appoint delegates to a general Congress, should that measure be acceded to by the committees of correspondence generally. It was acceded to; Philadelphia was appointed for the place, and the 5th of September for the time of meeting. We returned home, and in our several counties invited the clergy to meet assemblies of the people on the 1st of June, to perform the ceremonies of the day, and to address to them discourses suited to the occasion. The people met generally, with anxiety and alarm in their countenances, and the effect of the day, through the whole colony, was like a shock of electricity, arousing every man, and placing him erect and solidly on his centre. They chose, universally, delegates for the convention. Being elected one for my own county, I prepared a draught of instructions to be given to the delegates whom we should send to the Congress, which I meant to propose at our meeting. In this I took the ground that, from the beginning, I had thought the only one orthodox or tenable, which was, that the relation between Great Britain and these colonies was exactly the same as that of England and Scotland, after the accession

of James, and until the union, and the same as her present relations with Hanover, having the same executive chief, but no other necessary political connection; and that our emigration from England to this country gave her no more rights over us, than the emigrations of the Danes and Saxons gave to the present authorities of the mother country, over England. In this doctrine, however, I had never been able to get any one to agree with me but Mr. Wythe. He concurred in it from the first dawn of the question, What was the political relation between us and England? Our other patriots, Randolph, the Lees, Nicholas, Pendleton, stopped at the half-way house of John Dickinson, who admitted that England has a right to regulate our commerce, and to lay duties on it for the purposes of regulation, but not of raising revenue. But for this ground there was no foundation in compact, in any acknowledged principles of colonization, nor in reason: expatriation being a natural right, and acted on as such, by all nations, in all ages. I set out for Williamsburg some days before that appointed for our meeting, but was taken ill of a dysentery on the road, and was unable to proceed. I sent on, therefore, to Williamsburg, two copies of my draught, the one under cover to Peyton Randolph, who I knew would be in the chair of the convention, the other to Patrick Henry. Whether Mr. Henry disapproved the ground taken, or was too lazy to read it (for he was the laziest man in reading I ever knew) I never learned: but he communicated it to nobody. Peyton Randolph informed the convention he had received such a paper from a member, prevented by sickness from offering it in his place, and he laid it on the table for perusal. It was read generally by the members, approved by many, though thought too bold for the present state of things; but they printed it in pamphlet form, under the title of "A Summary View of the Rights of British America." It found its way to England, was taken up by the opposition, interpolated a little by Mr. Burke so as to make it answer opposition purposes, and in that form ran rapidly through several editions. This information I had from Parson Hurt, who happened at the time to be in London, whither he

had gone to receive clerical orders; and I was informed afterwards by Peyton Randolph, that it had procured me the honor of having my name inserted in a long list of proscriptions, enrolled in a bill of attainder commenced in one of the Houses of Parliament, but suppressed embryo by the hasty step of events, which warned them to be a little cautious. Montague, agent of the House of Burgesses in England, made extracts from the bill, copied the names, and sent them to Peyton Randolph. The names, I think, were about twenty, which he repeated to me, but I recollect those only of Hancock, the two Adamses, Peyton Randolph himself and myself. The convention met on the 1st of August, renewed their association, appointed delegates to the Congress, gave them instructions very temperately and properly expressed, both as to style and matter; and they repaired to Philadelphia at the time appointed. The splendid proceedings of that Congress, at their first session, belong to general history, are known to every one, and need not therefore be noted here. They terminated their session on the 26th of October, to meet again on the 10th of May ensuing. The convention, at their ensuing session of March, '75, approved of the proceedings of Congress, thanked their delegates, and reappointed the same persons to represent the colony at the meeting to be held in May: and foreseeing the probability that Peyton Randolph, their president, and speaker also of the House of Burgesses, might be called off, they added me, in that event, to the delegation.

Mr. Randolph was, according to expectation, obliged to leave the chair of Congress, to attend the General Assembly summoned by Lord Dunmore, to meet on the 1st day of June, 1775. Lord North's conciliatory propositions, as they were called, had been received by the Governor, and furnished the subject for which this assembly was convened. Mr. Randolph accordingly attended, and the tenor of these propositions being generally known, as having been addressed to all the governors, he was anxious that the answer of our Assembly, likely

to be the first, should harmonize with what he knew to be the sentiments and wishes of the body he had recently left. He feared that Mr. Nicholas, whose mind was not yet up to the mark of the times, would undertake the answer, and therefore pressed me to prepare it. I did so, and, with his aid, carried it through the House, with long and doubtful scruples from Mr. Nicholas and James Mercer, and a dash of cold water on it here and there, enfeebling it somewhat, but finally with unanimity, or a vote approaching it. This being passed, I repaired immediately to Philadelphia, and conveyed to Congress the first notice they had of it. It was entirely approved there. I took my seat with them on the 21st of June. On the 24th, a committee which had been appointed to prepare a declaration of the causes of taking up arms, brought in their report (drawn I believe by J. Rutledge) which, not being liked, the House recommitted it, on the 26th, and added Mr. Dickinson and myself to the committee. On the rising of the House, the committee having not yet met, I happened to find myself near Governor W. Livingston, and proposed to him to draw the paper. He excused himself and proposed that I should draw it. On my pressing him with urgency, "We are as yet but new acquaintances, sir," said he; "why are you so earnest for my doing it?" "Because," said I, "I have been informed that you drew the Address to the people of Great Britain, a production, certainly, of the finest pen in America." "On that," says he, "perhaps, sir, you may not have been correctly informed." I had received the information in Virginia from Colonel Harrison on his return from that Congress. Lee, Livingston, and Jay had been the committee for that draught. The first, prepared by Lee, had been disapproved and recommitted. The second was drawn by Jay, but being presented by Governor Livingston, had led Colonel Harrison into the error. The next morning, walking in the hall of Congress, many members being assembled, but the House not yet formed, I observed Mr. Jay speaking to R. H. Lee, and leading him by the button of his coat to me. "I understand, sir," said he to me, "that this gentleman informed you, that Governor Livingston drew the

Address to the people of Great Britain.” I assured him, at once, that I had not received that information from Mr. Lee, and that not a word had ever passed on the subject between Mr. Lee and myself; and after some explanations the subject was dropped. These gentlemen had had some sparrings in debate before, and continued ever very hostile to each other.

I prepared a draught of the declaration committed to us. It was too strong for Mr. Dickinson. He still retained the hope of reconciliation with the mother country, and was unwilling it should be lessened by offensive statements. He was so honest a man, and so able a one, that he was greatly indulged even by those who could not feel his scruples. We therefore requested him to take the paper, and put it into a form he could approve. He did so, preparing an entire new statement, and preserving of the former only the last four paragraphs and half of the preceding one. We approved and reported it to Congress, who accepted it. Congress gave a signal proof of their indulgence to Mr. Dickinson, and of their great desire not to go too fast for any respectable part of our body, in permitting him to draw their second petition to the King according to his own ideas, and passing it with scarcely any amendment. The disgust against this humility was general; and Mr. Dickinson’s delight at its passage was the only circumstance which reconciled them to it. The vote being passed, although further observation on it was out of order, he could not refrain from rising and expressing his satisfaction, and concluded by saying, “There is but one word, Mr. President, in the paper which I disapprove, and that is the word Congress” ; on which Ben Harrison rose and said, “There is but one word in the paper, Mr. President, of which I approve, and that is the word Congress.”

On the 22d of July, Dr. Franklin, Mr. Adams, R. H. Lee, and myself, were appointed a committee to consider and report on Lord North’s conciliatory resolution. The answer of the Virginia Assembly

on that subject having been approved, I was requested by the committee to prepare this report, which will account for the similarity of feature in the two instruments.

On the 15th of May, 1776, the convention of Virginia instructed their delegates in Congress, to propose to that body to declare the colonies independent of Great Britain, and appoint a committee to prepare a declaration of rights and plan of government.

In Congress, Friday, June 7, 1776.

The delegates from Virginia moved, in obedience to instructions from their constituents, that the Congress should declare that these United colonies are, and of right ought to be, free and independent states, that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; that measures should be immediately taken for procuring the assistance of foreign powers, and a Confederation be formed to bind the colonies more closely together.

The House being obliged to attend at that time to some other business, the proposition was referred to the next day, when the members were ordered to attend punctually at ten o'clock.

Saturday, June 8. They proceeded to take it into consideration, and referred it to a committee of the whole, into which they immediately resolved themselves, and passed that day and Monday, the 10th, in debating on the subject.

It was argued by Wilson, Robert R. Livingston, E. Rutledge, Dickinson, and others —

That, though they were friends to the measures themselves, and saw the impossibility that we should ever again be united with Great Britain, yet they were against adopting them at this time:

That the conduct we had formerly observed was wise and proper now, of deferring to take any capital step till the voice of the people drove us into it:

That they were our power, and without them our declarations could not be carried into effect:

That the people of the middle colonies (Maryland, Delaware, Pennsylvania, the Jerseys and New York) were not yet ripe for bidding adieu to British connection, but that they were fast ripening, and, in a short time, would join in the general voice of America:

That the resolution, entered into by this House on the 15th of May, for suppressing the exercise of all powers derived from the crown, had shown, by the ferment into which it had thrown these middle colonies, that they had not yet accommodated their minds to separation from the mother country:

That some of them had expressly forbidden their delegates to consent to such a declaration, and others had given no instructions, and consequently no powers to give such consent:

That if the delegates of any particular colony had no power to declare such colony independent, certain they were, the others could not declare it for them; the colonies being as yet perfectly independent of each other:

That the assembly of Pennsylvania was now sitting above stairs, their convention would sit within a few days, the convention of New York was now sitting, and those of the Jerseys and Delaware counties would meet on the Monday following, and it was probable these bodies would take up the question of Independence, and would declare to their delegates the voice of their state:

That if such a declaration should now be agreed to, these

delegates must retire, and possibly their colonies might secede from the Union:

That such a secession would weaken us more than could be compensated by any foreign alliance:

That in the event of such a division, foreign powers would either refuse to join themselves to our fortunes, or, having us so much in their power as that desperate declaration would place us, they would insist on terms proportionably more hard and prejudicial:

That we had little reason to expect an alliance with those to whom alone, as yet, we had cast our eyes:

That France and Spain had reason to be jealous of that rising power, which would one day certainly strip them of all their American possessions:

That it was more likely they should form a connection with the British court, who, if they should find themselves unable otherwise to extricate themselves from their difficulties, would agree to a partition of our territories, restoring Canada to France, and the Floridas to Spain, to accomplish for themselves a recovery of these colonies:

That it would not be long before we should receive certain information of the disposition of the French court, from the agent whom we had sent to Paris for that purpose:

That if this disposition should be favorable, by waiting the event of the present campaign, which we all hoped would be successful, we should have reason to expect an alliance on better terms:

That this would in fact work no delay of any effectual aid from such ally, as, from the advance of the season and distance of our situation, it was impossible we could receive any assistance during this campaign:

That it was prudent to fix among ourselves the terms on which we should form alliance, before we declared we would form one at all events:

And that if these were agreed on, and our Declaration of Independence ready by the time our Ambassador should be prepared to sail, it would be as well as to go into that Declaration at this day.

On the other side, it was urged by J. Adams, Lee, Wythe, and others, that no gentleman had argued against the policy or the right of separation from Britain, nor had supposed it possible we should ever renew our connection; that they had only opposed its being now declared:

That the question was not whether, by a Declaration of Independence, we should make ourselves what we are not; but whether we should declare a fact which already exists:

That, as to the people or parliament of England, we had always been independent of them, their restraints on our trade deriving efficacy from our acquiescence only, and not from any rights they possessed of imposing them, and that so far, our connection had been federal only, and was now dissolved by the commencement of hostilities:

That, as to the King, we had been bound to him by allegiance, but that this bond was now dissolved by his assent to the last act of Parliament, by which he declares us out of his protection, and by his levying war on us, a fact which had long ago proved us out of his protection; it being a certain position in law, that allegiance and protection are reciprocal, the one ceasing when the other is withdrawn:

That James the Second never declared the people of England out of his protection, yet his actions proved it, and the Parliament

declared it:

No delegates then can be denied, or ever want, a power of declaring an existing truth:

That the delegates from the Delaware counties having declared their constituents ready to join, there are only two colonies, Pennsylvania and Maryland, whose delegates are absolutely tied up, and that these had, by their instructions, only reserved a right of confirming or rejecting the measure:

That the instructions from Pennsylvania might be accounted for from the times in which they were drawn, near a twelve-month ago, since which the face of affairs has totally changed:

That within that time, it had become apparent that Britain was determined to accept nothing less than a carte-blanche, and that the King's answer to the Lord Mayor, Aldermen and Common Council of London, which had come to hand four days ago, must have satisfied every one of this point:

That the people wait for us to lead the way:

That they are in favor of the measure, though the instructions given by some of their representatives are not:

That the voice of the representatives is not always consonant with the voice of the people, and that this is remarkably the case in these middle colonies:

That the effect of the resolution of the 15th of May has proved this, which, raising the murmurs of some in the colonies of Pennsylvania and Maryland, called forth the opposing voice of the freer part of the people, and proved them to be the majority even in these colonies:

That the backwardness of these two colonies might be ascribed, partly to the influence of proprietary power and connections, and partly, to their having not yet been attacked by the enemy:

That these causes were not likely to be soon removed, as there seemed no probability that the enemy would make either of these the seat of this summer's war:

That it would be vain to wait either weeks or months for perfect unanimity, since it was impossible that all men should ever become of one sentiment on any question:

That the conduct of some colonies, from the beginning of this contest, had given reason to suspect it was their settled policy to keep in the rear of the confederacy, that their particular prospect might be better, even in the worst event:

That, therefore, it was necessary for those colonies who had thrown themselves forward and hazarded all from the beginning, to come forward now also, and put all again to their own hazard:

That the history of the Dutch Revolution, of whom three states only confederated at first, proved that a secession of some colonies would not be so dangerous as some apprehended:

That a Declaration of Independence alone could render it consistent with European delicacy, for European powers to treat with us, or even to receive an Ambassador from us:

That till this, they would not receive our vessels into their ports, nor acknowledge the adjudications of our courts of admiralty to be legitimate, in cases of capture of British vessels:

That though France and Spain may be jealous of our rising power, they must think it will be much more formidable with the addition of Great Britain; and will therefore see it their interest to prevent a

coalition; but should they refuse, we shall be but where we are; whereas without trying, we shall never know whether they will aid us or not:

That the present campaign may be unsuccessful, and therefore we had better propose an alliance while our affairs wear a hopeful aspect:

That to wait the event of this campaign will certainly work delay, because, during the summer, France may assist us effectually, by cutting off those supplies of provisions from England and Ireland, on which the enemy's armies here are to depend; or by setting in motion the great power they have collected in the West Indies, and calling our enemy to the defence of the possessions they have there:

That it would be idle to lose time in settling the terms of alliance, till we had first determined we would enter into alliance:

That it is necessary to lose no time in opening a trade for our people, who will want clothes, and will want money too, for the payment of taxes:

And that the only misfortune is, that we did not enter into alliance with France six months sooner, as, besides opening her ports for the vent of our last year's produce, she might have marched an army into Germany, and prevented the petty princes there, from selling their unhappy subjects to subdue us.

It appearing in the course of these debates, that the colonies of New York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina were not yet matured for falling from the parent stem, but that they were fast advancing to that state, it was thought most prudent to wait a while for them, and to postpone the final decision to July 1st; but, that this might occasion as little delay as possible, a committee was appointed to prepare a Declaration of Independence. The committee were John Adams, Dr. Franklin, Roger Sherman,

Robert R. Livingston, and myself. Committees were also appointed, at the same time, to prepare a plan of confederation for the colonies, and to state the terms proper to be proposed for foreign alliance. The committee for drawing the Declaration of Independence, desired me to do it. It was accordingly done, and being approved by them, I reported it to the House on Friday, the 28th of June, when it was read, and ordered to lie on the table. On Monday, the 1st of July, the House resolved itself into a committee of the whole, and resumed the consideration of the original motion made by the delegates of Virginia, which, being again debated through the day, was carried in the affirmative by the votes of New Hampshire, Connecticut, Massachusetts, Rhode Island, New Jersey, Maryland, Virginia, North Carolina and Georgia. South Carolina and Pennsylvania voted against it. Delaware had but two members present, and they were divided. The delegates from New York declared they were for it themselves, and were assured their constituents were for it; but that their instructions having been drawn near a twelve-month before, when reconciliation was still the general object, they were enjoined by them to do nothing which should impede that object. They, therefore, thought themselves not justifiable in voting on either side, and asked leave to withdraw from the question; which was given them. The committee rose and reported their resolution to the House. Mr. Edward Rutledge, of South Carolina, then requested the determination might be put off to the next day, as he believed his colleagues, though they disapproved of the resolution, would then join in it for the sake of unanimity. The ultimate question, whether the House would agree to the resolution of the committee, was accordingly postponed to the next day, when it was again moved, and South Carolina concurred in voting for it. In the meantime, a third member had come post from the Delaware counties, and turned the vote of that colony in favor of the resolution. Members of a different sentiment attending that morning from Pennsylvania also, her vote was changed, so that the whole twelve colonies who were authorized to vote at all, gave their voices

for it; and, within a few days, the convention of New York approved of it, and thus supplied the void occasioned by the withdrawing of her delegates from the vote.

Congress proceeded the same day to consider the Declaration of Independence, which had been reported and lain on the table the Friday preceding, and on Monday referred to a committee of the whole. The pusillanimous idea that we had friends in England worth keeping terms with, still haunted the minds of many. For this reason, those passages which conveyed censures on the people of England were struck out, lest they should give them offence. The clause too, reprobating the enslaving the inhabitants of Africa, was struck out in complaisance to South Carolina and Georgia, who had never attempted to restrain the importation of slaves, and who, on the contrary, still wished to continue it. Our northern brethren also, I believe, felt a little tender under those censures; for though their people had very few slaves themselves, yet they had been pretty considerable carriers of them to others. The debates, having taken up the greater parts of the 2d, 3d, and 4th days of July, were, on the evening of the last, closed; the Declaration was reported by the committee, agreed to by the House, and signed by every member present, except Mr. Dickinson. As the sentiments of men are known not only by what they receive, but what they reject also, I will state the form of the Declaration as originally reported. The parts struck out by Congress shall be distinguished by a black line drawn under them; and those inserted by them shall be placed in the margin, or in a concurrent column.

[2] Unanimously.

A DECLARATION BY THE REPRESENTATIVES OF THE UNITED STATES OF AMERICA, IN GENERAL CONGRESS ASSEMBLED

When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self evident: that all men are created equal; that they are endowed by their Creator with CERTAIN [inherent and] inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, [begun at a distinguished period and] pursuing invariably the same

[illegible]

He has refused his assent to laws the most wholesome and

necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and, when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly [and continually] for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time after such dissolutions to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise, the state remaining, in the meantime, exposed to all the dangers of invasion from without and convulsions within.

He has endeavored to prevent the population of these states; for that purpose obstructing the laws for naturalization of foreigners, refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has OBSTRUCTED [suffered] the administration of justice BY [totally to cease in some of these states] refusing his assent to laws for establishing judiciary powers.

He has made [our] judges dependent on his will alone for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, [by a self-assumed power] and sent hither swarms of new officers to harass our people and eat out their substance.

He has kept among us in times of peace standing armies [and ships of war] without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions and unacknowledged by our laws, giving his assent to their acts of pretended legislation for quartering large bodies of armed troops among us; for protecting them by a mock trial from punishment for any murders which they should commit on the inhabitants of these states; for cutting off our trade with all parts of the world; for imposing taxes on us without our consent; for depriving us IN MANY CASES of the benefits of trial by jury; for transporting us beyond seas to be tried for pretended offences; for abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these COLONIES [states]; for taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments; for suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here BY DECLARING US OUT OF HIS PROTECTION, AND WAGING WAR AGAINST US [withdrawing his governors and declaring us out of his allegiance and protection].

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation and tyranny already begun with circumstances of cruelty and perfidy SCARCELY PARAL-LELED IN THE MOST BARBAROUS AGES, AND TOTALLY unworthy the head of a civilized nation.

He has constrained our fellow citizens taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has EXCITED DOMESTIC INSURRECTION AMONG US, AND HAS endeavored to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes and conditions [of existence].

[He has incited treasonable insurrections of our fellow citizens, with the allurements of forfeiture and confiscation of our property.

He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation hither. This piratical warfare, the opprobrium of INFIDEL powers, is the warfare of the CHRISTIAN king of Great Britain. Determined to keep open a market where MEN should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce. And that this assemblage of horrors might want no fact of distinguished die, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which he has deprived them, by murdering the people on whom he also obtruded them: thus paying

off former crimes committed against the LIBERTIES of one people, with crimes which he urges them to commit against the LIVES of another.]

In every stage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injuries.

A prince whose character is thus marked by every act which may define a tyrant is unfit to be the ruler of a FREE people [who mean to be free. Future ages will scarcely believe that the hardiness of one man adventured, within the short compass of twelve years only, to lay a foundation so broad and so undisguised for tyranny over a people fostered and fixed in principles of freedom.]

Nor have we been wanting in attentions to our British brethren. We have warned them from time to time of attempts by their legislature to extend AN UNWARRANTABLE [a] jurisdiction over US [these our states]. We have reminded them of the circumstances of our emigration and settlement here, [no one of which could warrant so strange a pretension: that these were effected at the expense of our own blood and treasure, unassisted by the wealth or the strength of Great Britain: that in constituting indeed our several forms of government, we had adopted one common king, thereby laying a foundation for perpetual league and amity with them: but that submission to their parliament was no part of our constitution, nor ever in idea, if history may be credited: and,] we HAVE appealed to their native justice and magnanimity AND WE HAVE CONTENDED THEM BY [as well as to] the ties of our common kindred to disavow these usurpations which WOULD INEVITABLY [were likely to] interrupt our connection and correspondence. They too have been deaf to the voice of justice and of consanguinity. WE MUST THEREFORE [and when occasions have been given them, by the regular course of their laws, of removing from their councils the

disturbers of our harmony. they have, by their free election, re-established them in power. At this very time too, they are permitting their chief magistrate to send over not only soldiers of our common blood, but Scotch and foreign mercenaries to invade and destroy us. These facts have given the last stab to agonizing affection, and manly spirit bids us to renounce forever these unfeeling brethren. We must endeavor to forget our former love for them, and hold them as we hold the rest of mankind, enemies in war, in peace friends. We might have a free and a great people together; but a communication of grandeur and of freedom, it seems, is below their dignity. Be it so, since they will have it. The road to happiness and to glory is open to us, too. We will tread it apart from them, and] acquiesce in the necessity which denounces our [eternal] separation AND HOLD THEM AS WE HOLD THE REST OF MANKIND, ENEMIES IN WAR, IN PEACE FRIENDS!

We therefore the representatives of the United States of America in General Congress assembled, do in the name, and by the authority of the good people of these [states reject and renounce all allegiance and subjection to the kings of Great Britain and all others who may hereafter claim by, through or under them; we utterly dissolve all political connection which may heretofore have subsisted between us and the people or parliament of Great Britain: and finally we do assert and declare these colonies to be free and independent states,] and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do.

And for the support of this declaration, we mutually pledge each other our lives, our fortunes, and our sacred honor.

We, therefore, the representatives of the United States of America in General Congress assembled, appealing to the supreme judge of the world for the rectitude of our intentions, do in the name, and by the

authority of the good people of these colonies, solemnly publish and declare, that these united colonies are, and of right ought to be free and independent states; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do.

And for the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

The Declaration thus signed on the 4th, on paper, was engrossed on parchment, and signed again on the 2d of August.

[Some erroneous statements of the proceedings on the Declaration of Independence having got before the public in latter times, Mr. Samuel A. Wells asked explanations of me, which are given in my letter to him of May 12, '19, before and now again referred to. I took notes in my place while these things were going on, and at their close wrote them out in form and with correctness, and from 1 to 7 of the two preceding sheets, are the originals then written; as the two following are of earlier debates on the Confederation, which I took in like manner.] [\[1\]](#)

On Friday, July 12, the committee appointed to draw the articles of Confederation reported them, and, on the 22d, the House resolved themselves into a committee to take them into consideration. On the 30th and 31st of that month, and 1st of the ensuing, those articles were debated which determined the proportion, or quota, of money which each state should furnish to the common treasury, and the manner of voting in Congress. The first of these articles was expressed in the original draught in these

words. "Art. XI. All charges of war and all other expenses that shall be incurred for the common defence, or general welfare, and allowed by the United States assembled, shall be defrayed out of a common treasury, which shall be supplied by the several colonies in proportion to the number of inhabitants of every age, sex, and quality, except Indians not paying taxes, in each colony, a true account of which, distinguishing the white inhabitants, shall be triennially taken and transmitted to the Assembly of the United States. "

Mr. Chase moved that the quotas should be fixed, not by the number of inhabitants of every condition, but by that of the "white inhabitants." He admitted that taxation should be always in proportion to property, that this was, in theory, the true rule; but that, from a variety of difficulties, it was a rule which could never be adopted in practice. The value of the property in every State, could never be estimated justly and equally. Some other measure for the wealth of the State must therefore be devised, some standard referred to, which would be more simple. He considered the number of inhabitants as a tolerably good criterion of property, and that this might always be obtained. He therefore thought it the best mode which we could adopt, with one exception only: he observed that negroes are property, and as such, cannot be distinguished from the lands or personalities held in those States where there are few slaves; the surplus of profit which a Northern farmer is able to lay by, he invests in cattle, horses, &c., whereas a Southern farmer lays out the same surplus in slaves. There is no more reason, therefore, for taxing the Southern States on the farmer's head, and on his slave's head, than the Northern ones on their farmer's heads and the heads of their cattle; that the method proposed would, therefore, tax the Southern States according to their numbers and their wealth conjunctly, while the Northern would be taxed on numbers only: that negroes, in fact, should not be considered as members of the State, more than cattle, and that they have no more interest in it.

Mr. John Adams observed, that the numbers of people were taken by this article, as an index of the wealth of the State, and not as subjects of taxation; that, as to this matter, it was of no consequence by what name you called your people, whether by that of freemen or of slaves; that in some countries the laboring poor were called freemen, in others they were called slaves; but that the difference as to the state was imaginary only. What matters it whether a landlord, employing ten laborers on his farm, gives them annually as much money as will buy them the necessaries of life, or gives them those necessaries at short hand? The ten laborers add as much wealth annually to the State, increase its exports as much in the one case as the other. Certainly five hundred freemen produce no more profits, no greater surplus for the payment of taxes, than five hundred slaves. Therefore, the State in which are the laborers called freemen, should be taxed no more than that in which are those called slaves. Suppose, by an extraordinary operation of nature or of law, one-half the laborers of a State could in the course of one night be transformed into slaves; would the State be made the poorer or the less able to pay taxes? That the condition of the laboring poor in most countries, that of the fishermen particularly of the Northern States, is as abject as that of slaves. It is the number of laborers which produces the surplus for taxation, and numbers, therefore, indiscriminately, are the fair index of wealth; that it is the use of the word "property" here, and its application to some of the people of the State, which produces the fallacy. How does the Southern farmer procure slaves? Either by importation or by purchase from his neighbor. If he imports a slave, he adds one to the number of laborers in his country, and proportionably to its profits and abilities to pay taxes; if he buys from his neighbor, it is only a transfer of a laborer from one farm to another, which does not change the annual produce of the State, and therefore, should not change its tax: that if a Northern farmer works ten laborers on his farm, he can, it is true, invest the surplus of ten men's labor in cattle; but so may the Southern farmer, working ten

slaves; that a State of one hundred thousand freemen can maintain no more cattle, than one of one hundred thousand slaves. Therefore, they have no more of that kind of property; that a slave may indeed, from the custom of speech, be more properly called the wealth of his master, than the free laborer might be called the wealth of his employer; but as to the State, both were equally its wealth, and should, therefore, equally add to the quota of its tax.

Mr. Harrison proposed, as a compromise, that two slaves should be counted as one freeman. He affirmed that slaves did not do as much work as freemen, and doubted if two effected more than one; that this was proved by the price of labor; the hire of a laborer in the Southern colonies being from £8 to £12, while in the Northern it was generally £24.

Mr. Wilson said, that if this amendment should take place, the Southern colonies would have all the benefit of slaves, whilst the Northern ones would bear the burthen: the slaves increase the profits of a State, which the Southern States mean to take to themselves; that they also increase the burthen of defence, which would of course fall so much the heavier on the Northern: that slaves occupy the places of freemen, and eat their food. Dismiss your slaves, and freemen will take their places. It is our duty to lay every discouragement on the importation of slaves; but this amendment would give the *jus trium liberorum*^[2] to him who would import slaves: that other kinds of property were pretty equally distributed through all the colonies: there were as many cattle, horses and sheep, in the North as the South, and South as the North; but not so as to slaves: that experience has shown that those colonies have been always able to pay most, which have the most inhabitants, whether they be black or white; and the practice of the Southern colonies has always been to make every farmer pay poll taxes upon all his laborers, whether black or white. He acknowledges, indeed, that freemen work the most; but they consume

the most also. They do not produce a greater surplus for taxation. The slave is neither fed nor clothed so expensively as a freeman. Again, white women are exempted from labor generally, but negro women are not. In this, then, the Southern States have an advantage as the article now stands. It has sometimes been said, that slavery is necessary, because the commodities they raise would be too dear for market if cultivated by freemen; but now it is said that the labor of the slave is the dearest.

Mr. Payne urged the original resolution of Congress, to proportion the quotas of the States to the number of souls.

Dr. Witherspoon was of opinion, that the value of lands and houses was the best estimate of the wealth of a nation, and that it was practicable to obtain such a valuation. This is the true barometer of wealth. The one now proposed is imperfect in itself, and unequal between the States. It has been objected that negroes eat the food of freemen, and, therefore, should be taxed; horses also eat the food of freemen; therefore they also should be taxed. It has been said too, that in carrying slaves into the estimate of the taxes the State is to pay, we do no more than those States themselves do, who always take slaves into the estimate of the taxes the individual is to pay. But the cases are not parallel. In the Southern colonies slaves pervade the whole colony; but they do not pervade the whole continent. That as to the original resolution of Congress, to proportion the quotas according to the souls, it was temporary only, and related to the moneys heretofore emitted: whereas we are now entering into a new compact, and therefore stand on original ground.

August 1. The question being put, the amendment proposed was rejected by the votes of New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania, against those of Delaware, Maryland, Virginia, North and South Carolina. Georgia was divided.

The other article was in these words. "Art. X VII. In determining questions, each colony shall have one vote."

July 30, 31, August 1. Present forty-one members. Mr. Chase observed this article was the most likely to divide us, of any one proposed in the draught then under consideration: that the larger colonies had threatened they would not confederate at all, if their weight in Congress should not be equal to the numbers of people they added to the confederacy; while the smaller ones declared against a union, if they did not retain an equal vote for the protection of their rights. That it was of the utmost consequence to bring the parties together, as, should we sever from each other, either no foreign power will ally with us at all, or the different States will form different alliances, and thus increase the horrors of those scenes of civil war and bloodshed, which in such a state of separation and independence, would render us a miserable people. That our importance, our interests, our peace required that we should confederate, and that mutual sacrifices should be made to effect a compromise of this difficult question. He was of opinion, the smaller colonies would lose their rights, if they were not in some instances allowed an equal vote; and, therefore, that a discrimination should take place among the questions which would come before Congress. That the smaller States should be secured in all questions concerning life or liberty, and the greater ones, in all respecting property. He, therefore, proposed, that in votes relating to money, the voice of each colony should be proportioned to the number of its inhabitants.

Dr. Franklin thought, that the votes should be so proportioned in all cases. He took notice that the Delaware counties had bound up their delegates to disagree to this article. He thought it a very extraordinary language to be held by any State, that they would not confederate with us, unless we would let them dispose of our money. Certainly, if we vote equally, we ought to pay equally; but the smaller

States will hardly purchase the privilege at this price. That had he lived in a State where the representation, originally equal, had become unequal by time and accident, he might have submitted rather than disturb government; but that we should be very wrong to set out in this practice, when it is in our power to establish what is right. That at the time of the Union between England and Scotland, the latter had made the objection which the smaller States now do; but experience had proved that no unfairness had ever been shown them: that their advocates had prognosticated that it would again happen, as in times of old, that the whale would swallow Jonas [sic], but he thought the prediction reversed in event, and that Jonas had swallowed the whale; for the Scotch had in fact got possession of the government, and gave laws to the English. He reprobated the original agreement of Congress to vote by colonies, and, therefore, was for their voting, in all cases, according to the number of taxables.

Dr. Witherspoon opposed every alteration of the article. All men admit that a confederacy is necessary. Should the idea get abroad that there is likely to be no union among us, it will damp the minds of the people, diminish the glory of our struggle, and lessen its importance; because it will open to our view future prospects of war and dissension among ourselves. If an equal vote be refused, the smaller States will become vassals to the larger; and all experience has shown that the vassals and subjects of free States are the most enslaved. He instanced the Helots of Sparta, and the provinces of Rome. He observed that foreign powers, discovering this blemish, would make it a handle for disengaging the smaller States from so unequal a confederacy. That the colonies should in fact be considered as individuals; and that, as such, in all disputes, they should have an equal vote; that they are now collected as individuals making a bargain with each other, and, of course, had a right to vote as individuals. That in the East India Company they voted by persons, and not by their proportion of stock. That the Belgic confederacy

voted by provinces. That in questions of war the smaller States were as much interested as the larger, and, therefore, should vote equally; and indeed, that the larger States were more likely to bring war on the confederacy, in proportion as their frontier was more extensive. He admitted that equality of representation was an excellent principle, but then it must be of things which are co-ordinate; that is, of things similar, and of the same nature: that nothing relating to individuals could ever come before Congress; nothing but what would respect colonies. He distinguished between an incorporating and a federal union. The union of England was an incorporating one; yet Scotland had suffered by that union; for that its inhabitants were drawn from it by the hopes of places and employments: nor was it an instance of equality of representation; because, while Scotland was allowed nearly a thirteenth of representation they were to pay only one-fortieth of the land tax. He expressed his hopes, that in the present enlightened state of men's minds, we might expect a lasting confederacy, if it was founded on fair principles.

John Adams advocated the voting in proportion to numbers. He said that we stand here as the representatives of the people: that in some States the people are many, in others they are few; that therefore, their vote here should be proportioned to the numbers from whom it comes. Reason, justice and equity never had weight enough on the face of the earth, to govern the councils of men. It is interest alone which does it, and it is interest alone which can be trusted: that therefore the interests within doors, should be the mathematical representatives of the interests without doors: that the individuality of the colonies is a mere sound. Does the individuality of a colony increase its wealth or numbers? If it does, pay equally. If it does not add weight in the scale of the confederacy, it cannot add to their rights, nor weigh in argument. A. has £50, B. £500, C. £1,000 in partnership. Is it just they should equally dispose of the moneys of the

partnership? It has been said, we are independent individuals making a bargain together. The question is not what we are now, but what we ought to be when our bargain shall be made. The confederacy is to make us one individual only; it is to form us like separate parcels of metal, into one common mass. We shall no longer retain our separate individuality, but become a single individual as to all questions submitted to the confederacy. Therefore, all those reasons, which prove the justice and expediency of equal representation in other assemblies, hold good here. It has been objected that a proportional vote will endanger the smaller States. We answer that an equal vote will endanger the larger. Virginia, Pennsylvania, and Massachusetts, are the three greater colonies. Consider their distance, their difference of produce, of interests, and of manners, and it is apparent they can never have an interest or inclination to combine for the oppression of the smaller: that the smaller will naturally divide on all questions with the larger. Rhode Island, from its relation, similarity and intercourse, will generally pursue the same objects with Massachusetts; Jersey, Delaware, and Maryland, with Pennsylvania.

Dr. Rush took notice, that the decay of the liberties of the Dutch republic proceeded from three causes, 1. The perfect unanimity requisite on all occasions. 2. Their obligation to consult their constituents. 3. Their voting by provinces. This last destroyed the equality of representation, and the liberties of Great Britain also are sinking from the same defect. That a part of our rights is deposited in the hands of our legislatures. There, it was admitted, there should be an equality of representation. Another part of our rights is deposited in the hands of Congress: why is it not equally necessary there should be an equal representation there? Were it possible to collect the whole body of the people together, they would determine the questions submitted to them by their majority. Why should not the same majority decide when voting here, by their representatives? The larger colonies are so providentially divided in situation, as to render every

fear of their combining visionary. Their interests are different, and their circumstances dissimilar. It is more probable they will become rivals, and leave it in the power of the smaller States to give preponderance to any scale they please. The voting by the number of free inhabitants, will have one excellent effect, that of inducing the colonies to discourage slavery, and to encourage the increase of their free inhabitants.

Mr. Hopkins observed, there were four larger, four smaller, and four middle-sized colonies. That the four largest would contain more than half the inhabitants of the confederated States, and therefore, would govern the others as they should please. That history affords no instance of such a thing as equal representation. The Germanic body votes by States. The Helvetic body does the same; and so does the Belgic confederacy. That too little is known of the ancient confederations, to say what was their practice.

Mr. Wilson thought, that taxation should be in proportion to wealth, but that representation should accord with the number of freemen. That government is a collection or result of the will of all : that if any government could speak the will of all, it would be perfect; and that, so far as it departs from this, it becomes imperfect. It has been said that Congress is a representation of States, not of individuals. I say, that the objects of its care are all the individuals of the States. It is strange that annexing the name of "State" to ten thousand men, should give them an equal right with forty thousand. This must be the effect of magic, not of reason. As to those matters which are referred to Congress, we are not so many States; we are one large State. We lay aside our individuality, whenever we come here. The Germanic body is a burlesque on government; and their practice, on any point, is a sufficient authority and proof that it is wrong. The greatest imperfection in the constitution of the Belgic confederacy is their voting by provinces. The interest of the whole is constantly

sacrificed to that of the small States. The history of the war in the reign of Queen Anne sufficiently proves this. It is asked, shall nine colonies put it into the power of four to govern them as they please? I invert the question, and ask, shall two millions of people put it in the power of one million to govern them as they please? It is pretended, too, that the smaller colonies will be in danger from the greater. Speak in honest language and say, the minority will be in danger from the majority. And is there an assembly on earth, where this danger may not be equally pretended? The truth is, that our proceedings will then be consentaneous with the interests of the majority, and so they ought to be. The probability is much greater, that the larger States will disagree, than that they will combine. I defy the wit of man to invent a possible case, or to suggest any one thing on earth, which shall be for the interests of Virginia, Pennsylvania and Massachusetts, and which will not also be for the interest of the other States.

These articles, reported July 12, '76, were debated from day to day, and time to time, for two years, were ratified July 9, '78, by ten States, by New Jersey on the 26th of November of the same year, and by Delaware on the 23d of February following. Maryland alone held off two years more, acceding to them March 1, '81, and thus closing the obligation.

Our delegation had been renewed for the ensuing year, commencing August 11; but the new government was now organized, a meeting of the legislature was to be held in October, and I had been elected a member by my county. I knew that our legislation, under the regal government, had many very vicious points which urgently required reformation, and I thought I could be of more use in forwarding that work. I therefore retired from my seat in Congress on the 2d of September, resigned it, and took my place in the legislature of my State, on the 7th of October.

On the 11th, I moved for leave to bring in a bill for the

establishment of courts of justice, the organization of which was of importance. I drew the bill; it was approved by the committee, reported and passed, after going through its due course.

On the 12th, I obtained leave to bring in a bill declaring tenants in tail to hold their lands in fee simple. In the earlier times of the colony, when lands were to be obtained for little or nothing, some provident individuals procured large grants; and; desirous of founding great families for themselves, settled them on their descendants in fee tail. The transmission of this property from generation to generation, in the same name, raised up a distinct set of families, who, being privileged by law in the perpetuation of their wealth, were thus formed into a Patrician order, distinguished by the splendor and luxury of their establishments. From this order, too, the king habitually selected his counselors of State; the hope of which distinction devoted the whole corps to the interests and will of the crown. To annul this privilege, and instead of an aristocracy of wealth, of more harm and danger, than benefit, to society, to make an opening for the aristocracy of virtue and talent, which nature has wisely provided for the direction of the interests of society, and scattered with equal hand through all its conditions, was deemed essential to a well-ordered republic. —To effect it, no violence was necessary, no deprivation of natural right, but rather an enlargement of it by a repeal of the law. For this would authorize the present holder to divide the property among his children equally, as his affections were divided; and would place them, by natural generation, on the level of their fellow citizens. But this repeal was strongly opposed by Mr. Pendleton, who was zealously attached to ancient establishments; and who, taken all in all, was the ablest man in debate I have ever met with. He had not indeed the poetical fancy of Mr. Henry, his sublime imagination, his lofty and overwhelming diction; but he was cool, smooth and persuasive; his language flowing, chaste and embellished; his conceptions quick, acute and full of resource; never vanquished:

for if he lost the main battle, he returned upon you, and regained so much of it as to make it a drawn one, by dexterous manoeuvres, skirmishes in detail, and the recovery of small advantages which, little singly, were important all together. You never knew when you were clear of him, but were harassed by his perseverance, until the patience was worn down of all who had less of it than himself. Add to this, that he was one of the most virtuous and benevolent of men, the kindest friend, the most amiable and pleasant of companions, which ensured a favorable reception to whatever came from him. Finding that the general principle of entails could not be maintained, he took his stand on an amendment which he proposed, instead of an absolute abolition, to permit the tenant in tail to convey in fee simple, if he chose it; and he was within a few votes of saving so much of the old law. But the bill passed finally for entire abolition.

In that one of the bills for organizing our judiciary system, which proposed a court of Chancery, I had provided for a trial by jury of all matters of fact, in that as well as in the courts of law. He defeated it by the introduction of four words only, "if either party choose." The consequence has been, that as no suitor will say to his judge, "Sir, I distrust you, give me a jury," juries are rarely, I might say, perhaps, never, seen in that court, but when called for by the Chancellor of his own accord.

The first establishment in Virginia which became permanent, was made in 1607. I have found no mention of negroes in the colony until about 1650. The first brought here as slaves were by a Dutch ship; after which the English commenced the trade, and continued it until the revolutionary war. That suspended, ipso facto, their further importation for the present, and the business of the war pressing constantly on the legislature, this subject was not acted on finally until the year '78, when I brought in a bill to prevent their further importation. This passed without opposition, and stopped the increase

of the evil by importation, leaving to future efforts its final eradication.

The first settlers of this colony were Englishmen, loyal subjects to their king and church, and the grant to Sir Walter Raleigh contained an express proviso that their laws "should not be against the true Christian faith, now professed in the church of England." As soon as the state of the colony admitted, it was divided into parishes, in each of which was established a minister of the Anglican church, endowed with a fixed salary, in tobacco, a glebe house and land with the other necessary appendages. To meet these expenses, all the inhabitants of the parishes were assessed, whether they were or not, members of the established church. Towards Quakers who came here, they were most cruelly intolerant, driving them from the colony by the severest penalties. In process of time, however, other sectarisms were introduced, chiefly of the Presbyterian family; and the established clergy, secure for life in their glebes and salaries, adding to these, generally, the emoluments of a classical school, found employment enough, in their farms and schoolrooms, for the rest of the week, and devoted Sunday only to the edification of their flock, by service, and a sermon at their parish church. Their other pastoral functions were little attended to. Against this inactivity, the zeal and industry of sectarian preachers had an open and undisputed field; and by the time of the revolution, a majority of the inhabitants had become dissenters from the established church, but were still obliged to pay contributions to support the pastors of the minority. This unrighteous compulsion, to maintain teachers of what they deemed religious errors, was grievously felt during the regal government, and without a hope of relief. But the first republican legislature, which met in '76, was crowded with petitions to abolish this spiritual tyranny. These brought on the severest contests in which I have ever been engaged. Our great opponents were Mr. Pendleton and Robert Carter Nicholas; honest men, but zealous churchmen. The petitions were referred to

the committee of the whole house on the state of the country; and, after desperate contests in that committee, almost daily from the 11th of October to the 5th of December, we prevailed so far only, as to repeal the laws which rendered criminal the maintenance of any religious opinions, the forbearance of repairing to church, or the exercise of any mode of worship; and further, to exempt dissenters from contributions to the support of the established church; and to suspend, only until the next session, levies on the members of that church for the salaries of their own incumbents. For although the majority of our citizens were dissenters, as has been observed, a majority of the legislature were churchmen. Among these, however, were some reasonable and liberal men, who enabled us, on some points, to obtain feeble majorities. But our opponents carried, in the general resolutions of the committee of November 19, a declaration that religious assemblies ought to be regulated, and that provision ought to be made for continuing the succession of the clergy, and superintending their conduct. And, in the bill now passed, was inserted an express reservation of the question, Whether a general assessment should not be established by law, on every one, to the support of the pastor of his choice; or whether all should be left to voluntary contributions; and on this question, debated at every session, from '76 to '79, (some of our dissenting allies, having now secured their particular object, going over to the advocates of a general assessment,) we could only obtain a suspension from session to session until '79, when the question against a general assessment was finally carried, and the establishment of the Anglican church entirely put down. In justice to the two honest but zealous opponents who have been named, I must add, that although, from their natural temperaments, they were more disposed generally to acquiesce in things as they are, than to risk innovations, yet whenever the public will had once decided, none were more faithful or exact in their obedience to it.

The seat of our government had originally been fixed in the peninsula of Jamestown, the first settlement of the colonists; and had been afterwards removed a few miles inland to Williamsburg. But this was at a time when our settlements had not extended beyond the tide waters. Now they had crossed the Alleghany; and the centre of population was very far removed from what it had been. Yet Williamsburg was still the depository of our archives, the habitual residence of the Governor and many other of the public functionaries, the established place for the sessions of the legislature, and the magazine of our military stores; and its situation was so exposed that it might be taken at any time in war, and, at this time particularly, an enemy might in the night run up either of the rivers, between which it lies, land a force above, and take possession of the place, without the possibility of saving either persons or things. I had proposed its removal so early as October, '76; but it did not prevail until the session of May, '79.

威廉斯堡

Early in the session of May, '79, I prepared, and obtained leave to bring in a bill, declaring who should be deemed citizens, asserting the natural right of expatriation, and prescribing the mode of exercising it.

This, when I withdrew from the House, on the 1st of June following, I left in the hands of George Mason, and it was passed on the 26th of that month.

In giving this account of the laws of which I was myself the mover and draughtsman, I, by no means, mean to claim to myself the merit of obtaining their passage. I had many occasional and strenuous coadjutors in debate, and one, most steadfast, able and zealous; who was himself a host. This was George Mason, a man of the first order of wisdom among those who acted on the theatre of the revolution, of expansive mind, profound judgment, cogent in argument, learned in the lore of our former constitution, and earnest for the republican change on democratic principles. His elocution was neither flowing nor smooth; but his language was strong, his manner most impressive, and strengthened by a dash of biting cynicism, when provocation made it seasonable.

Mr. Wythe, while speaker in the two sessions of 1777, between his return from Congress and his appointment to the Chancery, was an able and constant associate in whatever was before a committee of the whole. His pure integrity, judgment and reasoning powers, gave him great weight....

Mr. Madison came into the House in 1776, a new member and young; which circumstances, concurring with his extreme modesty, prevented his venturing himself in debate before his removal to the Council of State, in November, '77. From thence he went to Congress, then consisting of few members. Trained in these successive schools, he acquired a habit of self-possession, which placed at ready command the rich resources of his luminous and discriminating mind, and of his extensive information, and rendered him the first of every assembly afterwards, of which he became a member. Never wandering from his subject into vain declamation, but pursuing it closely, in language pure, classical and copious, soothing always the feelings of

his adversaries by civilities and softness of expression, he rose to the eminent station which he held in the great National Convention of 1787; and in that of Virginia which followed, he sustained the new constitution in all its parts, bearing off the palm against the logic of George Mason, and the fervid declamation of Mr. Henry. With these consummate powers, were united a pure and spotless virtue, which no calumny has ever attempted to sully. Of the powers and polish of his pen, and of the wisdom of his administration in the highest office of the nation, I need say nothing. They have spoken, and will forever speak for themselves.

So far we were proceeding in the details of reformation only; selecting points of legislation, prominent in character and principle, urgent, and indicative of the strength of the general pulse of reformation. When I left Congress, in '76, it was in the persuasion that our whole code must be reviewed, adapted to our republican form of government; and, now that we had no negatives of Councils, Governors, and Kings to restrain us from doing right, it should be corrected, in all its parts, with a single eye to reason, and the good of those for whose government it was framed. Early, therefore, in the session of '76, to which I returned, I moved and presented a bill for the revision of the laws, which was passed on the 24th of October; and on the 5th of November, Mr. Pendleton, Mr. Wythe, George Mason, Thomas L. Lee, and myself, were appointed a committee to execute the work. We agreed to meet at Fredericksburg to settle the plan of operation, and to distribute the work. We met there accordingly, on the 13th of January, 1777. The first question was, whether we should propose to abolish the whole existing system of laws, and prepare a new and complete Institute, or preserve the general system, and only modify it to the present state of things. Mr. Pendleton, contrary to his usual disposition in favor of ancient things, was for the former proposition, in which he was joined by Mr. Lee. To this it was objected, that to abrogate our whole system would be a bold measure,

and probably far beyond the views of the legislature; that they had been in the practice of revising, from time to time, the laws of the colony, omitting the expired, the repealed, and the obsolete, amending only those retained, and probably meant we should now do the same, only including the British statutes as well as our own: that to compose a new Institute, like those of Justinian and Bracton, or that of Blackstone, which was the model proposed by Mr. Pendleton, would be an arduous undertaking, of vast research, of great consideration and judgment; and when reduced to a text, every word of that text, from the imperfection of human language, and its incompetence to express distinctly every shade of idea, would become a subject of question and chicanery, until settled by repeated adjudications; and this would involve us for ages in litigation, and render property uncertain, until, like the statutes of old, every word had been tried and settled by numerous decisions, and by new volumes of reports and commentaries; and that no one of us, probably, would undertake such a work, which to be systematical, must be the work of one hand. This last was the opinion of Mr. Wythe, Mr. Mason, and myself. When we proceeded to the distribution of the work, Mr. Mason excused himself, as, being no lawyer, he felt himself unqualified for the work, and he resigned soon after. Mr. Lee excused himself on the same ground, and died, indeed, in a short time. The other two gentlemen, therefore, and myself divided the work among us. The common law and statutes to the 4 James I. (when our separate legislature was established) were assigned to me; the British statutes, from that period to the present day, to Mr. Wythe; and the Virginia laws to Mr. Pendleton. As the law of Descents, and the criminal law fell of course within my portion, I wished the committee to settle the leading principles of these, as a guide for me in framing them; and, with respect to the first, I proposed to abolish the law of primogeniture, and to make real estate descendible in parcenary to the next of kin, as personal property is, by the statute of distribution. Mr. Pendleton wished to preserve the right of primogeniture, but seeing at

once that that could not prevail, he proposed we should adopt the Hebrew principle, and give a double portion to the elder son. I observed, that if the eldest son could eat twice as much, or do double work, it might be a natural evidence of his right to a double portion; but being on a par in his powers and wants, with his brothers and sisters, he should be on a par also in the partition of the patrimony; and such was the decision of the other members.

On the subject of the Criminal law, all were agreed, that the punishment of death should be abolished, except for treason and murder; and that, for other felonies, should be substituted hard labor in the public works, and in some cases, the *Lex talionis*^[3]. How this last revolting principle came to obtain our approbation, I do not remember. There remained, indeed, in our laws, a vestige of it in a single case of a slave; it was the English law, in the time of the Anglo-Saxons, copied probably from the Hebrew law of “an eye for an eye, a tooth for a tooth,” and it was the law of several ancient people; but the modern mind had left it far in the rear of its advances. These points, however, being settled, we repaired to our respective homes for the preparation of the work.

In the execution of my part, I thought it material not to vary the diction of the ancient statutes by modernizing it, nor to give rise to new questions by new expressions. The text of these statutes had been so fully explained and defined, by numerous adjudications, as scarcely ever now to produce a question in our courts. I thought it would be useful, also, in all new draughts, to reform the style of the later British statutes, and of our own acts of Assembly; which, from their verbosity, their endless tautologies, their involutions of case within case, and parenthesis within parenthesis, and their multiplied efforts at certainty, by *said*s and *aforesaid*s, by *ors* and by *ands*, to make them more plain, are really rendered more perplexed and incomprehensible, not only to common readers, but to the lawyers themselves. We were

employed in this work from that time to February, 1779, when we met at Williamsburg, that is to say, Mr. Pendleton, Mr. Wythe and myself; and meeting day by day, we examined critically our several parts, sentence by sentence, scrutinizing and amending, until we had agreed on the whole. We then returned home, had fair copies made of our several parts, which were reported to the General Assembly, June 18, 1779, by Mr. Wythe and myself, Mr. Pendleton's residence being distant, and he having authorized us by letter to declare his approbation. We had, in this work, brought so much of the Common law as it was thought necessary to alter, all the British statutes from Magna Carta to the present day, and all the laws of Virginia, from the establishment of our legislature, in the 4th Jac. I. to the present time, which we thought should be retained, within the compass of one hundred and twenty-six bills, making a printed folio of ninety pages only. Some bills were taken out, occasionally, from time to time, and passed; but the main body of the work was not entered on by the legislature until after the general peace, in 1785, when, by the unwearied exertions of Mr. Madison, in opposition to the endless quibbles, chicaneries, perversions, vexations and delays of lawyers and demi-lawyers, most of the bills were passed by the legislature, with little alteration.

The bill for establishing religious freedom, the principles of which had, to a certain degree, been enacted before, I had drawn in all the latitude of reason and right. It still met with opposition; but, with some mutilations in the preamble, it was finally passed; and a singular proposition proved that its protection of opinion was meant to be universal. Where the preamble declares, that coercion is a departure from the plan of the holy author of our religion, an amendment was proposed, by inserting the word "Jesus Christ" so that it should read, "a departure from the plan of Jesus Christ, the holy author of our religion;" the insertion was rejected by a great majority, in proof that they meant to comprehend, within the mantle of its protection, the

Jew and the Gentile, the Christian and Mahometan, the Hindoo, and Infidel of every denomination.

Beccaria, and other writers on crimes and punishments, had satisfied the reasonable world of the unrightfulness and inefficacy of the punishment of crimes by death; and hard labor on roads, canals and other public works, had been suggested as a proper substitute. The Revisors had adopted these opinions; but the general idea of our country had not yet advanced to that point. The bill, therefore, for proportioning crimes and punishments, was lost in the House of Delegates by a majority of a single vote. I learned afterwards, that the substitute of hard labor in public, was tried (I believe it was in Pennsylvania) without success. Exhibited as a public spectacle, with shaved heads and mean clothing, working on the high roads, produced in the criminals such a prostration of character, such an abandonment of self-respect, as, instead of reforming, plunged them into the most desperate and hardened depravity of morals and character. To pursue the subject of this law. —I was written to in 1785 (being then in Paris) by directors appointed to superintend the building of a Capitol in Richmond, to advise them as to a plan, and to add to it one of a Prison. Thinking it a favorable opportunity of introducing into the State an example of architecture, in the classic style of antiquity, and the Maison Quarree of Nismes, an ancient Roman temple, being considered as the most perfect model existing of what may be called Cubic architecture, I applied to M. Clerissault, who had published drawings of the Antiquities of Nismes, to have me a model of the building made in stucco, only changing the order from Corinthian to Ionic, on account of the difficulty of the Corinthian capitals. I yielded, with reluctance, to the taste of Clerissault, in his preference of the modern capital of Scamozzi to the more noble capital of antiquity. This was executed by the artist whom Choiseul Goumer had carried with him to Constantinople, and employed, while Ambassador there, in making those beautiful models of the remains of Grecian

architecture which are to be seen at Paris. To adapt the exterior to our use, I drew a plan for the interior, with the apartments necessary for legislative, executive, and judiciary purposes; and accommodated in their size and distribution to the form and dimensions of the building. These were forwarded to the Directors, in 1786, and were carried into execution, with some variations, not for the better, the most important of which, however, admit of future correction. With respect to the plan of a Prison, requested at the same time, I had heard of a benevolent society, in England, which had been indulged by the government, in an experiment of the effect of labor, in solitary confinement, on some of their criminals; which experiment had succeeded beyond expectation. The same idea had been suggested in France, and an Architect of Lyons had proposed a plan of a well-contrived edifice, on the principle of solitary confinement. I procured a copy, and as it was too large for our purposes, I drew one on a scale less extensive, but susceptible of additions as they should be wanting. This I sent to the Directors, instead of a plan of a common prison, in the hope that it would suggest the idea of labor in solitary confinement, instead of that on the public works, which we had adopted in our Revised Code. Its principle, accordingly, but not its exact form, was adopted by Latrobe in carrying the plan into execution, by the erection of what is now called the Penitentiary, built under his direction, In the meanwhile, the public opinion was ripening, by time, by reflection, and by the example of Pennsylvania, where labor on the highways had been tried, without approbation, from 1786 to '89, and had been followed by their Penitentiary system on the principle of confinement and labor, which was proceeding auspiciously. In 1796, our legislature resumed the subject, and passed the law for amending the Penal laws of the commonwealth. They adopted solitary, instead of public, labor, established a gradation in the duration of the confinement, approximated the style of the law more to the modern usage, and, instead of the settled distinctions of murder and manslaughter, preserved in my bill, they introduced the

new terms of murder in the first and second degree. Whether these have produced more or fewer questions of definition, I am not sufficiently informed of our judiciary transactions to say....

The acts of Assembly concerning the College of William and Mary, were properly within Mr. Pendleton's portion of our work; but these related chiefly to its revenue, while its constitution, organization and scope of science, were derived from its charter. We thought that on this subject, a systematical plan of general education should be proposed, and I was requested to undertake it. I accordingly prepared three bills for the Revisal, proposing three distinct grades of education, reaching all classes, 1st. Elementary schools, for all children generally, rich and poor. 2d. Colleges, for a middle degree of instruction, calculated for the common purposes of life, and such as would be desirable for all who were in easy circumstances. And, 3d, an ultimate grade for teaching the sciences generally, and in their highest degree. The first bill proposed to lay off every county into Hundreds, or Wards, of a proper size and population for a school, in which reading, writing, and common arithmetic should be taught; and that the whole State should be divided into twenty-four districts, in each of which should be a school for classical learning, grammar, geography, and the higher branches of numerical arithmetic. The second bill proposed to amend the constitution of William and Mary college, to enlarge its sphere of science, and to make it in fact a University. The third was for the establishment of a library. These bills were not acted on until the same year, '96, and then only so much of the first as provided for elementary schools. The College of William and Mary was an establishment purely of the Church of England; the Visitors were required to be all of that Church; the Professors to subscribe its thirty-nine Articles; its Students to learn its Catechism; and one of its fundamental objects was declared to be, to raise up Ministers for that church. The religious jealousies, therefore, of all the

dissenters, took alarm lest this might give an ascendancy to the Anglican sect, and refused acting on that bill. Its local eccentricity, too, and unhealthy autumnal climate, lessened the general inclination towards it. And in the Elementary bill, they inserted a provision which completely defeated it; for they left it to the court of each county to determine for itself, when this act should be carried into execution, within their county. One provision of the bill was, that the expenses of these schools should be borne by the inhabitants of the county, every one in proportion to his general tax rate. This would throw on wealth the education of the poor; and the justices, being generally of the more wealthy class, were unwilling to incur that burden, and I believe it was not suffered to commence in a single county. I shall recur again to this subject, towards the close of my story, if I should have life and resolution enough to reach that term; for I am already tired of talking about myself.

The bill on the subject of slaves, was a mere digest of the existing laws respecting them, without any intimation of a plan for a future and general emancipation. It was thought better that this should be kept back, and attempted only by way of amendment, whenever the bill should be brought on. The principles of the amendment, however, were agreed on, that is to say, the freedom of all born after a certain day, and deportation at a proper age. But it was found that the public mind would not yet bear the proposition, nor will it bear it even at this day. Yet the day is not distant when it must bear and adopt it, or worse will follow. Nothing is more certainly written in the book of fate, than that these people are to be free; nor is it less certain that the two races, equally free, cannot live in the same government. Nature, habit, opinion have drawn indelible lines of distinction between them. It is still in our power to direct the process of emancipation and deportation, peaceably, and in such slow degree, as that the evil will wear off insensibly, and their place be, *pari passu*^[4], filled up by free

white laborers. If, on the contrary, it is left to force itself on, human nature must shudder at the prospect held up. We should in vain look for an example in the Spanish deportation or deletion of the Moors. This precedent would fall far short of our case.

I consider four of these bills, passed or reported, as forming a system by which every fibre would be eradicated of ancient or future aristocracy; and a foundation laid for a government truly republican. The repeal of the laws of entail would prevent the accumulation and perpetuation of wealth, in select families, and preserve the soil of the country from being daily more and more absorbed in mortmain. The abolition of primogeniture, and equal partition of inheritances, removed the feudal and unnatural distinctions which made one member of very family rich, and all the rest poor, substituting equal partition, the best of all Agrarian laws. The restoration of the rights of conscience relieved the people from taxation for the support of a religion not theirs; for the establishment was truly of the religion of the rich, the dissenting sects being entirely composed of the less wealthy people; and these, by the bill for a general education, would be qualified to understand their rights, to maintain them, and to exercise with intelligence their parts in self-government; and all this would be effected, without the violation of a single natural right of any one individual citizen. To these, too, might be added, as a further security, the introduction of the trial by jury, into the Chancery courts, which have already engulfed, and continue to engulf, so great a proportion of the jurisdiction over our property.

On the 1st of June, 1779, I was appointed Governor of the Commonwealth, and retired from the legislature. Being elected, also, one of the Visitors of William and Mary college, a self-electing body, I effected, during my residence in Williamsburg that year, a change in the organization of that institution, by abolishing the Grammar school, and the two professorships of Divinity and Oriental languages, and

substituting a professorship of Law and Police, one of Anatomy, Medicine and Chemistry, and one of Modern languages; and the charter confining us to six professorships, we added the Law of Nature and Nations, and the Fine Arts to the duties of the Moral professor, and Natural History to those of the professor of Mathematics and Natural Philosophy.

Being now, as it were, identified with the Commonwealth itself, to write my own history, during the two years of my administration, would be to write the public history of that portion of the revolution within this State. This has been done by others, and particularly by Mr. Girardin, who wrote his Continuation of Burke's History of Virginia, while at Milton, in this neighborhood, had free access to all my papers while composing it, and has given as faithful an account as I could myself. For this portion, therefore, of my own life, I refer altogether to his history. From a belief that, under the pressure of the invasion under which we were then laboring, the public would have more confidence in a Military chief, and that the Military commander, being invested with the Civil power also, both might be wielded with more energy, promptitude and effect for the defence of the State, I resigned the administration at the end of my second year, and General Nelson was appointed to succeed me.

Soon after my leaving Congress, in September, '76, to wit, on the last day of that month, I had been appointed, with Dr. Franklin, to go to France, as a Commissioner, to negotiate treaties of alliance and commerce with that government. Silas Deane, then in France, acting as agent for procuring military stores, was joined with us in commission. But such was the state of my family that I could not leave it, nor could I expose it to the dangers of the sea, and of capture by the British ships, then covering the ocean. I saw, too, that the laboring oar was really at home, where much was to be done, of the most permanent interest, in new modeling our governments, and much to

defend our fanes and fire-sides from the desolations of an invading enemy, pressing on our country in every point. I declined, therefore, and Mr. Lee was appointed in my place. On the 15th of June, 1781, I had been appointed, with Mr. Adams, Mr. Franklin, Mr. Jay, and Mr. Laurence, a Minister Plenipotentiary for negotiating peace, then expected to be effected through the mediation of the Empress of Russia. The same reasons obliged me still to decline; and the negotiation was in fact never entered on. But, in the autumn of the next year, 1782, Congress receiving assurances that a general peace would be concluded in the winter and spring, they renewed my appointment on the 13th of November of that year. I had, two months before that, lost the cherished companion of my life, in whose affections, unabated on both sides, I had lived the last ten years in unchequered happiness. With the public interests, the state of my mind concurred in recommending the change of scene proposed; and I accepted the appointment, and left Monticello on the 19th of December, 1782, for Philadelphia, where I arrived on the 27th. The Minister of France, Luzerne, offered me a passage in the *Romulus* frigate, which I accepted; but she was then lying a few miles below Baltimore, blocked up in the ice. I remained, therefore, a month in Philadelphia, looking over the papers in the office of State, in order to possess myself of the general state of our foreign relations, and then went to Baltimore, to await the liberation of the frigate from the ice. After waiting there nearly a month, we received information that a Provisional treaty of peace had been signed by our Commissioners on the 3d of September, 1782, to become absolute, on the conclusion of peace between France and Great Britain. Considering my proceeding to Europe as now of no utility to the public, I returned immediately to Philadelphia, to take the orders of Congress, and was excused by them from further proceeding. I, therefore, returned home, where I arrived on the 15th of May, 1783.

On the 6th of the following month, I was appointed by the

legislature a delegate to Congress, the appointment to take place on the 1st of November ensuing, when that of the existing delegation would expire. I, accordingly, left home on the 16th of October, arrived at Trenton, where Congress was sitting, on the 3rd day of November, and took my seat on the 4th, on which day Congress adjourned, to meet at Annapolis on the 26th.

Congress had now become a very small body, and the members very remiss in their attendance on its duties, insomuch, that a majority of the States, necessary by the Confederation to constitute a House even for minor business, did not assemble until the 13th of December.

They, as early as January 7, 1782, had turned their attention to the moneys current in the several States, and had directed the Financier, Robert Morris, to report to them a table of rates, at which the foreign coins should be received at the treasury. That officer, or rather his assistant, Gouverneur Morris, answered them on the 15th, in an able and elaborate statement of the denominations of money current in the several States, and of the comparative value of the foreign coins chiefly in circulation with us. He went into the consideration of the necessity of establishing a standard of value with us, and of the adoption of a money Unit. He proposed for that Unit, such a fraction of pure silver as would be a common measure of the penny of every State, without leaving a fraction. This common divisor he found to be 1—1440 of a dollar, or 1—1600 of the crown sterling. The value of a dollar was, therefore, to be expressed by 1,440 units, and of a crown by 1,600; each Unit containing a quarter of a grain of fine silver. Congress turning again their attention to this subject the following year, the Financier, by a letter of April 30, 1783, further explained and urged the Unit he had proposed; but nothing more was done in it until the ensuing year, when it was again taken up, and referred to a committee, of which I was a member. The general views

of the Financier were sound, and the principle was ingenious on which he proposed to found his Unit; but it was too minute for ordinary use, too laborious for computation either by the head or in figures. The price of a loaf of bread, 1—20 of a dollar, would be 72 units.

A pound of butter, 1—5 of a dollar, 288 units.

A horse or bullock, of eighty dollars value, would require a notation of six figures, to wit, 115,200, and the public debt, suppose of eighty millions, would require twelve figures, to wit, 115,200,000,000 units. Such a system of money-arithmetic would be entirely unmanageable for the common purposes of society. I proposed, therefore, instead of this, to adopt the Dollar as our Unit of account and payment, and that its divisions and sub-divisions should be in the decimal ratio. I wrote some notes on the subject, which I submitted to the consideration of the Financier. I received his answer and adherence to his general system, only agreeing to take for his Unit one hundred of those he first proposed, so that a Dollar should be 14 40—100, and a crown 16 units. I replied to this, and printed my notes and reply on a flying sheet, which I put into the hands of the members of Congress for consideration, and the Committee agreed to report on my principle. This was adopted the ensuing year, and is the system which now prevails. I insert, here, the Notes and Reply, as showing the different views on which the adoption of our money system hung. The divisions into dimes, cents, and mills is now so well understood, that it would be easy of introduction into the kindred branches of weights and measures. I use when I travel, an Odometer of Clark's invention, which divides the mile into cents, and I find every one comprehends a distance readily, when stated to him in miles and cents; so he would in feet and cents, pounds and cents, &c.

The remissness of Congress, and their permanent session, began to be a subject of uneasiness; and even some of the legislatures had

recommended to them intermissions, and periodical sessions. As the Confederation had made no provision for a visible head of the government, during vacations of Congress, and such a one was necessary to superintend the executive business, to receive and communicate with foreign ministers and nations, and to assemble Congress on sudden and extraordinary emergencies, I proposed, early in April, the appointment of a committee, to be called the "Committee of the States," to consist of a member from each State, who should remain in session during the recess of Congress: that the functions of Congress should be divided into executive and legislative, the latter to be reserved, and the former, by a general resolution, to be delegated to that Committee. This proposition was afterwards agreed to; a Committee appointed, who entered on duty on the subsequent adjournment of Congress, quarreled very soon, split into two parties, abandoned their post, and left the government without any visible head, until the next meeting in Congress. We have since seen the same thing take place in the Directory of France; and I believe it will forever take place in any Executive consisting of a plurality. Our plan, best, I believe, combines wisdom and practicability, by providing a plurality of Counsellors, but a single Arbiter for ultimate decision. I was in France when we heard of this schism, and separation of our Committee, and, speaking with Dr. Franklin of this singular disposition of men to quarrel, and divide into parties, he gave his sentiments, as usual, by way of Apologue. He mentioned the Eddystone lighthouse, in the British channel, as being built on a rock, in the mid-channel, totally inaccessible in winter, from the boisterous character of that sea, in that season; that, therefore, for the two keepers employed to keep up the lights, all provision for the winter were necessarily carried to them in autumn, as they could never be visited again till the return of the milder season; that, on the first practicable day in the spring, a boat put off to them with fresh supplies. The boatman met at the door one of the keepers, and accosted him with a "How goes it, friend? Very well. How is your

companion? I do not know. Don't know? Is not he here? I can't tell. Have not you seen him to-day? No. When did you see him? Not since last fall. You have killed him? Not I, indeed." They were about to lay hold of him, as having certainly murdered his companion; but he desired them to go up stairs and examine for themselves. They went up, and there found the other keeper. They had quarrelled, it seems, soon after being left there, had divided into two parties, assigned the cares below to one, and those above to the other, and had never spoken to, or seen, one another since.

But to return to our Congress at Annapolis. The definitive treaty of peace which had been signed at Paris on the 3d of September, 1783, and received here, could not be ratified without a House of nine States. On the 23d of December, therefore, we addressed letters to the several Governors, stating the receipt of the definitive treaty; that seven States only were in attendance, while nine were necessary to its ratification; and urging them to press on their delegates the necessity of their immediate attendance. And on the 26th, to save time, I moved that the Agent of Marine (Robert Morris) should be instructed to have ready a vessel at this place, at New York, and at some Eastern port, to carry over the ratification of the treaty when agreed to. It met the general sense of the House, but was opposed by Dr. Lee, on the ground of expense, which it would authorize the Agent to incur for us; and, he said, it would be better to ratify at once, and send on the ratification. Some members had before suggested, that seven States were competent to the ratification. My motion was therefore postponed, and another brought forward by Mr. Read, of South Carolina, for an immediate ratification. This was debated the 26th and 27th. Read, Lee, Williamson and Jeremiah Chase, urged that ratification was a mere matter of form, that the treaty was conclusive from the moment it was signed by the ministers; that, although the Confederation requires the assent of nine States to enter into a treaty, yet, that its conclusion could not be called entrance into it; that supposing nine

States requisite, it would be in the power of five States to keep us always at war; that nine States had virtually authorized the ratification, having ratified the provisional treaty, and instructed their ministers to agree to a definitive one in the same terms, and the present one was, in fact, substantially, and almost verbatim, the same; that there now remain but sixty-seven days for the ratification, for its passage across the Atlantic, and its exchange; that there was no hope of our soon having nine States present; in fact, that this was the ultimate point of time to which we could venture to wait; that if the ratification was not in Paris by the time stipulated, the treaty would become void; that if ratified by seven States, it would go under our seal, without its being known to Great Britain that only seven had concurred; that it was a question of which they had not right to take cognizance, and we were only answerable for it to our constituents; that it was like the ratification which Great Britain had received from the Dutch, by the negotiations of Sir William Temple.

On the contrary, it was argued by Monroe, Gerry, Howel, Ellery and myself, that by the modern usage of Europe, the ratification was considered as the act which gave validity to a treaty, until which, it was not obligatory. That the commission to the ministers reserved the ratification to Congress; that the treaty itself stipulated that it should be ratified; that it became a second question, who were competent to the ratification? That the Confederation expressly required nine States to enter into any treaty; that, by this, that instrument must have intended, that the assent of nine States should be necessary, as well to the completion as to the commencement of the treaty, its object having been to guard the rights of the Union in all those important cases where nine States are called for; that by the contrary construction, seven States, containing less than one-third of our whole citizens, might rivet on us a treaty, commenced indeed under commission and instructions from nine States, but formed by the

minister in express contradiction to such instructions, and in direct sacrifice of the interests of so great a majority; that the definitive treaty was admitted not to be a verbal copy of the provisional one, and whether the departures from it were of substance, or not, was a question on which nine States alone were competent to decide; that the circumstances of the ratification of the provisional articles by nine States, the instructions to our ministers to form a definitive one by them, and their actual agreement in substance, do not render us competent to ratify in the present instance; if these circumstances are in themselves a ratification, nothing further is requisite than to give attested copies of them, in exchange for the British ratification; if they are not, we remain where we were, without a ratification by nine States, and incompetent ourselves to ratify; that it was but four days since the seven States, now present, unanimously concurred in a resolution, to be forwarded to the Governors of the absent States, in which they stated as a cause for urging on their delegates, that nine States were necessary to ratify the treaty; that in the case of the Dutch ratification, Great Britain had courted it, and therefore was glad to accept it as it was; that they knew our Constitution, and would object to a ratification by seven; that, if that circumstance was kept back, it would be known hereafter, and would give them ground to deny the validity of a ratification, into which they should have been surprised and cheated, and it would be a dishonorable prostitution of our seal ; that there is a hope of nine States; that if the treaty would become null, if not ratified in time, it would not be saved by an imperfect ratification; but that, in fact, it would not be null, and would be placed on better ground, going in unexceptionable form, though a few days too late, and rested on the small importance of this circumstance, and the physical impossibilities which had prevented a punctual compliance in point of time; that this would be approved by all nations, and by Great Britain herself, if not determined to renew the war, and if so determined, she would never want excuses, were this out of the way. Mr. Read gave notice, he should call for the yeas and

nays; whereon those in opposition, prepared a resolution, expressing pointedly the reasons of their dissent from his motion. It appearing, however, that his proposition could not be carried, it was thought better to make no entry at all. Massachusetts alone would have been for it; Rhode Island, Pennsylvania and Virginia against it, Delaware, Maryland and North Carolina, would have been divided.

Our body was little numerous, but very contentious. Day after day was wasted on the most unimportant questions. A member, one of those afflicted with the morbid rage of debate, of an ardent mind, prompt imagination, and copious flow of words, who heard with impatience any logic which was not his own, sitting near me on some occasion of a trifling but wordy debate, asked me how I could sit in silence, hearing so much false reasoning, which a word should refute? I observed to him, that to refute indeed was easy, but to silence was impossible; that in measures brought forward by myself, I took the laboring oar, as was incumbent on me; but that in general, I was willing to listen; that if every sound argument or objection was used by some one or other of the numerous debaters, it was enough; if not, I thought it sufficient to suggest the omission, without going into a repetition of what had been already said by others: that this was a waste and abuse of the time and patience of the House, which could not be justified. And I believe, that if the members of deliberate bodies were to observe this course generally, they would do in a day, what takes them a week; and it is really more questionable, than may at first be thought, whether Bonaparte's dumb legislature, which said nothing, and did much, may not be preferable to one which talks much, and does nothing. I served with General Washington in the legislature of Virginia, before the revolution, and during it, with Dr. Franklin in Congress. I never heard either of them speak ten minutes at a time, nor to any but the main point, which was to decide the question. They laid their shoulders to the great points, knowing that the little ones would follow of themselves. If the present Congress errs

in too much talking, how can it be otherwise, in a body to which the people send one hundred and fifty lawyers, whose trade it is to question everything, yield nothing, and talk by the hour? That one hundred and fifty lawyers should do business together, ought not to be expected. But to return again to our subject.

Those who thought seven States competent to the ratification, being very restless under the loss of their motion, I proposed, on the third of January, to meet them on middle ground, and therefore moved a resolution, which premised, that there were but seven States present, who were unanimous for the ratification, but that they differed in opinion on the question of competency; that those however in the negative were unwilling that any powers which it might be supposed they possessed, should remain unexercised for the restoration of peace, provided it could be done, saving their good faith, and without importing any opinion of Congress, that seven States were competent, and resolving that the treaty be ratified so far as they had power; that it should be transmitted to our ministers, with instructions to keep it uncommunicated; to endeavor to obtain three months longer for exchange of ratifications; that they should be informed, that so soon as nine States shall be present, a ratification by nine shall be sent them: if this should get to them before the ultimate point of time for exchange, they were to use it, and not the other; if not, they were to offer the act of the seven States in exchange, informing them the treaty had come to hand while Congress was not in session; that but seven States were as yet assembled, and these had unanimously concurred in the ratification. This was debated on the third and fourth; and on the fifth, a vessel being to sail for England, from this port (Annapolis), the House directed the President to write to our ministers accordingly.

January 14. Delegates from Connecticut having attended yesterday, and another from South Carolina coming in this day, the

treaty was ratified without a dissenting voice; and three instruments of ratification were ordered to be made out, one of which was sent by Colonel Harmer, another by Colonel Franks, and the third transmitted to the Agent of Marine, to be forwarded by any good opportunity.

Congress soon took up the consideration of their foreign relations. They deemed it necessary to get their commerce placed with every nation, on a footing as favorable as that of other nations; and for this purpose, to propose to each a distinct treaty of commerce. This act too would amount to an acknowledgment, by each, of our independence, and of our reception into the fraternity of nations; which, although as possessing our station of right, and in fact we would not condescend to ask, we were not unwilling to furnish opportunities for receiving their friendly salutations and welcome. With France, the United Netherlands, and Sweden, we had already treaties of commerce; but commissions were given for those countries also, should any amendments be thought necessary. The other States to which treaties were to be proposed, were England, Hamburg, Saxony, Prussia, Denmark, Russia, Austria, Venice, Rome, Naples, Tuscany, Sardinia, Genoa, Spain, Portugal, the Porte, Algiers, Tripoli, Tunis, and Morocco.

On the 7th of May Congress resolved that a Minister Plenipotentiary should be appointed, in addition to Mr. Adams and Dr. Franklin, for negotiating treaties of commerce with foreign nations, and I was elected to that duty. I accordingly left Annapolis on the 11th, took with me my eldest daughter, then at Philadelphia (the two others being too young for the voyage), and proceeded to Boston, in quest of a passage. While passing through the different States, I made a point of informing myself of the state of the commerce of each; went on to New Hampshire with the same view, and returned to Boston. Thence I sailed on the 5th of July, in the *Ceres*, a merchant ship of Mr. Nathaniel Tracey, bound to Cowes. He was himself a passenger, and,

after a pleasant voyage of nineteen days, from land to land, we arrived at Cowes on the 26th. I was detained there a few days by the indisposition of my daughter. On the 30th, we embarked for Havre, arrived there on the 31st, left it on the 3d of August, and arrived at Paris on the 6th. I called immediately on Dr. Franklin, at Passy, communicated to him our charge, and we wrote to Mr. Adams, then at the Hague, to join us at Paris.

Before I had left America, that is to say, in the year 1781, I had received a letter from M. de Marbois, of the French legation in Philadelphia, informing me, he had been instructed by his government to obtain such statistical accounts of the different States of our Union, as might be useful for their information; and addressing to me a number of queries relative to the State of Virginia. I had always made it a practice, whenever an opportunity occurred of obtaining any information of our country, which might be of use to me in any station, public or private, to commit it to writing. These memoranda were on loose papers, bundled up without order, and difficult of recurrence, when I had occasion for a particular one. I thought this a good occasion to embody their substance, which I did in the order of Mr. Marbois' queries, so as to answer his wish, and to arrange them for my own use. Some friends, to whom they were occasionally communicated, wished for copies; but their volume rendering this too laborious by hand, I proposed to get a few printed, for their gratification. I was asked such a price, however, as exceeded the importance of the object. On my arrival at Paris, I found it could be done for a fourth of what I had been asked here. I therefore corrected and enlarged them, and had two hundred copies printed, under the title of "Notes on Virginia" I gave a very few copies to some particular friends in Europe, and sent the rest to my friends in America. A European copy, by the death of the owner, got into the hands of a bookseller, who engaged its translation, and when ready for the press, communicated his intentions and manuscript to me, suggesting that I

should correct it, without asking any other permission for the publication. I never had seen so wretched an attempt at translation. Introverted, abridged, mutilated, and often reversing the sense of the original, I found it a blotch of errors, from beginning to end. I corrected some of the most material, and, in that form, it was printed in French. A London bookseller, on seeing the translation, requested me to permit him to print the English original. I thought it best to do so, to let the world see that it was not really so bad as the French translation had made it appear. And this is the true history of that publication.

Mr. Adams soon joined us at Paris, and our first employment was to prepare a general form, to be proposed to such nations as were disposed to treat with us. During the negotiations for peace with the British Commissioner, David Hartley, our Commissioners had proposed, on the suggestion of Dr. Franklin, to insert an article, exempting from capture by the public or private armed ships, of either belligerent, when at war, all merchant vessels and their cargoes, employed merely in carrying on the commerce between nations. It was refused by England, and unwisely, in my opinion. For, in the case of a war with us, their superior commerce places infinitely more at hazard on the ocean, than ours; and, as hawks abound in proportion to game, so our privateers would swarm, in proportion to the wealth exposed to their prize, while theirs would be few, for want of subjects of capture. We inserted this article in our form, with a provision against the molestation of fishermen, husbandmen, citizens unarmed, and following their occupations in unfortified places, for the humane treatment of prisoners of war, the abolition of contraband of war, which exposes merchant vessels to such vexatious and ruinous detentions and abuses; and for the principle of free bottoms, free goods.

In conference with the Count de Vergennes, it was thought better

to leave to legislative regulation, on both sides, such modifications of our commercial intercourse, as would voluntarily flow from amicable dispositions. Without urging, we sounded the ministers of the several European nations, at the court of Versailles, on their dispositions towards mutual commerce, and the expediency of encouraging it by the protection of a treaty. Old Frederic, of Prussia, met us cordially, and without hesitation, and appointing the Baron de Thulemeyer, his minister at the Hague, to negotiate with us, we communicated to him our *Projet*, which, with little alteration by the King, was soon concluded. Denmark and Tuscany, entered also into negotiations with us. Other powers appearing indifferent; we did not think it proper to press them. They seemed, in fact, to know little about us, but as rebels, who had been successful in throwing off the yoke of the mother country. They were ignorant of our commerce, which had been always monopolized by England, and of the exchange of articles it might offer advantageously to both parties. They were inclined, therefore, to stand aloof, until they could see better what relations might be usefully instituted with us. The negotiations, therefore, begun with Denmark and Tuscany, we protracted designedly, until our powers had expired; and abstained from making new propositions to others having no colonies; because our commerce being an exchange of raw for wrought materials, is a competent price for admission into the colonies of those possessing them; but were we to give it, without price, to others, all would claim it, without price, on the ordinary ground of *gentis amicissimae*^[5].

Mr. Adams being appointed Minister Plenipotentiary of the United States, to London, left us in June, and in July, 1785, Dr. Franklin returned to America, and I was appointed his successor at Paris. In February, 1780, Mr. Adams wrote to me, pressingly, to join him in London immediately, as he thought he discovered there some symptoms of better disposition towards us. Colonel Smith, his secretary of legation, was the bearer of his urgencies for my

immediate attendance. I, accordingly, left Paris on the 1st of March, and, on my arrival in London, we agreed on a very summary form of treaty, proposing an exchange of citizenship for our citizens, our ships, and our productions generally, except as to office. On my presentation, as usual, to the King and Queen, at their levees, it was impossible for anything to be more ungracious, than their notice of Mr. Adams and myself. I saw, at once, that the ulcerations of mind in that quarter, left nothing to be expected on the subject of my attendance; and, on the first conference with the Marquis of Caermarthen, the Minister for foreign affairs, the distance and disinclination which he betrayed in his conversation, the vagueness and evasions of his answers to us, confirmed me in the belief of their aversion to have anything to do with us. We delivered him, however, our Projet, Mr. Adams not despairing as much as I did, of its effect. We afterwards, by one or more notes, requested his appointment of an interview and conference, which, without directly declining, he evaded, by pretences of other pressing occupations for the moment. After staying there seven weeks, till within a few days of the expiration of our commission, I informed the minister, by note, that my duties at Paris required my return to that place, and that I should, with pleasure, be the bearer of any commands to his Ambassador there. He answered, that he had none, and, wishing me a pleasant journey, I left London the 26th, and arrived at Paris the 30th of April.

While in London, we entered into negotiations with the Chevalier Pinto, Ambassador of Portugal, at that place. The only article of difficulty between us was, a stipulation that our bread stuff should be received in Portugal, in the form of flour as well as of grain. He approved of it himself, but observed that several Nobles, of great influence at their court, were the owners of wind-mills in the neighborhood of Lisbon, which depended much for their profits on manufacturing our wheat, and that this stipulation would endanger the whole treaty. He signed it, however, and its fate was what he had

candidly portended.

My duties, at Paris, were confined to a few objects; the receipt of our whale-oils, salted fish, and salted meats, on favorable terms; the admission of our rice on equal terms with that of Piedmont, Egypt and the Levant; a mitigation of the monopolies of our tobacco by the Farmers-general, and a free admission of our productions into their islands, were the principal commercial objects which required attention; and, on these occasions, I was powerfully aided by all the influence and the energies of the Marquis de La Fayette, who proved himself equally zealous for the friendship and welfare of both nations; and, in justice, I must also say, that I found the government entirely disposed to befriend us on all occasions, and to yield us every indulgence, not absolutely injurious to themselves. The Count de Vergennes had the reputation, with the diplomatic corps, of being wary and slippery in his diplomatic intercourse; and so he might be with those whom he knew to be slippery, and doublefaced themselves. As he saw that I had no indirect views, practised no subtleties, meddled in no intrigues, pursued no concealed objects, I found him as frank, as honorable, as easy of access to reason, as any man with whom I had ever done business; and I must say the same for his successor, Montmorin, one of the most honest and worthy of human beings.

Our commerce, in the Mediterranean, was placed under early alarm, by the capture of two of our vessels and crews by the Barbary cruisers. I was very unwilling that we should acquiesce in the European humiliation, of paying a tribute to those lawless pirates, and endeavored to form an association of the powers subject to habitual depredations from them. I accordingly prepared, and proposed to their Ministers at Paris, for consultation with their governments, articles of a special confederation, in the following form:

“Proposals for concerted operation among the powers at war with

the piratical States of Barbary.

1. "It is proposed, that the several powers at war with the piratical States of Barbary, or any two or more of them who shall be willing, shall enter into a convention to carry on their operations against those States, in concert, beginning with the Algerines.

2. "This convention shall remain open to any other powers, who shall, at any future time, wish to accede to it; the parties reserving the right to prescribe the conditions of such accession, according to the circumstances existing at the time it shall be proposed.

3. "The object of the convention shall be, to compel the piratical States to perpetual peace, without price, and to guarantee that peace to each other.

4. "The operations for obtaining this peace shall be constant cruises on their coast, with a naval force now to be agreed on. It is not proposed that this force shall be so considerable as to be inconvenient to any party. It is believed that half a dozen frigates, with as many Tenders or Xebecs, one half of which shall be in cruise, while the other half is at rest, will suffice.

5. "The force agreed to be necessary, shall be furnished by the parties, in certain quotas, now to be fixed; it being expected, that each will be willing to contribute, in such proportion as circumstances may render reasonable.

6. "As miscarriages often proceed from the want of harmony among officers of different nations, the parties shall now consider and decide, whether it will not be better to contribute their quotas in money, to be employed in fitting out and keeping on duty, a single fleet of the force agreed on.

7. "The difficulties and delays, too, which will attend the

management of these operations, if conducted by the parties themselves separately, distant as their courts may be from one another, and incapable of meeting in consultation, suggest a question, whether it will not be better for them to give full powers, for that purpose, to their Ambassadors, or other Ministers resident at some one court of Europe, who shall form a Committee, or Council, for carrying this convention into effect; wherein, the vote of each member shall be computed in proportion to the quota of his sovereign, and the majority so computed, shall prevail in all questions within the view of this convention. The court of Versailles is proposed, on account of its neighborhood to the Mediterranean, and because all those powers are represented there, who are likely to become parties to this convention.

8. "To save to that Council the embarrassment of personal solicitations for office, and to assure the parties that their contributions will be applied solely to the object for which they are destined, there shall be no establishment of officers for the said Council, such as Commissioners, Secretaries, or any other kind, with either salaries or perquisites, nor any other lucrative appointments but such whose functions are to be exercised on board the said vessels.

9. "Should war arise between any two of the parties to this convention, it shall not extend to this enterprise, nor interrupt it; but as to this they shall be reputed at peace.

10. "When Algiers shall be reduced to peace, the other piratical States, if they refuse to discontinue their piracies, shall become the objects of this convention, either successively or together, as shall seem best.

11. "Where this convention would interfere with treaties actually existing between any of the parties and the States of Barbary, the treaty shall prevail, and such party shall be allowed to withdraw from the operations against that State."

Spain had just concluded a treaty with Algiers, at the expense of three millions of dollars, and did not like to relinquish the benefit of that, until the other party should fail in their observance of it. Portugal, Naples, the two Sicilies, Venice, Malta, Denmark and Sweden, were favorably disposed to such an association; but their representatives at Paris expressed apprehensions that France would interfere, and, either openly or secretly, support the Barbary powers; and they required, that I should ascertain the dispositions of the Count de Vergennes on the subject. I had before taken occasion to inform him of what we were proposing, and, therefore, did not think it proper to insinuate any doubt of the fair conduct of his government; but, stating our propositions, I mentioned the apprehensions entertained by us, that England would interfere in behalf of those piratical governments. "She dares not do it," said he. I pressed it no further. The other Agents were satisfied with this indication of his sentiments, and nothing was now wanting to bring it into direct and formal consideration, but the assent of our government, and their authority to make the formal proposition. I communicated to them the favorable prospect of protecting our commerce from the Barbary depredations, and for such a continuance of time, as, by an exclusion of them from the sea, to change their habits and characters, from a predatory to an agricultural people: toward which, however, it was expected they would contribute a frigate, and its expenses, to be in constant cruise. But they were in no condition to make any such engagement. Their recommendatory powers for obtaining contributions, were so openly neglected by the several States, that they declined an engagement which they were conscious they could not fulfill with punctuality; and so it fell through.

In 1786, while at Paris, I became acquainted with John Ledyard, of Connecticut, a man of genius, of some science, and of fearless courage and enterprise. He had accompanied Captain Cook in his voyage to the Pacific, had distinguished himself on several occasions

by an unrivalled intrepidity, and published an account of that voyage, with details unfavorable to Cook's deportment towards the savages, and lessening our regrets at his fate. Ledyard had come to Paris, in the hope of forming a company to engage in the fur trade of the Western coast of America. He was disappointed in this, and, being out of business, and of a roaming, restless character, I suggested to him the enterprise of exploring the Western part of our continent, by passing through St. Petersburg to Kamschatka, and procuring a passage thence in some of the Russian vessels to Nootka Sound, whence he might make his way across the continent to the United States; and I undertook to have the permission of the Empress of Russia solicited. He eagerly embraced the proposition, and M. de Semoulin, the Russian Ambassador, and more particularly Baron Grimm, the special correspondent of the Empress, solicited her permission for him to pass through her dominions, to the Western coast of America. And here I must correct a material error, which I have committed in another place, to the prejudice of the Empress. In writing some notes of the life of Captain Lewis, prefixed to his "Expedition to the Pacific," I stated that the Empress gave the permission asked, and afterwards retracted it. This idea, after a lapse of twenty-six years, had so insinuated itself into my mind, that I committed it to paper, without the least suspicion of error. Yet I find, on recurring to my letters of that date, that the Empress refused permission at once, considering the enterprise as entirely chimerical. But Ledyard would not relinquish it, persuading himself that, by proceeding to St. Petersburg, he could satisfy the Empress of its practicability, and obtain her permission. He went accordingly, but she was absent on a visit to some distant part of her dominions, and he pursued his course to within two hundred miles of Kamschatka, where he was overtaken by an arrest from the Empress, brought back to Poland, and there dismissed. I must therefore, in justice, acquit the Empress of ever having for a moment countenanced ever by the indulgence of an innocent passage through her territories, this interesting enterprise.

The pecuniary distresses of France produced this year measure of which there had been no example for nearly two centuries, and the consequences of which, good and evil, are not yet calculable. For its remote causes, we must go a little back.

Celebrated writers of France and England had already sketched good principles on the subject of government; yet the American Revolution seems first to have awakened the thinking part of the French nation in general, from the sleep of despotism in which they were sunk. The officers too, who had been to America, were mostly young men, less shackled by habit and prejudice, and more ready to assent to the suggestions of common sense, and feeling of common rights, than others. They came back with new ideas and impressions. The press, notwithstanding its shackles, began to disseminate them; conversation assumed new freedoms; Politics became the theme of all societies, male and female, and a very extensive and zealous party was formed, which acquired the appellation of the Patriotic party, who, sensible of the abusive government under which they lived, sighed for occasions of reforming it. This party comprehended all the honesty of the kingdom, sufficiently at leisure to think, the men of letters, the easy Bourgeois, the young nobility, partly from reflection, partly from mode; for these sentiments became matter of mode, and as such, united most of the young women to the party. Happily for the nation, it happened, at the same moment, that the dissipations of the Queen and court, the abuses of the pension-list, and dilapidations in the administration of every branch of the finances, had exhausted the treasures and credit of the nation, insomuch that its most necessary functions were paralyzed. To reform these abuses would have overset the Minister; to impose new taxes by the authority of the King, was known to be impossible, from the determined opposition of the Parliament to their enregistry. No resource remained then, but to appeal to the nation. He advised, therefore, the call of an Assembly of the most distinguished characters of the nation, in the hope that, by

promises of various and valuable improvements in the organization and regimen of the government, they would be induced to authorize new taxes, to control the opposition of the Parliament, and to raise the annual revenue to the level of expenditures. An Assembly of Notables therefore, about one hundred and fifty in number, named by the King, convened on the 22d of February. The Minister (Calonne) stated to them, that the annual excess of expenses beyond the revenue, when Louis X VI. came to the throne, was thirty-seven millions of livres; that four hundred and forty millions had been borrowed to reestablish the navy; that the American war had cost them fourteen hundred and forty millions (two hundred and fifty-six millions of dollars), and that the interest of these sums, with other increased expenses, had added forty millions more to the annual deficit. (But a subsequent and more candid estimate made it fifty-six millions.) He proffered them a universal redress of grievances, laid open those grievances fully, pointed out sound remedies, and, covering his canvas with objects of this magnitude, the deficit dwindled to a little accessory, scarcely attracting attention. The persons chosen were the most able and independent characters in the kingdom, and their support, if it could be obtained, would be enough for him. They improved the occasion for redressing their grievances, and agreed that the public wants should be relieved; but went into an examination of the causes of them. It was supposed that Calonne was conscious that his accounts could not bear examination; and it was said, and believed, that he asked of the King, to send four members to the Bastille, of whom the Marquis de La Fayette was one, to banish twenty others, and two of his Ministers. The King found it shorter to banish him. His successor went on in full concert with the Assembly. The result was an augmentation of the revenue, a promise of economies in its expenditure, of an annual settlement of the public accounts before a council, which the Comptroller, having been heretofore obliged to settle only with the King in person, of course never settled at all; an acknowledgment that the King could not lay a

new tax, a reformation of the Criminal laws, abolition of torture, suppression of corvees, reformation of the gabelles, removal of the interior Custom Houses, free commerce of grain, internal and external, and the establishment of Provincial Assemblies; which, altogether, constituted a great mass of improvement in the condition of the nation. The establishment of the Provincial Assemblies was, in itself, a fundamental improvement. They would be of the choice of the people, one-third renewed every year, in those provinces where there are no States, that is to say, over about three-fourths of the kingdom. They would be partly an Executive themselves, and partly an Executive Council to the Intendant, to whom the Executive power, in his province, had been heretofore entirely delegated. Chosen by the people, they would soften the execution of hard laws, and, having a right of representation to the King, they would censure bad laws, suggest good ones, expose abuses, and their representations, when united, would command respect. To the other advantages, might be added the precedent itself of calling the *Assemblée des Notables*, which would perhaps grow into habit. The hope was, that the improvements thus promised would be carried into effect; that they would be maintained during the present reign, and that that would be long enough for them to take some root in the constitution, so that they might come to be considered as a part of that, and be protected by time, and the attachment of the nation.

The Count de Vergennes had died a few days before the meeting of the Assembly, and the Count de Montmorin had been named Minister of Foreign Affairs, in his place. Villedeuil succeeded Calonne, as Comptroller General, and Lomenie de Bryenne, Archbishop of Thoulouse, afterwards of Sens, and ultimately Cardinal Lomenie, was named Minister principal, with whom the other Ministers were to transact the business of their departments, heretofore done with the King in person; and the Duke de Nivernois, and M. de Malesherbes,

were called to the Council. On the nomination of the Minister principal, the Marshals de Segur and de Castries retired from the departments of War and Marine, unwilling to act subalternately, or to share the blame of proceedings taken out of their direction. They were succeeded by the Count de Brienne, brother of the Prime Minister, and the Marquis de La Luzerne, brother to him who had been Minister in the United States.

A dislocated wrist, unsuccessfully set, occasioned advice from my surgeon, to try the mineral waters of Aix, in Provence, as a corroborant. I left Paris for that place therefore, on the 28th of February, and proceeded up the Seine, through Champagne and Burgundy, and down the Rhone through the Beaujolais by Lyons, Avignon, Nismes to Aix; where, finding on trial no benefit from the waters, I concluded to visit the rice country of Piedmont, to see if anything might be learned there, to benefit the rivalry of our Carolina rice with that, and thence to make a tour of the seaport towns of France, along its Southern and Western coast, to inform myself, if anything could be done to favor our commerce with them. From Aix, therefore, I took my route by Marseilles, Toulon, Hieres, Nice, across the Col de Tende, by Coni, Turin, Vercelli, Novara, Milan, Pavia, Novi, Genoa. Thence, returning along the coast of Savona, Noli, Albenga, Oneglia, Monaco, Nice, Antibes, Frejus, Aix, Marseilles, Avignon, Nismes, Montpeller, Frontignan, Cette, Agde, and along the canal of Languedoc, by Beziers, Narbonne, Cascaissonne, Castelnaudari, through the Souterrain of St. Feriol, and back by Castelnaudari, to Toulouse; thence to Montauban, and down the Garonne by Langon to Bordeaux. Thence to Rochefort, la Rochelle, Nantes, L'Orient; then back by Rennes to Nantes, and up the Loire by Angers, Tours, Ambolse, Blois to Orleans, thence direct to Paris, where I arrived on the 10th of June. Soon after my return from this journey, to wit, about the latter part of July, I received my younger daughter, Maria, from Virginia, by the way of London, the youngest having died

some time before.

The treasonable perfidy of the Prince of Orange, Stadtholder and Captain General of the United Netherlands, in the war which England waged against them, for entering into a treaty of commerce with the United States, is known to all. As their Executive officer, charged with the conduct of the war, he contrived to baffle all the measures of the States General, to dislocate all their military plans and played false into the hands of England against his own country, on every possible occasion, confident in her protection, and in that of the King of Prussia, brother to his Princess. The States General, indignant at this patricidal conduct, applied to France for aid, according to the stipulations of the treaty concluded with her in '85. It was assured to them readily, and in cordial terms, in a letter from the Count de Vergennes, to the Marquis de Verac, Ambassador of France at the Hague, of which the following is an extract:

Extract from the despatch of the Count de Vergennes, to the Marquis de Verac, Ambassador from France, at the Hague, dated March 1, 1786:

“The King will give his aid, as far as may be in his power, towards the success of the affair, and will, on his part, invite the Patriots to communicate to him their views, their plans, and their discontents. You may assure them that the King takes a real interest in themselves as well as their cause, and that they may rely upon his protection. On this they may place the greater dependence, as we do not conceal, that if the Stadtholder resumes his former influence, the English System will soon prevail, and our alliance become a mere affair of the imagination. The Patriots will readily feel, that this position would be incompatible both with the dignity and consideration of his Majesty. But in case the Chief of the Patriots should have to fear a division, they would have time sufficient to reclaim those whom the Anglomaniacs had misled, and to prepare matters in such a manner,

that the question when again agitated, might be decided according to their wishes. In such a hypothetical case, the King authorizes you to act in concert with them, to pursue the direction which they may think proper to give you, and to employ every means to augment the number of the partisans of the good cause. It remains for me to speak of the personal security of the Patriots. You may assure them, that under every circumstance, the King will take them under his immediate protection, and you will make known wherever you may judge necessary, that his Majesty will regard as a personal offence every undertaking against their liberty. It is to be presumed that this language, energetically maintained, may have some effect on the audacity of the Anglomaniacs, and that the Prince de Nassau will feel that he runs some risk in provoking the resentment of his Majesty.”

This letter was communicated by the Patriots to me, when at Amsterdam, in 1788, and a copy sent by me to Mr. Jay, in my letter to him of March 16, 1788.

The object of the Patriots was, to establish a representative and republican government. The majority of the States General were with them, but the majority of the populace of the towns was with the Prince of Orange; and that populace was played off with great effect, by the triumvirate of ... Harris, the English Ambassador, afterwards Lord Malmesbury, the Prince of Orange, a stupid man, and the Princess as much a man as either of her colleagues, in audaciousness, in enterprise, and in the thirst of domination. By these, the mobs of the Hague were excited against the members of the States General; their persons were insulted and endangered in the streets; the sanctuary of their houses was violated; and the Prince, whose function and duty it was to repress and punish these violations of order, took no steps for that purpose. The States General, for their own protection, were therefore obliged to place their militia under the command of a Committee. The Prince filled the courts of London and Berlin with

complaints at this usurpation of his prerogatives, and, forgetting that he was but the first servant of a Republic, marched his regular troops against the city of Utrecht, where the States were in session. They were repulsed by the militia. His interests now became marshalled with those of the public enemy, and against his own country. The States, therefore, exercising their rights of sovereignty, deprived him of all his powers. The great Frederic had died in August, '86. He had never intended to break with France in support of the Prince of Orange. During the illness of which he died, he had, through the Duke of Brunswick, declared to the Marquis de La Fayette, who was then at Berlin, that he meant not to support the English interest in Holland: that he might assure the government of France, his only wish was, that some honorable place in the Constitution should be reserved for the Stadtholder and his children, and that he would take no part in the quarrel, unless an entire abolition of the Stadtholderate should be attempted. But his place was now occupied by Frederic William, his great nephew, a man of little understanding, much caprice, and very inconsiderate; and the Princess, his sister, although her husband was in arms against the legitimate authorities of the country, attempting to go to Amsterdam, for the purpose of exciting the mobs of that place, and being refused permission to pass a military post on the way, he put the Duke of Brunswick at the head of twenty thousand men, and made demonstrations of marching on Holland. The King of France hereupon declared, by his Chargé des Affaires in Holland, that if the Prussian troops continued to menace Holland with an invasion, his Majesty, in quality of Ally, was determined to succor that province. In answer to this, Eden gave official information to Count Montmorin, that England must consider as at an end its convention with France relative to giving notice of its naval armaments, and that she was arming generally. War being now imminent, Eden, since Lord Auckland, questioned me on the effect of our treaty with France, in the case of a war, and what might be our dispositions. I told him frankly, and without hesitation, that our dispositions would be neutral, and

that I thought it would be the interest of both these powers that we should be so; because, it would relieve both from all anxiety as to feeding their West India islands; that England, too, by suffering us to remain so, would avoid a heavy land war on our Continent, which might very much cripple her proceedings elsewhere; that our treaty, indeed, obliged us to receive into our ports the armed vessels of France, with their prizes, and to refuse admission to the prizes made on her by her enemies: that there was clause, also, by which we guaranteed to France her American possessions, which might perhaps force us into the war, if these were attacked. "Then it will be war," said he, "for they will assuredly be attacked." Liston, at Madrid, about the same time, made the same inquiries of Carmichael. The Government of France then declared a determination to form a camp of observation at Givet, commenced arming her marine, and named the Bailli de Suffrein their Generalissimo on the Ocean. She secretly engaged, also, in negotiations with Russia, Austria, and Spain, to form a quadruple alliance. The Duke of Brunswick having advanced to the confines of Holland, sent some of his officers to Givet, to reconnoitre the state of things there, and report them to him. He said afterwards, that "if there had been only a few tents at that place, he should not have advanced further, for that the King would not, merely for the interest of his sister, engage in a war with France." But, finding that there was not a single company there, he boldly entered the country, took their towns as fast as he presented himself before them, and advanced on Utrecht. The States had appointed the Rhingrave of Salm their Commander-in-Chief; a Prince without talents, without courage, and without principle. He might have held out in Utrecht for a considerable time, but he surrendered the place without firing a gun, literally ran away and hid himself, so that for months it was not known what had become of him. Amsterdam was then attacked, and capitulated. In the meantime, the negotiations for the quadruple alliance were proceeding favorably; but the secrecy with which they were attempted to be conducted, was penetrated by Fraser, Chargé

d’Affaires of England at St. Petersburg, who instantly notified his court and gave the alarm to Prussia. The King saw at once what would be his situation, between the jaws of France, Austria, and Russia. In great dismay, he besought the court of London not to abandon him, sent Alvensleben to Paris to explain and soothe; and England, through the Duke of Dorset and Eden, renewed her conferences for accommodation. The Archbishop, who shuddered at the idea of war, and preferred a peaceful surrender of right to an armed vindication of it, received them with open arms, entered into cordial conferences, and a declaration, and counter-declaration, were cooked up at Versailles, and sent to London for approbation. They were approved there, reached Paris at one o’clock of the 27th, and were signed that night at Versailles. It was said and believed at Paris, that M. de Montmorin, literally “pleuroit comme un enfant,” when obliged to sign this counter-declaration; so distressed was he by the dishonor of sacrificing the Patriots, after assurances so solemn of protection, and absolute encouragement to proceed. The Prince of Orange was reinstated in all his powers, now become regal. A great emigration of the Patriots took place; all were deprived of office, many exiled, and their property confiscated. They were received in France, and subsisted, for some time, on her bounty. Thus fell Holland, by the treachery of her Chief, from her honorable independence, to become a province of England; and so, also, her Stadtholder, from the high station of the first citizen of a free Republic, to be the servile Viceroy of a foreign Sovereign. And this was effected by a mere scene of bullying and demonstration; not one of the parties, France, England, or Prussia, having ever really meant to encounter actual war for the interest of the Prince of Orange. But it had all the effect of a real and decisive war.

Our first essay, in America, to establish a federative government had fallen, on trial, very short of its object. During the war of

Independence, while the pressure of an external enemy hooped us together, and their enterprises kept us necessarily on the alert, the spirit of the people, excited by danger, was a supplement to the Confederation, and urged them to zealous exertions, whether claimed by that instrument or not; but, when peace and safety were restored, and every man became engaged in useful and profitable occupation, less attention was paid to the calls of Congress. The fundamental defect of the Confederation was, that Congress was not authorized to act immediately on the people, and by its own officers. Their power was only requisitory, and these requisitions were addressed to the several Legislatures, to be by them carried into execution, without other coercion than the moral principle of duty. This allowed, in fact, a negative to every Legislature, on every measure proposed by Congress; a negative so frequently exercised in practice, as to benumb the action of the Federal government, and to render it inefficient in its general objects, and more especially in pecuniary and foreign concerns. The want, too, of a separation of the Legislative, Executive, and Judiciary functions, worked disadvantageously in practice. Yet this state of things afforded a happy augury of the future march of our Confederacy, when it was seen that the good sense and good dispositions of the people, as soon as they perceived the incompetence of their first compact, instead of leaving its correction to insurrection and civil war, agreed, with one voice, to elect deputies to a general Convention, who should peaceably meet and agree on such a Constitution as “would ensure peace, justice, liberty, the common defence and general welfare.”

This Convention met at Philadelphia on the 25th of May, '87. It sat with closed doors, and kept all its proceedings secret, until its dissolution on the 17th of September, when the results of its labors were published all together. I received a copy, early in November, and read and contemplated its provisions with great satisfaction. As not a member of the Convention, however, nor probably a single citizen of

the Union, had approved it in all its parts, so I, too, found articles which I thought objectionable. The absence of express declarations ensuring freedom of religion, freedom of the press, freedom of the person under the uninterrupted protection of the Habea corpus, and trial by jury in Civil as well as in Criminal cases, excited my jealousy; and the re-eligibility of the President for life, I quite disapproved. I expressed freely, in letters to my friends, and most particularly to Mr. Madison and General Washington, my approbations and objections, How the good should be secured and the ill brought to rights was the difficulty. To refer it back to a new Convention might endanger the loss of the whole. My first idea was, that the nine States first acting, should accept it unconditionally, and thus secure what in it was good, and that the four last should accept on the previous condition, that certain amendments should be agreed to; but a better course was devised, of accepting the whole, and trusting that the good sense and honest intentions of our citizens, would make the alterations which should be deemed necessary. Accordingly, all accepted, six without objection, and seven with recommendations of specified amendments. Those respecting the press, religion, and juries, with several others, of great value, were accordingly made; but the Habeas corpus was left to the discretion of Congress, and the amendment against the re-eligibility of the President was not proposed. My fears of that feature were founded on the importance of the office, on the fierce contentions it might excite among ourselves, if continuable for life, and the dangers of interference, either with money or arms, by foreign nations, to whom the choice of an American President might become interesting. Examples of this abounded in history; in the case of the Roman Emperors, for instance; of the Popes, while of any significance; of the German Emperors; the Kings of Poland, and the Deys of Barbary. I had observed, too, in the feudal history, and in the recent instance, particularly, of the Stadtholder of Holland, how easily offices, or tenures for life, slide into inheritances. My wish, therefore, was, that the President should be elected for seven years, and be

ineligible afterwards. This term I thought sufficient to enable him, with the concurrence of the Legislature, to carry through and establish any system of improvement he should propose for the general good. But the practice adopted, I think, is better, allowing his continuance for eight years, with a liability to be dropped at half way of the term, making that a period of probation. That his continuance should be restrained seven years was the opinion of the Convention at an earlier stage of its session, when it voted that term, by a majority of eight against two, and by a simple majority that he should be ineligible a second time. This opinion was confirmed by the House so late as July 26, referred to the Committee of detail, reported favorably by them, and changed to the present form by final vote, on the last day but one only of their session. Of this change, three States expressed their disapprobation; New York, by recommending an amendment, that the President should not be eligible a third time, and Virginia and North Carolina that he should not be capable of serving more than eight, in any term of sixteen years; and though this amendment has not been made in form, yet practice seems to have established it. The example of four Presidents voluntarily retiring at the end of their eighth year, and the progress of public opinion, that the principle is salutary, have given it in practice the force of precedent and usage; insomuch, that, should a President consent to be a candidate for a third election, I trust he would be rejected, on this demonstration of ambitious views.

But there was another amendment, of which none of us thought at the time, and in the omission of which, lurks the germ that is to destroy this happy combination of National powers in the General government, for matters of National concern, and independent powers in the States, for what concerns the States severally. In England, it was a great point gained at the Revolution, that the commissions of the Judges, which had hitherto been during pleasure, should thenceforth be made during good behavior. A Judiciary, dependent on the will of

the King, had proved itself the most oppressive of all tools, in the hands of that Magistrate. Nothing, then, could be more salutary, than a change there, to the tenure of good behavior; and the question of good behavior, left to the vote of a simple majority in the two Houses of Parliament. Before the Revolution, we were all good English Whigs, cordial in their free principles, and in their jealousies of their Executive Magistrate. These jealousies are very apparent, in all our state Constitutions; and, in the General government in this instance, we have gone even beyond the English caution, by requiring a vote of two-thirds, in one of the Houses, for removing a Judge; a vote so impossible, where^[6] any defence is made, before men of ordinary prejudices and passions, that our Judges are effectually independent of the nation. But this ought not to be. I would not, indeed, make them dependent on the Executive authority, as they formerly were in England; but I deem it indispensable to the continuance of this government, that they should be submitted to some practical and impartial control; and that this, to be imparted, must be compounded of a mixture of State and Federal authorities. It is not enough that honest men are appointed Judges. All know the influence of interest on the mind of man, and how unconsciously his judgment is warped by that influence. To this bias add that of the esprit de corps, of their peculiar maxim and creed, that “it is the office of a good Judge to enlarge his jurisdiction,” and the absence of responsibility; and how can we expect impartial decision between the General government, of which they are themselves so eminent a part, and an individual State, from which they have nothing to hope or fear? We have seen, too, that contrary to all correct example, they are in the habit of going out of the question before them, to throw an anchor ahead, and grapple further hold for future advances of power. They are then, in fact, the corps of sappers and miners, steadily working to undermine the independent rights of the States, and to consolidate all power in the hands of that government in which they have so important a freehold estate. But it is not by the consolidation, or concentration of powers,

but by their distribution, that good government is effected. Were not this great country already divided into States, that division must be made, that each might do for itself what concerns itself directly, and what it can so much better do than a distant authority. Every State again is divided into counties, each to take care of what lies within its local bounds; each county again into townships or wards, to manage minuter details; and every ward into farms, to be governed each by its individual proprietor. Were we directed from Washington when to sow, and when to reap, we should soon want bread. It is by this partition of cares, descending in gradation from general to particular, that the mass of human affairs may be best managed, for the good and prosperity of all. I repeat, that I do not charge the Judges with wilful and ill-intentioned error; but honest error must be arrested, where its toleration leads to public ruin. As, for the safety of society, we commit honest maniacs to Bedlam, so judges should be withdrawn from their bench, whose erroneous biases are leading us to dissolution. It may, indeed, injure them in fame or in fortune; but it saves the Republic, which is the first and supreme law.

Among the debilities of the government of the Confederation, no one was more distinguished or more distressing, than the utter impossibility of obtaining, from the States, the moneys necessary for the payment of debts, or even for the ordinary expenses of the government. Some contributed a little, some less, and some nothing; and the last furnished at length an excuse for the first to do nothing also. Mr. Adams, while residing at the Hague, had a general authority to borrow what sums might be requisite, for ordinary and necessary expenses. Interest on the public debt, and the maintenance of the diplomatic establishment in Europe, had been habitually provided in this way. He was now elected Vice-President of the United States, was soon to return to America, and had referred our bankers to me for future counsel, on our affairs in their hands. But I had no powers, no

instructions, no means, and no familiarity with the subject. It had always been exclusively under his management, except as to occasional and partial deposits in the hands of Mr. Grand, banker in Paris, for special and local purposes. These last had been exhausted for some time, and I had fervently pressed the Treasury board to replenish this particular deposit, as Mr. Grand now refused to make further advances. They answered candidly, that no funds could be obtained until the new government should get into action, and have time to make its arrangements. Mr. Adams had received his appointment to the court of London, while engaged at Paris, with Dr. Franklin and myself, in the negotiations under our joint commissions. He had repaired thence to London, without returning to the Hague, to take leave of that government. He thought it necessary, however, to do so now, before he should leave Europe, and accordingly went there. I learned his departure from London, by a letter from Mrs. Adams, received on the very day on which he would arrive at the Hague. A consultation with him, and some provision for the future, was indispensable, while we could yet avail ourselves of his powers; for when they would be gone, we should be without resource. I was daily dunned by a Company who had formerly made a small loan to the United States, the principal of which was now become due; and our bankers in Amsterdam, had notified me that the interest on our general debt would be expected in June; that if we failed to pay it, it would be deemed an act of bankruptcy, and would effectually destroy the credit of the United States, and all future prospect of obtaining money there; that the loan they had been authorized to open, of which a third only was filled, had now ceased to get forward, and rendered desperate that hope of resource. I saw that there was not a moment to lose, and set out for the Hague on the second morning after receiving the information of Mr. Adams's journey. I went the direct road by Louvres, Senlis, Roye, Pont St. Maxence, Bois le duc, Gournay, Peronne, Cambray, Bouchain, Valenciennes, Mons, Bruxelles, Malines, Antwerp, Mordick, and Rotterdam, to the Hague,

where I happily found Mr. Adams. He concurred with me at once in opinion, that something must be done, and that we ought to risk ourselves on doing it without instructions, to save the credit of the United States. We foresaw, that before the new government could be adopted, assembled, establish its financial system, get the money into the Treasury, and place it in Europe, considerable time would elapse; that, therefore, we had better provide at once, for the years '88, '89, and '90, in order to place our government at its ease, and our credit in security, during that trying interval. We set out, therefore, by the way of Leyden, for Amsterdam, where we arrived on the 10th. I had prepared an estimate, showing that

	Florins.
There would be necessary for the year '88	531,937-10
'89	538,540
'90	473,540
Total	<u>1,544,017-10</u>
	Florins.
To meet this, the bankers had in hand	79,268-2-8
and the unsold bonds would yield	<u>542,800</u>
	622,068-2-8
Leaving a deficit of	<u>921,949-7-4</u>
We proposed then to borrow a million, yielding	<u>920,000</u>
Which would leave a small deficiency of	1,949-7-4

Mr. Adams accordingly executed 1,000 bonds, for 1,000 florins each, and deposited them in the hands of our bankers, with instructions, however, not to issue them until Congress should ratify the measure. This done, he returned to London, and I set out for Paris; and, as nothing urgent forbade it, I determined to return along the banks of the Rhine, to Strasburg, and thence strike off to Paris. I accordingly left Amsterdam on the 30th of March, and proceeded by Utrecht, Nimeguen, Cleves, Duysberg, Dusseldorf, Cologne, Bonne, Coblentz, Nassau, Hocheim, Frankfort, and made an excursion to Hanau, thence to Mayence, and another excursion to Rudesheim, and Johansberg; then by Oppenheim, Worms, and Manheim, making an

excursion to Heidelberg, then by Spire, Carlsruhe, Rastadt and Kelh, to Strasburg, where I arrived April the 16th, and proceeded again on the 18th, by Phalsbourg, Fenestrange, Dieuze, Moyenvie, Nancy, Toul, Ligny, Barle-duc, St. Diziers, Vitry, Chalons sur Marne, Epernay, Chateau Thierry, Meaux, to Paris, Where I arrived on the 23d of April; and I had the satisfaction to reflect, that by this journey our credit was secured, the new government was placed at ease for two years to come, and that, as well as myself, relieved from the torment of incessant duns, whose just complaints could not be silenced by any means within our power.

A Consular Convention had been agreed on in '84, between Dr. Franklin and the French government, containing several articles, so entirely inconsistent with the laws of the several States, and the general spirit of our citizens, that Congress withheld their ratification, and sent it back to me, with instructions to get those articles expunged, or modified so as to render them compatible with our laws. The Minister unwillingly released us from these concessions, which, indeed, authorized the exercise of powers very offensive in a free State. After much discussion, the Convention was reformed in a considerable degree, and was signed by the Count Montmorin and myself, on the 14th of November, '88; not, indeed, such as I would have wished, but such as could be obtained with good humor and friendship.

On my return from Holland, I found Paris as I had left it, still in high fermentation. Had the Archbishop, on the close of the Assembly of Notables, immediately carried into operation the measures contemplated, it was believed they would all have been registered by the Parliament; but he was slow, presented his edicts, one after another, and at considerable intervals, which gave time for the feelings excited by the proceedings of the Notables to cool off, new claims to be advanced, and a pressure to arise for a fixed constitution,

not subject to changes at the will of the King. Nor should we wonder at this pressure, when we consider the monstrous abuses of power under which this people were ground to powder; when we pass in review the weight of their taxes, and the inequality of their distribution; the oppressions of the tithes, the tailles, the corvees, the gabelles, the farms and the barriers; the shackles on commerce by monopolies; on industry by guilds and corporations; on the freedom of conscience, of thought, and of speech; on the freedom of the press by the Censure; and of the person by Lettres de Cachet; the cruelty of the Criminal code generally; the atrocities of the Rack; the venality of the Judges, and their partialities to the rich; the monopoly of Military honors by the Noblesse; the enormous expenses of the Queen, the Princes and the Court; the prodigalities of pensions; and the riches, luxury, indolence and immorality of the Clergy. Surely under such a mass of misrule and oppression, a people might justly press for a thorough reformation, and might even dismount their rough-shod riders, and leave them to walk on their own legs. The edicts, relative to the corvees and free circulation of grain, were first presented to the Parliament and registered; but those for the impôt territorial, and stamp tax, offered some time after, were refused by the Parliament, which proposed a call of the States General, as alone competent to their authorization. Their refusal produced a Bed of justice, and their exile to Troyes. The Advocates, however, refusing to attend them, a suspension in the administration of justice took place. The Parliament held out for awhile, but the ennui of their exile and absence from Paris, began at length to be felt, and some dispositions for compromise to appear. On their consent, therefore, to prolong some of the former taxes, they were recalled from exile, the King met them in session, November 19, '87, promised to call the States General in the year '92, and a majority expressed their assent to register an edict for successive and annual loans from 1788 to '92; but a protest being entered by the Duke of Orleans, and this encouraging others in a disposition to retract, the King ordered peremptorily the registry of the edict, and

left the Assembly abruptly. The Parliament immediately protested, that the votes for the enregistry had not been legally taken, and that they gave no sanction to the loans proposed. This was enough to discredit and defeat them. Hereupon issued another edict, for the establishment of a cour plenière, and the suspension of all the Parliaments in the kingdom. This being opposed, as might be expected, by reclamations from all the Parliaments and Provinces, the King gave way, and by an edict of July 5th, '88, renounced his cour plenière, and promised the States General for the 1st of May, of the ensuing year; and the Archbishop, finding the times beyond his faculties, accepted the promise of a Cardinal's hat, was removed [September '88] from the Ministry, and M. Necker was called to the department of finance. The innocent rejoicings of the people of Paris on this change provoked the interference of an officer of the city guards, whose order for their dispersion not being obeyed, he charged them with fixed bayonets, killed two or three, and wounded many. This dispersed them for the moment, but they collected the next day in great numbers, burnt ten or twelve guard-houses, killed two or three of the guards, and lost six or eight more of their own number. The city was hereupon put under Martial law, and after awhile the tumult subsided. The effect of this change of ministers, and the promise of the States General at an early day, tranquillized the nation. But two great questions now occurred, 1st. What proportion shall the number of deputies of the Tiers État bear to those of the Nobles and Clergy? And 2d, shall they sit in the same or in distinct apartments? M. Necker, desirous of avoiding himself these knotty questions, proposed a second call of the same Notables, and that their advice should be asked on the subject. They met, November 9, '88; and, by five bureaux against one, they recommended the forms of the States General of 1614; wherein the Houses were separate, and voted by orders, not by persons. But the whole nation declaring at once against this, and that the Tiers État should be, in numbers, equal to both the other orders, and the Parliament deciding for the same proportion, it

was determined so to be, by a declaration of December 27th, '88. A Report of M. Necker, to the King, of about the same date, contained other very important concessions. 1. That the King could neither lay a new tax, nor prolong an old one. 2. It expressed a readiness to agree on the periodical meeting of the States. 3. To consult on the necessary restriction on Lettres de Cachet; and 4. How far the press might be made free. 5. It admits that the States are to appropriate the public money; and 6. That Ministers shall be responsible for public expenditures. And these concessions came from the very heart of the King. He had not a wish but for the good of the nation; and for that object, no personal sacrifice would ever have cost him a moment's regret; but his mind was weakness itself, his constitution timid, his judgment null, and without sufficient firmness even to stand by the faith of his word. His Queen, too, haughty and bearing no contradiction, had an absolute ascendancy over him; and around her were rallied the King's brother d'Artois, the court generally, and the aristocratic part of his Ministers, particularly Breteuil, Broglio, Vauguyon, Foulon, Luzerne, men whose principles of government were those of the age of Louis

X IV. Against this host, the good counsels of Necker, Montmorin, St. Priest, although in unison with the wishes of the King himself, were of little avail. The resolutions of the morning, formed under their advice, would be reversed in the evening, by the influence of the Queen and court. But the hand of heaven weighed heavily indeed on the machinations of this junto; producing collateral incidents, not arising out of the case, yet powerfully co-exciting the nation to force a regeneration of its government, and overwhelming with accumulated difficulties, this liberticide resistance. For, while laboring under the want of money for even ordinary purposes, in a government which required a million of livres a day, and driven to the last ditch by the universal call for liberty, there came on a winter of such severe cold, as was without example in the memory of man, or in the written records of history. The Mercury was at times 50° below the freezing

point of Fahrenheit, and 22° below that of Reaumur. All out-door labor was suspended, and the poor, without the wages of labor were, of course, without either bread or fuel. The government found its necessities aggravated by that of procuring immense quantities of firewood, and of keeping great fires at all the cross streets, around which the people gathered in crowds, to avoid perishing with cold. Bread, too, was to be bought, and distributed daily, gratis, until a relaxation of the season should enable the people to work; and the slender stock of bread stuff had for some time threatened famine, and had raised that article to an enormous price. So great, indeed, was the scarcity of bread, that, from the highest to the lowest citizen, the bakers were permitted to deal but a scanty allowance per head, even to those who paid for it; and, in cards of invitation to dine in the richest houses, the guest was notified to bring his own bread. To eke out the existence of the people, every person who had the means, was called on for a weekly subscription, which the Cures collected, and employed in providing messes for the nourishment of the poor, and vied with each other in devising such economical compositions of food, as would subsist the greatest number with the smallest means. This want of bread had been foreseen for some time past, and M. de Montmorin had desired me to notify it in America, and that, in addition to the market price, a premium should be given on what should be brought from the United States. Notice was accordingly given, and produced considerable supplies. Subsequent information made the importations from America, during the months of March, April, and May, into the Atlantic ports of France, amount to about twenty-one thousand barrels of flour, besides what went to other ports, and in other months; while our supplies to their West Indian islands relieved them also from that drain. This distress for bread continued till July.

法国三级会议

Hitherto no acts of popular violence had been produced by the struggle for political reformation. Little riots, on ordinary incidents, had taken place as at other times, in different parts of the kingdom, in which some lives, perhaps a dozen or twenty, had been lost; but in the month of April, a more serious one occurred in Paris, unconnected, indeed, with the Revolutionary principle, but making part of the history of the day. The Fauxbourg St. Antoine is a quarter of the city inhabited entirely by the class of day laborers and journeymen in every line. A rumor was spread among them, that a great paper manufacturer, of the name of Reveillon, had proposed, on some occasion, that their wages should be lowered to fifteen sous a day. Inflamed at once into rage, and without inquiring into its truth, they flew to his house in vast numbers, destroyed everything in it, and in his magazines and work-shops, without secreting, however, a pin's worth to themselves, and were continuing this work of devastation, when the regular troops were called in. Admonitions being disregarded, they were of necessity fired on, and a regular action ensued, in which about one hundred of them were killed, before the rest would disperse. There had rarely passed a year without such a riot, in some part or other of the Kingdom; and this is distinguished only as contemporary with the Revolution, although not produced by it.

The States General were opened on the 5th of May, '89, by speeches from the King, the Garde des Sceaux, Lamoignon, and M. Necker. The last was thought to trip too lightly over the constitutional reformatations which were expected. His notices of them in this speech, were not as full as in his previous 'Rapport au Roi.' This was observed, to his disadvantage; but much allowance should have been made for the situation in which he was placed, between his own counsels, and those of the ministers and party of the court. Overruled in his own opinions, compelled to deliver, and to gloss over those of his opponents, and even to keep their secrets, he could not come forward in his own attitude.

The composition of the Assembly, although equivalent, on the whole, to what had been expected, was something different in its elements. It had been supposed, that a superior education would carry into the scale of the Commons a respectable portion of the Noblesse. It did so as to those of Paris, of its vicinity, and of the other considerable cities, whose greater intercourse with enlightened society had liberalized their minds, and prepared them to advance up to the measure of the times. But the Noblesse of the country, which constituted two-thirds of that body, were far in their rear. Residing constantly on their patrimonial feuds, and familiarized, by daily habit, with Seigneurial powers and practices, they had not yet learned to suspect their inconsistency with reason and right. They were willing to submit to equality of taxation, but not to descend from their rank and prerogatives to be incorporated in session with the Tiers État. Among the Clergy, on the other hand, it had been apprehended that the higher orders of the Hierarchy, by their wealth and connections, would have carried the elections generally; but it turned out, that in most cases, the lower clergy had obtained the popular majorities. These consisted of the Curés, sons of the peasantry, who had been employed to do all the drudgery of parochial services for ten, twenty, or thirty Louis ayear; while their superiors were consuming their

princely revenues in palaces of luxury and indolence.

The objects for which this body was convened, being of the first order of importance, I felt it very interesting to understand the views of the parties of which it was composed, and especially the ideas prevalent as to the organization contemplated for their government. I went, therefore, daily from Paris to Versailles, and attended their debates, generally till the hour of adjournment. Those of the Noblesse were impassioned and tempestuous. They had some able men on both sides, actuated by equal zeal. The debates of the Commons were temperate, rational, and inflexibly firm. As preliminary to all other business, the awful questions came on, shall the States sit in one, or in distinct apartments? And shall they vote by heads or houses? The opposition was soon found to consist of the Episcopal order among the clergy, and two-thirds of the Noblesse; while the Tiers État were, to a man, united and determined. After various propositions of compromise had failed, the Commons undertook to cut the Gordian knot. The Abbé Sieyes, the most logical head of the nation, (author of the pamphlet "Qu'est ce que le Tiers État?" which had electrified that country, as Paine's

Common Sense did us,) after an impressive speech on the 10th of June, moved that a last invitation should be sent to the Noblesse and Clergy, to attend in the hall of the States, collectively or individually, for the verification of powers, to which the Commons would proceed immediately, either in their presence or absence. This verification being finished, a motion was made, on the 15th, that they should constitute themselves a National Assembly; which was decided on the 17th, by a majority of four-fifths. During the debates on this question, about twenty of the Curés had joined them, and a proposition was made, in the chamber of the Clergy, that their whole body should join. This was rejected, at first, by a small majority only; but, being afterwards somewhat modified, it was decided affirmatively, by a majority of eleven. While this was under debate, and unknown to the

court, to wit, on the 19th, a council was held in the afternoon, at Marly, wherein it was proposed that the King should interpose, by a declaration of his sentiments, in a *séance royale*. A form of declaration was proposed by Necker, which, while it censured, in general, the proceedings, both of the Nobles and Commons, announced the King's views, such as substantially to coincide with the Commons. It was agreed to in Council, the *séance* was fixed for the 22d, the meetings of the States were till then to be suspended, and everything, in the meantime, kept secret. The members, the next morning (the 20th) repairing to their house, as usual, found the doors shut and guarded, a proclamation posted up for a *séance royale* on the 22d, and a suspension of their meetings in the meantime. Concluding that their dissolution was now to take place, they repaired to a building called the "*Jeu de paume*" (or Tennis court) and there bound themselves by oath to each other, never to separate, of their own accord, till they had settled a constitution for the nation, on a solid basis, and, if separated by force, that they would reassemble in some other place. The next day they met in the church of St. Louis, and were joined by a majority of the clergy. The heads of the Aristocracy saw that all was lost without some bold exertion. The King was still at Marly. Nobody was permitted to approach him but their friends. He was assailed by falsehoods in all shapes. He was made to believe that the Commons were about to absolve the army from their oath of fidelity to him, and to raise their pay. The court party were now all rage and desperation. They procured a committee to be held, consisting of the King and his Ministers, to which Monsieur and the Count d'Artois should be admitted. At this committee, the latter attacked M. Necker personally, arraigned his declaration, and proposed one which some of his prompters had put into his hands. M. Necker was brow-beaten and intimidated, and the King shaken. He determined that the two plans should be deliberated on the next day, and the *séance royale* put off a day longer. This encouraged a fiercer attack on M. Necker the next day. His draught of a declaration was entirely broken up, and that of

the Count d'Artois inserted into it. Himself and Montmorin offered their resignation, which was refused; the Count d'Artois saying to M. Necker, "No, sir, you must be kept as the hostage; we hold you responsible for all the ill which shall happen. " This change of plan was immediately whispered without doors. The Noblesse were in triumph; the people in consternation. I was quite alarmed at this state of things. The soldiery had not yet indicated which side they should take, and that which they should support would be sure to prevail. I considered a successful reformation of government in France, as insuring a general reformation through Europe, and the resurrection, to a new life, of their people, now ground to dust by the abuses of the governing powers. I was much acquainted with the leading patriots of the Assembly. Being from a country which had successfully passed through a similar reformation, they were disposed to my acquaintance, and had some confidence in me. I urged, most strenuously, an immediate compromise; to secure what the government was now ready to yield, and trust to future occasions for what might still be wanting. It was well understood that the King would grant, at this time, 1. Freedom of the person by Habeas corpus: 2. Freedom of conscience: 3. Freedom of the press: 4. Trial by jury: 5. A representative Legislature: 6. Annual meetings: 7. The origination of laws: 8. The exclusive right of taxation and appropriation: and 9. The responsibility of Ministers; and with the exercise of these powers they could obtain, in future, whatever might be further necessary to improve and preserve their constitution. They thought otherwise, however, and events have proved their lamentable error. For, after thirty years of war, foreign and domestic, the loss of millions of lives, the prostration of private happiness, and the foreign subjugation of their own country for a time, they have obtained no more, nor even that securely. They were unconscious of (for who could foresee?) the melancholy sequel of their well-meant perseverance; that their physical force would be usurped by a first tyrant to trample on the independence, and even the existence, of other nations: that this

would afford a fatal example for the atrocious conspiracy of Kings against their people; would generate their unholy and homicide alliance to make common cause among themselves, and to crush, by the power of the whole, the efforts of any part to moderate their abuses and oppressions.

When the King passed, the next day, through the lane formed from the Chateau to the "Hotel des États," there was a dead silence. He was about an hour in the House, delivering his speech and declaration. On his coming out, a feeble cry of "vive le Roi" was raised by some children, but the people remained silent and sullen. In the close of his speech, he had ordered that the members should follow him, and resume their deliberations the next day. The Noblesse followed him, and so did the Clergy, except about thirty, who, with the Tiers, remained in the room, and entered into deliberation. They protested against what the King had done, adhered to all their former proceedings, and resolved the inviolability of their own persons. An officer came, to order them out of the room in the King's name. "Tell those who sent you" said Mirabeau, "that we shall not move hence but at our own will, or the point of the bayonet." In the afternoon, the people, uneasy, began to assemble in great numbers in the courts, and vicinities of the palace. This produced alarm. The Queen sent for M. Necker. He was conducted, amidst the shouts and acclamations of the multitude, who filled all the apartments of the palace. He was a few minutes only with the Queen, and what passed between them did not transpire. The King went out to ride. He passed through the crowd to his carriage, and into it, without being in the least noticed. As M. Necker followed him, universal acclamations were raised of "vive Monsieur Necker, vive le sauveur de la France opprimée." He was conducted back to his house with the same demonstrations of affection and anxiety. About two hundred deputies of the Tiers, catching the enthusiasm of the moment, went to his house, and

extorted from him a promise that he would not resign. On the 25th, forty-eight of the Nobles joined the Tiers, and among them the Duke of Orleans. There were then with them one hundred and sixty-four members of the Clergy, although the minority of that body still sat apart, and called themselves the Chamber of the Clergy. On the 26th, the Archbishop of Paris joined the Tiers, as did some others of the Clergy and of the Noblesse.

These proceedings had thrown the people into violent ferment. It gained the soldiery, first of the French guards, extended to those of every other denomination, except the Swiss, and even to the body guards of the King. They began to quit their barracks, to assemble in squads, to declare they would defend the life of the King, but would not be the murderers of their fellow-citizens. They called themselves the soldiers of the nation, and left now no doubt on which side they would be, in case of rupture. Similar accounts came in from the troops in other parts of the kingdom, giving good reason to believe they would side with their fathers and brothers, rather than with their officers. The operation of this medicine at Versailles was as sudden as it was powerful. The alarm there was so complete, that in the afternoon of the 27th, the King wrote, with his own hand, letters to the Presidents of the Clergy and Nobles, engaging them immediately to join the Tiers. These two bodies were debating, and hesitating, when notes from the Count d'Artois decided their compliance. They went in a body, and took their seats with the Tiers, and thus rendered the union of the orders in one chamber complete.

The Assembly now entered on the business of their mission, and first proceeded to arrange the order in which they would take up the heads of their constitution, as follows:

First, and as Preliminary to the whole, a general Declaration of the Rights of Man. Then, specifically, the Principles of the Monarchy; Rights of the Nation; Rights of the King; Rights of the Citizens;

Organization and Rights of the National Assembly; Forms necessary for the enactment of Laws; Organization and Functions of the Provincial and Municipal Assemblies; Duties and Limits of the Judiciary power; Functions and Duties of the Military power.

A Declaration of the Rights of Man, as the preliminary of their work, was accordingly prepared and proposed by the Marquis de La Fayette.

But the quiet of their march was soon disturbed by information that troops, and particularly the foreign troops, were advancing on Paris from various quarters. The King had probably been advised to this, on the pretext of preserving peace in Paris. But his advisers were believed to have other things in contemplation. The Marshal de Broglie was appointed to their command, a high-flying aristocrat, cool and capable of everything. Some of the French guards were soon arrested, under other pretexts, but really, on account of their dispositions in favor of the National cause. The people of Paris forced their prison, liberated them, and sent a deputation to the Assembly to solicit a pardon. The Assembly recommended peace and order to the people of Paris, the prisoners to the King, and asked from him the removal of the troops. His answer was negative and dry, saying they might remove themselves, if they pleased, to Noyons or Soissons. In the meantime, these troops, to the number of twenty or thirty thousand, had arrived, and were posted in, and between Paris and Versailles. The bridges and passes were guarded. At three o'clock in the afternoon of the 11th of July, the Count de La Luzerne was sent to notify M. Necker of his dismissal, and to enjoin him to retire instantly, without saying a word of it to anybody. He went home, dined, and proposed to his wife a visit to a friend, but went in fact to his country house at St. Ouen, and at midnight set out for Brussels. This was not known till the next day (the 12th,) when the whole Ministry was changed, except Villedeuil, of the domestic department,

and Barenton Garde des Sceaux. The changes were as follows:

The Baron de Breteuil, President of the Council of Finance; de la Galaisiere, Comptroller General, in the room of M. Necker; the Marshal de Broglie, Minister of War, and Foulon under him, in the room of Puy-Segur; the Duke de la Vauguyon, Minister of Foreign Affairs, instead of the Count de Montmorin; de La Porte, Minister of Marine, in place of the Count de La Luzerne; St. Priest was also removed from the Council. Luzerne and Puy-Segur had been strongly of the Aristocratic party in the Council, but they were not considered equal to the work now to be done. The King was now completely in the hands of men, the principal among whom had been noted, through their lives, for the Turkish despotism of their characters, and who were associated around the King, as proper instruments for what was to be executed. The news of this change began to be known at Paris, about one or two o'clock. In the afternoon, a body of about one hundred German cavalry were

advanced, and drawn up in the Place Louis XV, and about two hundred Swiss posted at a little distance in their rear. This drew people to the spot, who thus accidentally found themselves in front of the troops, merely at first as spectators; but, as their numbers increased, their indignation rose. They retired a few steps, and posted themselves on and behind large piles of stones, large and small, collected in that place for a bridge, which was to be built adjacent to it. In this position, happening to be in my carriage on a visit, I passed through the lane they had formed, without interruption. But the moment after I had passed, the people attacked the cavalry with stones. They charged, but the advantageous position of the people, and the showers of stones, obliged the horse to retire, and quit the field altogether, leaving one of their number on the ground, and the Swiss in the rear not moving to their aid. This was the signal for universal insurrection, and this body of cavalry, to avoid being massacred, retired towards Versailles. The people now armed

themselves with such weapons as they could find in armorer's shops, and private houses, and with bludgeons; and were roaming all night, through all parts of the city, without any decided object. The next day (the 13th,) the Assembly pressed on the King to send away the troops, to permit the Bourgeoisie of Paris to arm for the preservation of order in the city, and offered to send a deputation from their body to tranquillize them; but their propositions were refused. A committee of magistrates and electors of the city were appointed by those bodies, to take upon them its government. The people, now openly joined by the French guards, forced the prison of St. Lazare, released all the prisoners, and took a great store of corn, which they carried to the corn-market. Here they got some arms, and the French guards began to form and train them. The city-committee determined to raise forty-eight thousand Bourgeois, or rather to restrain their numbers to forty-eight thousand. On the 14th, they sent one of their members (Monsieur de Corny) to the Hotel des Invalides, to ask arms for their Garde Bourgeoise. He was followed by, and he found there, a great collection of people. The Governor of the Invalids came out, and represented the impossibility of his delivering arms, without the orders of those from whom he received them. De Corny advised the people then to retire, and retired himself; but the people took possession of the arms. It was remarkable, that not only the Invalids themselves made no opposition, but that a body of five thousand foreign troops, within four hundred yards, never stirred. M. de Corny, and five others, were then sent to ask arms of M. de Launay, Governor of the Bastile. They found a great collection of people already before the place, and they immediately planted a flag of truce, which was answered by a like flag hoisted on the parapet. The deputation prevailed on the people to fall back a little, advanced themselves to make their demand of the Governor, and in that instant, a discharge from the Bastile killed four persons of those nearest to the deputies. The deputies retired. I happened to be at the house of M. de Corny, when he returned to it, and received from him a narrative of these

transactions. On the retirement of the deputies, the people rushed forward, and almost in an instant, were in possession of a fortification of infinite strength, defended by one hundred men, which in other times had stood several regular sieges, and had never been taken. How they forced their entrance has never been explained. They took all the arms, discharged the prisoners, and such of the garrison as were not killed in the first moment of fury; carried the Governor and Lieutenant Governor, to the Place de Grève, (the place of public execution,) cut off their heads, and sent them through the city, in triumph, to the Palais royal. About the same instant, a treacherous correspondence having been discovered in M. de Flesselles, Prevôt des Marchands, they seized him in the Hotel de Ville, where he was in the execution of his office, and cut off his head. These events, carried imperfectly to Versailles, were the subject of two successive deputations from the Assembly to the King, to both of which he gave dry and hard answers; for nobody had as yet been permitted to inform him, truly and fully, of what had passed at Paris. But at night, the Duke de Liancourt forced his way into the King's bed chamber, and obliged him to hear a full and animated detail of the disasters of the day in Paris. He went to bed fearfully impressed. The decapitation of de Launay worked powerfully through the night on the whole Aristocratic party; insomuch, that in the morning, those of the greatest influence on the Count d'Artois, represented to him the absolute necessity that the King should give up everything to the Assembly. This according with the dispositions of the King, he went about eleven o'clock, accompanied only by his brothers, to the Assembly, and there read to them a speech, in which he asked their interposition to re-establish order. Although couched in terms of some caution, yet the manner in which it was delivered, made it evident that it was meant as a surrender at discretion. He returned to the Chateau on foot, accompanied by the Assembly. They sent off a deputation to quiet Paris, at the head of which was the Marquis de La Fayette, who had, the same morning, been named Commandant en chef of the Milice Bourgeoise; and

Monsieur Bailly, former President of the States General, was called for as *Prevôt des Marchands*. The demolition of the Bastile was now ordered and begun. A body of the Swiss guards, of the regiment of Ventimille, and the city horse guards joined the people. The alarm at Versailles increased. The foreign troops were ordered off instantly. Every Minister resigned. The King confirmed Bailly as *Prevôt des Marchands*, wrote to M. Necker, to recall him, sent his letter open to the Assembly, to be forwarded by them, and invited them to go with him to Paris the next day, to satisfy the city of his dispositions; and that night, and the next morning, the Count d'Artois, and M. de Montesson, a deputy connected with him, Madame de Polignac, Madame de Guiche, and the Count de Vaudreuil, favorites of the Queen, the Abbé de Vermont her confessor, the Prince of Condé, and Duke of Bourbon fled. The King came to Paris, leaving the Queen in consternation for his return. Omitting the less important figures of the procession, the King's carriage was in the centre; on each side of it, the Assembly, in two ranks a foot; at their head the Marquis de La Fayette, as Commander-in-chief, on horseback, and Bourgeois guards before and behind. About sixty thousand citizens, of all forms and conditions, armed with the conquest of the Bastile and Invalids, as far as they would go, the rest with pistols, swords, pikes, pruning-hooks, scythes, &c., lined all the streets through which the procession passed, and with the crowds of people in the streets, doors, and windows, saluted them everywhere with the cries of "vive la nation," but not a single "vive le Roi" was heard. The King stopped at the Hotel de Ville. There M. Bailly presented, and put into his hat, the popular cockade, and addressed him. The King being unprepared, and unable to answer, Bailly went to him, gathered from him some scraps of sentences, and made out an answer, which he delivered to the audience, as from the King. On their return, the popular cries were "vive le Roi et la nation." He was conducted by a *garde Bourgeoise* to his palace at Versailles, and thus concluded an "amende honorable" as no sovereign ever made, and no people ever received.

And here, again, was lost another precious occasion of sparing to France the crimes and cruelties through which she has since passed, and to Europe, and finally America, the evils which flowed on them also from this mortal source. The King was now become a passive machine in the hands of the National Assembly, and had he been left to himself, he would have willingly acquiesced in whatever they should devise as best for the nation. A wise constitution would have been formed, hereditary in his line, himself placed at its head; with powers so large as to enable him to do all the good of his station, and so limited, as to restrain him from its abuse. This he would have faithfully administered, and more than this, I do not believe, he ever wished. But he had a Queen of absolute sway over his weak mind and timid virtue, and of a character the reverse of his in all points. This angel, as gaudily painted in the rhapsodies of Burke, with some smartness of fancy, but no sound sense, was proud, disdainful of restraint, indignant at all obstacles to her will, eager in the pursuit of pleasure, and firm enough to hold to her desires, or perish in their wreck. Her inordinate gambling and dissipations, with those of the Count d'Artois, and others of her clique, had been a sensible item in the exhaustion of the treasury, which called into action the reforming hand of the nation; and her opposition to it, her inflexible perverseness, and dauntless spirit, led herself to the Guillotine, drew the King on with her, and plunged the world into crimes and calamities which will forever stain the pages of modern history. I have ever believed, that had there been no Queen, there would have been no revolution. No force would have been provoked, nor exercised. The King would have gone hand in hand with the wisdom of his sounder counsellors who, guided by the increased lights of the age, wished only, with the same pace, to advance the principles of their social constitution. The deed which closed the mortal course of these sovereigns, I shall neither approve nor condemn. I am not prepared to say, that the first magistrate of a nation cannot commit treason

against his country, or is unamenable to its punishment; nor yet, that where there is no written law, no regulated tribunal, there is not a law in our hearts, and a power in our hands, given for righteous employment in maintaining right, and redressing wrong. Of those who judged the King, many thought him wilfully criminal; many, that his existence would keep the nation in perpetual conflict with the horde of Kings who would war against a generation which might come home to themselves, and that it were better that one should die than all. I should not have voted with this portion of the legislature. I should have shut up the Queen in a convent, putting harm out of her power and placed the King in his station, investing him with limited powers, which, I verily believe, he would have honestly exercised, according to the measure of his understanding. In this way, no void would have been created, courting the usurpation of a military adventurer, nor occasion given for those enormities which demoralized the nations of the world, and destroyed, and is yet to destroy, millions and millions of its inhabitants. There are three epochs in history, signalized by the total extinction of national morality. The first was of the successors of Alexander, not omitting himself: The next, the successors of the first Caesar: The third, our own age. This was begun by the partition of Poland, followed by that of the treaty of Pilnitz; next the conflagration of Copenhagen; then the enormities of Bonaparte, partitioning the earth at his will, and devastating it with fire and sword; now the conspiracy of Kings, the successors of Bonaparte, blasphemously calling themselves the Holy Alliance, and treading in the footsteps of their incarcerated leader; not yet, indeed, usurping the government of other nations, avowedly and in detail, but controlling by their armies the forms in which they will permit them to be governed; and reserving, in petto, the order and extent of the usurpations further meditated. But I will return from a digression, anticipated, too, in time, into which I have been led by reflection on the criminal passions which refused to the world a favorable occasion of saving it from the afflictions it has since suffered.

法国《人权宣言》

攻占巴士底狱

M. Necker had reached Basle before he was overtaken by the letter of the King, inviting him back to resume the office he had recently left. He returned immediately, and all the other Ministers having resigned, a new administration was named, to wit: St. Priest and Montmorin were restored; the Archbishop of Bordeaux was appointed Garde des Sceaux, La Tour du Pin, Minister of War; La Luzerne, Minister of Marine. This last was believed to have been effected by the friendship of Montmorin; for although differing in politics, they continued firm in friendship, and Luzerne, although not an able man, was thought an honest one. And the Prince of Bauvau was taken into the Council.

Seven Princes of the blood Royal, six ex-Ministers, and many of the high Noblesse, having fled, and the present Ministers, except Luzerne, being all of the popular party, all the functionaries of government moved, for the present, in perfect harmony.

In the evening of August the 4th, and on the motion of the Viscount de Noailles, brother in law of La Fayette, the Assembly

abolished all titles of rank, all the abusive privileges of feudalism, the tithes and casuals of the Clergy, all Provincial privileges, and, in fine, the Feudal regimen generally. To the suppression of tithes, the Abbé Sieyès was vehemently opposed; but his learned and logical arguments were unheeded, and his estimation lessened by a contrast of his egoism (for he was beneficed on them), with the generous abandonment of rights by the other members of the Assembly. Many days were employed in putting into the form of laws, the numerous demolitions of ancient abuses; which done, they proceeded to the preliminary work of a Declaration of Rights. There being much concord of sentiment on the elements of this instrument, it was liberally framed, and passed with a very general approbation. They then appointed a Committee for the “reduction of a projet” of a constitution, at the head of which was the Archbishop of Bordeaux. I received from him, as chairman of the Committee, a letter of July 20th, requesting me to attend and assist at their deliberations; but I excused myself, on the obvious considerations, that my mission was to the King as Chief Magistrate of the nation, that my duties were limited to the concerns of my own country, and forbade me to intermeddle with the internal transactions of that, in which I had been received under a specific character only. Their plan of a constitution was discussed in sections, and so reported from time to time, as agreed to by the Committee. The first respected the general frame of the government; and that this should be formed into three departments, Executive, Legislative and Judiciary, was generally agreed. But when they proceeded to subordinate developments, many and various shades of opinion came into conflict, and schism, strongly marked, broke the Patriots into fragments of very discordant principles. The first question, Whether there should be a King? met with no open opposition; and it was readily agreed, that the government of France should be monarchical and hereditary. Shall the King have a negative on the laws? shall that negative be absolute, or suspensive only? Shall there be two Chambers of Legislation, or one only? If two, shall one of

them be hereditary? or for life? or for a fixed term? and named by the King? or elected by the people? These questions found strong differences of opinion, and produced repulsive combinations among the Patriots. The Aristocracy was cemented by a common principle, of preserving the ancient regime, or whatever should be nearest to it. Making this their polar star, they moved in phalanx, gave preponderance on every question to the minorities of the Patriots, and always to those who advocated the least change. The features of the new constitution were thus assuming a fearful aspect, and great alarm was produced among the honest Patriots by these dissensions in their ranks. In this uneasy state of things, I received one day a note from the Marquis de La Fayette, informing me that he should bring a party of six or eight friends to ask a dinner of me the next day. I assured him of their welcome. When they arrived, they were La Fayette himself, Duport, Barnave, Alexander la Meth, Blacon, Mounier, Maubourg, and Dagout. These were leading Patriots, of honest but differing opinions, sensible of the necessity of effecting a coalition by mutual Sacrifices, knowing each other, and not afraid, therefore, to unbosom themselves mutually. This last was a material principle in the selection. With this view, the Marquis had invited the conference, and had fixed the time and place inadvertently, as to the embarrassment under which it might place me. The cloth being removed, and wine set on the table, after the American manner, the Marquis introduced the objects of the conference, by summarily reminding them of the state of things in the Assembly, the course which the principles of the Constitution were taking, and the inevitable result, unless checked by more concord among the Patriots themselves. He observed, that although he also had his opinion, he was ready to sacrifice it to that of his brethren of the same cause; but that a common opinion must now be formed, or the Aristocracy would carry everything, and that, whatever they should now agree on, he, at the head of the National force, would maintain. The discussions began at the hour of four, and were continued till ten o'clock in the evening;

during which time, I was a silent witness to a coolness and candor of argument, unusual in the conflicts of political opinion; to a logical reasoning, and chaste eloquence, disfigured by no gaudy tinsel of rhetoric or declamation, and truly worthy of being placed in parallel with the finest dialogues of antiquity, as handed to us by Xenophon, by Plato and Cicero. The result was, that the King should have a suspensive veto on the laws, that the legislature should be composed of a single body only, and that to be chosen by the people. This Concordate decided the fate of the constitution. The Patriots all rallied to the principles thus settled, carried every question agreeably to them, and reduced the Aristocracy to insignificance and impotence. But duties of exculpation were now incumbent on me. I waited on Count Montmorin the next morning, and explained to him, with truth and candor, how it had happened that my house had been made the scene of conferences of such a character. He told me, he already knew everything which had passed, that so far from taking umbrage at the use made of my house on that occasion, he earnestly wished I would habitually assist at such conferences, being sure I should be useful in moderating the warmer spirits, and promoting a wholesome and practicable reformation only. I told him, I knew too well the duties I owed to the King, to the nation, and to my own country, to take any part in councils concerning their internal government, and that I should persevere, with care, in the character of a neutral and passive spectator, with wishes only, and very sincere ones, that those measures might prevail which would be for the greatest good of the nation. I have no doubts, indeed, that this conference was previously known and approved by this honest Minister, who was in confidence and communication with the Patriots, and wished for a reasonable reform of the Constitution.

Here I discontinue my relation of the French Revolution. The minuteness with which I have so far given its details, is

disproportioned to the general scale of my narrative. But I have thought it justified by the interest which the whole world must take in this Revolution. As yet, we are but in the first chapter of its history. The appeal to the rights of man, which had been made in the United States, was taken up by France, first of the European nations. From her, the spirit has spread over those of the South. The tyrants of the North have allied indeed against it; but it is irresistible. Their opposition will only multiply its millions of human victims; their own satellites will catch it, and the condition of man through the civilized world, will be finally and greatly ameliorated. This is a wonderful instance of great events from small causes. So inscrutable is the arrangement of causes and consequences in this world, that a two-penny duty on tea, unjustly imposed in a sequestered part of it, changes the condition of all its inhabitants. I have been more minute in relating the early transactions of this regeneration, because I was in circumstances peculiarly favorable for a knowledge of the truth. Possessing the confidence and intimacy of the leading Patriots, and more than all, of the Marquis Fayette, their head and Atlas, who had no secrets from me, I learned with correctness the views and proceedings of that party; while my intercourse with the diplomatic missionaries of Europe at Paris, all of them with the court, and eager in prying into its councils and proceedings, gave me a knowledge of these also. My information was always, and immediately committed to writing, in letters to Mr. Jay, and often to my friends, and a recurrence to these letters now insures me against errors of memory.

These opportunities of information ceased at this period, with my retirement from this interesting scene of action. I had been more than a year soliciting leave to go home, with a view to place my daughters in the society and care of their friends, and to return for a short time to my station at Paris. But the metamorphosis through which our government was then passing from its Chrysalid to its Organic form suspended its action in a great degree; and it was not till the last of

August, that I received the permission I had asked. And here, I cannot leave this great and good country, without expressing my sense of its pre-eminence of character among the nations of the earth. A more benevolent people I have never known, nor greater warmth and devotedness in their select friendships. Their kindness and accommodation to strangers is unparalleled, and the hospitality of Paris is beyond anything I had conceived to be practicable in a large city. Their eminence, too, in science, the communicative dispositions of their scientific men, the politeness of the general manners, the ease and vivacity of their conversation, give a charm to their society, to be found nowhere else. In a comparison of this, with other countries, we have the proof of primacy, which was given to Themistocles, after the battle of Salamis. Every general voted to himself the first reward of valor, and the second to Themistocles. So, ask the travelled inhabitant of any nation, in what country on earth would you rather live? — Certainly, in my own, where are all my friends, my relations, and the earliest and sweetest affections and recollections of my life. Which would be your second choice? France.

On the 26th of September I left Paris for Havre, where I was detained by contrary winds until the 8th of October. On that day, and the 9th, I crossed over to Cowes, where I had engaged the *Clermont*, Capt. Colley, to touch for me. She did so; but here again we were detained by contrary winds, until the 22d, when we embarked, and landed at Norfolk on the 23d of November. On my way home, I passed some days at Eppington, in Chesterfield, the residence of my friend and connection, Mr. Eppes; and, while there, I received a letter from the President, General Washington, by express, covering an appointment to be Secretary of State. I received it with real regret. My wish had been to return to Paris, where I had left my household establishment, as if there myself, and to see the end of the Revolution, which I then thought would be certainly and happily closed in less than a year. I then meant to return home, to withdraw from political

life, into which I had been impressed by the circumstances of the times, to sink into the bosom of my family and friends, and devote myself to studies more congenial to my mind. In my answer of December 15th, I expressed these dispositions candidly to the President, and my preference of a return to Paris; but assured him, that if it was believed I could be more useful in the administration of the government, I would sacrifice my own inclinations without hesitation, and repair to that destination; this I left to his decision. I arrived at Monticello on the 23d of December, where I received a second letter from the President, expressing his continued wish that I should take my station there, but leaving me still at liberty to continue in my former office, if I could not reconcile myself to that now proposed. This silenced my reluctance, and I accepted the new appointment.

In the interval of my stay at home, my eldest daughter had been happily married to the eldest son of the Tuckahoe branch of Randolphs, a young gentleman of genius, science, and honorable mind, who afterwards filled a dignified station in the General Government, and the most dignified in his own State. I left Monticello on the first of March, 1790, for New York. At Philadelphia I called on the venerable and beloved Franklin. He was then on the bed of sickness from which he never rose. My recent return from a country in which he had left so many friends, and the perilous convulsions to which they had been exposed, revived all his anxieties to know what part they had taken, what had been their course, and what their fate. He went over all in succession, with a rapidity and animation almost too much for his strength. When all his inquiries were satisfied, and a pause took place, I told him I had learned with much pleasure that, since his return to America, he had been occupied in preparing for the world the history of his own life. I cannot say much of that, said he; but I will give you a sample of what I shall leave; and he directed his little grandson (William Bache) who was standing by the bedside, to

hand him a paper from the table, to which he pointed. He did so; and the Doctor putting it into my hands, desired me to take it and read it at my leisure. It was about a quire of folio paper, written in a large and running hand, very like his own. I looked into it slightly, then shut it, and said I would accept his permission to read it, and would carefully return it. He said. "no, keep it." Not certain of his meaning, I again looked into it, folded it for my pocket, and said again, I would certainly return it. "No" said he, "keep it." I put it into my pocket, and shortly after took leave of him. He died on the 17th of the ensuing month of April; and as I understood that he had bequeathed all his papers to his grandson, William Temple Franklin, I immediately wrote to Mr. Franklin, to inform him I possessed this paper, which I should consider as his property, and would deliver to his order. He came on immediately to New York, called on me for it, and I delivered it to him. As he put it into his pocket, he said carelessly, he had either the original, or another copy of it, I do not recollect which. This last expression struck my attention forcibly, and for the first time suggested to me the thought that Dr. Franklin had meant it as a confidential deposit in my hands, and that I had done wrong in parting from it. I have not yet seen the collection he published of Dr. Franklin's works, and, therefore, know not if this is among them. I have been told it is not. It contained a narrative of the negotiations between Dr. Franklin and the British Ministry, when he was endeavoring to prevent the contest of arms which followed. The negotiation was brought about by the intervention of Lord Howe and his sister, who, I believe, was called Lady Howe, but I may misremember her title. Lord Howe seems to have been friendly to America, and exceedingly anxious to prevent a rupture. His intimacy with Dr. Franklin, and his position with the Ministry, induced him to undertake a mediation between them; in which his sister seemed to have been associated. They carried from one to the other, backwards and forwards, the several propositions and answers which passed, and seconded with their own intercessions, the importance of mutual

sacrifices, to preserve the peace and connection of the two countries. I remember that Lord North's answers were dry, unyielding, in the spirit of unconditional submission, and betrayed an absolute indifference to the occurrence of a rupture; and he said to the mediators distinctly, at last, that "a rebellion was not to be deprecated on the part of Great Britain; that the confiscations it would produce would provide for many of their friends." This expression was reported by the mediators to Dr. Franklin, and indicated so cool and calculated a purpose in the Ministry, as to render compromise hopeless, and the negotiation was discontinued. If this is not among the papers published, we ask, what has become of it? I delivered it with my own hands, into those of Temple Franklin. It certainly established views so atrocious in the British government, that its suppression would, to them, be worth a great price. But could the grandson of Dr. Franklin be, in such degree, an accomplice in the parricide of the memory of his immortal grandfather? The suspension for more than twenty years of the general publication, bequeathed and confided to him, produced, for awhile, hard suspicions against him; and if, at last, all are not published, a part of these suspicions may remain with some.

I arrived at New York on the 21st of March, where Congress was in session.

The Anas

In these three volumes will be found copies of the official opinions given in writing by me to General Washington, while I was Secretary of State, with sometimes the documents belonging to the case. Some of these are the rough draughts, some press copies, some fair ones. In the earlier part of my acting in that office, I took no other note of the passing transactions; but after awhile, I saw the importance of doing it in aid of my memory. Very often, therefore, I made memorandums on loose scraps of paper, taken out of my pocket in the moment, and laid by to be copied fair at leisure, which, however, they hardly ever were. These scraps, therefore, ragged, rubbed, and scribbled as they were, I had bound with the others by a binder who came into my cabinet, did it under my own eye, and without the opportunity of reading a single paper. At this day, after the lapse of twenty-five years, or more, from their dates, I have given to the whole a calm revisal, when the passions of the time are passed away, and the reasons of the transactions act alone on the judgment. Some of the informations I had recorded, are now cut out from the rest, because I have seen that they were incorrect, or doubtful, or merely personal or private, with which we have nothing to do. I should perhaps have thought the rest not worth preserving, but for their testimony against the only history of that period, which pretends to have been compiled from authentic and unpublished documents.

But a short review of facts... will show, that the contests of that day were contests of principle, between the advocates of republican, and those of kingly government, and that had not the former made the efforts they did, our government would have been, even at this early day, a very different thing from what the successful issue of those efforts have made it.

The alliance between the States under the old Articles of Confederation, for the purpose of joint defence against the aggression of Great Britain, was found insufficient, as treaties of alliance generally are, to enforce compliance with their mutual stipulations; and these, once fulfilled, that bond was to expire of itself, and each State to become sovereign and independent in all things. Yet it could not but occur to every one, that these separate independencies, like the petty States of Greece, would be eternally at war with each other, and would become at length the mere partisans and satellites of the leading powers of Europe. All then must have looked forward to some further bond of union, which would insure eternal peace, and a political system of our own, independent of that of Europe. Whether all should be consolidated into a single government, or each remain independent as to internal matters, and the whole form a single nation as to what was foreign only, and whether that national government should be a monarchy or republic, would of course divide opinions, according to the constitutions, the habits, and the circumstances of each individual. Some officers of the army, as it has always been said and believed (and Steuben and Knox have ever been named as the leading agents), trained to monarchy by military habits, are understood to have proposed to General Washington to decide this great question by the army before its disbandment, and to assume himself the crown on the assurance of their support. The indignation with which he is said to have scouted this parricide proposition was equally worthy of his virtue and wisdom.

The next effort was (on suggestion of the same individuals, in the moment of their separation), the establishment of an hereditary order under the name of the Cincinnati, ready prepared by that distinction to be ingrafted into the future frame of government, and placing General Washington still at their head. The General wrote to me on this subject, while I was in Congress at Annapolis, and an extract from my letter is inserted in 5th Marshall's history, page 28. He afterwards

called on me at that place on his way to a meeting of the society, and after a whole evening of consultation, he left that place fully determined to use all his endeavors for its total suppression. But he found it so firmly riveted in the affections of the members, that, strengthened as they happened to be by an adventitious occurrence of the moment, he could effect no more than the abolition of its hereditary principle. He called again on his return, and explained to me fully the opposition which had been made, the effect of the occurrence from France, and the difficulty with which its duration had been limited to the lives of the present members. Further details will be found among my papers, in his and my letters, and some in the *Encyclopédie Méthodique et Dictionnaire d'Economie Politique*, communicated by myself to M. Meusnier, its author, who had made the establishment of this society the ground, in that work, of a libel on our country.

The want of some authority which should procure justice to the public creditors, and an observance of treaties with foreign nations, produced, some time after, the call of a convention of the States at Annapolis. Although, at this meeting, a difference of opinion was evident on the question of a republican or kingly government, yet, so general through the States was the sentiment in favor of the former, that the friends of the latter confined themselves to a course of obstruction only, and delay, to everything proposed; they hoped, that nothing being done, and all things going from bad to worse, a kingly government might be usurped, and submitted to by the people, as better than anarchy and wars internal and external, the certain consequences of the present want of a general government. The effect of their manoeuvres, with the defective attendance of Deputies from the States, resulted in the measure of calling a more general convention, to be held at Philadelphia. At this, the same party exhibited the same practices, and with the same views of preventing a government of concord, which they foresaw would be republican, and

of forcing through anarchy their way to monarchy. But the mass of that convention was too honest, too wise, and too steady, to be baffled and misled by their manoeuvres.

One of these was a form of government proposed by Colonel Hamilton, which would have been in fact a compromise between the two parties of royalism and republicanism. According to this, the executive and one branch of the legislature were to be during good behavior, i. e. for life, and the governors of the States were to be named by these two permanent organs. This, however, was rejected; on which Hamilton left the convention, as desperate, and never returned again until near its final conclusion. These opinions and efforts, secret or avowed, of the advocates for monarchy, had begotten great jealousy through the States generally; and this jealousy it was which excited the strong opposition to the conventional constitution; a jealousy which yielded at last only to a general determination to establish certain amendments as barriers against a government either monarchical or consolidated. In what passed through the whole period of these conventions, I have gone on the information of those who were members of them, being absent myself on my mission to France.

I returned from that mission in the first year of the new government, having landed in Virginia in December, 1789, and proceeded to New York in March, 1790, to enter on the office of Secretary of State. Here, certainly, I found a state of things which, of all I had ever contemplated, I the least expected. I had left France in the first year of her revolution, in the fervor of natural rights, and zeal for reformation. My conscientious devotion to these rights could not be heightened, but it had been aroused and excited by daily exercise. The President received me cordially, and my colleagues and the circle of principal citizens apparently with welcome. The courtesies of dinner parties given me, as a stranger newly arrived among them, placed me at once in their familiar society. But I cannot describe the

wonder and mortification with which the table conversations filled me. Politics were the chief topic, and a preference of kingly over republican government was evidently the favorite sentiment. An apostate I could not be, nor yet a hypocrite; and I found myself, for the most part, the only advocate on the republican side of the question, unless among the guests there chanced to be some member of that party from the legislative Houses. Hamilton's financial system had then passed. It had two objects; 1st, as a puzzle, to exclude popular understanding and inquiry; 2d, as a machine for the corruption of the legislature; for he avowed the opinion, that man could be governed by one of two motives only, force or interest; force, he observed, in this country was out of the question, and the interests, therefore, of the members must be laid hold of, to keep the legislative in unison with the executive. And with grief and shame it must be acknowledged that his machine was not without effect; that even in this, the birth of our government, some members were found sordid enough to bend their duty to their interests, and to look after personal rather than public good.

It is well known that during the war the greatest difficulty we encountered was the want of money or means to pay our soldiers who fought, or our farmers, manufacturers and merchants, who furnished the necessary supplies of food and clothing for them. After the expedient of paper money had exhausted itself, certificates of debt were given to the individual creditors, with assurance of payment so soon as the United States should be able. But the distresses of these people often obliged them to part with these for the half, the fifth, and even a tenth of their value; and speculators had made a trade of cozening them from the holders by the most fraudulent practices, and persuasions that they would never be paid. In the bill for funding and paying these, Hamilton made no difference between the original holders and the fraudulent purchasers of this paper. Great and just repugnance arose at putting these two classes of creditors on the same

footing, and great exertions were used to pay the former the full value, and to the latter, the price only which they had paid, with interest. But this would have prevented the game which was to be played, and for which the minds of greedy members were already tutored and prepared. When the trial of strength on these several efforts had indicated the form in which the bill would finally pass, this being known within doors sooner than without, and especially, than to those who were in distant parts of the Union, the base scramble began. Couriers and relay horses by land, and swift sailing pilot boats by sea, were flying in all directions. Active partners and agents were associated and employed in every State, town, and country neighborhood, and this paper was bought up at five shillings, and even as low as two shillings in the pound, before the holder knew that Congress had already provided for its redemption at par. Immense sums were thus filched from the poor and ignorant, and fortunes accumulated by those who had themselves been poor enough before. Men thus enriched by the dexterity of a leader, would follow of course the chief who was leading them to fortune, and become the zealous instruments of all his enterprises.

This game was over, and another was on the carpet at the moment of my arrival; and to this I was most ignorantly and innocently made to hold the candle. This fiscal manoeuvre is well known by the name of the Assumption. Independently of the debts of Congress, the States had during the war contracted separate and heavy debts; and Massachusetts particularly, in an absurd attempt, absurdly conducted, on the British post of Penobscot: and the more debt Hamilton could rake up, the more plunder for his mercenaries. This money, whether wisely or foolishly spent, was pretended to have been spent for general purposes, and ought, therefore, to be paid from the general purse. But it was objected, that nobody knew what these debts were, what their amount, or what their proofs. No matter; we will guess them to be twenty millions. But of these twenty millions, we do

not know how much should be reimbursed to one State, or how much to another. No matter; we will guess. And so another scramble was set on foot among the several States, and some got much, some little, some nothing. But the main object was obtained, the phalanx of the Treasury was reinforced by additional recruits. This measure produced the most bitter and angry contest ever known in Congress, before or since the Union of the States. I arrived in the midst of it. But a stranger to the ground, a stranger to the actors on it, so long absent as to have lost all familiarity with the subject, and as yet unaware of its object, I took no concern in it.

The great and trying question, however, was lost in the House of Representatives. So high were the feuds excited by this subject, that on its rejection business was suspended. Congress met and adjourned from day to day without doing anything, the parties being too much out of temper to do business together. The eastern members particularly, who, with Smith from South Carolina, were the principal gamblers in these scenes, threatened a secession and dissolution. Hamilton was in despair. As I was going to the President's one day, I met him in the street. He walked me backwards and forwards before the President's door for half an hour. He painted pathetically the temper into which the legislature had been wrought; the disgust of those who were called the creditor States; the danger of the secession of their members, and the separation of the States. He observed that the members of the administration ought to act in concert; that though this question was not of my department, yet a common duty should make it a common concern; that the President was the centre on which all administrative questions ultimately rested, and that all of us should rally around him, and support, with joint efforts, measures approved by him; and that the question having been lost by a small majority only, it was probable that an appeal from me to the judgment and discretion of some of my friends, might effect a change in the vote, and the machine of government, now suspended,

might be again set into motion. I told him that I was really a stranger to the whole subject; that not having yet informed myself of the system of finances adopted, I knew not how far this was a necessary sequence; that undoubtedly, if its rejection endangered a dissolution of our Union at this incipient stage, I should deem that the most unfortunate of all consequences, to avert which all partial and temporary evils should be yielded. I proposed to him, however, to dine with me the next day, and I would invite another friend or two, bring them into conference together, and I thought it impossible that reasonable men, consulting together coolly, could fail, by some mutual sacrifices of opinion, to form a compromise which was to save the Union.

The discussion took place. I could take no part in it but an exhortatory one, because I was a stranger to the circumstances which should govern it. But it was finally agreed, that whatever importance had been attached to the rejection of this proposition, the preservation of the Union and of concord among the States was more important, and that therefore it would be better that the vote of rejection should be rescinded, to effect which, some members should change their votes. But it was observed that this pill would be peculiarly bitter to the southern States, and that some concomitant measure should be adopted, to sweeten it a little to them. There had before been propositions to fix the seat of government either at Philadelphia, or at Georgetown on the Potomac; and it was thought that by giving it to Philadelphia for ten years, and to Georgetown permanently afterwards, this might, as an anodyne, calm in some degree the ferment which might be excited by the other measure alone. So two of the Potomac members (White and Lee, but White with a revulsion of stomach almost convulsive) agreed to change their votes, and Hamilton undertook to carry the other point. In doing this, the influence he had established over the eastern members, with the agency of Robert Morris with those of the middle States, effected his

side of the engagement; and so the Assumption was passed, and twenty millions of stock divided among favored States, and thrown in as a pabulum to the stock-jobbing herd. This added to the number of votaries to the Treasury, and made its chief the master of every vote in the legislature, which might give to the government the direction suited to his political views.

I know well, and so must be understood, that nothing like a majority in Congress had yielded to this corruption. Far from it. But a division, not very unequal, had already taken place in the honest part of that body, between the parties styled republican and federal. The latter being monarchists in principle, adhered to Hamilton of course, as their leader in that principle, and this mercenary phalanx added to them, insured him always a majority in both Houses; so that the whole action of legislature was now under the direction of the Treasury. Still the machine was not complete. The effect of the funding system, and of the Assumption, would be temporary; it would be lost with the loss of the individual members whom it has enriched, and some engine of influence more permanent must be contrived, while these myrmidons were yet in place to carry it through all opposition. This engine was the Bank of the United States. All that history is known, so I shall say nothing about it. While the government remained at Philadelphia, a selection of members of both Houses were constantly kept as directors who, on every question interesting to that institution, or to the views of the federal head, voted at the will of that head; and, together with the stock-holding members, could always make the federal vote that of the majority. By this combination, legislative expositions were given to the constitution, and all the administrative laws were shaped on the model of England, and so passed. And from this influence we were not relieved, until the removal from the precincts of the bank, to Washington.

Here then was the real ground of the opposition which was made to the course of administration. Its object was to preserve the legislature pure and independent of the executive, to restrain the administration to republican forms and principles, and not permit the constitution to be construed into a monarchy, and to be warped, in practice, into all the principles and pollutions of their favorite English model. Nor was this an opposition to General Washington. He was true to the republican charge confided to him; and has solemnly and repeatedly protested to me, in our conversations, that he would lose the last drop of his blood in support of it; and he did this the oftener and with the more earnestness, because he knew my suspicions of Hamilton's designs against it, and wished to quiet them. For he was not aware of the drift, or of the effect of Hamilton's schemes. Unversed in financial projects and calculations and budgets, his approbation of them was bottomed on his confidence in the man.

But Hamilton was not only a monarchist, but for a monarchy bottomed on corruption. In proof of this, I will relate an anecdote, for the truth of which I attest the God who made me. Before the President set out on his southern tour in April, 1791, he addressed a letter of the fourth of that month, from Mount Vernon, to the Secretaries of State, Treasury and War, desiring that if any serious and important cases should arise during his absence, they would consult and act on them. And he requested that the Vice President should also be consulted. This was the only occasion on which that officer was ever requested to take part in a cabinet question. Some occasion for consultation arising, I invited those gentlemen (and the Attorney General, as well as I remember) to dine with me, in order to confer on the subject. After the cloth was removed, and our question agreed and dismissed, conversation began on other matters, and by some circumstance, was led to the British constitution, on which Mr. Adams observed, "purge that constitution of its corruption, and give to its popular branch equality of representation, and it would be the most perfect

constitution ever devised by the wit of man.” Hamilton paused and said, “purge it of its corruption, and give to its popular branch equality of representation, and it would become an impracticable government: as it stands at present, with all its supposed defects, it is the most perfect government which ever existed.” And this was assuredly the exact line which separated the political creeds of these two gentlemen. The one was for two hereditary branches and an honest elective one; the other, for an hereditary King, with a House of Lords and Commons corrupted to his will, and standing between him and the people.

Hamilton was, indeed, a singular character. Of acute understanding, disinterested, honest, and honorable in all private transactions, amiable in society, and duly valuing virtue in private life, yet so bewitched and perverted by the British example, as to be under thorough conviction that corruption was essential to the government of a nation. Mr. Adams had originally been a republican. The glare of royalty and nobility, during his mission to England, had made him believe their fascination a necessary ingredient in government; and Shay’s [sic] rebellion, not sufficiently understood where he then was, seemed to prove that the absence of want and oppression, was not a sufficient guarantee of order. His book on the American constitutions having made known his political bias, he was taken up by the monarchical federalists in his absence, and on his return to the United States, he was by them made to believe that the general disposition of our citizens was favorable to monarchy. He here wrote his “Davila,” as a supplement to a former work, and his election to the Presidency confirmed him in his errors. Innumerable addresses too, artfully and industriously poured in upon him, deceived him into a confidence that he was on the pinnacle of popularity, when the gulf was yawning at his feet, which was to swallow up him and his deceivers. For when General Washington was withdrawn, these energumens of royalism, kept in check hitherto by the dread of his

honesty, his firmness, his patriotism, and the authority of his name, now mounted on the car of State and free from control, like Phaeton on that of the sun, drove headlong and wild, looking neither to right nor left, nor regarding anything but the objects they were driving at; until, displaying these fully, the eyes of the nation were opened, and a general disbandment of them from the public councils took place.

Mr. Adams, I am sure, has been long since convinced of the treacheries with which he was surrounded during his administration. He has since thoroughly seen, that his constituents were devoted to republican government, and whether his judgment is re-settled on its ancient basis, or not, he is conformed as a good citizen to the will of the majority, and would now, I am persuaded, maintain its republican structure with the zeal and fidelity belonging to his character. For even an enemy has said, "he is always an honest man, and often a great one." But in the fervor of the fury and follies of those who made him their stalking horse, no man who did not witness it can form an idea of their unbridled madness, and the terrorism with which they surrounded themselves. The horrors of the French revolution, then raging, aided them mainly, and using that as a raw head and bloody bones, they were enabled by their stratagems of X. Y. Z. in which this historian was a leading mountebank, their tales of tub-plots, ocean massacres, bloody buoys, and pulpit lyings and slanderings, and maniacal ravings of their Gardeners, their Osgoods and parishes, to spread alarm into all but the firmest breasts. Their Attorney General had the impudence to say to a republican member, that deportation must be resorted to, of which, said he, "you republicans have set the example"; thus daring to identify us with the murderous Jacobins of France.

These transactions, now recollected but as dreams of the night, were then sad realities; and nothing rescued us from their liberticide effect, but the unyielding opposition of those firm spirits who sternly

maintained their post in defiance of terror, until their fellow citizens could be aroused to their own danger, and rally and rescue the standard of the constitution. This has been happily done. Federalism and monarchism have languished from that moment, until their treasonable combinations with the enemies of their country during the late war, their plots of dismembering the Union, and their Hartford convention, have consigned them to the tomb of the dead; and I fondly hope, “we may now truly say, we are all republicans, all federalists,” and that the motto of the standard to which our country will forever rally, will be, “federal union, and republican government”; and sure I am we may say, that we are indebted for the preservation of this point of ralliance, to that opposition of which so injurious an idea is so artfully insinuated and excited in this history.

Much of this relation is notorious to the world; and many intimate proofs of it will be found in these notes. From the moment where they end, of my retiring from the administration, the federalists got unchecked hold of General Washington. His memory was already sensibly impaired by age, the firm tone of mind for which he had been remarkable, was beginning to relax, its energy was abated, a listlessness of labor, a desire for tranquility had crept on him, and a willingness to let others act, and even think for him. Like the rest of mankind, he was disgusted with atrocities of the French revolution, and was not sufficiently aware of the difference between the rabble who were used as instruments of their perpetration, and the steady and rational character of the American people, in which he had not sufficient confidence. The opposition too of the republicans to the British treaty, and the zealous support of the federalists in that unpopular but favorite measure of theirs, had made him all their own. Understanding, moreover, that I disapproved of that treaty, and copiously nourished with falsehoods by a malignant neighbor of mine, who ambitioned to be his correspondent, he had become alienated from myself personally, as from the republican body generally of his

fellow-citizens; and he wrote the letters to Mr. Adams and Mr. Carroll, over which, in devotion to his imperishable fame, we must forever weep as monuments of mortal decay.

February 4th, 1818.

Conversation with President Washington

February the 7th, 1793

.... as to a coalition with Mr. Hamilton, if by that was meant that either was to sacrifice his general system to the other, it was impossible. We had both, no doubt, formed our conclusions after the most mature consideration; and principles conscientiously adopted, could not be given up on either side. My wish was, to see both Houses of Congress cleansed of all persons interested in the bank or public stocks; and that a pure legislature being given us, I should always be ready to acquiesce under their determinations, even if contrary to my own opinions; for that I subscribe to the principle, that the will of the majority, honestly expressed, should give law....

February the 16th, 1793

E. Randolph tells J. Madison and myself, a curious fact which he had from Lear. When the President went to New York, he resisted for three weeks the efforts to introduce levees. At length he yielded, and left it to Humphreys and some others to settle the forms. Accordingly, an ante-chamber and presence room were provided, and when those who were to pay their court were assembled, the President set out, preceded by Humphreys. After passing through the ante-chamber, the door of the inner room was thrown open, and Humphreys entered first, calling out with a loud voice, "the President of the United States." The President was so much disconcerted with it, that he did not recover from it the whole time of the levee, and when the company was gone, he said to Humphreys, "Well, you have taken me

in once, but by God you shall never take me in a second time.”

May the 23d, [1793]

.... He [President Washington] adverted to a piece in Freneau’s paper of yesterday; he said he despised all their attacks on him personally, but that there never had been an act of the Government, not meaning in the executive line only, but in any line, which that paper had not abused. He had also marked the word republic thus, where it was applied to the French republic He was evidently sore and warm, and I took his intention to be, that I should interpose in some way with Freneau, perhaps withdraw his appointment of translating clerk to my office. But I will not do it. His paper has saved our Constitution, which was galloping fast into monarchy, and has been checked by no one means so powerfully as by that paper. It is well and universally known, that it has been that paper which has checked the career of the monocrats; and the President, not sensible of the designs of the party, has not with his usual good sense and sang froid, looked on the efforts and effects of this free press, and seen that, though some bad things have passed through it to the public, yet the good have preponderated immensely.

January the 24th, [1800]

Mr. Smith, a merchant of Hamburg, gives me the following information: The St. Andrew’s Club of New York (all of Scotch tories) gave a public dinner lately. Among other guests, Alexander Hamilton was one. After dinner, the first toast was, “The President of the United States” It was drunk without any particular approbation. The next was, “George the Third.” Hamilton started up on his feet, and insisted on a bumper and three cheers. The whole company accordingly rose and gave the cheers....

Travel Journals

Memoranda taken on a Journey from Paris into the Southern
Parts of France, and Northern of Italy, in the year 1787.

CHAMPAGNE. March 3. Sens to Vermanton. The face of the country is in large hills, not too steep for the plough, somewhat resembling the Elk hill, and Beaver-dam hills of Virginia. The soil is generally a rich mulatto loam, with a mixture of coarse sand and some loose stone. The plains of the Yonne are of the same color. The plains are in corn, the hills in vineyard, but the wine not good. There are a few apple trees, but none of any other kind, and no inclosures. No cattle, sheep, or swine; fine mules.

Few châteaux; no farm-houses, all the people being gathered in villages. Are they thus collected by that dogma of their religion, which makes them believe, that to keep the Creator in, good humor with His own works, they must mumble a mass every day? Certain it is, that they are less happy and less virtuous in villages, than they would be insulated with their families on the grounds they cultivate. The people are illy clothed. Perhaps they have put on their worst clothes at this moment, as it is raining. But I observe women and children carrying heavy burdens, and laboring with the hoe. This is an unequivocal indication of extreme poverty. Men, in a civilized country, never expose their wives and children to labor above their force and sex, as long as their own labor can protect them from it. I see few beggars. Probably this is the effect of a police.

BURGUNDY. March 4. Lucy le bois. Cussy les forges. Rouvray. Maison-neuve. Vitteaux. La Chaleure. Pont de Panis. Dijon. The hills are higher and more abrupt. The soil, a good red loam and sand, mixed with more or less grit, small stone, and sometimes rock. All in

corn. Some forest wood here and there, broom, whins and holly, and a few inclosures of quick hedge. Now and then a flock of sheep.

The people are well clothed, but it is Sunday. They have the appearance of being well fed. The Château de Sevigny, near Cussy les forges, is a charming situation. Between Maison-neuve and Vitteaux the road leads through an avenue of trees, eight American miles long, in a right line. It is impossible to paint the ennui of this avenue....

March 7 and 8. From la Barague to Chagny

.... The corn lands here rent for about fifteen livres the arpent. They are now planting, pruning, and sticking their vines. When a new vineyard is made, they plant the vines in gutters about four feet apart. As the vines advance, they lay them down. They put out new shoots, and fill all the intermediate space, till all trace of order is lost. They have ultimately about one foot square to each vine. They begin to yield good profit at five or six years old, and last one hundred, or one hundred and fifty years. A vigneron at Voulenay carried me into his vineyard, which was of about ten arpents. He told me that some years it produced him sixty pieces of wine, and some, not more than three pieces. The latter is the most advantageous produce, because the wine is better in quality, and higher in price in proportion as less is made, and the expenses at the same time diminish in the same proportion. Whereas, when much is made, the expenses are increased, while the price and quality become less. In very plentiful years, they often give one half the wine for casks to contain the other half. The cask for two hundred and fifty bottles, costs six livres in scarce years, and ten in plentiful. The Feuillette is of one hundred and twenty-five bottles, the Piece of two hundred and fifty, and the Queue or Botte, of five hundred. An arpent rents at from twenty to sixty livres. A farmer of ten arpents has about three laborers engaged by the year. He pays four louis to a man, and half as much to a woman, and feeds them. He kills one hog, and salts it, which is all the meat used in the family during

the year. Their ordinary food is bread and vegetables. At Pommard and Voulenay, I observed them eating good wheat bread; at Meursault, rye. I asked the reason of this difference. They told me that the white wines fail in quality much oftener than the red, and remain on hand. The farmer, therefore, cannot afford to feed his laborers so well. At Meursault, only white wines are made, because there is too much stone for the red. On such slight circumstances depends the condition of man! The wines which have given such celebrity to Burgundy, grow only on the Cote, an extent of about five leagues long, and half a league wide. They begin at Chambertin, and go through Vougeau, Romanie, Veauve, Nuys, Beaune, Pommard, Voulenay, Meursault, and end at Monrachet. Those of the two last are white, the others red. Chambertin, Vougeau and Veauve are strongest, and will bear transportation and keeping. They sell, therefore, on the spot for twelve hundred livres the queue, which is forty-eight sous the bottle. Voulenay is the best of the other reds, equal in flavor to Chambertin, etc., but being lighter, will not keep, and therefore sells for not more than three hundred livres the queue, which is twelve sous the bottle. It ripens sooner than they do, and consequently is better for those who wish to broach at a year old. In like manner of the white wines, and for the same reason, Monrachet sells for twelve hundred livres the queue (forty-eight sous the bottle), and Meursault of the best quality, viz., the Goutte d'or, at only one hundred and fifty livres (six sous the bottle). It is remarkable, that the best of each kind, that is, of the red and white, is made at the extremities of the line, to wit, at Chambertin and Monrachet. It is pretended that the adjoining vineyards produce the same qualities, but that belonging to obscure individuals, they have not obtained a name, and therefore sell as other wines. The aspect of the Cote is a little south of east. The western side is also covered with vines, and is apparently of the same soil, yet the wines are of the coarsest kinds. Such, too, are those which are produced in the plains; but there the soil is richer and less strong. Vougeau is the property of the monks of Citeaux, and produces about two hundred

pieces. Monrachet contains about fifty arpents, and produces, one year with another, about one hundred and twenty pieces. It belongs to two proprietors only, Monsieur de Clarmont, who leases to some wine merchants, and the Marquis de Sarsnet, of Dijon, whose part is farmed to a Monsieur de la Tour, whose family for many generations have had the farm. The best wines are carried to Paris by land. The transportation costs thirty-six livres the piece. The more indifferent go by water. Bottles cost four and a half sous each....

BEAUJOLAIS. Maison blanche. St. George. Château de Laye-Epinaye.

.... The wages of a laboring man here, are five louis; of a woman, one half. The women do not work with the hoe; they only weed the vines, the corn, etc., and spin. They speak a patois very difficult to understand. I passed some time at the Chateau de Laye-Epinaye. Monsieur de Laye has a seignory of about fifteen thousand arpents, in pasture, corn, vines, and wood. He has over this, as is usual, a certain jurisdiction, both criminal and civil. But this extends only to the first crude examination, which is before his judges. The subject is referred for final examination and decision, to the regular judicatures of the country. The Seigneur is keeper of the peace on his domains. He is therefore subject to the expenses of maintaining it. A criminal prosecuted to sentence and execution, costs M. de Laye about five thousand livres. This is so burdensome to the Seigneurs, that they are slack in criminal prosecutions. A good effect from a bad cause. Through all Champagne, Burgundy, and the Beaujolois, the husbandry seems good, except that they manure too little. This proceeds from the shortness of their leases. The people of Burgundy and Beaujolois are well clothed, and have the appearance of being well fed. But they experience all the oppressions which result from the nature of the general government, and from that of their particular tenures, and of

the seignorial government to which they are subject. What a cruel reflection, that a rich country cannot long be a free one. M. de Laye has a Diana and Endymion, a very superior morsel of sculpture by Michael Angelo Slodtz, done in 1740. The wild gooseberry is in leaf; the wild pear and sweet briar in bud.

Lyons. There are some feeble remains here, of an amphitheatre of two hundred feet diameter, and of an aqueduct in brick. The Pont d'Ainay has nine arches of forty feet from centre to centre. The piers are of six feet. The almond is in bloom.

.... Nice. The pine bur is used here for kindling fires. The people are in separate establishments. With respect to the orange, there seems to be no climate on this side of the Alps, sufficiently mild in itself to preserve it without shelter. At Olioules, they are between two high mountains; at Hieres, covered on the north by a very high mountain; at Antibes and Nice, covered by mountains, and also within small high enclosures. Quere. To trace the true line from east to west, which forms the northern and natural limit of that fruit? Saw an elder tree (sambucus) near Nice, fifteen inches in diameter, and eight feet stem. The wine made in this neighborhood is good, though not of the first quality. There are one thousand mules, loaded with merchandise, which pass every week between Nice and Turin, counting those coming as well as going.

.... April 14th. Ciandola. Tende.

.... Tende is a very inconsiderable village, in which they have not yet the luxury of glass windows; nor in any of the villages on this passage, have they yet the fashion of powdering the hair. Common stone and limestone are so abundant, that the apartments of every story are vaulted with stone, to save wood.

April 15th. Limone. Coni.

.... A great deal of golden willow all along the rivers, on the whole of this passage through the Alps. The southern parts of France, but still more the passage through the Alps, enable one to form a scale of the tenderer plants, arranging them according to their several powers of resisting cold. Ascending three different mountains, Braus, Brois, and Tende, they disappear one after another; and descending on the other side, they show themselves again one after another. This is their order, from the tenderest to the hardiest. Capér, orange, palm, aloe, olive, pomegranate, walnut, fig, almond. But this must be understood of the plant; for as to the fruit, the order is somewhat different. The capér, for example, is the tenderest plant, yet being so easily protected, it is the most certain in its fruit. The almond, the hardiest plant, loses its fruit the oftenest, on account of its forwardness. The palm hardier than the capér and the orange, never produces perfect fruit in these parts. Coni is a considerable town, and pretty well built. It is walled.

.... April 19th. Settimo. Chivasco. Ciliano. S. Germano. Vercelli. The country continues plain and rich, the soil black. The culture, corn, pasture, maize, vines, mulberries, walnuts, some willow and poplar. The maize bears a very small proportion to the small grain. The earth is formed into ridges from three to four feet wide, and the maize sowed in the broadcast on the higher parts of the ridge, so as to cover a third or half of the whole surface. It is sowed late in May. This country is plentifully arid beautifully watered at present. Much of it is by torrents which are dry in summer. These torrents make a great deal of waste ground, covering it with sand and stones. These wastes are sometimes planted in trees, sometimes quite unemployed. They make hedges of willows, by setting the plants from one to three feet apart. When they are grown to the height of eight or ten feet, they bend them down, and interlace them one with another. I do not see any of these, however, which are become old. Probably, therefore, they soon die. The women here smite on the anvil, and work with the maul and

spade. The people of this country are ill dressed in comparison with those of France, and there are more spots of uncultivated ground. The plough here is made with a single handle, which is a beam twelve feet long, six inches in diameter below, and tapered to about two inches at the upper end. They use goads for the oxen, not whips. The first swallows I have seen, are to-day....

April 21st, 22d. Milan. Figs and pomegranates grow here unsheltered, as I am told. I saw none, and therefore suppose them rare. They had formerly olives; but a great cold in 1709 killed them, and they have not been replanted. Among a great many houses painted al fresco, the Casa Roma and Casa Candiani, by Appiani, and Casa Belgioiosa, by Martin, are superior. In the second is a small cabinet, the ceiling of which is in small hexagons, within which are cameos and heads painted alternately, no two the same. The salon of the Casa Belgioiosa is superior to anything I have ever seen. The mixture called Scaiola, of which they make their walls and floors, is so like the finest marble as to be scarcely distinguishable from it. The nights of the 20th and 21st instant the rice ponds froze half an inch thick. Drouths of two or three months are not uncommon here in summer. About five years ago, there was such a hail as to kill cats. The Count del Verme tells me of a pendulum odometer for the wheel of a carriage. Leases here are mostly for nine years. Wheat costs a louis d'or the one hundred and forty pounds. A laboring man receives sixty livres, and is fed and lodged. The trade of this country is principally rice, raw silk, and cheese.

April 23d. Casino, five miles from Milan. I examined another ricebeater of six pestles. They are eight feet nine inches long. Their ends, instead of being a truncated cone, have nine teeth of iron, bound closely together. Each tooth is a double pyramid, joined at the base. When put together, they stand with the upper ends placed in contact,

so as to form them into one great cone, and the lower ends diverging. The upper are socketed into the end of the pestle, and the lower, when a little blunted by use, are not unlike the jaw teeth of the mammoth, with their studs. They say here, that pestles armed with these teeth, clean the rice faster, and break it less.

.... Rozzano. Parmesan cheese. It is supposed this was formerly made at Parma, and took its name thence, but none is made there now. It is made through all the country extending from Milan for one hundred and fifty miles....

The milk, ... receives its due quantity of rennet, and is gently warmed, if the season requires it. In about four hours it becomes a slip. Then the whey begins to separate. A little of it is taken out. The curd is then thoroughly broken by a machine like a chocolate mill. A quarter of an ounce of saffron is put to seven brentas of milk, to give color to the cheese. The kettle is then moved over the hearth, and heated by a quick fire till the curd is hard enough, being broken into small lumps by continued stirring. It is moved off the fire, most of the whey taken out, the curd compressed into a globe by the hand, a linen cloth slipped under it, and it is drawn out in that. A loose hoop is then laid on a bench, and the curd, as wrapped in the linen, is put into the hoop; it is a little pressed by the hand, the hoop drawn tight and made fast. A board two inches thick is laid on it, and a stone on that of about twenty pounds weight. In an hour, the whey is run off, and the cheese finished. They sprinkle a little salt on it every other day in summer, and every day in winter, for six weeks. Seven brentas of milk make a cheese of fifty pounds, which requires six months to ripen, and is then dried to forty-five pounds. It sells on the spot for eighty-eight livres the one hundred pounds. There are now one hundred and fifty cheeses in this dairy. They are nineteen inches diameter, and six inches thick. They make a cheese a day in summer, and two in three days, or one in two days, in winter.

.... April 26th. Genoa. Strawberries at Genoa. Scaffold poles for the upper parts of a wall, as for the third story, rest on the window sills of the story below. Slate is used here for paving, for steps, for stairs, (the rise as well as tread) and for fixed Venetian blinds. At the Palazzo Marcello Durazzo, benches with straight legs, and bottoms of cane. At the Palazzo del principe Lomellino, at Sestri, a phaeton with a canopy. At the former, tables folding into one plane. At Nervi they have peas, strawberries, etc., all the year round. The gardens of the Count Durazzo at Nervi exhibit as rich a mixture of the utile dulci, as I ever saw. All the environs in Genoa, are in olives, figs, oranges, mulberries, corn, and garden stuff. Aloes in many places, but they never flower.

April 28th. Noli. The Apennine and Alps appear to me, to be one and the same continued ridge of mountains, separating everywhere the waters of the Adriatic Gulf from those of the Mediterranean. Where it forms an elbow, touching the Mediterranean, as a smaller circle touches a larger, within which it is inscribed, in the manner of a tangent, the name changes from Alps to Apennine. It is the beginning of the Apennine which constitutes the State of Genoa, the mountains there generally falling down in barren naked precipices into the sea.... Noli, into which I was obliged to put, by a change of wind, is forty miles from Genoa. There are twelve hundred inhabitants in the village, and many separate houses round about. One of the precipices hanging over the sea is covered with aloes. But neither here, nor anywhere else I have been, could I procure satisfactory information that they ever flower. The current of testimony is to the contrary. Noli furnishes many fishermen. Paths penetrate up into the mountains in several directions, about three-fourths of a mile; but these are practicable only for asses and mules. I saw no cattle nor sheep in the settlement. The wine they make, is white and indifferent. A curious cruet for oil and vinegar in one piece, I saw here. A bishop resides here, whose revenue is two thousand livres, equal to sixty-six guineas.

I heard a nightingale here.

April 29th. Albenga. In walking along the shore from Louano to this place, I saw no appearance of shells. The tops of the mountains are covered with snow, while there are olive trees, etc., on the lower parts. I do not remember to have seen assigned anywhere, the cause of the apparent color of the sea. Its water is generally clear and colorless, if taken up and viewed in a glass. That of the Mediterranean is remarkably so. Yet in the mass, it assumes, by reflection, the color of the sky or atmosphere, black, green, blue, according to the state of the weather. If any person wished to retire from his acquaintance, to live absolutely unknown, and yet in the midst of physical enjoyments, it should be in some of the little villages of this coast, where air, water and earth concur to offer what each has most precious. Here are nightingales, beccaficas, ortolans, pheasants, partridges, quails, a superb climate, and the power of changing it from summer to winter at any moment, by ascending the mountains. The earth furnishes wine, oil, figs, oranges, and every production of the garden, in every season. The sea yields lobsters, crabs, oysters, thunny, sardines, anchovies, etc.

May 15. Bezieres. Argilies. Le Saumal.

.... The canal of Languedoc, along which I now travel, is six toises wide at bottom, and ten toises at the surface of the water, which is one toise deep. The barks which navigate it are seventy and eighty feet long, and seventeen or eighteen feet wide. They are drawn by one horse, and worked by two hands, one of which is generally a woman. The locks are mostly kept by women, but the necessary operations are much too laborious for them. The encroachments by the men, on the offices proper for the women, is a great derangement in the order of things. Men are shoemakers, tailors, upholsterers, stay-makers, mantua-makers, cooks, housekeepers, house-cleaners, bedmakers; they coiffe the ladies, and bring them to bed: the women, therefore, to live,

are obliged to undertake the offices which they abandon. They become porters, carters, reapers, sailors, lock-keepers, smiters on the anvil, cultivators of the earth, etc. Can we wonder, if such of them as have a little beauty, prefer easier courses to get their livelihood, as long as that beauty lasts? Ladies who employ men in the offices which should be reserved for their sex, are they not bawds in effect? For every man whom they thus employ, some girl, whose place he has thus taken, is driven to whoredom.

.... June 6th, 7th, 8th. Nantes. Ancenis, Angers. Tours.

....Tours is at the one hundred and nineteenth milestone. Being desirous of inquiring here into a fact stated by Voltaire, in his Questions Encyclopediques, article Coquilles, relative to the growth of shells unconnected with animal bodies, at the Chateau of Monsieur de la Sauvagiere, near Tours, I called on Monsieur Gentil, premier secretaire de l'Intendance, to whom the Intendant had written on my behalf, at the request of the Marquis de Chastellux. I stated to him the fact as advanced by Voltaire, and found he was, of all men, the best to whom I could have addressed myself. He told me he had been in correspondence with Voltaire on that very subject, and was perfectly acquainted with Monsieur de la Sauvagiere, and the Faluniere where the fact is said to have taken place. It is at the Chateau de Grillemont, six leagues from Tours, on the road to Bordeaux, belong now to Monsieur d'Orcai. He says, that de la Sauvagiere was a man of truth, and might be relied on for whatever facts he stated as of his own observations; but that he was overcharged with imagination, which, in matters of opinion and theory, often led him beyond his facts; that this feature in his character had appeared principally in what he wrote on the antiquities of Touraine; but that, as to the fact in question, he believed him. That he himself, indeed, had not watched the same identical shells, as Sauvagiere had done, growing from small to great;

but that he had often seen such masses of those shells of all sizes, from a point to a full size, as to carry conviction to his mind that they were in the act of growing; that he had once made a collection of shells for the Emperor's cabinet, reserving duplicates of them for himself; and that these afforded proofs of the same fact; that he afterwards gave those duplicates to a Monsieur du Verget, a physician of Tours, of great science and candor, who was collecting on a larger scale, and who was perfectly in sentiment with Monsieur de la Sauvagiere, that not only the Faluniere, but many other places about Tours, would convince any unbiased observer, that shells are a fruit of the earth, spontaneously produced; and he gave me a copy of de la Sauvagiere's *Recueil de Dissertations*, presented by the author, wherein is one *Sur la vegetation spontanée des coquilles du Chateau des Places*. So far, I repeat from him. What are we to conclude? That we have not materials enough yet, to form any conclusion. The fact stated by Sauvagiere is not against any law of nature, and is therefore possible; but it is so little analogous to her habitual processes, that, if true, it would be extraordinary; that to command our belief, therefore, there should be such a suite of observations, as that their untruth would be more extraordinary than the existence of the fact they affirm. The bark of trees, the skin of fruits and animals, the feathers of birds, receive their growth and nutriment from the internal circulation of a juice through the vessels of the individual they cover. We conclude from analogy, then, that the shells of the testaceous tribe, receive also their growth from a like internal circulation. If it be urged, that this does not exclude the possibility of a like shell being produced by the passage of a fluid through the pores of the circumjacent body, whether of earth, stone, or water; I answer, that it is not within the usual economy of nature, to use two processes for one species of production. While I withhold my assent, however, from this hypothesis, I must deny it to every other I have ever seen, by which their authors pretend to account for the origin of shells in high places. Some of these are against the laws of nature, and therefore impossible; and

others are built on positions more difficult to assent to, than that of de la Sauvagiere. They all suppose the shells to have covered submarine animals, and have then to answer the question, How came they fifteen thousand feet above the level of the sea? And they answer it, by demanding what cannot be conceded. One, therefore, who had rather have no opinion than a false one, will suppose this question one of those beyond the investigation of human sagacity; or wait till further and fuller observations enable him to decide it.

Chantcloup. I heard a nightingale to-day at Chanteloup. The gardener says, it is the male who alone sings, while the female sits; and that when the young are hatched, he also ceases. In the border at Chanteloup, is an ingenious contrivance to hide the projecting steps of a stair-case. Three steps were of necessity to project into the boudoir: they are therefore made triangular steps; and instead of being rested on the floor, as usual, they are made fast at their broad end to the stair door, swinging out and in, with that. When it shuts, it runs them under the other steps; when open, it brings them out to their proper place.

TRAVELLING NOTES FOR MR. RUTLEDGE AND MR. SHIPPEN, JUNE 3, 1788

General Observations. —On arriving at a town, the first thing is to buy the plan of the town, and the book noting its curiosities. Walk round the ramparts when there are any, go to the top of a steeple to have a view of the town and its environs.

When you are doubting whether a thing is worth the trouble of going to see, recollect that you will never again be so near it, that you may repent the not having seen it, but can never repent having seen it. But there is an opposite extreme too, that is, the seeing too much. A

judicious selection is to be aimed at, taking care that the indolence of the moment have no influence in the decision. Take care particularly not to let the porters of churches, cabinets, etc., lead you through all the little details of their profession, which will load the memory with trifles, fatigue the attention, and waste that and your time. It is difficult to confine these people to the few objects worth seeing and remembering. They wish for your money, and suppose you give it the more willingly the more they detail to you.

When one calls in the taverns for the *vin du pays*, they give what is natural and unadulterated and cheap: when *vin etrangere* is called for, it only gives a pretext for charging an extravagant price for an unwholesome stuff, very often of their own brewery. The people you will naturally see the most of will be tavern keepers, valets de place, and postilions. These are the hackneyed rascals of every country. Of course they must never be considered when we calculate the national character.

Objects of attention for an American. —1. Agriculture. Everything belonging to this art, and whatever has a near relation to it. Useful or agreeable animals which might be transported to America. Species of plants for the farmer's garden, according to the climate of the different States.

2. Mechanical arts, so far as they respect things necessary in America, and inconvenient to be transported thither ready-made, such as forges, stone quarries, boats, bridges, (very especially,) etc., etc.

3. Lighter mechanical arts, and manufactures. Some of these will be worth a superficial view; but circumstances rendering it impossible that America should become a manufacturing country during the time of any man now living, it would be a waste of attention to examine these minutely.

4. Gardens peculiarly worth the attention of an American,

because it is the country of all others where the noblest gardens may be made without expense. We have only to cut out the superabundant plants.

5. Architecture worth great attention. As we double our numbers every twenty years, we must double our houses. Besides, we build of such perishable materials, that one half of our houses must be rebuilt in every space of twenty years, so that in that time, houses are to be built for three-fourths of our inhabitants. It is, then, among the most important arts; and it is desirable to introduce taste into an art which shows so much.

6. Painting. Statuary. Too expensive for the state of wealth among us. It would be useless, therefore, and preposterous, for us to make ourselves connoisseurs in those arts. They are worth seeing, but not studying.

7. Politics of each country, well worth studying so far as respects internal affairs. Examine their influence on the happiness of the people. Take every possible occasion for entering into the houses of the laborers, and especially at the moments of their repast; see what they eat, how they are clothed, whether they are obliged to work too hard; whether the government or their landlord takes from them an unjust proportion of their labor; on what footing stands the property they call their own, their personal liberty, etc., etc.

8. Courts. To be seen as you would see the tower of London or menagerie of Versailles with their lions, tigers, hyenas, and other beasts of prey, standing in the same relation to their fellows. A slight acquaintance with them will suffice to show you that, under the most imposing exterior, they are the weakest and worst part of mankind. Their manners, could you ape them, would not make you beloved in your own country, nor would they improve it could you introduce them there to the exclusion of that honest simplicity now prevailing in

America and worthy of being cherished.

Essay on Anglo-Saxon

To Herbert Croft, Esq., LL.B., London Monticello, October 30th, 1798

Sir, —The copy of your printed letter on the English and German languages, which you have been so kind as to send me, has come to hand; and I pray you to accept my thanks for this mark of your attention. I have perused it with singular pleasure, and, having long been sensible of the importance of a knowledge of the Northern languages to the understanding of English, I see it, in this letter, proved and specifically exemplified by your collations of the English and German. I shall look with impatience for the publication of your “English and German Dictionary.” Johnson, besides the want of precision in his definitions, and of accurate distinction in passing from one shade of meaning to another of the same word, is most objectionable in his derivations. From a want probably of intimacy with our own language while in the Anglo-Saxon form and type, and of its kindred languages of the North, he has a constant leaning towards Greek and Latin for English etymon. Even Skinner has a little of this, who, when he has given the true Northern parentage of a word, often tells you from what Greek and Latin source it might be derived by those who have that kind of partiality. He is, however, on the whole, our best etymologist, unless we ascend a step higher to the Anglo-Saxon vocabulary; and he has set the good example of collating the English word with its kindred word in the several Northern dialects, which often assist in ascertaining its true meaning.

Your idea is an excellent one, in producing authorities for the meaning of words, “to select the prominent passages in our best writers, to make your dictionary a general index to English literature, and thus intersperse with verdure and flowers the barren deserts of

Philology.” And I believe with you that “wisdom, morality, religion, thus thrown down, as if without intention, before the reader, in quotations, may often produce more effect than the very passages in the books themselves.” — “that the cowardly suicide, in search of a strong word for his dying letter, might light on a passage which would excite him to blush at his want of fortitude, and to forego his purpose;”—“and that a dictionary with examples at the words may, in regard to every branch of knowledge, produce more real effect than the whole collection of books which it quotes.” I have sometimes myself used Johnson as a Repertory, to find favorite passages which I wished to recollect, but too rarely with success.

I was led to set a due value on the study of the Northern languages, and especially of our Anglo-Saxon, while I was a student of the law, by being obliged to recur to that source for explanation of a multitude of law-terms. A preface to Fortescue on Monarchies, written by Fortescue Aland, and afterwards premised to his volume of Reports, develops the advantages to be derived to the English student generally, and particularly the student of law, from an acquaintance with the Anglo-Saxon; and mentions the books to which the learner may have recourse for acquiring the language. I accordingly devoted some time to its study, but my busy life has not permitted me to indulge in a pursuit to which I felt great attraction. While engaged in it, however, some ideas occurred for facilitating the study by simplifying its grammar, by reducing the infinite diversities of its unfixed orthography to single and settled forms, indicating at the same time the pronunciation of the word by its correspondence with the characters and powers of the English alphabet. Some of these ideas I noted at the time on the blank leaves of my Elstob’s Anglo-Saxon Grammar: but there I have left them, and must leave them, unpursued, although I still think them sound and useful. Among the works which I proposed for the Anglo-Saxon student, you will find such literal and verbal translations of the Anglo-Saxon writers

recommended, as you have given us of the German in your printed letter. Thinking that I cannot submit those ideas to a better judge than yourself, and that if you find them of any value you may put them to some use, either as hints in your dictionary, or in some other way, I will copy them as a sequel to this letter, and commit them without reserve to your better knowledge of the subject. Adding my sincere wishes for the speedy publication of your valuable dictionary, I tender you the assurance of my high respect and consideration.

An Essay on the Anglo-Saxon Language

The importance of the Anglo-Saxon dialect toward a perfect understanding of the English language seems not to have been duly estimated by those charged with the education of youth; and yet it is unquestionably the basis of our present tongue. It was a full-formed language; its frame and construction, its declension of nouns and verbs, and its syntax were peculiar to the Northern languages, and fundamentally different from those of the South. It was the language of all England, properly so called, from the Saxon possession of that country in the sixth century to the time of

Henry III in the thirteenth, and was spoken pure and unmixed with any other. Although the Romans had been in possession of that country for nearly five centuries from the time of Julius Caesar, yet it was a military possession chiefly, by their soldiery alone, and with dispositions intermutually jealous and unamicable. They seemed to have aimed at no lasting settlements there, and to have had little familiar mixture with the native Britons. In this state of connection there would probably be little incorporation of the Roman into the native language, and on their subsequent evacuation of the island its traces would soon be lost altogether. And had it been otherwise, these innovations would have been carried with the natives themselves when driven into Wales by the invasion and entire occupation of the rest of the Southern portion of the island by the Anglo-Saxons.

The language of these last became that of the country from that time forth, for nearly seven centuries; and so little attention was paid among them to the Latin, that it was known to a few individuals only as a matter of science, and without any chance of transfusion into the vulgar language. We may safely repeat the affirmation, therefore, that

the pure Anglo-Saxon constitutes at this day the basis of our language. That it was sufficiently copious for the purposes of society in the existing condition of arts and manners, reason alone would satisfy us from the necessity of the case. Its copiousness, too, was much favored by the latitude it allowed of combining primitive words so as to produce any modification of idea desired. In this characteristic it was equal to the Greek, but it is more especially proved by the actual fact of the books they have left us in the various branches of history, geography, religion, law, and poetry. And although since the Norman conquest it has received vast additions and embellishments from the Latin, Greek, French, and Italian languages, yet these are but engraftments on its idiomatic stem; its original structure and syntax remain the same, and can be but imperfectly understood by the mere Latin scholar. Hence the necessity of making the Anglo-Saxon a regular branch of academic education. In the sixteenth and seventeenth centuries it was assiduously cultivated by a host of learned men. The names of Lambard, Parker, Spelman, Wheeloc, Wilkins, Gibson, Hickes, Thwaites, Somner, Benson, Mareschal, Elstob, deserve to be ever remembered with gratitude for the Anglo-Saxon works which they have given us through the press, the only certain means of preserving and promulgating them. For a century past this study has been too much neglected. The reason of this neglect, and its remedy, shall be the subject of some explanatory observations. These will respect—I. The Alphabet. II. Orthography. III. Pronunciation. IV. Grammar.

I. THE ALPHABET

The Anglo-Saxon alphabet, as known to us in its printer forms, consists of twenty-six characters, about the half of which are Roman, the others of forms peculiarly Saxon. These, mixed with the others, give an aspect to the whole rugged, uncouth, and appalling to an eye accustomed to the roundness and symmetry of the Roman character.

This is a first discouragement to the English student. Next, the task of learning a new alphabet, and the time and application necessary to render it easy and familiar to the reader, often decides the doubting learner against an enterprise so apparently irksome.

The earliest remains extant of Saxon writing are said to be of the seventh century; and the latest of the thirteenth. The black letter seems to have been introduced by William the Conqueror, whose laws are written in Norman French, and in that letter. The full alphabet of Roman characters was first used about the beginning of the sixteenth century. But the expression of the same sounds, by a different character did not change these sounds, nor the language which they constituted; did not make the language of Alfred a different one from that of Piers Ploughman, of Chaucer, Douglas, Spenser, and Shakespeare, any more than the second revolution, which substituted the Roman for the English black letter, made theirs a different language from that of Pope and Bolingbroke; or the writings of Shakespeare, printed in black letter, different from the same as now done in Roman type. The life of Alfred, written in Latin and in Roman character by Asser, was reprinted by Archbishop Parker in Anglo-Saxon letters. But it is Latin still, although the words are represented by characters different from those of Asser's original. And the extracts given us by Dr. Hickes from the Greek Septuagint, in Anglo-Saxon characters, are Greek still, although the Greek sounds are represented by other types. Here then I ask, why should not this Roman character, with which we are all familiar, be substituted now for the Anglo-Saxon, by printing in the former the works already edited in the latter type? and also the manuscripts still inedited? This may be done letter for letter, and would remove entirely the first discouraging obstacle to the general study of the Anglo-Saxon.

II. ORTHOGRAPHY

In the period during which the Anglo-Saxon alphabet was in use, reading and writing were rare arts. The highest dignitaries of the church subscribed their marks, not knowing how to write their names. Alfred himself was taught to read in his thirty-sixth year only, or, as some editions of Asser say, in his thirty-ninth. Speaking of learning in his Preface to the Pastoral of Gregory, Alfred says, “Swa clean hi was oth-fallen on Angelkin that swithe few were on behinan Humber the hior thenung cuthon understandan on Englisc, oth furthron an errand y-write of Latin on Englisc areckon. And I ween that not many beyondan Humber nay aren; swa few hior weron that I furthron ane on lepne nay may y-thinkan be-Suthan Thames tha tha I to ric fang.” Or, as literally translated into later English by Archbishop Parker, “So clean was it fallen amongst the English nation, that very few were on this side Humber which their service could understand in English, or else furthermore an epistle from Latin into English to declare. And I ween that not many beyond Humber were not. So few of them were that I also one only may not remember by South Tamise when as I to reign undertook.” In this benighted state, so profoundly illiterate, few read at all, and fewer wrote: and the writer having no examples of orthography to recur to, thinking them indeed not important, had for his guide his own ideas only of the power of the letters, unpractised and indistinct as they might be. He brought together, therefore, those letters which he supposed must enter into the composition of the sound he meant to express, and was not even particular in arranging them in the order in which the sounds composing the word followed each other. Thus, birds was spelt brides; grass, gaers; run, yrnan; cart, craett; fresh, fersh. They seemed to suppose, too, that a final vowel was necessary to give sound to the consonant preceding it, and they used for that purpose any vowel indifferently. A son was suna, sune, sunu; maera, maere, maero, maeru; fines, limites; ge, ye, y, i, are various spellings of the same prefix. The final e mute in English is a remain of this, as in give, love, curse.

The vowels were used indiscriminately also for every vowel sound. Thus,

The comparative ended in ar, er, ir, or, ur, yr.

The superlative ended in ast, est, ist, ost, ust, yst.

The participle present ended in and, end, ind, ond, und, ynd.

The participle past ended in ad, ed, id, od, ud, yd.

Other examples are, betweox, betwix, betwox, betwux, betwyx, for betwixt; egland, igland, ygland, for island.

Of this promiscuous use of the vowels we have also abundant remains still in English. For according to the powers given to our letters we often use them indifferently for the same sound, as in bulwark, assert, stir, work, lurk, myrtle. The single word many, in Anglo-Saxon, was spelt, as Dr. Hickes has observed, in twenty different ways; to wit, maenigeo, maenio, maeniu, menio, meniu, maenigo, maenego, manige, menigo, manege, maenegeo, menegeo, maenygeo, menigeo, manegu, maenigu, menegu, menego, menigu manigo. To prove, indeed, that every one spelt according to his own notions, without regard to any standard, we have only to compare different editions of the same composition....

This unsettled orthography renders it necessary to swell the volume of the dictionaries, by giving to each word as many places in order of the alphabet as there are different modes of spelling it; and in proportion as this is omitted, the difficulty of finding the words increases on the student.

Since, then, it is apparent that the Anglo-Saxon writers had established no particular standard of orthography, but each followed arbitrarily his own mode of combining the letters, we are surely at liberty equally to adopt any mode which, establishing uniformity, may

be more consonant with the power of the letters, and with the orthography of the present dialect, as established by usage. The latter attention has the advantage of exhibiting more evidently the legitimate parentage of the two dialects.

III. PRONUNCIATION

To determine what that was among the Anglo-Saxons, our means are as defective as to determine the long-agitated question what was the original pronunciation of the Greek and Latin languages. The presumption is certainly strong that in Greece and Italy, the countries occupied by those languages, their pronunciation has been handed down, by tradition, more nearly than it can be known to other countries: and the rather, as there has been no particular point of time at which those ancient languages were changed into the modern ones occupying the same grounds. They have been gradually worn down to their present forms by time, and changes of modes and circumstances. In like manner there has been no particular point of time at which the Anglo-Saxon has been changed into its present English form. The languages of Europe have generally, in like manner, undergone a gradual metamorphosis, some of them in name as well as in form. We should presume, therefore, that in those countries of Great Britain which were occupied earliest, longest, and latest by the Saxon immigrants, the pronunciation of their language has been handed down more nearly than elsewhere; and should be searched for in the provincial dialects of those countries. But the fact is, that these countries have divaricated in their dialects, so that it would be difficult to decide among them which is the most genuine. Under these doubts, therefore, we may as well take the pronunciation now in general use as the legitimate standard, and that form which it is most promotive of our object to infer the Anglo-Saxon pronunciation. It is, indeed, the forlorn hope of all aim at their probably pronunciation; for were we to regard the powers of the letters only, no human organ

could articulate their uncouth jumble. We will suppose, therefore, the power of the letters to have been generally the same in Anglo-Saxon as now in English; and to produce the same sounds we will combine them, as nearly as may be, conformably with the present English orthography. This is, indeed, a most irregular and equivocal standard; but a conformity with it will bring the two dialects nearer together in sound and semblance, and facilitate the transition from the one to the other more auspiciously than a rigorous adherence to any uniform system of orthography which speculation might suggest.

IV. GRAMMAR

Some observations on Anglo-Saxon grammar may show how much easier that also may be rendered to the English student. Dr. Hickes may certainly be considered as the father of this branch of modern learning. He has been the great restorer of the Anglo-Saxon dialect from the oblivion into which it was fast falling. His labors in it were great, and his learning not less than his labors. His grammar may be said to be the only one we yet possess: for that edited at Oxford in 1711 is but an extract from Hickes, and the principal merit of Mrs. Elstob's is, that it is written in English, without anything original in it. Some others have been written, taken also, and almost entirely from Hickes. In his time there was too exclusive a prejudice in favor of the Greek and Latin languages. They were considered as the standards of perfection, and the endeavor generally was to force other languages to a conformity with these models. But nothing can be more radically unlike than the frames of the ancient languages, Southern and Northern, of the Greek and Latin languages, from those of the Gothic family. Of this last are the Anglo-Saxon and English; and had Dr. Hickes, instead of keeping his eye fixed on the Greek and Latin languages, as his standard, viewed the Anglo-Saxon in its conformity with the English only, he would greatly have enlarged the advantages for which we are already so much indebted to him. His labors,

however, have advanced us so far on the right road, and a correct pursuit of it will be a just homage to him.

A noun is to be considered under its accidents of genders, cases, and numbers. The word gender is, in nature, synonymous with sex. To all the subjects of the animal kingdom nature has given sex, and that is twofold only, male or female, masculine or feminine. Vegetable and mineral subjects have no distinction of sex, consequently are of no gender. Words, like other inanimate things, have no sex, are of no gender. Yet in the construction of the Greek and Latin languages, and of the modern ones of the same family, their adjectives being varied in termination, and made distinctive of animal sex, in conformity with the nouns or names of animal subject, the two real genders, which nature has established, are distinguished in these languages. But, not stopping here, they have by usage, thrown a number of unsexual subjects into the sexual classes, leaving the residuary mass to a third class, which grammarians call neutral—that is to say, of no gender or sex: and some Latin grammarians have so far lost sight of the real and natural genders as to ascribe to that language seven genders, the masculine, feminine, neuter, gender common to two, common to three, the doubtful, and the epicene; than which nothing can be more arbitrary, and nothing more useless. But the language of the Anglo-Saxons and English is based on principles totally different from those of the Greek and Latin, and is constructed on laws peculiar and idiomatic to itself. Its adjectives have no changes of termination on account of gender, number or case. Each has a single one applicable to every noun, whether it be the name of a thing having sex, or not. To ascribe gender to nouns in such a case would be to embarrass the learner with unmeaning and useless distinctions.

It will be said, e.g., that a priest is of one gender, and a priestess of another; a poet of one, a poetess of another, etc.; and that therefore the words designating them must be of different genders. I say, not at

all; because although the thing designated may have sex, the word designating it, like other inanimate things, has no sex, no gender. In Latin, we well know that the thing may be of one gender and the word designating it of another. See Martial vii., Epig. 17. The ascription of gender to it is artificial and arbitrary, and, in English and Anglo-Saxon, absolutely useless. Lowthe, therefore, among the most correct of our English grammarians, has justly said that in the nouns of the English language there is no other distinction of gender but that of nature, its adjectives admitting no change but of the degrees of comparison. We must guard against the conclusion of Dr. Hickes that the change of termination in the Anglo-Saxon adjectives, as *god*, *gode*, for example, is an indication of gender; this, like others of his examples of inflection, is only an instance of unsettled orthography. In the languages acknowledged to ascribe genders to their words, as Greek, Latin, Italian, Spanish, French, their dictionaries indicate the gender of every noun; but the Anglo-Saxon and English dictionaries give no such indication; a proof of the general sense that gender makes no part of the character of the noun. We may safely therefore dismiss the learning of genders from our language, whether in its ancient or modern form.

2. Our law of Cases is different. They exist in nature, according to the difference of accident they announce. No language can be without them, and it is an error to say that the Greek is without an ablative. Its ablative indeed is always like its dative; but were that sufficient to deny its existence, we might equally say that the Latins had no ablative plural, because in all nouns of every declension, their ablative plural is the same with the dative. It would be to say that to go to a place, or from a place, means the same thing. The grammarians of Port-Royal, therefore, have justly restored the ablative to Greek nouns. Our cases are generally distinguished by the aid of the prepositions *of*, *to*, *by*, *from*, or *with*, but sometimes also by change of termination. But these changes are not so general or difficult as to require, or to be

capable of a distribution into declensions. Yet Dr. Hickes, having in view the Saxon declensions of the Latin, and ten of the Greek language, has given six, and Thwaytes seven to the Anglo-Saxon. The whole of them, however, are comprehended under the three simple canons following:

(1.) The datives and ablatives plural of all nouns end in *um*.

(2.) Of the other cases, some nouns inflect their genitive singular only, and some their nominative, accusative and vocative plural also in *s*, as in English.

(3.) Others, preserving the primitive form in their nominative and vocative singular, inflect all the other cases and numbers in *en*.

3. Numbers. Every language, as I presume, has so formed its nouns and verbs as to distinguish a single and a plurality of subjects, and all, as far as I know, have been contented with the simple distinction of singular and plural, except the Greeks, who have interposed between them a dual number, so distinctly formed by actual changes of termination and inflection, as to leave no doubt of its real distinction from the other numbers. But they do not uniformly use their dual for its appropriate purpose. The number two is often expressed plurally, and sometimes by a dual noun and plural verb. Dr. Hickes supposes the Anglo-Saxon to have a dual number also, not going through the whole vocabulary of nouns and verbs, as in Greek, but confined to two particular pronouns, i.e., *wit* and *yit*, which he translates *we two*, and *ye two*. But Benson renders *wit* by *nos*, and does not give *yit* at all. And is it worth while to embarrass grammar with an extra distinction for two or three, or half a dozen words? And why may not *wit*, *we two*, and *yit*, *ye two*, be considered plural, as well as *we three*, or *we four*? as *duo*, *ambo*, with the Latins? We may surely say then that neither the Anglo-Saxon nor English have a dual number.

4. Verbs, moods. To the verbs in Anglo-Saxon Dr. Hickes gives six moods. The Greeks, besides the four general moods, Indicative, Subjunctive, Imperative, and Infinitive, have really an Optative mood, distinguished from the others by actual differences of termination. And some Latin grammarians, besides the Optative, have added, in that language, a Potential mood; neither of them distinguished by differences of termination or inflection. They have therefore been disallowed by later and sounder grammarians; and we may, in like manner, disembarass our Anglo-Saxon and English from the Optatives and Potentials of Dr. Hickes.

Supines and Gerunds

He thinks, too, that the Anglo-Saxon has supines and gerunds among its variations; accidents certainly peculiar to Latin verbs only. He considers *lufian*, to love, as the infinitive, and *to lufian*, a supine. The exclusion, therefore, of the preposition *to*, makes with him the infinitive, while we have ever considered it as the essential sign of that mood. And what all grammarians have hitherto called the infinitive, he considers as a supine or gerund....

From these aberrations, into which our great Anglo-Saxon leader, Dr. Hickes, has been seduced by too much regard to the structure of the Greek and Latin languages and too little to their radical difference from that of the Gothic family, we have to recall our footsteps into the right way, and we shall find our path rendered smoother, plainer, and more direct to the object of profiting of the light which each dialect throws on the other....

As we are possessed in America of the printed editions of the Anglo-Saxon writings, they furnish a fit occasion for this country to make some return to the older nations for the science for which we are indebted to them; and in this task I hope an honorable part will in time be borne by our University, for which, at an hour of life too late

for anything elaborate, I hazard these imperfect hints, for consideration chiefly on a subject on which I pretend not to be profound. The publication of the inedited manuscripts which exist in the libraries of Great Britain only, must depend on the learned of that nation. Their means of science are great. They have done much, and much is yet expected from them. Nor will they disappoint us. Our means are as yet small; but the widow's mite was piously given and kindly accepted. How much would contribute to the happiness of these two nations a brotherly emulation in doing good to each other, rather than the mutual vituperations so unwisely and unjustifiably sometimes indulged in by both. And this too by men on both sides of the water, who think themselves of a superior order of understanding, and some of whom are truly of an elevation far above the ordinary stature of the human mind. No two people on earth can so much help or hurt each other. Let us then yoke ourselves jointly to the same car of mutual happiness, and vie in common efforts to do each other all the good we can—to reflect on each other the lights of mutual science particularly, and the kind affections of kindred blood. Be it our task, in the case under consideration, to reform and republish, in forms more advantageous, what we already possess, and theirs to add to the common stock the inedited treasures which have been too long buried in their depositories.

P. S. January, 1825. In the year 1818, by authority of the legislature of Virginia, a plan for the establishment of an University was prepared and proposed by them. In that plan the Anglo-Saxon language was comprehended as a part of the circle of instruction to be given to the students; and the preceding pages were then committed to writing for the use of the University. I pretend not to be an Anglo-Saxon scholar. From an early period of my studies, indeed, I have been sensible of the importance of making it a part of the regular education of our youth; and at different times, as leisure permitted, I applied myself to the study of it, with some degree of attention. But

my life has been too busy in pursuits of another character to have made much proficiency in this. The leading idea which very soon impressed itself on my mind, and which has continued to prevail through the whole of my observations on the language, was, that it was nothing more than the Old English of a period of some ages earlier than that of Piers Ploughman; and under this view my cultivation of it has been continued. It was apparent to me that the labors of Dr. Hickes, and other very learned men, have been employed in a very unfortunate direction, in endeavors to give it the complicated structure of the Greek and Latin languages. I have just now received a copy of a new work, by Mr. Bosworth, on the elements of Anglo-Saxon grammar, and it quotes two other works, by Turner and Jamieson, both of great erudition, but not yet known here.

Mr. Bosworth's is, indeed, a treasure of that venerable learning. It proved the assiduity with which he has cultivated it, the profound knowledge in it which he has attained, and that he has advanced far beyond all former grammarians in the science of its structure. Yet, I own, I was disappointed on finding that in proportion as he has advanced on and beyond the footsteps of his predecessors, he has the more embarrassed the language with rules and distinctions, in imitation of the grammars of Greek and Latin; has led it still further from its genuine type of old English, and increased its difficulties by the multitude and variety of new and minute rules with which he has charged it.... And this leads to such an infinitude of minute rules and observances, as are beyond the power of any human memory to retain. If, indeed, this be the true genius of the Anglo-Saxon language, then its difficulties go beyond its worth, and render a knowledge of it no longer a compensation for the time and labor its acquisition will require; and, in that case, I would recommend its abandonment in our University, as an unattainable and unprofitable pursuit.

But if, as I believe, we may consider it as merely an antiquated

form of our present language, if we may throw aside the learned difficulties which mask its real character, liberate it from these foreign shackles, and proceed to apply ourselves to it with little more preparation than to Piers Ploughman, Douglas, or Chaucer, then I am persuaded its acquisition will require little time or labor, and will richly repay us by the intimate insight it will give us into the genuine structure, powers, and meanings of the language we now read and speak. We shall then read Shakespeare and Milton with a superior degree of intelligence and delight, heightened by the new and delicate shades of meaning developed to us by a knowledge of the original sense of the same words.

This rejection of the learned labors of our Anglo-Saxon doctors, may be considered, perhaps, as a rebellion against science. My hope, however, is, that it may prove a revolution. Two great works, indeed, will be wanting to effect all its advantages, 1. A grammar on the simple principles of the English grammar, analogizing the idiom, the rules and principles of the one and the other, eliciting their common origin, the identity of their structure, laws, and composition, and their total unlikeness to the genius of the Greek and Latin. 2. A dictionary, on the plan of Stephens or Scapula, in which the Anglo-Saxon roots should be arranged alphabetically, and the derivatives from each root, Saxon and English, entered under it in their proper order and connection. Such works as these, with new editions of the Saxon writings, on the plan I venture to propose, would show that the Anglo-Saxon is really old English, little more difficult to understand than works we possess, and read, and still call English. They would recruit and renovate the vigor of the English language, too much impaired by the neglect of its ancient constitution and dialects, and would remove, for the student, the principal difficulties of ascending to the source of the English language, the main object of what has been here proposed.

Biographical Sketches

The Character of George Washington

.... I think I knew General Washington intimately and thoroughly; and were I called on to delineate his character, it should be in terms like these.

His mind was great and powerful, without being of the very first order; his penetration strong, though not so acute as that of a Newton, Bacon, or Locke; and as far as he saw, no judgment was ever sounder. It was slow in operation, being little aided by invention or imagination, but sure in conclusion. Hence the common remark of his officers, of the advantage he derived from councils of war, where hearing all suggestions, he selected whatever was best; and certainly no general ever planned his battles more judiciously. But if deranged during the course of the action, if any member of his plan was dislocated by sudden circumstances, he was slow in re-adjustment. The consequence was, that he often failed in the field, and rarely against an enemy in station, as at Boston and York. He was incapable of fear, meeting personal dangers with the calmest unconcern. Perhaps the strongest feature in his character was prudence, never acting until every circumstance, every consideration, was maturely weighed; refraining if he saw a doubt, but, when once decided, going through with his purpose, whatever obstacles opposed. His integrity was most pure, his justice the most inflexible I have ever known, no motives of interest or consanguinity, of friendship or hatred, being able to bias his decision. He was, indeed, in every sense of the words, a wise, a good, and a great man. His temper was naturally irritable and high toned; but reflection and resolution had obtained a firm and habitual ascendancy over it. If ever, however, it broke its bonds, he was most tremendous in his wrath. In his expenses he was honorable, but exact;

liberal in contributions to whatever promised utility; but frowning and unyielding on all visionary projects, and all unworthy calls on his charity. His heart was not warm in its affections; but he exactly calculated every man's value, and gave him a solid esteem proportioned to it. His person, you know, was fine, his stature exactly what one would wish, his deportment easy, erect and noble; the best horseman of his age, and the most graceful figure that could be seen on horseback. Although in the circle of his friends, where he might be unreserved with safety, he took a free share in conversation, his colloquial talents were not above mediocrity, possessing neither copiousness of ideas, nor fluency of words. In public, when called on for a sudden opinion, he was unready, short and embarrassed. Yet he wrote readily, rather diffusely, in an easy and correct style. This he had acquired by conversation with the world, for his education was merely reading, writing and common arithmetic, to which he added surveying at a later day. His time was employed in action chiefly, reading little, and that only in agriculture and English history. His correspondence became necessarily extensive, and, with journalizing his agricultural proceedings, occupied most of his leisure hours within doors. On the whole, his character was, in its mass, perfect, in nothing bad, in few points indifferent; and it may truly be said, that never did nature and fortune combine more perfectly to make a man great, and to place him in the same constellation with whatever worthies have merited from man an everlasting remembrance. For his was the singular destiny and merit, of leading the armies of his country successfully through an arduous war, for the establishment of its independence; of conducting its councils through the birth of a government, new in its forms and principles, until it had settled down into a quiet and orderly train; and of scrupulously obeying the laws through the whole of his career, civil and military, of which the history of the world furnishes no other example.

华盛顿像

.... I am satisfied the great body of republicans think of him as I do. We were, indeed, dissatisfied with him on his ratification of the British treaty. But this was short lived. We knew his honesty, the wiles with which he was encompassed, and that age had already begun to relax the firmness of his purposes; and I am convinced he is more deeply seated in the love and gratitude of the republicans, than in the Pharisaical homage of the federal monarchists. For he was no monarchist from preference of his judgment. The soundness of that gave him correct views of the rights of man, and his severe justice devoted him to them. He has often declared to me that he considered our new Constitution as an experiment on the practicability of

republican government, and with what dose of liberty man could be trusted for his own good; that he was determined the experiment should have a fair trial, and would lose the last drop of his blood in support of it. And these declarations he repeated to me the oftener and more pointedly, because he knew my suspicions of Colonel Hamilton's views, and probably had heard from him the same declarations which I had, to wit, "that the British constitution, with its unequal representation, corruption and other existing abuses, was the most perfect government which had ever been established on earth, and that a reformation of those abuses would make it an impracticable government." I do believe that General Washington had not a firm confidence in the durability of our government. He was naturally distrustful of men, and inclined to gloomy apprehensions; and I was ever persuaded that a belief that we must at length end in something like a British constitution, had some weight in his adoption of the ceremonies of levees, birthdays, pompous meetings with Congress, and other forms of the same character, calculated to prepare us gradually for a change which he believed possible, and to let it come on with as little shock as might be to the public mind.

These are my opinions of General Washington, which I would vouch at the judgment seat of God, having been formed on an acquaintance of thirty years. I served with him in the Virginia legislature from 1769 to the Revolutionary war, and again, a short time in Congress, until he left us to take command of the army. During the war and after it we corresponded occasionally, and in the four years of my continuance in the office of Secretary of State, our intercourse was daily, confidential and cordial. After I retired from that office, great and malignant pains were taken by our federal monarchists, and not entirely without effect, to make him view me as a theorist, holding French principles of government, which would lead infallibly to licentiousness and anarchy. And to this he listened the more easily, from my known disapprobation of the British treaty. I

never saw him afterwards, or these malignant insinuations should have been dissipated before his just judgment, as mists before the sun. I felt on his death, with my countrymen, that “verily a great man hath fallen this day in Israel.”

Anecdotes of Benjamin Franklin

Our revolutionary process, as is well known, commenced by petitions, memorials, remonstrances, etc., from the old Congress. These were followed by a non-importation agreement, as a pacific instrument of coercion. While that was before us, and sundry exceptions, as of arms, ammunition, etc., were moved from different quarters of the house, I was sitting by Dr. Franklin and observed to him that I thought we should except books; that we ought not to exclude science, even coming from an enemy. He thought so too, and I proposed the exception, which was agreed to. Soon after it occurred that medicine should be excepted, and I suggested that also to the Doctor. “As to that,” said he, “I will tell you a story. When I was in London, in such a year, there was a weekly club of physicians, of which Sir John Pringle was president, and I was invited by my friend Dr. Fothergill to attend when convenient. Their rule was to propose a thesis one week and discuss it the next. I happened there when the question to be considered was whether physicians had, on the whole, done most good or harm? The young members, particularly, having discussed it very learnedly and eloquently till the subject was exhausted, one of them observed to Sir John Pringle, that although it was not usual for the President to take part in a debate, yet they were desirous to know his opinion on the question. He said they must first tell him whether, under the appellation of physicians, they meant to include old women, if they did he thought they had done more good than harm, otherwise more harm than good.”

富兰克林像

The confederation of the States, while on the carpet before the old Congress, was strenuously opposed by the smaller States, under apprehensions that they would be swallowed up by the larger ones. We were long engaged in the discussion; it produced great heats, much ill humor, and intemperate declarations from some members. Dr. Franklin at length brought the debate to a close with one of his little apologues. He observed that “at the time of the union of England and Scotland, the Duke of Argyle was most violently opposed to that measure and among other things predicted that, as the whale had swallowed Jonah, so Scotland would be swallowed by England. However,” said the Doctor, “when Lord Bute came into the government, he soon brought into its administration so many of his countrymen, that it was found in event that Jonah swallowed the

whale.” This little story produced a general laugh, and restored good humor, and the article of difficulty was passed.

When Dr. Franklin went to France, on his revolutionary mission, his eminence as a philosopher, his venerable appearance, and the cause on which he was sent, rendered him extremely popular. For all ranks and conditions of men there, entered warmly into the American interest. He was, therefore, feasted and invited into all the court parties. At these he sometimes met the old Duchess of Bourbon, who, being a chess player of about his force, they very generally played together. Happening once to put her king into prize, the Doctor took it. “Ah,” said she, “we do not take kings so.” “We do in America,” said the Doctor.

At one of these parties the Emperor Joseph III, then at Paris, incog., under the title of Count Falkenstein, was overlooking the game in silence, while the company was engaged in animated conversations on the American question. “How happens it M. le Comte,” said the Duchess, “that while we all feel so much interest in the cause of the Americans, you say nothing for them?” “I am a king by trade,” said he.

When the Declaration of Independence was under the consideration of Congress, there were two or three unlucky expressions in it which gave offence to some members. The words “Scotch and other foreign auxiliaries” excited the ire of a gentleman or two of that country. Severe strictures on the conduct of the British king, in negotiating our repeated repeals of the law which permitted the importation of slaves, were disapproved by some Southern gentlemen, whose reflections were not yet matured to the full abhorrence of that traffic. Although the offensive expressions were immediately yielded these gentlemen continued their depredations on other parts of the instrument. I was sitting by Dr. Franklin, who perceived that I was not insensible to these mutilations. “I have made it a rule,” said he,

“whenever in my power, to avoid becoming the draughtsmen of papers to be reviewed by a public body. I took my lesson from an incident which I will relate to you. When I was a journeyman printer, one of my companions, an apprentice hatter, having served out his time, was about to open shop for himself. His first concern was to have a handsome signboard, with a proper inscription. He composed it in these words, ‘John Thompson, Hatter, makes and sells hats for ready money’ with a figure of a hat subjoined; but he thought he would submit it to his friends for their amendments. The first he showed it to thought the word ‘Hatter’ tautologous, because followed by the words ‘makes hats,’ which show he was a hatter. It was struck out. The next observed that the word ‘makes’ might as well be omitted, because his customers would not care who made the hats. If good and to their mind, they would buy, by whomsoever made. He struck it out. A third said he thought the words ‘for ready money’ were useless, as it was not the custom of the place to sell on credit. Every one who purchased expected to pay. They were parted with, and the inscription now stood, ‘John Thompson sells hats.’ ‘Sells hats!’ says his next friend. Why nobody will expect you to give them away, what then is the use of that word? It was stricken out, and ‘hats’ followed it, the rather as there was one painted on the board. So the inscription was reduced ultimately to ‘John Thompson’ with the figure of a hat subjoined.”

The Doctor told me at Paris the two following anecdotes of the Abbé Raynal. He had a party to dine with him one day at Passy, of whom one half were Americans, the other half French, and among the last was the Abbé. During the dinner he got on his favorite theory of the degeneracy of animals, and even of man, in America, and urged it with his usual eloquence. The Doctor at length noticing the accidental stature and position of his guests, at table, “Come,” says he, ‘M. l’Abbé, let us try this question by the fact before us. We are here one half Americans, and one half French, and it happens that the

Americans have placed themselves on one side of the table, and our French friends are on the other. Let both parties rise, and we will see on which side nature has degenerated." It happened that his American guests were Carmichael, Harmer, Humphreys, and others of the finest stature and form; while those of the other side were remarkably diminutive, and the Abbé himself particularly, was a mere shrimp. He parried the appeal, however, by a complimentary admission of exceptions, among which the Doctor himself was a conspicuous one.

The Doctor and Silas Deane were in conversation one day at Passy, on the numerous errors in the Abbé's *Histoire des deux Indes*, when he happened to step in. After the usual salutations, Silas Deane said to him, "The Doctor and myself, Abbé, were just speaking of the errors of fact into which you have been led in your history." "Oh, no Sir," said the Abbé, "that is impossible. I took the greatest care not to insert a single fact, for which I had not the most unquestionable authority." "Why," says Deane, "there is the story of Polly Baker, and the eloquent apology you have put into her mouth, when brought before a court of Massachusetts to suffer punishment under a law which you cite, for having had a bastard. I know there never was such a law in Massachusetts." "Be assured," said the Abbé, "you are mistaken, and that that is a true story. I do not immediately recollect indeed the particular information on which I quote it; but I am certain that I had for it unquestionable authority." Doctor Franklin, who had been for some time shaking with unrestrained laughter at the Abbé's confidence in his authority for that tale, said, "I will tell you, Abbé, the origin of that story. When I was a printer and editor of a newspaper, we were sometimes slack of news, and to amuse our customers, I used to fill up our vacant columns with anecdotes and fables, and fancies of my own, and this of Polly Baker is a story of my making, on one of these occasions. The Abbé, without the least disconcert, exclaimed with a laugh, "Oh, very well, Doctor, I had rather relate your stories than other men's truths."

Notes for the Biography of George Wythe

George Wythe was born about the year 1727, or 1728, of a respectable family in the County of Elizabeth City, on the shores of the Chesapeake. He inherited, from his father, a fortune sufficient for independence and ease. He had not the benefit of a regular education in the schools, but acquired a good one of himself, and without assistance; insomuch, as to become the best Latin and Greek scholar in the State. It is said, that while reading the Greek Testament, his mother held an English one, to aid him in rendering the Greek text conformably with that. He also acquired, by his own reading, a good knowledge of Mathematics, and of Natural and Moral Philosophy. He engaged in the study of the law under the direction of a Mr. Lewis, of that profession, and went early to the bar of the General Court, then occupied by men of great ability, learning, and dignity in their profession. He soon became eminent among them, and, in process of time, the first at the bar, taking into consideration his superior learning, correct elocution, and logical style of reasoning; for in pleading he never indulged himself with an useless or declamatory thought or word; and became as distinguished by correctness and purity of conduct in his profession, as he was by his industry and fidelity to those who employed him. He was early elected to the House of Representatives, then called the House of Burgesses, and continued in it until the Revolution. On the first dawn of that, instead of higgling on half-way principles, as others did who feared to follow their reason, he took his stand on the solid ground that the only link of political union between us and Great Britain, was the identity of our Executive; that that nation and its Parliament had no more authority over us, than we had over them, and that we were co-ordinate nations with Great Britain and Hanover.

In 1774, he was a member of a Committee of the House of Burgesses, appointed to prepare a Petition to the King, a Memorial to

the House of Lords, and a Remonstrance to the House of Commons, on the subject of the proposed Stamp Act. He was made draughtsman of the last, and, following his own principles, he so far overwent the timid hesitations of his colleagues, that his draught was subjected by them to material modifications; and, when the famous Resolutions of Mr. Henry, in 1775, were proposed, it was not on any difference of principle that they were opposed by Wythe, Randolph, Pendleton, Nicholas, Bland, and other worthies, who had long been the habitual leaders of the House; but because those papers of the preceding session had already expressed the same sentiments and assertions of right, and that an answer to them was yet to be expected.

In August, 1775, he was appointed a member of Congress, and in 1776, signed the Declaration of Independence, of which he had, in debate, been an eminent supporter. And subsequently, in the same year, he was appointed, by the Legislature of Virginia, one of a Committee to revise the laws of the State, as well of British as of Colonial enactment, and to prepare bills for re-enacting them, with such alterations as the change in the form and principles of the government, and other circumstances, required; and of this work, he executed the period commencing with the revolution in England, and ending with the establishment of the new government here; excepting the Acts for regulating descents, for religious freedom, and for proportioning crimes and punishments. In 1777, he was chosen Speaker of the House of Delegates, being of distinguished learning in Parliamentary law and proceedings; and towards the end of the same year, he was appointed one of the three Chancellors, to whom that department of the Judiciary was confided, on the first organization of the new government. On a subsequent change of the form of that court, he was appointed sole Chancellor, in which office he continued to act until his death, which happened in June, 1806, about the seventy-eighth or seventy-ninth year of his age.

Mr. Wythe had been twice married: first, I believe, to a daughter of Mr. Lewis, with whom he had studied law, and afterwards to a Miss Taliaferro, of a wealthy and respectable family in the neighborhood of Williamsburg; by neither of whom did he leave issue.

No man ever left behind him a character more venerated than George Wythe. His virtue was of the purest tint; his integrity inflexible, and his justice exact; of warm patriotism, and, devoted as he was to liberty, and the natural and equal rights of man, he might truly be called the Cato of his country, without the avarice of the Roman; for a more disinterested person never lived. Temperance and regularity in all his habits, gave him general good health, and his unaffected modesty and suavity of manners endeared him to every one. He was of easy elocution, his language chaste, methodical in the arrangement of his matter, learned and logical in the use of it, and of great urbanity in debate; not quick of apprehension, but, with a little time, profound in penetration, and sound in conclusion. In his philosophy he was firm, and neither troubling, nor perhaps trusting, any one with his religious creed, he left the world to the conclusion, that that religion must be good which could produce a life of such exemplary virtue.

His stature was of the middle size, well formed and proportioned, and the features of his face were manly, comely, and engaging. Such was George Wythe, the honor of his own, and the model of future times.

Notes on Virginia

QUERY I

An exact description of the limits and boundaries of the State of Virginia?

Virginia is bounded on the east by the Atlantic; on the north by a line of latitude crossing the eastern shore through Watkin's Point, being about $37^{\circ} 57'$ north latitude; from thence by a straight line to Cinquac, near the mouth of the Potomac; thence by the Potomac, which is common to Virginia and Maryland, to the first fountain of its northern branch; thence by a meridian line, passing through that fountain till it intersects a line running east and west, in latitude $39^{\circ} 43' 42.4''$ which divides Maryland from Pennsylvania, and which was marked by Messrs. Mason and Dixon; thence by that line, and a continuation of it westwardly to the completion of five degrees of longitude from the eastern boundary of Pennsylvania, in the same latitude, and thence by a meridian line to the Ohio; on the west by the Ohio and Mississippi, to latitude $36^{\circ} 30'$ north, and on the south by the line of latitude last mentioned.... These boundaries include an area somewhat triangular of one hundred and twenty-one thousand five hundred and twenty-five square miles, whereof seventy-nine thousand six hundred and fifty lie westward of the Alleghany mountains, and fifty-seven thousand and thirty-four westward of the meridian of the mouth of the Great Kanhaway. This State is therefore one-third larger than the islands of Great Britain and Ireland, which are reckoned at eighty-eight thousand three hundred and fifty-seven square miles.

These limits result from, 1. The ancient charters from the crown of England. 2. The grant of Maryland to the Lord Baltimore, and the

subsequent determinations of the British court as to the extent of that grant. 3. The grant of Pennsylvania to William Penn, and a compact between the general assemblies of the commonwealths of Virginia and Pennsylvania as to the extent of that grant. 4. The grant of Carolina, and actual location of its northern boundary, by consent of both parties. 5. The treaty of Paris of 1763. 6. The confirmation of the charters of the neighboring States by the convention of Virginia at the time of constituting their commonwealth. 7. The cession made by Virginia to Congress of all the lands to which they had title on the north side of the Ohio.

QUERY II

A notice of its rivers, rivulets, and how far they are navigable?

An inspection of a map of Virginia, will give a better idea of the geography of its rivers, than any description in writing. Their navigation may be imperfectly noted.

Roanoke, so far as it lies within the State, is nowhere navigable but for canoes, or light batteaux; and even for these in such detached parcels as to have prevented the inhabitants from availing themselves of it at all.

James River, and its waters, afford navigation as follows:

The whole of Elizabeth River, the lowest of those which run into James River, is a harbor, and would contain upwards of three hundred ships. The channel is from one hundred and fifty to two hundred fathoms wide and at common flood tide affords eighteen feet water to Norfolk. The Stafford, a sixty gun ship, went there, lightening herself to cross the bar at Sowel's Point. The Fier Rodrigue, pierced for sixty-

four guns, and carrying fifty, went there without lightening. Craney Island, at the mouth of this river, commands its channel tolerably well.

Nansemond River is navigable to Sleepy Hole for vessels of two hundred and fifty tons; to Suffolk for those of one hundred tons; and to Milner's for those of twenty-five.

Pagan Creek affords eight or ten feet water to Smithfield, which admits vessels of twenty tons.

Chickahominy has at its mouth a bar, on which is only twelve feet water at common flood tide. Vessels passing that, may go eight miles up the river; those of ten feet draught may go four miles further, and those of six tons burden twenty miles further.

Appomattox may be navigated as far as Broadways, by any vessel which has crossed Harrison's bar in James River; it keeps eight or ten feet water a mile or two higher up to Fisher's bar, and four feet on that and upwards to Petersburg, where all navigation ceases.

James River itself affords a harbor for vessels of any size in Hampton Road, but not in safety through the whole winter; and there is navigable water for them as far as Mulberry Island. A forty gun ship goes to Jamestown, and lightening herself, may pass Harrison's bar; on which there is only fifteen feet water. Vessels of two hundred and fifty tons may go to Warwick; those of one hundred and twenty-five go to Rocket's, a mile below Richmond; from thence is about seven feet water to Richmond; and about the centre of the town, four feet and a half, where the navigation is interrupted by falls, which in a course of six miles, descend about eighty-eight feet perpendicular; above these it is resumed in canoes and batteaux, and is prosecuted safely and advantageously to within ten miles of the Blue Ridge; and even through the Blue Ridge a ton weight has been brought; and the expense would not be great, when compared with its object, to open a

tolerable navigation up Jackson's river and Carpenter's creek, to within twenty-five miles of Howard's creek of Green Briar, both of which have then water enough to float vessels into the Great Kanhaway. In some future state of population I think it possible that its navigation may also be made to interlock with that of the Potomac, and through that to communicate by a short portage with the Ohio. It is to be noted that this river is called in the maps James River, only to its confluence with the Rivanna; thence to the Blue Ridge it is called the Fluvanna; and thence to its source Jackson's river. But in common speech, it is called James River to its source.

The Rivanna, a branch of James River, is navigable for canoes and batteaux to its intersection with the South-West mountains, which is about twenty-two miles; and may easily be opened to navigation through these mountains to its fork above Charlottesville....

The Mississippi will be one of the principal channels of future commerce for the country westward of the Alleghany. From the mouth of this river to where it receives the Ohio, is one thousand miles by water, but only five hundred by land, passing through the Chickasaw country. From the mouth of the Ohio to that of the Missouri, is two hundred and thirty miles by water, and one hundred and forty by land, from thence to the mouth of the Illinois river, is about twenty-five miles. The Mississippi, below the mouth of the Missouri, is always muddy, and abounding with sand bars, which frequently change their places. However, it carries fifteen feet water to the mouth of the Ohio, to which place it is from one and a half to two miles wide, and thence to Kaskaskia from one mile to a mile and a quarter wide. Its current is so rapid, that it never can be stemmed by the force of the wind alone, acting on sails. Any vessel, however, navigated with oars, may come up at any time, and receive much aid from the wind. A batteau passes from the mouth of Ohio to the mouth of Mississippi in three weeks, and is from two to three months getting up again. During its floods,

which are periodical as those of the Nile, the largest vessels may pass down it, if their steerage can be insured. These floods begin in April, and the river returns into its banks early in August. The inundation extends further on the western than eastern side, covering the lands in some places for fifty miles from its banks. Above the mouth of the Missouri it becomes much such a river as the Ohio, like it clear and gentle in its current, not quite so wide, the period of its floods nearly the same, but not rising to so great a height. The streets of the village at Cohoes are not more than ten feet above the ordinary level of the water, and yet were never overflowed. Its bed deepens every year. Cohoes, in the memory of many people now living, was insulated by every flood of the river. What was the eastern channel has now become a lake, nine miles in length and one in width, into which the river at this day never flows. This river yields turtle of a peculiar kind, perch, trout, gar, pike, mullets, herrings, carp, spatula-fish of fifty pounds weight, cat-fish of one hundred pounds weight, buffalo fish, and sturgeon. Alligators or crocodiles have been seen as high up as the Acansas. It also abounds in herons, cranes, ducks, brant, geese, and swans. Its passage is commanded by a fort established by this State, five miles below the mouth of the Ohio, and ten miles above the Carolina boundary.

The Missouri, since the treaty of Paris, the Illinois and northern branches of the Ohio, since the cession to Congress, are no longer within our limits. Yet having been so heretofore, and still opening to us channels of extensive communication with the western and northwestern country, they shall be noted in their order.

QUERY III

A notice of the best Seaports of the State and how big
are the vessels they can receive?

Having no ports but our rivers and creeks, this Query has been answered under the preceding one.

QUERY IV

A notice of its Mountains?

For the particular geography of our mountains I must refer to Fry and Jefferson's map of Virginia; and to Evans' analysis of this map of America, for a more philosophical view of them than is to be found in any other work. It is worthy of notice, that our mountains are not solitary and scattered confusedly over the face of the country; but that they commence at about one hundred and fifty miles from the sea-coast, are disposed in ridges, one behind another, running nearly parallel with the sea-coast, though rather approaching it as they advance north-eastwardly. To the south-west, as the tract of country between the sea-coast and the Mississippi becomes narrower, the mountains converge into a single ridge, which, as it approaches the Gulf of Mexico, subsides into plain country, and gives rise to some of the waters of that gulf, and particularly to a river called the Apalachicola, probably from the Apalachies, an Indian nation formerly residing on it. Hence, the mountains giving rise to that river, and seen from its various parts, were called the Apalachian mountains, being in fact the end or termination only of the great ridges passing through the continent. European geographers, however, extended the name northwardly as far as the mountains extended; some giving it, after their separation into different ridges, to the Blue Ridge, others to the North Mountain, others to the Alleghany, others to the Laurel Ridge, as may be seen by their different maps. But the fact I believe is, that none of these ridges were ever known by that name to the inhabitants, either native or emigrant, but as they saw them so called in European maps. In the same direction, generally, are the veins of limestone, coal, and other minerals hitherto discovered;

and so range the falls of our great rivers. But the courses of the great rivers are at right angles with these. James and Potomac penetrate through all the ridges of mountains eastward of the Alleghany; that is, broken by no water course. It is in fact the spine of the country between the Atlantic on one side, and the Mississippi and St. Lawrence on the other. The passage of the Potomac through the Blue Ridge is, perhaps, one of the most stupendous scenes in nature. You stand on a very high point of land. On your right comes up the Shenandoah, having ranged along the foot of the mountain an hundred miles to seek a vent. On your left approaches the Potomac, in quest of a passage also. In the moment of their junction, they rush together against the mountain, rend it asunder, and pass off to the sea. The first glance of this scene hurries our senses into the opinion, that this earth has been created in time, that the mountains were formed first, that the rivers began to flow afterwards, that in this place, particularly, they have been dammed up by the Blue Ridge of mountains, and have formed an ocean which filled the whole valley; that continuing to rise they have at length broken over at this spot, and have torn the mountain down from its summit to its base. The piles of rock on each hand, but particularly on the Shenandoah, the evident marks of their disrupture and avulsion from their beds by the most powerful agents of nature, corroborate the impression. But the distant finishing which nature has given to the picture, is of a very different character. It is a true contrast to the foreground. It is as placid and delightful as that is wild and tremendous. For the mountain being cloven asunder, she presents to your eye, through the cleft, a small catch of smooth blue horizon, at an infinite distance in the plain country, inviting you, as it were, from the riot and tumult roaring around, to pass through the breach and participate of the calm below. Here the eye ultimately composes itself; and that way, too, the road happens actually to lead. You cross the Potomac above the junction, pass along its side through the base of the mountain for three miles, its terrible precipices hanging in fragments over you, and within about twenty miles reach

Fredericktown, and the fine country round that. This scene is worth a voyage across the Atlantic. Yet here, as in the neighborhood of the Natural Bridge, are people who have passed their lives within half a dozen miles, and have never been to survey these monuments of a war between rivers and mountains, which must have shaken the earth itself to its centre....

The height of our mountains has not yet been estimated with any degree of exactness. The Alleghany being the great ridge which divides the waters of the Atlantic from those of the Mississippi, its summit is doubtless more elevated above the ocean than that of any other mountain. But its relative height, compared with the base on which it stands, is not so great as that of some others, the country rising behind the successive ridges like the steps of stairs. The mountains of the Blue Ridge, and of these the Peaks of Otter, are thought to be of a greater height, measured from their base, than any others in our country, and perhaps in North America. From data, which may found a tolerable conjecture, we suppose the highest peak to be about four thousand feet perpendicular, which is not a fifth part of the height of the mountains of South America, nor onethird of the height which would be necessary in our latitude to preserve ice in the open air unmelted through the year. The ridge of mountains next beyond the Blue Ridge, called by us the North mountain, is of the greatest extent; for which reason they were named by the Indians the endless mountains.

A substance supposed to be Pumice, found floating on the Mississippi, has induced a conjecture that there is a volcano on some of its waters; and as these are mostly known to their sources, except the Missouri, our expectations of verifying the conjecture would of course be led to the mountains which divide the waters of the Mexican Gulf from those of the South Sea; but no volcano having ever yet been known at such a distance from the sea, we must rather

suppose that this floating substance has been erroneously deemed Pumice.

QUERY V

Its Cascades and Caverns?

The only remarkable cascade in this country is that of the Falling Spring in Augusta. It is a water of James' river where it is called Jackson's river, rising in the warm spring mountains, about twenty miles southwest of the warm spring, and flowing into that valley. About three-quarters of a mile from its source it falls over a rock two hundred feet into the valley below. The sheet of water is broken in its breadth by the rock, in two or three places, but not at all in its height. Between the sheet and the rock, at the bottom, you may walk across dry. This cataract will bear no comparison with that of Niagara as to the quantity of water composing it; the sheet being only twelve or fifteen feet wide above and somewhat more spread below; but it is half as high again, the latter being only one hundred and fifty-six feet, according to the mensuration made by order of M. Vaudreuil, Governor of Canada, and one hundred and thirty according to a more recent account.

In the lime-stone country there are many caverns of very considerable extent. The most noted is called Madison's Cave, and is on the north side of the Blue Ridge, near the intersection of the Rockingham and Augusta line with the south fork of the southern river of Shenandoah. It is in a hill of about two hundred feet perpendicular height, the ascent of which, on one side, is so steep that you may pitch a biscuit from its summit into the river which washes its base. The entrance of the cave is, in this side, about two-thirds of the way up. It extends into the earth about three hundred feet, branching into subordinate caverns, sometimes ascending a little, but

more generally descending, and at length terminates, in two different places, at basins of water of unknown extent, and which I should judge to be nearly on a level with the water of the river; however, I do not think they are formed by reflux water from that, because they are never turbid; because they do not rise and fall in correspondence with that in times of flood or of drought; and because the water is always cool. It is probably one of the many reservoirs with which the interior parts of the earth are supposed to abound, and yield supplies to the fountains of water, distinguished from others only by being accessible. The vault of this cave is of solid lime-stone, from twenty to forty or fifty feet high; through which water is continually percolating. This, trickling down the sides of the cave, has incrustated them over in the form of elegant drapery; and dripping from the top of the vault generates on that and on the base below, stalactites of a conical form, some of which have met and formed massive columns.

Another of these caves is near the North Mountain, in the county of Frederic, on the lands of Mr. Zane. The entrance into this is on the top of an extensive ridge. You descend thirty or forty feet, as into a well, from whence the cave extends, nearly horizontally, four hundred feet into the earth, preserving a breadth of from twenty to fifty feet, and a height of from five to twelve feet. After entering this cave a few feet, the mercury, which in the open air was 50° , rose to 57° of Fahrenheit's thermometer, answering to 11° of Reaumur's, and it continued at that to the remotest parts of the cave. The uniform temperature of the cellars of the observatory of Paris, which are ninety feet deep, and of all subterraneous cavities of any depth, where no chemical agencies may be supposed to produce a factitious heat, has been found to be 10° of Reaumur, equal to $54\frac{1}{2}^{\circ}$ of Fahrenheit. The temperature of the cave above mentioned so nearly corresponds with this, that the difference may be ascribed to a difference of instruments.

At the Panther gap, in the ridge which divides the waters of the Cow and the Calf pasture, is what is called the Blowing Cave. It is in the side of a hill, is of about one hundred feet diameter, and emits constantly a current of air of such force as to keep the weeds prostrate to the distance of twenty yards before it. This current is strongest in dry, frosty weather, and in long spells of rain weakest. Regular inspirations and expirations of air, by caverns and fissures, have been probably enough accounted for by supposing them combined with intermitting fountains; as they must of course inhale air while their reservoirs are emptying themselves, and again emit it while they are filling. But a constant issue of air, only varying in its force as the weather is drier or damper, will require a new hypothesis. There is another blowing cave in the Cumberland mountain, about a mile from where it crosses the Carolina line. All we know of this is, that it is not constant, and that a fountain of water issues from it.

The Natural Bridge, the most sublime of nature's works, though not comprehended under the present head, must not be pretermitted. It is on the ascent of a hill, which seems to have been cloven through its length by some great convulsion. The fissure, just at the bridge, is, by some admeasurements, two hundred and seventy feet deep, by others only two hundred and five. It is about forty-five feet wide at the bottom and ninety feet at the top; this of course determines the length of the bridge, and its height from the water. Its breadth in the middle is about sixty feet, but more at the ends, and the thickness of the mass, at the summit of the arch, about forty feet. A part of this thickness is constituted by a coat of earth, which gives growth to many large trees. The residue, with the hill on both sides, is one solid rock of lime-stone. The arch approaches the semi-elliptical form; but the larger axis of the ellipsis, which would be the cord of the arch, is many times longer than the transverse. Though the sides of this bridge are provided in some parts with a parapet of fixed rocks, yet few men have resolution to walk to them, and look over into the abyss. You

involuntarily fall on your hands and feet, creep to the parapet, and peep over it. Looking down from this height about a minute, gave me a violent headache. If the view from the top be painful and intolerable, that from below is delightful in an equal extreme. It is impossible for the emotions arising from the sublime to be felt beyond what they are here; so beautiful an arch, so elevated, so light, and springing as it were up to heaven! The rapture of the spectator is really indescribable! The fissure continuing narrow, deep, and straight, for a considerable distance above and below the bridge, opens a short but very pleasing view of the North mountain on one side and the Blue Ridge on the other, at the distance each of them of about five miles. This bridge is in the county of Rockbridge, to which it has given name, and affords a public and commodious passage over a valley which cannot be crossed elsewhere for a considerable distance. The stream passing under it is called Cedar creek. It is a water of James' river, and sufficient in the driest seasons to turn a grist-mill, though its fountain is not more than two miles above.

QUERY VI

A notice of the mines and other subterraneous riches;
its trees, plants, fruits, etc.

I knew a single instance of gold found in this State. It was interspersed in small specks through a lump of ore of about four pounds weight, which yielded seventeen pennyweights of gold, of extraordinary ductility. This ore was found on the north side of Rappahanoc, about four miles below the falls. I never heard of any other indication of gold in its neighborhood....

Near the eastern foot of the North mountain are immense bodies of Schist, containing impressions of shells in a variety of forms. I have received petrified shells of very different kinds from the first sources

of Kentucky, which bear no resemblance to any I have ever seen on the tide-waters. It is said that shells are found in the Andes, in South America, fifteen thousand feet above the level of the ocean. This is considered by many, both of the learned and unlearned, as a proof of an universal deluge. To the many considerations opposing this opinion, the following may be added: The atmosphere, and all its contents, whether of water, air, or other matter, gravitate to the earth; that is to say, they have weight. Experience tells us, that the weight of all these together never exceeds that of a column of mercury of thirty-one inches height, which is equal to one of rain water of thirty-five feet high. If the whole contents of the atmosphere, then, were water, instead of what they are, it would cover the globe but thirty-five feet deep; but as these waters, as they fell, would run into the seas, the superficial measure of which is to that of the dry parts of the globe, as two to one, the seas would be raised only fifty-two and a half feet above their present level, and of course would overflow the lands to that height only. In Virginia this would be a very small proportion even of the champaign country, the banks of our tide waters being frequently, if not generally, of a greater height. Deluges beyond this extent, then, as for instance, to the North mountain or to Kentucky, seem out of the laws of nature. But within it they may have taken place to a greater or less degree, in proportion to the combination of natural causes which may be supposed to have produced them. History renders probably some instances of a partial deluge in the country lying round the Mediterranean sea. It has been often^[7] supposed, and it is not unlikely, that that sea was once a lake. While such, let us admit an extraordinary collection of the waters of the atmosphere from the other parts of the globe to have been discharged over that and the countries whose waters run into it. Or without supposing it a lake, admit such an extraordinary collection of the waters of the atmosphere, and an influx from the Atlantic ocean, forced by long-continued western winds. The lake, or that sea, may thus have been so raised as to overflow the low lands adjacent to it, as

those of Egypt and Armenia, which, according to a tradition of the Egyptians and Hebrews, were overflowed about two thousand three hundred years before the Christian era; those of Attica, said to have been overflowed in the time of Ogyges, about five hundred years later; and those of Thessaly, in the time of Deucalion, still three hundred years posterior. But such deluges as these will not account for the shells found in the higher lands. A second opinion has been entertained, which is, that in times anterior to the records either of history or tradition, the bed of the ocean, the principal residence of the shelled tribe, has, by some great convulsion of nature, been heaved to the heights at which we now find shells and other marine animals. The favorers of this opinion do well to suppose the great events on which it rests to have taken place beyond all the eras of history; for within these, certainly, none such are to be found; and we may venture to say farther, that no fact has taken place, either in our own days, or in the thousands of years recorded in history, which proves the existence of any natural agents, within or without the bowels of the earth, of forces sufficient to heave, to the height of fifteen thousand feet, such masses as the Andes. The difference between the power necessary to produce such an effect, and that which shuffled together the different parts of Calabria in our days, is so immense, that from the existence of the latter, we are not authorized to infer that of the former.

M. de Voltaire has suggested a third solution of this difficulty. (*Quest. Encycl. Coquilles.*) He cites an instance in Touraine, where, in the space of eighty years, a particular spot of earth had been twice metamorphosed into soft stone, which had become hard when employed in building. In this stone shells of various kinds were produced, discoverable at first only with a microscope, but afterwards growing with the stone. From this fact, I suppose, he would have us infer, that, besides the usual process for generating shells by the

elaboration of earth and water in animal vessels, nature may have provided an equivalent operation, by passing the same materials through the pores of calcareous earths and stones; as we see calcareous drop-stones generating every day, by the percolation of water through lime-stone, and new marble forming in the quarries from which the old has been taken out. And it might be asked, whether is it more difficult for nature to shoot the calcareous juice into the form of a shell, than other juices into the forms of crystals, plants, animals, according to the construction of the vessels through which they pass? There is a wonder somewhere. Is it greatest on this branch of the dilemma; on that which supposes the existence of a power, of which we have no evidence in any other case; or on the first, which requires us to believe the creation of a body of water and its subsequent annihilation? The establishment of the instance, cited by M. de Voltaire, of the growth, of shells unattached to animal bodies, would have been that of his theory. But he has not established it. He has not even left it on ground so respectable as to have rendered it an object of inquiry to the literati of his own country. Abandoning this fact, therefore, the three hypotheses are equally unsatisfactory; and we must be contented to acknowledge, that this great phenomenon is as yet unsolved. Ignorance is preferable to error; and he is less remote from the truth who believes nothing, than he who believes what is wrong.

.... Our farms produce wheat, rye, barley, oats, buck-wheat, broom corn, and Indian corn. The climate suits rice well enough, wherever the lands do. Tobacco, hemp, flax, and cotton, are staple commodities. Indigo yields two cuttings. The silk-worm is a native, and the mulberry, proper for its food, grows kindly.

We cultivate, also, potatoes, both the long and the round, turnips, carrots, parsnips, pumpkins, and ground nuts (*Arachis*). Our grasses are lucerne, st. foin, burnet, timothy, ray, and orchard grass; red,

white, and yellow clover; greensward, blue grass, and crab grass.

The gardens yield musk-melons, water-melons, tomatoes, okra, pomegranates, figs, and the esculent plants of Europe.

The orchards produce apples, pears, cherries, quinces, peaches, nectarines, apricots, almonds, and plums.

Our quadrupeds have been mostly described by Linnaeus and Mons. de Buffon. Of these the mammoth, or big buffalo as called by the Indians, must certainly have been the largest. Their tradition is, that he was carnivorous, and still exists in the northern parts of America. A delegation of warriors from the Delaware tribe having visited the Governor of Virginia, during the revolution, on matters of business, after these had been discussed and settled in council, the Governor asked them some questions relative to their country, and among others, what they knew or had heard of the animal whose bones were found at the Saltlicks on the Ohio. Their chief speaker immediately put himself into an attitude of oratory, and with a pomp suited to what he conceived the elevation of his subject, informed him that it was a tradition handed down from their fathers, "That in ancient times a herd of these tremendous animals came to the Big-bone licks, and began an universal destruction of the bear, deer, elks, buffaloes, and other animals which had been created for the use of the Indians; that the Great Man above, looking down and seeing this, was so enraged that he seized his lightning, descended on the earth, seated himself on a neighboring mountain, on a rock of which his seat and the print of his feet are still to be seen, and hurled his bolts among them till the whole were slaughtered, except the big bull, who presenting his forehead to the shafts, shook them off as they fell; but missing one at length, it wounded him in the side; whereon, springing round, he bounded over the Ohio, over the Wabash, the Illinois, and finally over the great lakes, where he is living at this day." It is well known, that on the Ohio, and in many parts of America further north,

tusks, grinders, and skeletons of unparalleled magnitude, are found in great numbers, some lying on the surface of the earth, and some a little below it. A Mr. Stanley, taken prisoner near the mouth of the Tennessee, relates, that after being transferred through several tribes, from one to another, he was at length carried over the mountains west of the Missouri to a river which runs westwardly; that these bones abounded there, and that the natives described to him the animal to which they belonged as still existing in the northern parts of their country; from which description he judged it to be an elephant. Bones of the same kind have been lately found, some feet below the surface of the earth, in salines opened on the North Holston, a branch of the Tennessee, about the latitude of $36\frac{1}{2}^{\circ}$ north. From the accounts published in Europe, I suppose it to be decided that these are of the same kind with those found in Siberia. Instances are mentioned of like animal remains found in the more southern climates of both hemispheres; but they are either so loosely mentioned as to leave a doubt of the fact, so inaccurately described as not to authorize the classing them with the great northern bones, or so rare as to found a suspicion that they have been carried thither as curiosities from the northern regions. So that, on the whole, there seem to be no certain vestiges of the existence of this animal farther south than the salines just mentioned. It is remarkable that the tusks and skeletons have been ascribed by the naturalists of Europe to the elephant, while the grinders have been given to the hippopotamus, or river horse. Yet it is acknowledged, that the tusks and skeletons are much larger than those of the elephant, and the grinders many times greater than those of the hippopotamus, and essentially different in form. Wherever these grinders are found, there also we find the tusks and skeleton; but no skeleton of the hippopotamus nor grinders of the elephant. It will not be said that the hippopotamus and elephant came always to the same spot, the former to deposit his grinders, and the latter his tusks and skeleton. For what became of the parts not deposited there? We must agree then, that these remains belong to each other, that they are of

one and the same animal, that this was not a hippopotamus, because the hippopotamus had no tusks, nor such a frame, and because the grinders differ in their size as well as in the number and form of their points. That this was not an elephant, I think ascertained by proofs equally decisive. I will not avail myself of the authority of the celebrated^[8] anatomist, who, from an examination of the form and structure of the tusks, has declared they were essentially different from those of the elephant; because another^[9] anatomist, equally celebrated, has declared, on a like examination, that they are precisely the same. Between two such authorities I will suppose this circumstance equivocal. But, 1. The skeleton of the mammoth (for so the incognitum has been called) bespeaks an animal of five or six times the cubic volume of the elephant, as Mons. de Buffon has admitted. 2. The grinders are five times as large, are square, and the grinding surface studded with four or five rows of blunt points; whereas those of the elephant are broad and thin, and their grinding surface flat. 3. I have never heard an instance, and suppose there has been none, of the grinder of an elephant being found in America. 4. From the known temperature and constitution of the elephant, he could never have existed in those regions where the remains of the mammoth have been found. The elephant is a native only of the torrid zone and its vicinities; if, with the assistance of warm apartments and warm clothing, he has been preserved in the temperate climates of Europe, it has only been for a small portion of what would have been his natural period, and no instance of his multiplication in them has ever been known. But no bones of the mammoth, as I have before observed, have been ever found further south than the salines of Holston, and they have been found as far north as the Arctic circle. Those, therefore, who are of opinion that the elephant and mammoth are the same, must believe, 1. That the elephant known to us can exist and multiply in the frozen zone; or, 2. That an eternal fire may once have warmed those regions, and since abandoned them, of which, however, the globe exhibits no unequivocal indications; or, 3. That the

obliquity of the ecliptic, when these elephants lived, was so great as to include within the tropics all those regions in which the bones are found; the tropics being, as is before observed, the natural limits of habitation for the elephant. But if it be admitted that this obliquity has really decreased, and we adopt the highest rate of decrease yet pretended, that is, of one minute in a century, to transfer the northern tropic to the Arctic circle, would carry the existence of these supposed elephants two hundred and fifty thousand years back; a period far beyond our conception of the duration of animal bones less exposed to the open air than these are in many instances. Besides, though these regions would then be supposed within the tropics, yet their winters would have been too severe for the sensibility of the elephant. They would have had, too, but one day and one night in the year, a circumstance to which we have no reason to suppose the nature of the elephant fitted. However, it has been demonstrated, that, if a variation of obliquity in the ecliptic takes place at all, it is vibratory, and never exceeds the limits of nine degrees, which is not sufficient to bring these bones within the tropics. One of these hypotheses, or some other equally voluntary and inadmissible to cautious philosophy, must be adopted to support the opinion that these are the bones of the elephant. For my own part, I find it easier to believe that an animal may have existed, resembling the elephant in his tusks, and general anatomy, while his nature was in other respects extremely different. From the 30th degree of south latitude to the 30th degree of north, are nearly the limits which nature has fixed for the existence and multiplication of the elephant known to us. Proceeding thence northwardly to $36\frac{1}{2}$ degrees, we enter those assigned to the mammoth. The farther we advance north, the more their vestiges multiply as far as the earth has been explored in that direction; and it is as probable as otherwise, that this progression continues to the pole itself, if land extends so far. The centre of the frozen zone, then, may be the acmé of their vigor, as that of the torrid is of the elephant. Thus nature seems to have drawn a belt of separation between these two

tremendous animals, whose breadth, indeed, is not precisely known, though at present we may suppose it about 6 1/2 degrees of latitude; to have assigned to the elephant the region south of these confines, and those north to the mammoth, founding the constitution of the one in her extreme of heat, and that of the other in the extreme of cold. When the Creator has therefore separated their nature as far as the extent of the scale of animal life allowed to this planet would permit, it seems perverse to declare it the same, from a partial resemblance of their tusks and bones. But to whatever animal we ascribe these remains, it is certain such a one has existed in America, and that it has been the largest of all terrestrial beings. It should have sufficed to have rescued the earth it inhabited, and the atmosphere it breathed, from the imputation of impotence in the conception and nourishment of animal life on a large scale; to have stifled, in its birth, the opinion of a writer, the most learned, too, of all others in the science of animal history, that in the new world, “La nature vivante est beaucoup moins agissante, beaucoup moins forte:” [10]

that nature is less active, less energetic on one side of the globe than she is on the other. As if both sides were not warmed by the same genial sun; as if a soil of the same chemical composition was less capable of elaboration into animal nutriment; as if the fruits and grains from that soil and sun yielded a less rich chyle, gave less extension to the solids and fluids of the body, or produced sooner in the cartilages, membranes, and fibres, that rigidity which restrains all further extension, and terminates animal growth. The truth is, that a pigmy and a Patagonian, a mouse and a mammoth, derive their dimensions from the same nutritive juices. The difference of increment depends on circumstances unsearchable to beings with our capacities. Every race of animals seems to have received from their Maker certain laws of extension at the time of their formation. Their elaborate organs were formed to produce this, while proper obstacles were opposed to its further progress. Below these limits they cannot fall, nor rise above them. What intermediate station they shall take may

depend on soil, on climate, on food, on a careful choice of breeders. But all the manna of heaven would never raise the mouse to the bulk of the mammoth.

The opinion advanced by the Count de Buffon,^[11] is 1. That the animals common both to the old and new world are smaller in the latter; 2. That those peculiar to the new are on a smaller scale; 3. That those which have been domesticated in both have degenerated in America; and 4. That on the whole it exhibits fewer species. And the reason he thinks is, that the heats of America are less; that more waters are spread over its surface by nature, and fewer of these drained off by the hand of man. In other words, that heat is friendly, and moisture adverse to the production and development of large quadrupeds. I will not meet this hypothesis on its first doubtful ground, whether the climate of America be comparatively more humid? Because we are not furnished with observations sufficient to decide this question. And though, till it be decided, we are as free to deny as others are to affirm the fact, yet for a moment let it be supposed. The hypothesis, after this supposition, proceeds to another; that moisture is unfriendly to animal growth. The truth of this is inscrutable to us by reasonings a priori. Nature has hidden from us her *modus agendi*. Our only appeal on such questions is to experience; and I think that experience is against the supposition. It is by the assistance of heat and moisture that vegetables are elaborated from the elements of earth, air, water, and fire. We accordingly see the more humid climates produce the greater quantity of vegetables. Vegetables are mediately or immediately the food of every animal; and in proportion to the quantity of food, we see animals not only multiplied in their numbers, but improved in their bulk, as far as the laws of their nature will admit. Of this opinion is the Count de Buffon himself in another part of his work; ^[12] “in general, it appears that rather cold countries are more suitable to our oxen than rather warm

countries, and that they (the oxen) are all the larger and greater in proportion as the climate is damper and more abounding in pasturage....” Here then a race of animals, and one of the largest too, has been increased in its dimensions by cold and moisture, in direct opposition to the hypothesis, which supposes that these two circumstances diminish animal bulk, and that it is their contraries heat and dryness which enlarge it. But when we appeal to experience we are not to rest satisfied with a single fact. Let us, therefore, try our question on more general ground. Let us take two portions of the earth, Europe and America for instance, sufficiently extensive to give operation to general causes; let us consider the circumstances peculiar to each, and observe their effect on animal nature. America, running through the torrid as well as temperate zone, has more heat collectively taken, than Europe. But Europe, according to our hypothesis, is the driest. They are equally adapted then to animal productions; each being endowed with one of those causes which befriends animal growth, and with one which opposes it. If it be thought unequal to compare Europe with America, which is so much larger, I answer, not more so than to compare America with the whole world. Besides, the purpose of the comparison is to try an hypothesis, which makes the size of animals depend on the heat and moisture of climate. If, therefore, we take a region so extensive as to comprehend a sensible distinction of climate, and so extensive, too, as that local accidents, or the intercourse of animals on its borders, may not materially affect the size of those in its interior parts, we shall comply with those conditions which the hypothesis may reasonably demand. The objection would be the weaker in the present case, because any intercourse of animals which may take place on the confines of Europe and Asia, is to the advantage of the former, Asia producing certainly larger animals than Europe. Let us then take a comparative view of the quadrupeds of Europe and America, presenting them to the eye in three different tables, in one of which shall be enumerated those found in both countries; in a second, those found in one only; in a

third, those which have been domesticated in both. To facilitate the comparison, let those of each table be arranged in gradation according to their sizes, from the greatest to the smallest, so far as their sizes can be conjectured. The weights of the large animals shall be expressed in the English avoirdupois and its decimals; those of the smaller, in the same ounce and its decimals....The white bear of America is as large as that of Europe. The bones of the mammoth which has been found in America, are as large as those found in the old world. It may be asked, why I insert the mammoth, as if it still existed? I ask in return, why I should omit it, as if it did not exist? Such is the economy of nature, that no instance can be produced, of her having permitted any one race of her animals to become extinct; of her having formed any link in her great work so weak as to be broken. To add to this, the traditionary testimony of the Indians, that this animal still exists in the northern and western parts of America, would be adding the light of a taper to that of the meridian sun. Those parts still remain in their aboriginal state, unexplored and undisturbed by us, or by others for us. He may as well exist there now, as he did formerly where we find his bones. If he be a carnivorous animal, as some anatomists have conjectured, and the Indians affirm, his early retirement may be accounted for from the general destruction of the wild game by the Indians, which commences in the first instant of their connection with us, for the purpose of purchasing match-coats, hatchets, and fire-locks, with their skins. There remain then the buffalo, red deer, fallow deer, wolf, roe, glutton, wild cat, monax, bison, hedgehog, marten, and water-rat, of the comparative sizes of which we have not sufficient testimony. It does not appear that Messieurs de Buffon and D'Aubenton have measured, weighed, or seen those of America. It is said of some of them, by some travellers, that they are smaller than the European. But who were these travellers? Have they not been men of a very different description from those who have laid open to us the other three quarters of the world? Was natural history the object of their travels? Did they measure or weigh the animals they speak of? or

did they not judge of them by sight, or perhaps even from report only? Were they acquainted with the animals of their own country, with which they undertake to compare them? Have they not been so ignorant as often to mistake the species? A true answer to these questions would probably lighten their authority, so as to render it insufficient for the foundation of an hypothesis. How unripe we yet are, for an accurate comparison of the animals of the two countries, will appear from the work of Monsieur de Buffon. The ideas we should have formed of the sizes of some animals, from the formation he had received at his first publications concerning them, are very different from what his subsequent communications give us. And indeed his candor in this can never be too much praised. One sentence of his book must do him immortal honor. "I like a person who points out a mistake just as much as one who teaches me a truth, because, in effect, a corrected mistake is a truth." ...

Hitherto I have considered this hypothesis as applied to brute animals only, and not in its extension to the man of America, whether aboriginal or transplanted. It is the opinion of Mons. de Buffon that the former furnishes no exception to it...

An afflicting picture, indeed, which for the honor of human nature, I am glad to believe has no original. Of the Indian of South America I know nothing; for I would not honor with the appellation of knowledge, what I derive from the fables published of them. These I believe to be just as true as the fables of Æsop. This belief is founded on what I have seen of man, white, red, and black, and what has been written of him by authors, enlightened themselves, and writing among an enlightened people. The Indian of North America being more within our reach, I can speak of him somewhat from my own knowledge, but more from the information of others better acquainted with him, and on whose truth and judgment I can rely. From these sources I am able to say, in contradiction to this representation, that

he is neither more defective in ardor, nor more impotent with his female, than the white reduced to the same diet and exercise; that he is brave, when an enterprise depends on bravery; education with him making the point of honor consist in the destruction of an enemy by stratagem, and in the preservation of his own person free from injury; or, perhaps, this is nature, while it is education which teaches us to honor force more than finesse; that he will defend himself against a host of enemies, always choosing to be killed, rather than to surrender, though it be to the whites, who he knows will treat him well; that in other situations, also, he meets death with more deliberation, and endures tortures with a firmness unknown almost to religious enthusiasm with us; that he is affectionate to his children, careful of them, and indulgent in the extreme; that his affections comprehend his other connections, weakening, as with us, from circle to circle, as they recede from the centre; that his friendships are strong and faithful to the uttermost extremity; that his sensibility is keen, even the warriors weeping most bitterly on the loss of their children, though in general they endeavor to appear superior to human events; that his vivacity and activity of mind is equal to ours in the same situation; hence his eagerness for hunting, and for games of chance. The women are submitted to unjust drudgery. This I believe is the case with every barbarous people. With such, force is law. The stronger sex imposes on the weaker. It is civilization alone which replaces women in the enjoyment of their natural equality. That first teaches us to subdue the selfish passions, and to respect those rights in others which we value in ourselves. Were we in equal barbarism, our females would be equal drudges. The man with them is less strong than with us, but their women stronger than ours; and both for the same obvious reason; because our man and their woman is habituated to labor, and formed by it. With both races the sex which is indulged with ease is the least athletic. An Indian man is small in the hand and wrist, for the same reason for which a sailor is large and strong in the arms and shoulders, and a porter in the legs and thighs. They raise

fewer children than we do. The causes of this are to be found, not in a difference of nature, but of circumstance. The women very frequently attending the men in their parties of war and of hunting, child-bearing becomes extremely inconvenient to them. It is said, therefore, that they have learned the practice of procuring abortion by the use of some vegetable; and that it even extends to prevent conception for a considerable time after. During these parties they are exposed to numerous hazards, to excessive exertions, to the greatest extremities of hunger. Even at their homes the nation depends for food, through a certain part of every year, on the gleanings of the forest; that is, they experience a famine once in every year. With all animals, if the female be badly fed, or not fed at all, her young perish; and if both male and female be reduced to like want, generation becomes less active, less productive. To the obstacles, then, of want and hazard, which nature has opposed to the multiplication of wild animals, for the purpose of restraining their numbers within certain bounds, those of labor and of voluntary abortion are added with the Indian. No wonder, then, if they multiply less than we do. Where food is regularly supplied, a single farm will show more of cattle, than a whole country of forests can of buffaloes. The same Indian women, when married to white traders, who feed them and their children plentifully and regularly, who exempt them from excessive drudgery, who keep them stationary and unexposed to accident, produce and raise as many children as the white women. Instances are known, under these circumstances, of their rearing a dozen children. An inhuman practice once prevailed in this country, of making slaves of the Indians. It is a fact well known with us, that the Indian women so enslaved produced and raised as numerous families as either the whites or blacks among whom they lived. It has been said that Indians have less hair than the whites, except on the head. But this is a fact of which fair proof can scarcely be had. With them it is disgraceful to be hairy on the body. They say it likens them to hogs. They therefore pluck the hair as fast as it appears. But the traders who marry their women, and prevail on them to

discontinue this practice, say, that nature is the same with them as with the whites. Nor, if the fact be true, is the consequence necessary which has been drawn from it....

Before we condemn the Indians of this continent as wanting genius, we must consider that letters have not yet been introduced among them. Were we to compare them in their present state with the Europeans, north of the Alps, when the Roman arms and arts first crossed those mountains, the comparison would be unequal, because, at that time, those parts of Europe were swarming with numbers; because numbers produce emulation, and multiply the chances of improvement, and one improvement begets another. Yet I may safely ask, how many good poets, how many able mathematicians, how many great inventors in arts or sciences, had Europe, north of the Alps, then produced? And it was sixteen centuries after this before a Newton could be formed. I do not mean to deny that there are varieties in the race of man, distinguished by their powers both of body and mind. I believe there are, as I see to be the case in the races of other animals. I only mean to suggest a doubt, whether the bulk and faculties of animals depend on the side of the Atlantic on which their food happens to grow, or which furnishes the elements of which they are compounded? Whether nature has enlisted herself as a Cis or Trans-Atlantic partisan? I am induced to suspect there has been more eloquence than sound reasoning displayed in support of this theory; that it is one of those cases where the judgment has been seduced by a glowing pen; and whilst I render every tribute of honor and esteem to the celebrated zoologist, who has added, and is still adding, so many precious things to the treasures of science, I must doubt whether in this instance he has not cherished error also, by lending her for a moment his vivid imagination and bewitching language....

So far the Count de Buffon has carried this new theory of the tendency of nature to belittle her productions on this side the Atlantic.

Its application to the race of whites transplanted from Europe, remained for the Abbé Raynal. "One must be astonished (he says) that America has not yet produced a good poet, an able mathematician, a man of genius in a single art or single science." When we shall have existed as a people as long as the Greeks did before they produced a Homer, the Romans a Virgil, the French a Racine and Voltaire, the English a Shakespeare and Milton, should this reproach be still true, we will inquire from what unfriendly causes it has proceeded, that the other countries of Europe and quarters of the earth shall not have inscribed any name in the roll of poets.^[13] But neither has America produced "one able mathematician, one man of genius in a single art or a single science." In war we have produced a Washington, whose memory will be adored while liberty shall have votaries, whose name shall triumph over time, and will in future ages assume its just station among the most celebrated worthies of the world, when that wretched philosophy shall be forgotten which would have arranged him among the degeneracies of nature. In physics we have produced a Franklin, than whom no one of the present age has made more important discoveries, nor has enriched philosophy with more, or more ingenious solutions of the phenomena of nature. We have supposed Mr. Rittenhouse second to no astronomer living; that in genius he must be the first, because he is self taught. As an artist he has exhibited as great a proof of mechanical genius as the world has ever produced. He has not indeed made a world; but he has by imitation approached nearer its Maker than any man who has lived from the creation to this day.^[14] As in philosophy and war, so in government, in oratory, in painting, in the plastic art, we might show that America, though but a child of yesterday, has already given hopeful proofs of genius, as well as of the nobler kinds, which arouse the best feelings of man, which call him into action, which substantiate his freedom, and conduct him to happiness, as of the subordinate, which serve to amuse him only. We therefore suppose, that this reproach is as unjust as it is unkind: and that, of the geniuses which adorn the present age,

America contributes its full share, For comparing it with those countries where genius is most cultivated, where are the most excellent models for art, and scaffoldings for the attainment of science, as France and England for instance, we calculate thus: The United States contains three millions of inhabitants; France twenty millions; and the British islands ten. We produce a Washington, a Franklin, a Rittenhouse. France then should have half a dozen in each of these lines, and Great Britain half that number, equally eminent. It may be true that France has; we are but just becoming acquainted with her, and our acquaintance so far gives us high ideas of the genius of her inhabitants. It would be injuring too many of them to name particularly a Voltaire, a Buffon, the constellation of Encyclopedists, the Abbé Raynal himself, etc., etc. We, therefore, have reason to believe she can produce her full quota of genius. The present war having so long cut off all communication with Great Britain, we are not able to make a fair estimate of the state of science in that country. The spirit in which she wages war, is the only sample before our eyes, and that does not seem the legitimate offspring either of science or of civilization. The sun of her glory is fast descending to the horizon. Her philosophy has crossed the channel, her freedom the Atlantic, and herself seems passing to that awful dissolution whose issue is not given human foresight to scan.

QUERY VII

A notice of all that can increase the progress of
Human Knowledge?

[This section, which is concerned with an analysis of local climatic conditions, is omitted in the present.]

QUERY VIII

The number of its inhabitants?

.... During the infancy of the colony, while numbers were small, wars, importations, and other accidental circumstances render the progression fluctuating and irregular. By the year 1654, however, it becomes tolerably uniform, importations having in a great measure ceased from the dissolution of the company, and the inhabitants become too numerous to be sensibly affected by Indian wars. Beginning at that period, therefore, we find that from thence to the year 1772, our tythes had increased from 7,209 to 153,000. The whole term being of one hundred and eighteen years, yields a duplication once in every twenty-seven and a quarter years. The intermediate enumerations taken in 1700, 1748, and 1759, furnish proofs of the uniformity of this progression. Should this rate of increase continue, we shall have between six and seven millions of inhabitants within ninety-five years. If we suppose our country to be bounded, at some future day, by the meridian of the mouth of the Great Kanhaway, (within which it has been before conjectured, are 64,461 square miles) there will then be one hundred inhabitants for every square mile, which is nearly the state of population in the British Islands.

Here I will beg leave to propose a doubt. The present desire of America is to produce rapid population by as great importations of foreigners as possible. But is this founded in good policy? The advantage proposed is the multiplication of numbers. Now let us suppose (for example only) that, in this state, we could double our numbers in one year by the importation of foreigners; and this is a greater accession than the most sanguine advocate for emigration has a right to expect. Then I say, beginning with a double stock, we shall attain any given degree of population only twenty-seven years, and three months sooner than if we proceed on our single stock. If we propose four millions and a half as a competent population for this

State, we should be fifty-four and a half years attaining it, could we at once double our numbers; and eighty-one and three quarter years, if we rely on natural propagation, as may be seen by the following tablet:

	Proceeding on our present stock.	Proceeding on a double stock.
1781	567,614	1,135,228
1808 $\frac{1}{4}$	1,135,228	2,270,456
1835 $\frac{1}{2}$	2,270,456	4,540,912
1862 $\frac{3}{4}$	4,540,912	

In the first column are stated periods of twenty-seven and a quarter years; in the second are our numbers at each period, as they will be if we proceed on our actual stock; and in the third are what they would be, at the same periods, were we to set out from the double of our present stock. I have taken the term of four million and a half of inhabitants for example's sake only. Yet I am persuaded it is a greater number than the country spoken of, considering how much inarable land it contains, can clothe and feed without a material change in the quality of their diet. But are there no inconveniences to be thrown into the scale against the advantage expected from a multiplication of numbers by the importation of foreigners? It is for the happiness of those united in society to harmonize as much as possible in matters which they must of necessity transact together. Civil government being the sole object of forming societies, its administration must be conducted by common consent. Every species of government has its specific principles. Ours perhaps are more peculiar than those of any other in the universe. It is a composition of the freest principles of the English constitution, with others derived from natural right and natural reason. To these nothing can be more opposed than the maxims of absolute monarchies. Yet from such we are to expect the greatest number of emigrants. They will bring with them the principles of the governments they leave, imbibed in their

early youth; or, if able to throw them off, it will be in exchange for an unbounded licentiousness, passing, as is usual, from one extreme to another. It would be a miracle were they to stop precisely at the point of temperate liberty. These principles, with their language, they will transmit to their children. In proportion to their numbers, they will share with us the legislation. They will infuse into it their spirit, warp and bias its directions, and render it a heterogeneous, incoherent, distracted mass. I may appeal to experience, during the present contest, for a verification of these conjectures. But, if they be not certain in event, are they not possible, are they not probable? Is it not safer to wait with patience twenty-seven years and three months longer, for the attainment of any degree of population desired or expected? May not our government be more homogeneous, more peaceable, more durable? Suppose twenty millions of republican Americans thrown all of a sudden into France, what would be the condition of that kingdom? If it would be more turbulent, less happy, less strong, we may believe that the addition of half a million of foreigners to our present numbers would produce a similar effect here. If they come of themselves they are entitled to all the rights of citizenship; but doubt the expediency of inviting them by extraordinary encouragements. I mean not that these doubts should be extended to the importation of useful artificers. The policy of that measure depends on very different considerations. Spare no expense in obtaining them. They will after a while go to the plough and the hoe; but, in the mean time, they will teach us something we do not know. It is not so in agriculture. The indifferent state of that among us does not proceed from a want of knowledge merely; it is from our having such quantities of land to waste as we please. In Europe the object is to make the most of their land, labor being abundant ; here it is to make the most of our labor, land being abundant....

During the regal government we had at one time obtained a law

which imposed such a duty on the importation of slaves as amounted nearly to a prohibition, when one inconsiderate assembly, placed under a peculiarity of circumstance, repealed the law. This repeal met a joyful sanction from the then reigning sovereign, and no devices, no expedients, which could ever be attempted by subsequent assemblies, and they seldom met without attempting them, could succeed in getting the royal assent to a renewal of the duty. In the very first session held under the republican government, the assembly passed a law for the perpetual prohibition of the importation of slaves. This will in some measure stop the increase of this great political and moral evil, while the minds of our citizens may be ripening for a complete emancipation of human nature.

QUERY IX

The number and condition of the Militia and Regular Troops, and their Pay?

....

Every able-bodied freeman, between the ages of sixteen and fifty, is enrolled in the militia. Those of every county are formed into companies, and these again into one or more battalions, according to the numbers in the county. They are commanded by colonels, and other subordinate officers, as in the regular service. In every county is a county-lieutenant, who commands the whole militia of his county, but ranks only as a colonel in the field. We have no general officers always existing, These are appointed occasionally, when an invasion or insurrection happens, and their commission determines with the occasion. The Governor is head of the military, as well as civil power. The law requires every militia-man to provide himself with the arms usual in the regular service. But this injunction was always indifferently complied with, and the arms they had, have been so

frequently called for to arm the regulars, that in the lower parts of the country they are entirely disarmed. In the middle country a fourth or fifth part of them may have such firelocks as they had provided to destroy the noxious animals which infest their farms; and on the western side of the Blue Ridge they are generally armed with rifles. The pay of our militia, as well as of our regulars, is that of the continental regulars. The condition of our regulars, of whom we have none but continentals, and part of a battalion of state troops, is so constantly on the change, that a state of it at this day would not be its state a month hence. It is much the same with the condition of the other continental troops, which is well enough known.

QUERY X

The Marine?

Before the present invasion of this State by the British, under the command of General Phillips, we had three vessels of sixteen guns, one of fourteen, five small gallies, and two or three armed boats. They were generally so badly manned as seldom to be in a condition for service. Since the perfect possession of our rivers assumed by the enemy, I believe we are left with a single armed boat only.

QUERY XI

A description of the Indians established in that State?

When the first effectual settlement of our colony was made, which was in 1607, the country from the seacoast to the mountains, and from the Potomac to the most southern waters of James' river, was occupied by upwards of forty different tribes of Indians. Of these the Powhatans, the Mannahoacs, and Monacans, were the most powerful. Those between the sea-coast and falls of the rivers, were in

amity with one another, and attached to the Powhatans as their link of union. Those between the falls of the rivers and the mountains, were divided into two confederacies; the tribes inhabiting the head waters of Potomac and Rappahannock, being attached to the Mannahoacs; and those on the upper parts of James' river to the Monacans. But the Monacans and their friends were in amity with the Mannahoacs and their friends, and waged joint and perpetual war against the Powhatans. We are told that the Powhatans, Mannahoacs, and Monacans, spoke languages so radically different, that interpreters were necessary when they transacted business. Hence we may conjecture, that this was not the case between all the tribes, and, probably, that each spoke the language of the nation to which it was attached; which we know to have been the case in many particular instances. Very possibly there may have been anciently three different stocks, each of which, multiplying in a long course of time, had separated into so many little societies. This practice results from the circumstance of their having never submitted themselves to any laws, any coercive power, any shadow of government. Their only controls are their manners, and that moral sense of right and wrong, which, like the sense of tasting and feeling in every man, makes a part of his nature. An offence against these is punished by contempt, by exclusion from society, or, where the case is serious, as that of murder, by the individuals whom it concerns. Imperfect as this species of coercion may seem, crimes are very rare among them; insomuch that were it made a question, whether no law, as among the savage Americans, or too much law, as among the civilized Europeans, submits man to the greatest evil, one who has seen both conditions of existence would pronounce it to be the last; and that the sheep are happier of themselves, than under care of the wolves. It will be said, the great societies cannot exist without government. The savages, therefore, break them into small ones.

The territories of the Powhatan confederacy, south of the

Potomac, comprehended about eight thousand square miles, thirty tribes, and two thousand four hundred warriors. Captain Smith tells us, that within sixty miles of Jamestown were five thousand people, of whom one thousand five hundred were warriors. From this we find the proportion of their warriors to their whole inhabitants, was as three to ten. The Powhatan confederacy, then, would consist of about eight thousand inhabitants, which was one for every square mile; being about the twentieth part of our present population in the same territory, and the hundredth of that of the British islands.

Besides these were the Nottoways, living on Nottoway river, the Meherrins and Tuteloës on Meherrin river, who were connected with the Indians of Carolina, probably with the Chowanocs....

I know of no such thing existing as an Indian monument; for I would not honor with that name arrow points, stone hatchets, stone pipes, and half shapen images. Of labor on the large scale, I think there is no remain as respectable as would be a common ditch for the draining of lands; unless indeed it would be the barrows, of which many are to be found all over this country. These are of different sizes, some of them constructed of earth, and some of loose stones. That they were repositories of the dead, has been obvious to all; but on what particular occasion constructed, was a matter of doubt. Some have thought they covered the bones of those who have fallen in battles fought on the spot of interment. Some ascribed them to the custom, said to prevail among the Indians, of collecting, at certain periods, the bones of all their dead, wheresoever deposited at the time of death. Others again supposed them the general sepulchres for towns, conjectured to have been on or near these grounds; and this opinion was supported by the quality of the lands in which they are found (those constructed of earth being generally in the softest and most fertile meadow-grounds on river sides), and by a tradition, said to be handed from the aboriginal Indians, that when they settled in a

town, the first person who died was placed erect, and earth put about him, so as to cover and support him; that when another died, a narrow passage was dug to the first, the second reclined against him, and the cover of earth replaced, and so on. There being one of these in my neighborhood, I wished to satisfy myself whether any, and which of these opinions were just. For this purpose I determined to open and examine it thoroughly. It was situated on the low grounds of the Rivanna, about two miles above its principal fork, and opposite to some hills, on which had been an Indian town. It was of a spheroidal form, of about forty feet diameter at the base, and had been of about twelve feet altitude, though now reduced by the plough to seven and a half, having been under cultivation about a dozen years. Before this it was covered with trees of twelve inches diameter, and round the base was an excavation of five feet depth and width, from whence the earth had been taken of which the hillock was formed. I first dug superficially in several parts of it, and came to collections of human bones, at different depth, from six inches to three feet below the surface. These were lying in the utmost confusion, some vertical, some oblique, some horizontal, and directed to every point of the compass, entangled and held together in clusters by the earth. Bones of the most distant parts were found together, as, for instance, the small bones of the foot in the hollow of a skull; many skulls would sometimes be in contact, lying on the face, on the side, on the back, top or bottom, so as, on the whole, to give the idea of bones emptied promiscuously from a bag or a basket, and covered over with earth, without any attention to their order. The bones of which the greatest numbers remained, were skulls, jaw-bones, teeth, the bones of the arms, thighs, legs, feet and hands. A few ribs remained, some vertebrae of the neck and spine, without their processes, and one instance only of the bone^[15] which serves as a base to the vertebral column. The skulls were so tender, that they generally fell to pieces on being touched. The other bones were stronger. There were some teeth which were judged to be smaller than those of an adult; a skull, which on a slight

view, appeared to be that of an infant, but it fell to pieces on being taken out, so as to prevent satisfactory examination; a rib, and a fragment of the under-jaw of a person about half grown; another rib of an infant; and a part of the jaw of a child, which had not cut its teeth. This last furnishing the most decisive proof of the burial of children here, I was particular in my attention to it. It was part of the right half of the under-jaw. The processes, by which it was attenuated to the temporal bones, were entire, and the bone itself firm to where it had been broken off, which, as nearly as I could judge, was about the place of the eye-tooth. Its upper edge, wherein would have been the sockets of the teeth, was perfectly smooth. Measuring it with that of an adult, by placing their hinder processes together, its broken end extended to the penultimate grinder of the adult. This bone was white, all the others of a sand color. The bones of infants being soft, they probably decay sooner, which might be the cause so few were found here. I proceeded then to make a perpendicular cut through the body of the barrow, that I might examine its internal structure. This passed about three feet from its centre, was opened to the former surface of the earth, and was wide enough for a man to walk through and examine its sides. At the bottom, that is, on the level of the circumjacent plain, I found bones; above these a few stones, brought from a cliff a quarter of a mile off; then a large interval of earth, then a stratum of bones, and so on. At one end of the section were four strata of bones plainly distinguishable; at the other, three; the strata in one part not ranging with those in another. The bones nearest the surface were least decayed. No holes were discovered in any of them, as if made with bullets, arrows, or other weapons. I conjectured that in this barrow might have been a thousand skeletons. Every one will readily seize the circumstances above related, which militate against the opinion, that it covered the bones only of persons fallen in battle; and against the tradition also, which would make it the common sepulchre of a town, in which the bodies were placed upright, and touching each other. Appearances certainly indicate that it has derived

both origin and growth from the accustomary collection of bones, and deposition of them together; that the first collection had been deposited on the common surface of the earth, a few stones put over it, and then a covering of earth, that the second had been laid on this, had covered more or less of it in proportion to the number of bones, and was then also covered with earth; and so on. The following are the particular circumstances which give it this aspect, 1. The number of bones. 2. Their confused position. 3. Their being in different strata. 4. The strata in one part having no correspondence with those in another. 5. The different states of decay in these strata, which seem to indicate a difference in the time of inhumation. The existence of infant bones among them.

But on whatever occasion they may have been made, they are of considerable notoriety among the Indians; for a party passing, about thirty years ago, through the part of the country where this barrow is, went through the woods directly to it, without any instructions or inquiry, and having staid about it for some time, with expressions which were construed to be those of sorrow, they returned to the high road, which they had left about half a dozen miles to pay this visit, and pursued their journey. There is another barrow much resembling this, in the low grounds of the south branch of Shenandoah, where it is crossed by the road leading from the Rockfish gap to Staunton. Both of these have, within these dozen years, been cleared of their trees and put under cultivation, are much reduced in their height, and spread in width, by the plough, and will probably disappear in time. There is another on a hill in the Blue Ridge of mountains, a few miles north of Wood's gap, which is made up of small stones thrown together. This has been opened and found to contain human bones, as the others do. There are also many others in other parts of the country.

Great question has arisen from whence came those aboriginals of

America? Discoveries, long ago made, were sufficient to show that the passage from Europe to America was always practicable, even to the imperfect navigation of ancient times, In going from Norway to Iceland, from Iceland to Greenland, from Greenland to Labrador, the first trajet is the widest; and this having been practised from the earliest times of which we have any account of that part of the earth, it is not difficult to suppose that the subsequent trajetcs may have been sometimes passed. Again, the late discoveries of Captain Cook, coasting from Kamschatka to California, have proved that if the two continents of Asia and America be separated at all, it is only by a narrow strait. So that from this side also, inhabitants may have passed into America; and the resemblance between the Indians of America and the eastern inhabitants of Asia, would induce us to conjecture, that the former are the descendants of the latter, or the latter of the former; Excepting indeed the Esquimaux, who, from the same circumstance of resemblance, and from identity of language, must be derived from the Greenlanders, and these probably from some of the northern parts of the old continent. A knowledge of their several languages would be the most certain evidence of their derivation which could be produced. In fact, it is the best proof of the affinity of nations which ever can be referred to. How many ages have elapsed since the English, the Dutch, the Germans, the Swiss, the Norwegians, Danes and Swedes have separated from their common stock? Yet how many more must elapse before the proofs of their common origin, which exist in their several languages, will disappear? It is to be lamented then, very much to be lamented, that we have suffered so many of the Indian tribes already to extinguish, without our having previously collected and deposited in the records of literature, the general rudiments at least of the languages they spoke. Were vocabularies formed of all the languages spoken in North and South America, preserving their appellations of the most common objects in nature, of those which must be present to every nation barbarous or civilized, with the inflections of their nouns and verbs, their principles

of regimen and concord, and these deposited in all the public libraries, it would furnish opportunities to those skilled in the languages of the old world to compare them with these, now, or at any future time, and hence to construct the best evidence of the derivation of this part of the human race.

But imperfect as is our knowledge of the tongues spoken in America, it suffices to discover the following remarkable fact: Arranging them under the radical ones to which they may be palpably traced, and doing the same by those of the red men of Asia, there will be found probably twenty in America, for one in Asia, of those radical languages, so called because if they were ever the same they have lost all resemblance to one another. A separation into dialects may be the work of a few ages only, but for two dialects to recede from one another till they have lost all vestiges of their common origin, must require an immense course of time; perhaps not less than many people give to the age of the earth. A greater number of those radical changes of language having taken place among the red men of America, proves them of greater antiquity than those of Asia.

....

QUERY XII

A notice of the counties, cities, townships, and villages?

The counties have been enumerated under Query IX. They are seventy-four in number, of very unequal size and population. Of these thirty-five are on the tide waters, or in that parallel; twenty-three are in the midlands, between the tide waters and Blue Ridge of mountains; eight between the Blue Ridge and Alleghany; and eight westward of the Alleghany.

The State, by another division, is formed into parishes, many of which are commensurate with the counties; but sometimes a county comprehends more than one parish, and sometimes a parish more than one county. This division had relation to the religion of the State, a portion of the Anglican church, with a fixed salary, having been heretofore established in each parish. The care of the poor was another object of the parochial division.

We have no townships. Our country being much intersected with navigable waters, and trade brought generally to our doors, instead of our being obliged to go in quest of it, has probably been one of the causes why we have no towns of any consequence. Williamsburg, which, till the year 1780, was the seat of our government, never contained above 1,800 inhabitants; and Norfolk, the most populous town we ever had, contained but 6,000....

There are other places at which, like some of the foregoing, the laws have said there shall be towns; but nature has said there shall not, and they remain unworthy of enumeration. Norfolk will probably be the emporium for all the trade of the Chesapeake bay and its waters; and a canal of eight or ten miles will bring to it all that of Albemarle sound and its waters. Secondary to this place, are the towns at the head of the tide waters, to wit, Petersburg on Appomattox; Richmond on James' river; Newcastle on York river; Alexandria on Potomac, and Baltimore on Patapsco. From these the distribution will be to subordinate situations in the country. Accidental circumstances, however, may control the indications of nature, and in no instance do they do it more frequently than in the rise and fall of towns.

QUERY XIII

The constitution of the State and its several charters?

Queen Elizabeth by her letters patent, bearing date March 25, 1584, licensed Sir Walter Raleigh to search for remote heathen lands, not inhabited by Christian people, and granted to him in fee simple, all the soil within two hundred leagues of the places where his people should, within six years, make their dwellings or abidings; reserving only to herself and her successors, their allegiance and one-fifth part of all the gold and silver ore they should obtain. Sir Walter immediately sent out two ships, which visited Wococon island in North Carolina, and the next year despatched seven with one hundred and seven men, who settled in Roanoke island, about latitude 35° 50'. Here Okisko, king of the Weopomeiocs, in a full council of his people is said to have acknowledged himself the homager of the Queen of England, and, after her, of Sir Walter Raleigh. A supply of fifty men were sent in 1586, and one hundred and fifty in 1587. With these last Sir Walter sent a governor, appointed him twelve assistants, gave them a charter of incorporation, and instructed them to settle on Chesapeake bay. They landed, however, at Hatorask. In 1588, when a fleet was ready to sail with a new supply of colonists and necessities, they were detained by the Queen to assist against the Spanish armada. Sir Walter having now expended £40,000 in these enterprises, obstructed occasionally by the crown without a shilling of aid from it, was under a necessity of engaging others to adventure their money. He, therefore, by deed bearing date the 7th of March, 1589, by the name of Sir Walter Raleigh, Chief Governor of Assamàcòmoc, (probably Acomàc,) alias Wingadacoia, alias Virginia, granted to Thomas Smith and others, in consideration of their adventuring certain sums of money, liberty to trade to this new country free from all customs and taxes for seven years, excepting the fifth part of the gold and silver ore to be obtained; and stipulated with them and the other assistants, then in Virginia, that he would confirm the deed of incorporation which he had given in 1587, with all the prerogatives, jurisdictions, royalties and privileges granted to him by the Queen. Sir Walter, at different times, sent five other adventurers hither, the last

of which was in 1602; for in 1603 he was attainted and put into close imprisonment, which put an end to his cares over his infant colony. What was the particular fate of the colonists he had before sent and seated, has never been known; whether they were murdered, or incorporated with the savages.

Some gentlemen and merchants, supposing that by the attainder of Sir Walter Raleigh the grant to him was forfeited, not inquiring over carefully whether the sentence of an English court could affect lands not within the jurisdiction of that court, petitioned king James for a new grant of Virginia to them. He accordingly executed a grant to Sir Thomas Gates and others, bearing date the 9th of March, 1607, under which, in the same year, a settlement was effected at Jamestown, and ever after maintained. Of this grant, however, no particular notice need be taken, as it was superseded by letters patent of the same king, of May 23, 1609, to the Earl of Salisbury and others, incorporating them by the name of "The Treasurer and company of Adventurers and Planters of the City of London for the first colony in Virginia," granting to them and their successors all the lands in Virginia from Point Comfort along the sea-coast, to the northward two hundred miles, and from the same point along the sea-coast to the southward two hundred miles, and all the space from this precinct on the sea-coast up into the land, west and north-west, from sea to sea, and the islands within one hundred miles of it, with all the communities, jurisdictions, royalties, privileges, franchises, and pre-eminencies, within the same, and thereto and thereabouts, by sea and land, appertaining in as ample manner as had before been granted to any adventurer; to be held of the king and his successors, in common soccage, yielding one-fifth part of the gold and silver ore to be therein found, for all manner of services; establishing a counsel in England for the direction of the enterprise, the members of which were to be chosen and displaced by the voice of the majority of the company and adventurers, and were to have the nomination and revocation of

governors, officers, and ministers, which by them should be thought needful for the colony, the power of establishing laws and forms of government and magistracy, obligatory not only within the colony, but also on the seas in going and coming to and from it; authorizing them to carry thither any persons who should consent to go, freeing them forever from all taxes and impositions on any goods or merchandise on importations into the colony, or exportation out of it, except the five per cent, due for custom on all goods imported into the British dominions, according to the ancient trade of merchants; which five per cent, only being paid they might, within thirteen months, re-export the same goods into foreign parts, without any custom, tax, or other duty, to the king or any of his officers, or deputies; with powers of waging war against those who should annoy them; giving to the inhabitants of the colony all the rights of natural subjects, as if born and abiding in England; and declaring that these letters should be construed, in all doubtful parts, in such manner as should be most for the benefit of the grantees.

Afterwards on the 12th of March, 1612, by other letters patent, the king added to his former grants, all islands in any part of the ocean between the 30th and 41st degrees of latitude, and within three hundred leagues of any of the parts before granted to the treasurer and company, not being possessed or inhabited by any other Christian prince or state, nor within the limits of the northern colony.

In pursuance of the authorities given to the company by these charters, and more especially of that part in the charter of 1609, which authorized them to establish a form of government, they on the 24th of July, 1621, by charter under their common seal, declared that from thenceforward there should be two supreme councils in Virginia, the one to be called the council of state, to be placed and displaced by the treasurer, council in England, and company from time to time, whose office was to be that of assisting and advising the governor; the

other to be called the general assembly, to be convened by the governor once yearly or oftener, which was to consist of the council of state, and two burgesses out of every town, hundred, or plantation, to be respectively chosen by the inhabitants. In this all matters were to be decided by the greater part of the votes present; reserving to the governor a negative voice; and they were to have power to treat, consult, and conclude all emergent occasions concerning the public weal, and to make laws for the behoof and government of the colony, imitating and following the laws and policy of England as nearly as might be; providing that these laws should have no force till ratified in a general court of the company in England, and returned under their common seal; and declaring that, after the government of the colony should be well framed and settled, no orders of the council in England should bind the colony unless ratified in the said general assembly. The king and company quarrelled, and by a mixture of law and force, the latter were ousted of all their rights without retribution, after having expended one hundred thousand pounds in establishing the colony, without the smallest aid from government. King James suspended their powers by proclamation of July 15, 1624, and Charles I. took the government into his own hands. Both sides had their partisans in the colony, but, in truth, the people of the colony in general thought themselves little concerned in the dispute. There being three parties interested in these several charters, what passed between the first and second, it was thought could not affect the third. If the king seized on the powers of the company, they only passed into other hands, without increase or diminution, while the rights of the people remained as they were. But they did not remain so long. The northern parts of their country were granted away to the lords Baltimore and Fairfax; the first of these obtaining also the rights of separate jurisdiction and government. And in 1650 the parliament, considering itself as standing in the place of their deposed king, and as having succeeded to all his powers, without as well as within the realm, began to assume a right over the colonies, passing an act for

inhibiting their trade with foreign nations. This succession to the exercise of kingly authority gave the first color for parliamentary interference with the colonies, and produced that fatal precedent which they continued to follow, after they had retired, in other respects, within their proper functions. When this colony, therefore, which still maintained its opposition to Cromwell and the parliament, was induced in 1651 to lay down their arms, they previously secured their most essential rights by a solemn convention, which, having never seen in print, I will here insert literally from the records.

“ARTICLES agreed on and concluded at James Cittie in Virginia for the surrendering and settling of that plantation under the obedience and government of the commonwealth of England by the commissioners of the Councill of State by authoritie of the parliamt of England, and by the Grand assembly of the Governour, Councill, and Burgesses of that countrey.

“First it is agreed and consted that the plantation of Virginia, and all the inhabitants thereof, shall be and remain in due obedience and subjection to the Commonwealth of England, according to the laws there established, and that this submission and subscription bee acknowledged a voluntary act not forced nor constrained by a conquest upon the countrey, and that they shall have and enjoy such freedoms and priviledges as belong to the free borne people of England, and that the former government by the Commissions and Instructions be void and null.

“2ly. That the Grand assembly as formerly shall convene and transact the affairs of Virginia, wherein nothing is to be acted or done contrairie to the government of the Commonwealth of England and the lawes there established.

“3ly. That there shall be a full and total remission and indempnitie of all acts, words, or writeings done or spoken against the

parliament of England in relation to the same.

“4ly. That Virginia shall have and enjoy the antient bounds and lymitts granted by the charters of the former kings, and that we shall seek a new charter from the parliament to that purpose against any that have intrencht upon the rights thereof.

“5ly. That all the pattents of land granted under the colony seal by any of the precedent governours shall be and remaine in their full force and strength.

“6ly. That the priviledge of haveing fffitie acres of land for every person transported in that collonie shall continue as formerly granted.

“7ly. That the people of Virginia have free trade as the people of England do enjoy to all places and with all nations according to the lawes of that commonwealth, and that Virginia shall enjoy all priviledges equall with any English plantations in America.

“8ly. That Virginia shall be free from all taxes, customs and impositions whatsoever, and none to be imposed on them without consent of the Grand assembly; and soe that neither fforts nor castle bee erected or garrisons maintained without their consent.

“9ly. That noe charge shall be required from this country in respect of this present ffleet.

“10ly. That for the future settlement of the countrey in their due obedience, the engagement shall be tendred to all the inhabitants according to act of parliament made to that purpose, that all persons who shall refuse to subscribe the said engagement, shall have a yeare's time if they please to remove themselves and their estates out of Virginia, and in the meantime during the said yeare to have equall justice as formerly.

“11ly. That the use of the booke of common prayer shall be

permitted for one yeare ensueinge with referrence to the consent of the major part of the parishes, provided that those which relate to kingshipp or that government be not used publiquely, and the continuance of ministers in their places, they not misdemeaning themselves, and the payment of their accustomed dues and agreements made with them respectively shall be left as they now stand dureing this ensueing yeare.

“12ly. That no man’s cattell shall be questioned as the companies unless such as have been entrusted with them or have disposed of them without order.

“13ly. That all ammunition, powder and armes, other than for private use, shall be delivered up, securitie being given to make satisfaction for it.

“14ly. That all goods allreadie brought hither by the Dutch or others which are now on shoar shall be free from surprizall.

“15ly. That the quittrents granted unto us by the late kinge for seaven yeares bee confirmed.

“16ly. That the commissioners for the parliament subscribeing these articles engage themselves and the honour of parliament for the full performance thereof; and that the present governour, and the councill, and the burgesses do likewise subscribe and engage the whole collony on their parts.

RICHARD BENNETT. —Seale.

WILLIAM CLAIBORNE. —Seale.

EDMOND CURTIS. —Seale.

“Theise articles were signed and sealed by the Commissioners of the Councill of state for the Commonwealth of England the twelveth

day of March 1651.”

The colony supposed, that, by this solemn convention, entered into with arms in their hands, they had secured the ancient limits of their country, its free trade, its exemption from taxation but by their own assembly, and exclusion of military force from among them. Yet in every of these points was this convention violated by subsequent kings and parliaments, and other infractions of their constitution, equally dangerous committed. Their general assembly, which was composed of the council of state and burgesses, sitting together and deciding by plurality of voices, was split into two houses, by which the council obtained a separate negative on their laws. Appeals from their supreme court, which had been fixed by law in their general assembly, were arbitrarily revoked to England, to be there heard before the king and council. Instead of four hundred miles on the seacoast, they were reduced, in the space of thirty years, to about one hundred miles. Their trade with foreigners was totally suppressed, and when carried to Great Britain, was there loaded with imposts. It is unnecessary, however, to glean up the several instances of injury, as scattered through American and British history, and the more especially as, by passing on to the accession of the present king, we shall find specimens of them all, aggravated, multiplied and crowded within a small compass of time, so as to evince a fixed design of considering our rights natural, conventional and chartered as mere nullities. The following is an epitome of the first sixteen years of his reign: The colonies were taxed internally and externally; their essential interests sacrificed to individuals in Great Britain; their legislatures suspended; charters annulled; trials by juries taken away; their persons subjected to transportation across the Atlantic, and to trial before foreign judicatories; their supplications for redress thought beneath answer: themselves published as cowards in the councils of their mother country and courts of Europe; armed troops sent among them to enforce submission to these violences; and actual hostilities

commenced against them. No alternative was presented but resistance, or unconditional submission. Between these could be no hesitation. They closed in the appeal to arms. They declared themselves independent states. They confederated together into one great republic; thus securing to every State the benefit of an union of their whole force. In each State separately a new form of government was established. Of ours particularly the following are the outlines: The executive powers are lodged in the hands of a governor, chosen annually, and incapable of acting more than three years in seven. He is assisted by a council of eight members. The judiciary powers are divided among several courts, as will be hereafter explained. Legislation is exercised by two houses of assembly, the one called the house of Delegates, composed of two members from each county, chosen annually by the citizens, possessing an estate for life in one hundred acres of uninhabited land, or twenty-five acres with a house on it, or in a house or lot in some town: the other called the Senate, consisting of twenty-four members, chosen quadrennially by the same electors, who for this purpose are distributed into twenty-four districts. The concurrence of both houses is necessary to the passage of a law. They have the appointment of the governor and council, the judges of the superior courts, auditors, attorney-general, treasurer, register of the land office, and delegates to Congress. As the dismemberment of the State had never had its confirmation, but, on the contrary, had always been the subject of protestation and complaint, that it might never be in our own power to raise scruples on that subject, or to disturb the harmony of our new confederacy, the grants to Maryland, Pennsylvania, and the two Carolinas, were ratified.

This constitution was formed when we were new and unexperienced in the science of government. It was the first, too, which was formed in the whole United States. No wonder then that time and trial

have discovered very capital defects in it.

1. The majority of the men in the State, who pay and fight for its support, are unrepresented in the legislature, the roll of freeholders entitled to vote not including generally the half of those on the roll of the militia, or of the tax-gatherers.

2. Among those who share the representation, the shares are very unequal. Thus the county of Warwick, with only one hundred fighting men, has an equal representation with the county of Loudon, which has one thousand seven hundred and forty-six. So that every man in Warwick has as much influence in the government as seventeen men in Loudon. But lest it should be thought that an equal interspersion of small among large counties, through the whole State, may prevent any danger of injury to particular parts of it, we will divide it into districts, and show the proportions of land, of fighting men, and of representation in each....

3. The senate is, by its constitution, too homogeneous with the house of delegates. Being chosen by the same electors, at the same time, and out of the same subjects, the choice falls of course on men of the same description. The purpose of establishing different houses of legislation is to introduce the influence of different interests or different principles. Thus in Great Britain it is said their constitution relies on the house of commons for honesty, and the lords for wisdom; which would be a rational reliance, if honesty were to be bought with money, and if wisdom were hereditary. In some of the American States, the delegates and senators are so chosen, as that the first represent the persons, and the second the property of the State. But with us, wealth and wisdom have equal chance for admission into both houses. We do not, therefore, derive from the separation of our legislature into two houses, those benefits which a proper complication of principles are capable of producing, and those which alone can compensate the evils which may be produced by their

dissensions.

4. All the powers of government, legislative, executive, and judiciary, result to the legislative body. The concentrating these in the same hands is precisely the definition of despotic government. It will be no alleviation that these powers will be exercised by a plurality of hands, and not by a single one. One hundred and seventy-three despots would surely be as oppressive as one. Let those who doubt it turn their eyes on the republic of Venice. As little will it avail us that they are chosen by ourselves. An elective despotism was not the government we fought for, but one which should not only be founded on free principles, but in which the powers of government should be so divided and balanced among several bodies of magistracy, as that no one could transcend their legal limits, without being effectually checked and restrained by the others. For this reason that convention which passed the ordinance of government, laid its foundation on this basis, that the legislative, executive, and judiciary departments should be separate and distinct, so that no person should exercise the powers of more than one of them at the same time. But no barrier was provided between these several powers. The judiciary and executive members were left dependent on the legislative, for their subsistence in office, and some of them for their continuance in it. If, therefore, the legislature assumes executive and judiciary powers, no opposition is likely to be made; nor, if made, can it be effectual; because in that case they may put their proceedings into the form of an act of assembly, which will render them obligatory on the other branches. They have, accordingly, in many instances, decided rights which should have been left to judiciary controversy; and the direction of the executive, during the whole time of their session, is becoming habitual and familiar. And this is done with no ill intention. The views of the present members are perfectly upright. When they are led out of their regular province, it is by art in others, and inadvertance in themselves. And this will probably be the case for some time to come. But it will

not be a very long time. Mankind soon learn to make interested uses of every right and power which they possess, or may assume. The public money and public liberty, intended to have been deposited with three branches of magistracy, but found inadvertently to be in the hands of one only, will soon be discovered to be sources of wealth and dominion to those who hold them; distinguished, too, by this tempting circumstance, that they are the instrument, as well as the object of acquisition. With money we will get men, said Cæsar, and with men we will get money. Nor should our assembly be deluded by the integrity of their own purposes, and conclude that these unlimited powers will never be abused, because themselves are not disposed to abuse them. They should look forward to a time, and that not a distant one, when a corruption in this, as in the country from which we derive our origin, will have seized the head of government, and be spread by them through the body of the people; when they will purchase the voices of the people, and make them pay the price. Human nature is the same on every side of the Atlantic, and will be alike influenced by the same causes. The time to guard against corruption and tyranny, is before they shall have gotten hold of us. It is better to keep the wolf out of the fold, than to trust to drawing his teeth and claws after he shall have entered. To render these considerations the more cogent, we must observe in addition:

5. That the ordinary legislature may alter the constitution itself. On the discontinuance of assemblies, it became necessary to substitute in their place some other body, competent to the ordinary business of government, and to the calling forth the powers of the State for the maintenance of our opposition to Great Britain. Conventions were therefore introduced, consisting of two delegates from each county, meeting together and forming one house, on the plan of the former house of burgesses, to whose places they succeeded. These were at first chosen anew for every particular session. But in March 1775, they

recommended to the people to choose a convention, which should continue in office a year. This was done, accordingly, in April 1775, and in the July following that convention passed an ordinance for the election of delegates in the month of April annually. It is well known, that in July 1775, a separation from Great Britain and establishment of republican government, had never yet entered into any person's mind. A convention, therefore, chosen under that ordinance, cannot be said to have been chosen for the purposes which certainly did not exist in the minds of those who passed it. Under this ordinance, at the annual election in April 1776, a convention for the year was chosen. Independence, and the establishment of a new form of government, were not even yet the objects of the people at large. One extract from the pamphlet called Common Sense had appeared in the Virginia papers in February, and copies of the pamphlet itself had got in a few hands. But the idea had not been opened to the mass of the people in April, much less can it be said that they had made up their minds in its favor.

So that the electors of April 1776, no more than the legislators of July 1775, not thinking of independence and a permanent republic, could not mean to vest in these delegates powers of establishing them, or any authorities other than those of the ordinary legislature. So far as a temporary organization of government was necessary to render our opposition energetic, so far their organization was valid. But they received in their creation no powers but what were given to every legislature before and since. They could not, therefore, pass an act transcendent to the powers of other legislatures. If the present assembly pass an act, and declare it shall be irrevocable by subsequent assemblies, the declaration is merely void, and the act repealable, as other acts are. So far, and no farther authorized, they organized the government by the ordinance entitled a constitution or form of government. It pretends to no higher authority than the other ordinances of the same session; it does not say that it shall be

perpetual; that it shall be unalterable by other legislatures; that it shall be transcendent above the powers of those who they knew would have equal power with themselves. Not only the silence of the instrument is a proof they thought it would be alterable, but their own practice also; for this very convention, meeting as a house of delegates in general assembly with the Senate in the autumn of that year, passed acts of assembly in contradiction to their ordinance of government; and every assembly from that time to this has done the same. I am safe, therefore, in the position that the constitution itself is alterable by the ordinary legislature. Though this opinion seems founded on the first elements of common sense, yet is the contrary maintained by some persons, 1. Because, say they, the conventions were vested with every power necessary to make effectual opposition to Great Britain. But to complete this argument, they must go on, and say further, that effectual opposition could not be made to Great Britain without establishing a form of government perpetual and unalterable by the legislature; which is not true. An opposition which at some time or other was to come to an end, could not need a perpetual institution to carry it on; and a government amendable as its defects should be discovered, was as likely to make effectual resistance, as one that should be unalterably wrong. Besides, the assemblies were as much vested with all powers requisite for resistance as the conventions were. If, therefore, these powers included that of modelling the form of government in the one case, they did so in the other. The assemblies then as well as the conventions may model the government; that is; they may alter the ordinance of government. 2. They urge, that if the convention had meant that this instrument should be alterable, as their other ordinances were, they would have called it an ordinance; but they have called it a constitution, which, *ex vi termini*, means “an act above the power of the ordinary legislature.” I answer that *constitutio*, *constitutium*, *statutum*, *lex*, are convertible terms.... Thus in the statute 25 Hen. VIII. c. 19, § 1, “Constitutions and ordinances” are used as synonymous. The term constitution has many

other significations in physics and politics; but in jurisprudence, whenever it is applied to any act of the legislature, it invariably means a statute, law, or ordinance which is the present case. No inference then of a different meaning can be drawn from the adoption of this title; on the contrary, we might conclude that, by their affixing to it a term synonymous with ordinance or statute, they meant it to be an ordinance, or statute. But of what consequence is their meaning, where their power is denied? If they meant to do more than they had power to do, did this give them power? It is not the name, but the authority that renders an act obligatory.... To get rid of the magic supposed to be in the word constitution, let us translate it into its definition as given by those who think it above the power of the law ; and let us suppose the convention instead of saying, "We the ordinary legislature, establish a constitution" had said, "We the ordinary legislature, establish an act above the power of the ordinary legislature" Does not this expose the absurdity of the attempt? 3. But, say they, the people have acquiesced, and this has given it an authority superior to the laws. It is true that the people did not rebel against it; and was that a time for the people to rise in rebellion? Should a prudent acquiescence, at a critical time, be construed into a confirmation of every illegal thing done during that period? Besides, why should they rebel? At an annual election they had chosen delegates for the year, to exercise the ordinary powers of legislation, and to manage the great contest in which they were engaged. These delegates thought the contest would be best managed by an organized government. They therefore, among others, passed an ordinance of government. They did not presume to call it perpetual and unalterable. They well knew they had no power to make it so; that our choice of them had been for no such purpose, and at a time when we could have no such purpose in contemplation. Had an unalterable form of government been meditated, perhaps we should have chosen a different set of people. There was no cause then for the people to rise in rebellion. But to what dangerous lengths will this argument lead?

Did the acquiescence of the colonies under the various acts of power exercised by Great Britain in our infant State, confirm these acts, and so far invest them with the authority of the people as to render them unalterable, and our present resistance wrong? On every unauthoritative exercise of power by the legislature must the people rise in rebellion, or their silence be construed into a surrender of that power to them? If so, how many rebellious should we have had already? One certainly for every session of assembly. The other States in the union have been of opinion that to render a form of government unalterable by ordinary acts of assembly, the people must delegate persons with special powers. They have accordingly chosen special conventions to form and fix their governments. The individuals then who maintain the contrary opinion in this country, should have the modesty to suppose it possible that they may be wrong, and the rest of America right. But if there be only a possibility of their being wrong, if only a plausible doubt remains of the validity of the ordinance of government, is it not better to remove that doubt by placing it on a bottom which none will dispute? If they be right we shall only have the unnecessary trouble of meeting once in convention. If they be wrong, they expose us to the hazard of having no fundamental rights at all. True it is, this is no time for deliberating on forms of government. While an enemy is within our bowels, the first object is to expel him. But when this shall be done, when peace shall be established, and leisure given us for intrenching within good forms, the rights for which we have bled, let no man be found indolent enough to decline a little more trouble for placing them beyond the reach of question. If anything more be requisite to produce a conviction of the expediency of calling a convention at a proper season to fix our form of government, let it be the reflection:

6. That the assembly exercises a power of determining the quorum of their own body which may legislate for us. After the

establishment of the new form they adhered to the *Lex majoris partis*, founded in common law as well as common right. It is the natural law of every assembly of men, whose numbers are not fixed by any other law. They continued for some time to require the presence of a majority of their whole number, to pass an act. But the British parliament fixes its own quorum; our former assemblies fixed their own quorum; and one precedent in favor of power is stronger than an hundred against it. The house of delegates, therefore, have lately voted that, during the present dangerous invasion, forty members shall be a house to proceed to business. They have been moved to this by the fear of not being able to collect a house. But this danger could not authorize them to call that a house which was none; and if they may fix it at one number, they may at another, till it loses its fundamental character of being a representative body. As this vote expires with the present invasion, it is probable the former rule will be permitted to revive; because at present no ill is meant. The power, however, of fixing their own quorum has been avowed, and a precedent set. From forty it may be reduced to four, and from four to one; from a house to a committee, from a committee to a chairman or speaker, and thus an oligarchy or monarchy be substituted under forms supposed to be regular. "All bad precedents arise out of good; but where power comes into the hands of the ignorant or the indifferent, that new precedent proceeds from the worthy and the fit to the unworthy and the unfit."

When, therefore, it is considered, that there is no legal obstacle to the assumption by the assembly of all the powers legislative, executive, and judiciary, and that these may come to the hands of the smallest rag of delegation, surely the people will say, and their representatives, while yet they have honest representatives, will advise them to say, that they will not acknowledge as laws any acts not considered and assented to by the major part of their delegates.

In enumerating the defects of the Constitution, it would be wrong to count among them what is only the error of particular persons. In December 1776, our circumstances being much distressed, it was proposed in the house of delegates to create a dictator, invested with every power legislative, executive, and judiciary, civil and military, of life and of death, over our persons and over our properties; and in June 1781, again under calamity, the same proposition was repeated, and wanted a few votes only of being passed. One who entered into this contest from a pure love of liberty, and a sense of injured rights, who determined to make every sacrifice, and to meet every danger, for the re-establishment of those rights on a firm basis, who did not mean to expend his blood and substance for the wretched purpose of changing this matter for that, but to place the powers of governing him in a plurality of hands of his own choice, so that the corrupt will of no one man might in future oppress him, must stand confounded and dismayed when he is told, that a considerable portion of that plurality had mediated the surrender of them into a single hand, and, in lieu of a limited monarchy, to deliver him over to a despotic one! How must we find his efforts and sacrifices abused and baffled, if he may still, by a single vote, be laid prostrate at the feet of one man! In God's name, from whence have they derived this power? Is it from our ancient laws? None such can be produced. Is it from any principle in our new Constitution expressed or implied? Every lineament expressed or implied, is in full opposition to it. Its fundamental principle is, that the State shall be governed as a commonwealth. It provides a republican organization, proscribes under the name of prerogative the exercise of all powers undefined by the laws; places on this basis the whole system of our laws; and by consolidating them together, chooses that they should be left to stand or fall together, never providing for any circumstances, nor admitting that such could arise, wherein either should be suspended; no, not for a moment. Our ancient laws expressly declare, that those who are but delegates themselves shall not delegate to others powers which require

judgment and integrity in their exercise. Or was this proposition moved on a supposed right in the movers, of abandoning their posts in a moment of distress? The same laws forbid the abandonment of that post, even on ordinary occasions; and much more a transfer of their powers into other hands and other forms, without consulting the people. They never admit the idea that these, like sheep or cattle, may be given from hand to hand without an appeal to their own will. Was it from the necessity of the case? Necessities which dissolve a government, do not convey its authority to an oligarchy or a monarchy. They throw back, into the hands of the people, the powers they had delegated; and leave them as individuals to shift for themselves. A leader may offer, but not impose himself, nor be imposed on them. Much less can their necks be submitted to his sword, their breath to be held at his will or caprice. The necessity which should operate these tremendous effects should at least be palpable and irresistible. Yet in both instances, where it was feared, or pretended with us, it was belied by the event. It was belied, too, by the preceding experience of our sister States, several of whom had grappled through greater difficulties without abandoning their forms of government. When the proposition was first made, Massachusetts had found even the government of committees sufficient to carry them through an invasion. But we at the time of that proposition, were under no invasion. When the second was made, there had been added to this example those of Rhode Island, New York, New Jersey, and Pennsylvania, in all of which the republican form had been found equal to the task of carrying them through the severest trials. In this State alone did there exist so little virtue, that fear was to be fixed in the hearts of the people, and to become the motive of their exertions, and principle of their government? The very thought alone was treason against the people; was treason against mankind in general; as riveting forever the chains which bow down their necks, by giving to their oppressors a proof, which they would have trumpeted through the universe, of the imbecility of republican government, in times of

pressing danger, to shield them from harm. Those who assume the right of giving away the reins of government in any case, must be sure that the herd, whom they hand on to the rods and hatchet of the dictator, will lay their necks on the block when they shall nod to them. But if our assemblies supposed such a recognition in the people, I hope they mistook their character. I am of opinion, that the government, instead of being braced and invigorated for greater exertions under their difficulties, would have been thrown back upon the bungling machinery of county committees for administration, till a convention could have been called, and its wheels again set into regular motion. What a cruel moment was this for creating such an embarrassment, for putting to the proof the attachment of our countrymen to republican government! Those who meant well, of the advocates of this measure, (and most of them meant well, for I know them personally, had been their fellow-laborer in the common cause, and had often proved the purity of their principles,) had been seduced in their judgment by the example of an ancient republic, whose constitution and circumstances were fundamentally different. They had sought this precedent in the history of Rome, where alone it was to be found, and where at length, too, it had proved fatal. They had taken it from a republic rent by the most bitter factions and tumults, where the government was of a heavy-handed unfeeling aristocracy, over a people ferocious, and rendered desperate by poverty and wretchedness; tumults which could not be allayed under the most trying circumstances, but by the omnipotent hand of a single despot. Their constitution, therefore, allowed a temporary tyrant to be erected, under the name of a dictator; and that temporary tyrant, after a few examples, became perpetual. They misapplied this precedent to a people mild in their dispositions, patient under their trial, united for the public liberty, and affectionate to their leaders. But if from the constitution of the Roman government there resulted to their senate a power of submitting all their rights to the will of one man, does it follow that the assembly of Virginia have the same authority? What

clause in our constitution has substituted that of Rome, by way of residuary provision, for all cases not otherwise provided for? Or if they may step ad libitum into any other form of government for precedents to rule us by, for what oppression may not a precedent be found in this world of the ballum omnium in omnia? Searching for the foundations of this proposition, I can find none which may pretend a color of right or reason, but the defect before developed, that there being no barrier between the legislative, executive, and judiciary departments, the legislature may seize the whole; that having seized it, and possessing a right to fix their own quorum, they may reduce that quorum to one, whom they may call a chairman, speaker, dictator, or by any other name they please. Our situation is indeed perilous, and I hope my countrymen will be sensible of it, and will apply, at a proper season, the proper remedy; which is a convention to fix the constitution, to amend its defects, to bind up the several branches of government by certain laws, which, when they transgress, their acts shall become nullities; to render unnecessary an appeal to the people, or in other words a rebellion, on every infraction of their rights, on the peril that their acquiescence shall be construed into an intention to surrender those rights.

QUERY XIV

The administration of justice and the description of the laws?

The State is divided into counties. In every county are appointed magistrates, called justices of the peace, usually from eight to thirty or forty in number, in proportion to the size of the county, of the most discreet and honest inhabitants. They are nominated by their fellows, but commissioned by the governor, and act without reward. These magistrates have jurisdiction both criminal and civil. If the question

before them be a question of law only, they decide on it themselves; but if it be of fact, or of fact and law combined, it must be referred to a jury. In the latter case, of a combination of law and fact, it is usual for the jurors to decide the fact, and to refer the law arising on it to the decision of the judges. But this division of the subject lies with their discretion only. And if the question relate to any point of public liberty, or if it be one of those in which the judges may be suspected of bias, the jury undertake to decide both law and fact. If they be mistaken, a decision against right, which is casual only, is less dangerous to the State, and less afflicting to the loser, than one which makes part of a regular and uniform system. In truth, it is better to toss up cross and pile in a cause, than to refer it to a judge whose mind is warped by any motive whatever, in that particular case. But the common sense of twelve honest men gives still a better chance of just decision, than the hazard of cross and pile. These judges execute their process by the sheriff or coroner of the county, or by constables of their own appointment. If any free person commit an offense against the commonwealth; if it be below the degree of felony, he is bound by a justice to appear before their court, to answer it on an indictment or information. If it amount to felony, he is committed to jail; a court of these justices is called; if they on examination think him guilty, they send him to the jail of the general court, before which court he is to be tried first by a grand jury of twenty-four, of whom thirteen must concur in opinion; if they find him guilty, he is then tried by a jury of twelve men of the county where the offence was committed, and by their verdict, which must be unanimous, he is acquitted or condemned without appeal. If the criminal be a slave, the trial by the county court is final. In every case, however, except that of high treason, there resides in the governor a power of pardon. In high treason the pardon can only flow from the general assembly. In civil matters these justices have jurisdiction in all cases of whatever value, not appertaining to the department of the admiralty. This jurisdiction is twofold. If the matter in dispute be of less value than

four dollars and one-sixth, a single member may try it at any time and place within his county, and may award execution on the goods of the party cast. If it be of that or greater value, it is determinable before the county court, which consists of four at the least of those justices and assembles at the courthouse of the county on a certain day in every month. From their determination, if the matter be of the value of ten pounds sterling, or concern the title or bounds of land, an appeal lies to one of the superior courts.

....

The laws of England seem to have been adopted by consent of the settlers, which might easily enough be done whilst they were few and living all together. Of such adoption, however, we have no other proof than their practice till the year 1661, when they were expressly adopted by an act of the assembly, except so far as “a difference of condition” rendered them inapplicable. Under this adoption, the rule, in our courts of judicature was, that the common law of England, and the general statutes previous to the fourth of James, were in force here; but that no subsequent statutes were, unless we were named in them, said the judges and other partisans of the crown, but named or not named, said those who reflected freely. It will be unnecessary to attempt a description of the laws of England, as that may be found in English publications. To those which were established here, by the adoption of the legislature, have been since added a number of acts of assembly passed during the monarchy, and ordinances of convention and acts of assembly enacted since the establishment of the republic. The following variations from the British model are perhaps worthy of being specified:

Debtors unable to pay their debts, and making faithful delivery of their whole effects, are released from confinement, and their persons forever discharged from restraint for such previous debts; but any

property they may afterwards acquire will be subject to their creditors.

The poor unable to support themselves, are maintained by an assessment on the tytheable persons in their parish. This assessment is levied and administered by twelve persons in each parish, called vestrymen, originally chosen by the housekeepers of the parish, but afterwards filling vacancies in their own body by their own choice. These are usually the most discreet farmers, so distributed through their parish, that every part of it may be under the immediate eye of some one of them. They are well acquainted with the details and economy of private life, and they find sufficient inducements to execute their charge well, in their philanthropy, in the approbation of their neighbors, and the distinction which that gives them. The poor who have neither property, friends, nor strength to labor, are boarded in the houses of good farmers, to whom a stipulated sum is annually paid. To those who are able to help themselves a little, or have friends from whom they derive some succors, inadequate however to their full maintenance, supplementary aids are given which enable them to live comfortably in their own houses, or in the houses of their friends. Vagabonds without visible property or vocation, are placed in work houses, where they are well clothed, fed, lodged and made to labor. Nearly the same method of providing for the poor prevails through all our States; and from Savannah to Portsmouth you will seldom meet a beggar. In the large towns, indeed, they sometimes present themselves. These are usually foreigners, who have never obtained a settlement in any parish. I never yet saw a native American begging in the streets or highways. A subsistence is easily gained here; and if, by misfortunes, they are thrown on the charities of the world, those provided by their own country are so comfortable and so certain, that they never think of relinquishing them to become strolling beggars. Their situation too, when sick, in the family of a good farmer, where every member is emulous to do them kind offices, where they are

visited by all the neighbors, who bring them the little rarities which their sickly appetites may crave, and who take by rotation the nightly watch over them, when their condition requires it, is without comparison better than in a general hospital, where the sick, the dying and the dead are crammed together in the same rooms, and often in the same beds. The disadvantages, inseparable from general hospitals, are such as can never be counterpoised by all the regularities of medicine and regimen. Nature and kind nursing save a much greater proportion in our plain way, at a smaller expense, and with less abuse. One branch only of hospital institutions is wanting with us; that is, a general establishment for those laboring under difficult cases of chirurgery. The aids of this art are not equivocal. But an able chirurgeon cannot be had in every parish. Such a receptacle should therefore be provided for those patients; but no others should be admitted.

Marriages must be solemnized either on special license, granted by the first magistrate of the county, on proof of the consent of the parent or guardian of either party under age, or after solemn publication, on three several Sundays, at some place of religious worship, in the parishes where the parties reside. The act of solemnization may be by the minister of any society of Christians, who shall have been previously licensed for this purpose by the court of the county. Quakers and Menonists, however, are exempted from all these conditions, and marriage among them is to be solemnized by the society itself.

A foreigner of any nation, not in open war with us, becomes naturalized by removing to the State to reside, and taking an oath of fidelity; and thereupon acquires every right of a native citizen; and citizens may divest themselves of that character, by declaring, by solemn deed, or in open court, that they mean to expatriate themselves, and no longer to be citizens of this State.

Conveyances of land must be registered in the court of the county wherein they lie, or in the general court, or they are void, as to creditors, and subsequent purchasers.

Slaves pass by descent and dower as lands do. Where the descent is from a parent, the heir is bound to pay an equal share of their value in money to each of their brothers and sisters.

Slaves, as well as lands, were entailable during the monarchy; but by an act of the first republican assembly, all donees in tail, present and future, were vested with the absolute dominion of the entailed subject.

Bills of exchange, being protested, carry ten per cent interest from their date.

No person is allowed, in any other case, to take more than five per cent per annum simple interest for the loan of moneys.

Gaming debts are made void, and moneys actually paid to discharge such debts (if they exceed forty shillings) may be recovered by the payer within three months, or by any other person afterwards.

Tobacco, flour, beef, pork, tar, pitch, and turpentine must be inspected by persons publicly appointed, before they can be exported.

The erecting iron-works and mills is encouraged by many privileges; with necessary cautions however to prevent their dams from obstructing the navigation of the water-courses. The general assembly have on several occasions shown a great desire to encourage the opening the great falls of James and Potomac rivers. As yet, however, neither of these have been effected.

The laws have also descended to the preservation and improvement of the races of useful animals, such as horses, cattle, deer; to the extirpation of those which are noxious, as wolves,

squirrels, crows, blackbirds; and to the guarding our citizens against infectious disorders, by obliging suspected vessels coming into the State, to perform quarantine, and by regulating the conduct of persons having such disorders within the State.

The mode of acquiring lands, in the earliest times of our settlement, was by petition to the general assembly. If the lands prayed for were already cleared of the Indian title, and the assembly thought the prayer reasonable, they passed the property by their vote to the petitioner. But if they had not yet been ceded by the Indians, it was necessary that the petitioner should previously purchase their right. This purchase the assembly verified, by inquiries of the Indian proprietors; and being satisfied of its reality and fairness, proceeded further to examine the reasonableness of the petition, and its consistence with policy; and according to the result, either granted or rejected the petition. The company also sometimes, though very rarely, granted lands, independently of the general assembly. As the colony increased, and individual applications for land multiplied, it was found to give too much occupation to the general assembly to inquire into and execute the grant in every special case. They therefore thought it better to establish general rules, according to which all grants should be made, and to leave to the governor the execution of them, under these rules. This they did by what have been usually called the land laws, amending them from time to time, as their defects were developed. According to these laws, when an individual wished a portion of unappropriated land, he was to locate and survey it by a public officer, appointed for that purpose, its breadth was to bear a certain proportion to its length: the grant was to be executed by the governor; and the lands were to be improved in a certain manner, within a given time. From these regulations there resulted to the State a sole and exclusive power of taking conveyances of the Indian right of soil; since, according to them, an Indian conveyance alone could give no right to an individual, which the laws

would acknowledge. The State, or the crown, thereafter, made general purchases of the Indians from time to time, and the governor parcelled them out by special grants, conformable to the rules before described, which it was not in his power, or in that of the crown, to dispense with. Grants, unaccompanied by their proper legal circumstances, were set aside regularly by *fieri facias*, or by bill in chancery. Since the establishment of our new Government, this order of things is but little changed. An individual, wishing to appropriate to himself lands still unappropriated by any other, pays to the public treasurer a sum of money proportioned to the quantity he wants. He carries the treasurer's receipt to the auditors of public accounts, who thereupon debit the treasurer with the sum, and order the register of the land-office to give the party a warrant for his land. With this warrant from the register, he goes to the surveyor of the county where the land lies on which he has cast his eye. The surveyor lays it off for him, gives him its exact description, in the form of a certificate, which certificate he returns to the land-office, where a grant is made out, and is signed by the governor. This vests in him a perfect dominion in his lands, transmissible to whom he pleases by deed or will, or by descent to his heirs, if he die intestate.

Many of the laws which were in force during the monarchy being relative merely to that form of government, or inculcating principles inconsistent with republicanism, the first assembly which met after the establishment of the commonwealth appointed a committee to revise the whole code, to reduce it into proper form and volume, and report it to the assembly. This work has been executed by three gentlemen, and reported; but probably will not be taken up till a restoration of peace shall leave to the legislature leisure to go through such a work.

The plan of the revisal was this. The common law of England, by which is meant, that part of the English law which was anterior to the

date of the oldest statutes extant, is made the basis of the work. It was thought dangerous to attempt to reduce it to a text; it was therefore left to be collected from the usual monuments of it. Necessary alterations in that, and so much of the whole body of the British statutes, and of acts of assembly, as were thought proper to be retained, were digested into one hundred and twenty-six new acts, in which simplicity of style was aimed at, as far as was safe. The following are the most remarkable alterations proposed:

To change the rules of descent, so as that the lands of any person dying intestate shall be divisible equally among all his children, or other representatives, in equal degree.

To make slaves distributable among the next of kin, as other movables.

To have all public expenses, whether of the general treasury, or of a parish or county, (as for the maintenance of the poor, building bridges, courthouses, &c.,) supplied by assessment on the citizens, in proportion to their property.

To hire undertakers for keeping the public roads in repair, and indemnify individuals through whose lands new roads shall be opened.

To define with precision the rules whereby aliens should become citizens, and citizens make themselves aliens.

To establish religious freedom on the broadest bottom.

To emancipate all slaves born after the passing the act. The bill reported by the revisers does not itself contain this proposition; but an amendment containing it was prepared, to be offered to the legislature whenever the bill should be taken up, and farther directing, that they should continue with their parents to a certain age, then to be brought

up, at the public expense, to tillage, arts, or sciences, according to their geniuses, till the females should be eighteen, and the males twenty-one years of age, when they should be colonized to such place as the circumstances of the time should render most proper, sending them out with arms, implements of household and of the handicraft arts, seeds, pairs of the useful domestic animals, &c., to declare them a free and independent people, and extend to them our alliance and protection, till they have acquired strength; and to send vessels at the same time to other parts of the world for an equal number of white inhabitants; to induce them to migrate hither proper encouragements were to be proposed. It will probably be asked, Why not retain and incorporate the blacks into the State, and thus save the expense of supplying by importation of white settlers, the vacancies they will leave? Deep-rooted prejudices entertained by the whites; ten thousand recollections, by the blacks, of the injuries they have sustained; new provocations; the real distinctions which nature has made; and many other circumstances, will divide us into parties, and produce convulsions, which will probably never end but in the extermination of the one or the other race. To these objections, which are political, may be added others, which are physical and moral. The first difference which strikes us is that of color. Whether the black of the negro resides in the reticular membrane between the skin and scarf-skin, or in the scarf-skin itself; whether it proceeds from the color of the blood, the color of the bile, or from that of some other secretion, the difference is fixed in nature, and is as real as if its seat and cause were better known to us. And is this difference of no importance? Is it not the foundation of a greater or less share of beauty in the two races? Are not the fine mixtures of red and white, the expressions of every passion by greater or less suffusions of color in the one, preferable to that eternal monotony, which reigns in the countenances, that immovable veil of black which covers the emotions of the other race? Add to these, flowing hair, a more elegant symmetry of form, their own judgment in favor of the whites, declared

by their preference of them, as uniformly as is the preference of the Oran-utan for the black woman over those of his own species. The circumstance of superior beauty, is thought worthy attention in the propagation of our horses, dogs, and other domestic animals; why not in that of man? Besides those of color, figure, and hair, there are other physical distinctions proving a difference of race. They have less hair on the face and body. They secrete less by the kidneys, and more by the glands of the skin, which gives them a very strong and disagreeable odor. This greater degree of transpiration, renders them more tolerant of heat, and less so of cold than the whites. Perhaps, too, a difference of structure in the pulmonary apparatus, which a late ingenious experimentalist has discovered to be the principal regulator of animal heat, may have disabled them from extricating, in the act of inspiration, so much of that fluid from the outer air, or obliged them in expiration, to part with more of it. They seem to require less sleep. A black after hard labor through the day, will be induced by the slightest amusements to sit up till midnight, or later, though knowing he must be out with first dawn of the morning. They are at least as brave, and more adventuresome. But this may perhaps proceed from a want of forethought, which prevents their seeing a danger till it be present. When present, they do not go through it with more coolness or steadiness than the whites. They are more ardent after their female; but love seems with them to be more an eager desire, than a tender delicate mixture of sentiment and sensation. Their griefs are transient. Those numberless afflictions, which render it doubtful whether heaven has given life to us in mercy or in wrath, are less felt, and sooner forgotten with them. In general, their existence appears to participate more of sensation than reflection. To this must be ascribed their disposition to sleep when abstracted from their diversions, and unemployed in labor. An animal whose body is at rest, and who does not reflect must be disposed to sleep of course. Comparing them by their faculties of memory, reason, and imagination, it appears to me that in memory they are equal to the whites; in reason much inferior,

as I think one could scarcely be found capable of tracing and comprehending the investigations of Euclid ; and that in imagination they are dull, tasteless, and anomalous. It would be unfair to follow them to Africa for this investigation. We will consider them here, on the same stage with the whites, and where the facts are not apocryphal on which a judgment is to be formed. It will be right to make great allowances for the difference of condition, of education, of conversation, of the sphere in which they move. Many millions of them have been brought to, and born in America. Most of them, indeed, have been confined to tillage, to their own homes, and their own society; yet many have been so situated, that they might have availed themselves of the conversation of their masters; many have been brought up to the handicraft arts, and from that circumstance have always been associated with the whites. Some have been liberally educated, and all have lived in countries where the arts and sciences are cultivated to a considerable degree, and all have had before their eyes samples of the best works from abroad. The Indians, with no advantages of this kind, will often carve figures on their pages not destitute of design and merit. They will crayon out an animal, a plant, or a country, so as to prove the existence of a germ in their minds which only wants cultivation. They astonish you with strokes of the most sublime oratory; such as prove their reason and sentiment strong, their imagination glowing and elevated. But never yet could I find that a black had uttered a thought above the level of plain narration; never saw even an elementary trait of painting or sculpture. In music they are more generally gifted than the whites with accurate ears for tune and time, and they have been found capable of imagining a small catch.^[16] Whether they will be equal to the composition of a more extensive run of melody, or of complicated harmony, is yet to be proved. Misery is often the parent of the most affecting touches in poetry. Among the blacks is misery enough, God knows, but no poetry. Love is the peculiar oestrus of the poet. Their love is ardent, but it kindles the senses only, not the imagination.

Religion, indeed, has produced a Phyllis Whately; but it could not produce a poet. The compositions published under her name are below the dignity of criticism, The heroes of the Dunciad are to her, as Hercules to the author of that poem. Ignatius Sancho has approached nearer to merit in composition; yet his letters do more honor to the heart than the head. They breathe the purest effusions of friendship and general philanthropy, and show how great a degree of the latter may be compounded with strong religious zeal. He is often happy in the turn of his compliments, and his style is easy and familiar, except when he affects a Shandean fabrication of words. But his imagination is wild and extravagant, and escapes incessantly from every restraint of reason and taste, and, in the course of its vagaries, leaves a tract of thought as incoherent and eccentric, as is the course of a meteor through the sky. His subjects should often have led him to a process of sober reasoning; yet we find him always substituting sentiment for demonstration. Upon the whole, though we admit him to the first place among those of his own color who have presented themselves to the public judgment, yet when we compare him with the writers of the race among whom he lived and particularly with the epistolary class in which he has taken his own stand, we are compelled to enrol him at the bottom of the column. This criticism supposes the letters published under his name to be genuine, and to have received amendment from no other hand; points which would not be of easy investigation. The improvement of the blacks in body and mind, in the first instance of their mixture with the whites, has been observed by every one, and proves that their inferiority is not the effect merely of their condition of life. We know that among the Romans, about the Augustan age especially, the condition of their slaves was much more deplorable than that of the blacks on the continent of America. The two sexes were confined in separate apartments, because to raise a child cost the master more than to buy one. Cato, for a very restricted indulgence to his slaves in this particular, took from them a certain price. But in this country the slaves multiply as fast as the free

inhabitants. Their situation and manners place the commerce between the two sexes almost without restraint. The same Cato, on a principle of economy, always sold his sick and superannuated slaves. He gives it as a standing precept to a master visiting his farm, to sell his old oxen, old wagons, old tools, old and diseased servants, and everything else become useless.... The American slaves cannot enumerate this among the injuries and insults they receive. It was the common practice to expose in the island Aesculapius, in the Tyber, diseased slaves whose cure was like to become tedious. The emperor Claudius by an edict, gave freedom to such of them as should recover, and first declared that if any person chose to kill rather than to expose them, it should not be deemed homicide. The exposing them is a crime of which no instance has existed with us; and were it to be followed by death, it would be punished capitally. We are told of a certain Vedius Pollio, who, in the presence of Augustus, would have given a slave as food to his fish, for having broken a glass. With the Roman, the regular method of taking the evidence of their slaves was under torture. Here it has been thought better never to resort to their evidence. When a master was murdered, all his slaves, in the same house, or within hearing, were condemned to death. Here punishment falls on the guilty only, and as precise proof is required against him as against a freeman. Yet notwithstanding these and other discouraging circumstances among the Romans, their slaves were often their rarest artists. They excelled too in science, insomuch as to be usually employed as tutors to their master's children. Epictetus, Terence, and Phaedrus, were slaves. But they were of the race of whites. It is not their condition then, but nature, which has produced the distinction. Whether further observation will or will not verify the conjecture, that nature has been less bountiful to them in the endowments of the head, I believe that in those of the heart she will be found to have done them justice. That disposition to theft with which they have been branded, must be ascribed to their situation, and not to any depravity of the moral sense. The man in whose favor no laws of property exist,

probably feels himself less bound to respect those made in favor of others. When arguing for ourselves, we lay it down as a fundamental, that laws, to be just, must give a reciprocation of right; that, without this, they are mere arbitrary rules of conduct, founded in force, and not in conscience; and it is a problem which I give to the master to solve, whether the religious precepts against the violation of property were not framed for him as well as his slave? And whether the slave may not as justifiably take a little from one who has taken all from him, as he may slay one who would slay him? That a change in the relations in which a man is placed should change his ideas of moral right or wrong, is neither new, nor peculiar to the color of the blacks. Homer tells us it was so two thousand six hundred years ago.

Jove fix'd it certain, take whatever day

Makes man a slave, takes half his worth away.

But the slaves of which Homer speaks were whites. Notwithstanding these considerations which must weaken their respect for the laws of property, we find among them numerous instances of the most rigid integrity, and as many as among their better instructed masters, of benevolence, gratitude, and unshaken fidelity. The opinion that they are inferior in the faculties of reason and imagination, must be hazarded with great diffidence. To justify a general conclusion, requires many observations, even where the subject may be submitted to the anatomical knife, to optical glasses, to analysis by fire or by solvents. How much more then where it is a faculty, not a substance, we are examining; where it eludes the research of all the senses; where the conditions of its existence are various and variously combined; where the effects of those which are present or absent bid defiance to calculation; let me add too, as a circumstance of great tenderness, where our conclusion would degrade a whole race of men from the rank in the scale of beings which their Creator may perhaps

have given them. To our reproach it must be said, that though for a century and a half we have had under our eyes the races of black and of red men, they have never yet been viewed by us as subjects of natural history. I advance it, therefore, as a suspicion only, that the blacks, whether originally a distinct race, or made distinct by time and circumstances, are inferior to the whites in the endowments both of body and mind. It is not against experience to suppose that different species of the same genus, or varieties of the same species, may possess different qualifications. Will not a lover of natural history then, one who views the gradations in all the races of animals with the eye of philosophy, excuse an effort to keep those in the department of man as distinct as nature has formed them? This unfortunate difference of color, and perhaps of faculty, is a powerful obstacle to the emancipation of these people. Many of their advocates, while they wish to vindicate the liberty of human nature, are anxious also to preserve its dignity and beauty. Some of these, embarrassed by the question, "What further is to be done with them?" join themselves in opposition with those who are actuated by sordid avarice only. Among the Romans emancipation required but one effort. The slave, when made free, might mix with, without staining the blood of his master. But with us a second is necessary, unknown to history. When freed, he is to be removed beyond the reach of mixture....

Another object of the revisal is to diffuse knowledge more generally through the mass of the people. This bill proposes to lay off every county into small districts of five or six miles square, called hundreds, and in each of them to establish a school for teaching, reading, writing, and arithmetic. The tutor to be supported by the hundred, and every person in it entitled to send their children three years gratis, and as much longer as they please, paying for it. These schools to be under a visitor who is annually to choose the boy of best genius in the school, of those whose parents are too poor to give them further education, and to send him forward to one of the grammar

schools, of which twenty are proposed to be erected in different parts of the country, for teaching Greek, Latin, Geography, and the higher branches of numerical arithmetic. Of the boys thus sent in one year, trial is to be made at the grammar schools one or two years, and the best genius of the whole selected, and continued six years, and the residue dismissed. By this means twenty of the best geniuses will be reared from the rubbish annually, and be instructed, at the public expense, so far as the grammar schools go. At the end of six years' instruction, one half are to be discontinued (from among whom the grammar schools will probably be supplied with future masters); and the other half, who are to be chosen for the superiority of their parts and disposition, are to be sent and continued three years in the study of such sciences as they shall choose, at William and Mary College, the plan of which is proposed to be enlarged, as will be hereafter explained, and extended to all the useful sciences. The ultimate result of the whole scheme of education would be the teaching all the children of the State reading, writing, and common arithmetic; turning out ten annually, of superior genius, well taught in Greek, Latin, Geography, and the higher branches of arithmetic; turning out ten others annually, of still superior parts, who, to those branches of learning, shall have added such of the sciences as their genius shall have led them to; the furnishing to the wealthier part of the people convenient schools at which their children may be educated at their own expense. The general objects of this law are to provide an education adapted to the years, to the capacity, and the condition of every one, and directed to their freedom and happiness. Specific details were not proper for the law. These must be the business of the visitors entrusted with its execution. The first stage of this education being the schools of the hundreds, wherein the great mass of the people will receive their instruction, the principal foundations of future order will be laid here, Instead, therefore, of putting the Bible and Testament into the hands of the children at an age when their judgments are not sufficiently matured for religious inquiries, their

memories may here be stored with the most useful facts from Grecian, Roman, European and American history. The first elements of morality too may be instilled into their minds; such as, when further developed as their judgments advance in strength, may teach them how to work out their own greatest happiness, by showing them that it does not depend on the condition of life in which chance has placed them, but is always the result of a good conscience, good health, occupation, and freedom in all just pursuits. Those whom either the wealth of their parents or the adoption of the State shall destine to higher degrees of learning, will go on to the grammar schools, which constitute the next stage, there to be instructed in the languages. The learning Greek and Latin, I am told, is going into disuse in Europe. I know not what their manners and occupations may call for; but it would be very ill-judged in us to follow their example in this instance. There is a certain period of life, say from eight to fifteen or sixteen years of age, when the mind like the body is not yet firm enough for laborious and close operations. If applied to such, it falls an early victim to premature exertion; exhibiting, indeed, at first, in these young and tender subjects, the flattering appearance of their being men while they are yet children, but ending in reducing them to be children when they should be men. The memory is then most susceptible and tenacious of impressions; and the learning of languages being chiefly a work of memory, it seems precisely fitted to the powers of this period, which is long enough, too, for acquiring the most useful languages, ancient and modern. I do not pretend that language is science. It is only an instrument for the attainment of science. But that time is not lost which is employed in providing tools for future operation; more especially as in this case the books put into the hands of the youth for this purpose may be such as will at the same time impress their minds with useful facts and good principles. If this period be suffered to pass in idleness, the mind becomes lethargic and impotent, as would the body it inhabits if unexercised during the same time. The sympathy between body and mind during their rise,

progress and decline, is too strict and obvious to endanger our being missed while we reason from the one to the other. As soon as they are of sufficient age, it is supposed they will be sent on from the grammar schools to the university, which constitutes our third and last stage, there to study those sciences which may be adapted to their views. By that part of our plan which prescribes the selection of the youths of genius from among the classes of the poor, we hope to avail the State of those talents which nature has sown as liberally among the poor as the rich, but which perish without use, if not sought for and cultivated. But of the views of this law none is more important, none more legitimate, than that of rendering the people the safe, as they are the ultimate, guardians of their own liberty. For this purpose the reading in the first stage, where they will receive their whole education, is proposed, as has been said, to be chiefly historical. History, by apprizing them of the past, will enable them to judge of the future; it will avail them of the experience of other times and other nations; it will qualify them as judges of the actions and designs of men; it will enable them to know ambition under every disguise it may assume; and knowing it, to defeat its views. In every government on earth is some trace of human weakness, some germ of corruption and degeneracy, which cunning will discover, and wickedness insensibly open, cultivate and improve. Every government degenerates when trusted to the rulers of the people alone. The people themselves therefore are its only safe depositories. And to render even them safe, their minds must be improved to a certain degree. This indeed is not all that is necessary, though it be essentially necessary. An amendment of our constitution must here come in aid of the public education. The influence over government must be shared among all the people. If every individual which composes their mass participates of the ultimate authority, the government will be safe; because the corrupting the whole mass will exceed any private resources of wealth; and public ones cannot be provided but by levies on the people. In this case every man would have to pay his own price. The

government of Great Britain has been corrupted, because but one man in ten has a right to vote for members of parliament. The sellers of the government, therefore, get nine-tenths of their price clear. It has been thought that corruption is restrained by confining the right of suffrage to a few of the wealthier of the people; but it would be more effectually restrained by an extension of that right to such members as would bid defiance to the means of corruption.

Lastly, it is proposed, by a bill in this revisal, to begin a public library and gallery, by laying out a certain sum annually in books, paintings, and statues.

QUERY XV

The Colleges and Public Establishments, the Roads, Buildings, &c.

The college of William and Mary is the only public seminary of learning in this State. It was founded in the time of king William and queen Mary, who granted to it twenty thousand acres of land, and a penny a pound duty on certain tobaccoes exported from Virginia and Maryland, which had been levied by the statute of

25 Car. II. The assembly also gave it, by temporary laws, a duty on liquors imported, and skins and furs exported. From these resources it received upwards of three thousand pounds communibus annis. The buildings are of brick, sufficient for an indifferent accommodation of perhaps an hundred students. By its charter it was to be under the government of twenty visitors, who were to be its legislators, and to have a president and six professors, who were incorporated. It was allowed a representative in the general assembly. Under this charter, a professorship of the Greek and Latin languages, a professorship of mathematics, one of moral philosophy, and two of divinity, were

established. To these were annexed, for a sixth professorship, a considerable donation by Mr. Boyle, of England, for the instruction of the Indians, and their conversion to Christianity. This was called the professorship of Brafferton, from an estate of that name in England, purchased with the monies given. The admission of the learners of Latin and Greek filled the college with children. This rendering it disagreeable and degrading to young gentlemen already prepared for entering on the sciences, they were discouraged from resorting to it, and thus the schools for mathematics and moral philosophy, which might have been of some service, became of very little. The revenues, too, were exhausted in accommodating those who came only to acquire the rudiments of science. After the present revolution, the visitors, having no power to change those circumstances in the constitution of the college which were fixed by the charter, and being therefore confined in the number of the professorships, undertook to change the objects of the professorships. They excluded the two schools for divinity, and that for the Greek and Latin languages, and substituted others; so that at present they stand thus:

A Professorship for Law and Police;

Anatomy and Medicine;

A Natural Philosophy and Mathematics;

Moral Philosophy, the Law of Nature and Nations, the Fine Arts;

Modern Languages;

For the Brafferton.

And it is proposed, so soon as the legislature shall have leisure to take up this subject, to desire authority from them to increase the number of professorships, as well for the purpose of subdividing those already instituted, as of adding others for other branches of science.

To the professorships usually established in the universities of Europe, it would seem proper to add one for the ancient languages and literature of the north, on account of their connection with our own language, laws, customs, and history. The purposes of the Brafferton institution would be better answered by maintaining a perpetual mission among the Indian tribes, the object of which, besides instructing them in the principles of Christianity, as the founder requires, should be to collect their traditions, laws, customs, languages, and other circumstances which might lead to a discovery of their relation with one another, or descent from other nations. When these objects are accomplished with one tribe, the missionary might pass on to another.

The roads are under the government of the county courts, subject to be controlled by the general court. They order new roads to be opened wherever they think them necessary. The inhabitants of the county are by them laid off into precincts, to each of which they allot a convenient portion of the public roads to be kept in repair. Such bridges as may be built without the assistance of artificers, they are to build. If the stream be such as to require a bridge of regular workmanship, the court employs workmen to build it, at the expense of the whole county. If it be too great for the county, application is made to the general assembly, who authorize individuals to build it, and to take a fixed toll from all passengers, or give sanction to such other proposition as to them appears reasonable.

Ferries are admitted only at such places as are particularly pointed out by law, and the rates of ferriage are fixed.

Taverns are licensed by the courts, who fix their rates from time to time.

The private buildings are very rarely constructed of stone or brick, much the greatest portion being of scantling and boards,

plastered with lime. It is impossible to devise things more ugly, uncomfortable, and happily more perishable. There are two or three plans, on one of which, according to its size, most of the houses in the State are built. The poorest people build huts of logs, laid horizontally in pens, stopping the interstices with mud. These are warmer in winter, and cooler in summer, than the more expensive construction of scantling and plank. The wealthy are attentive to the raising of vegetables, but very little so to fruits. The poorer people attend to neither, living principally on milk and animal diet. This is the more inexcusable, as the climate requires indispensably a free use of vegetable food, for health as well as comfort, and is very friendly to the raising of fruits. The only public buildings worthy of mention are the capital, the palace, the college, and the hospital for lunatics, all of them in Williamsburg, heretofore the seat of our government. The capitol is a light and airy structure, with a portico in front of two orders, the lower of which, being Doric, is tolerably just in its proportions and ornaments, save only that the intercolonations are too large. The upper is Ionic, much too small for that on which it is mounted, its ornaments not proper to the order, nor proportioned within themselves. It is crowned with a pediment, which is too high for its span. Yet, on the whole, it is the most pleasing piece of architecture we have. The palace is not handsome without, but it is spacious and commodious within, is prettily situated, and with the grounds annexed to it, is capable of being made an elegant seat. The college and hospital are rude, misshapen piles, which, but that they have roofs, would be taken for brick-kilns. There are no other public buildings but churches and courthouses, in which no attempts are made at elegance. Indeed, it would not be easy to execute such an attempt, as a workman could scarcely be found capable of drawing an order. The genius of architecture seems to have shed its maledictions over this land. Buildings are often erected, by individuals, of considerable expense. To give these symmetry and taste, would not increase their cost. It would only change the arrangement of the

materials, the form and combination of the members. This would often cost less than the burthen of barbarous ornaments with which these buildings are sometimes charged. But the first principles of the art are unknown, and there exists scarcely a model among us sufficiently chaste to give an idea of them. Architecture being one of the fine arts, and as such within the department of a professor of the college, according to the new arrangement, perhaps a spark may fall on some young subjects of natural taste, kindle up their genius, and produce a reformation in this elegant and useful art. But all we shall do in this way will produce no permanent improvement to our country, while the unhappy prejudice prevails that houses of brick or stone are less wholesome than those of wood. A dew is often observed on the walls of the former in rainy weather, and the most obvious solution is, that the rain has penetrated through these walls. The following facts, however, are sufficient to prove the error of this solution: 1. This dew upon the walls appears when there is no rain, if the state of the atmosphere be moist. 2. It appears upon the partition as well as the exterior walls. 3. So, also, on pavements of brick or stone. 4. It is more copious in proportion as the walls are thicker; the reverse of which ought to be the case, if this hypothesis were just. If cold water be poured into a vessel of stone, or glass, a dew forms instantly on the outside; but if it be poured into a vessel of wood, there is no such appearance. It is not supposed, in the first case, that the water has exuded through the glass, but that it is precipitated from the circumambient air; as the humid particles of vapor, passing from the boiler of an alembic through its refrigerant, are precipitated from the air, in which they are suspended, on the internal surface of the refrigerant. Walls of brick and stone act as the refrigerant in this instance. They are sufficiently cold to condense and precipitate the moisture suspended in the air of the room, when it is heavily charged therewith. But walls of wood are not so. The question then is, whether the air in which this moisture is left floating, or that which is deprived of it, be most wholesome? In both cases the remedy is easy. A little

fire kindled in the room, whenever the air is damp, prevents the precipitation on the walls; and this practice, found healthy in the warmest as well as coldest seasons, is as necessary in a wooden as in a stone or brick house. I do not mean to say that the rain never penetrates through walls of brick. On the contrary, I have seen instances of it. But with us it is only through the northern and eastern walls of the house, after a northeasterly storm, this being the only one which continues long enough to force through the walls. This, however, happens too rarely to give a just character of unwholesomeness to such houses. In a house, the walls of which are of well-burnt brick and good mortar, I have seen the rain penetrate through but twice in a dozen or fifteen years. The inhabitants of Europe, who dwell chiefly in houses of stone or brick, are surely as healthy as those of Virginia. These houses have the advantage, too, of being warmer in winter and cooler in summer than those of wood; of being cheaper in their first construction, where lime is convenient, and infinitely more durable. The latter consideration renders it of great importance to eradicate this prejudice from the minds of our countrymen. A country whose buildings are of wood, can never increase in its improvements to any considerable degree. Their duration is highly estimated at fifty years. Every half century then our country becomes a tabula rasa, whereon we have to set out anew, as in the first moment of seating it. Whereas when buildings are of durable materials, every new edifice is an actual and permanent acquisition to the State, adding to its value as well as to its ornament.

QUERY XVI

The measures taken with regard to the estates and possessions of the Rebels, commonly called Tories?

A tory has been properly defined to be a traitor in thought but not

in deed. The only description, by which the laws have endeavored to come at them, was that of non-jurors, or persons refusing to take the oath of fidelity to the State. Persons of this description were at one time subjected to double taxation, at another to treble, and lastly were allowed retribution, and placed on a level with good citizens. It may be mentioned as a proof, both of the lenity of our government, and unanimity of its inhabitants, that though this war has now raged near seven years, not a single execution for treason has taken place.

Under this query I will state the measures which have been adopted as to British property, the owners of which stand on a much fairer footing than the tories. By our laws, the same as the English as in this respect, no alien can hold lands, nor alien enemy maintain an action for money, or other movable thing. Lands acquired or held by aliens become forfeited to the State; and, on an action by an alien enemy to recover money, or other movable property, the defendant may plead that he is an alien enemy. This extinguishes his right in the hands of the debtor or holder of his movable property. By our separation from Great Britain, British subjects became aliens, and being at war, they were alien enemies. Their lands were of course forfeited, and their debts irrecoverable. The assembly, however, passed laws at various times, for saving their property. They first sequestered their lands, slaves, and other property on their farms in the hands of commissioners, who were mostly the confidential friends or agents of the owners, and directed their clear profits to be paid into the treasury; and they gave leave to all persons owing debts to British subjects to pay them also into the treasury. The monies so to be brought in were declared to remain the property of the British subject, and if used by the State, were to be repaid, unless an improper conduct in Great Britain should render a detention of it reasonable. Depreciation had at that time, though unacknowledged and unperceived by the whigs, begun in some small degree. Great sums of money were paid in by debtors. At a later period, the assembly,

adhering to the political principles which forbid an alien to hold lands in the State, ordered all British property to be sold; and, become sensible of the real progress of depreciation, and of the losses which would thence occur, if not guarded against, they ordered that the proceeds of the sales should be converted into their then worth in tobacco, subject to the future direction of the legislature. This act has left the question of retribution more problematical. In May, 1780, another act took away the permission to pay into the public treasury debts due to British subjects.

QUERY XVII

The different religions received into that State?

The first settlers in this country were emigrants from England, of the English Church, just at a point of time when it was flushed with complete victory over the religious of all other persuasions. Possessed, as they became, of the powers of making, administering, and executing the laws, they showed equal intolerance in this country with their Presbyterian brethren, who had emigrated to the northern government. The poor Quakers were flying from persecution in England. They cast their eyes on these new countries as asylums of civil and religious freedom; but they found them free only for the reigning sect. Several acts of the Virginia assembly of 1659, 1662, and 1693, had made it penal in parents to refuse to have their children baptized; had prohibited the unlawful assembling of Quakers; had made it penal for any master of a vessel to bring a Quaker into the State; had ordered those already here, and such as should come thereafter, to be imprisoned till they should abjure the country; provided a milder punishment for their first and second return, but death for their third; had inhibited all persons from suffering their meetings in or near their houses, entertaining them individually, or disposing of books which supported their tenets. If no execution took

place here, as did in New England, it was not owing to the moderation of the church, or spirit of the legislature, as may be inferred from the law itself; but to historical circumstances which have not been handed down to us. The Anglicans retained full possession of the country about a century. Other opinions began then to creep in, and the great care of the government to support their own church, having begotten an equal degree of indolence in its clergy, two-thirds of the people had become dissenters at the commencement of the present revolution. The laws, indeed, were still oppressive on them, but the spirit of the one party had subsided into moderation, and of the other had risen to a degree of determination which commanded respect,

The present state of our laws on the subject of religion is this. The convention of May, 1776, in their declaration of rights, declared it to be a truth, and a natural right, that the exercise of religion should be free; but when they proceeded to form on that declaration the ordinance of government, instead of taking up every principle declared in the bill of rights, and guarding it by legislative sanction, they passed over that which asserted our religious rights, leaving them as they found them. The same convention, however, when they met as a member of the general assembly in October, 1776, repealed all acts of Parliament which had rendered criminal the maintaining any opinions in matters of religion, the forbearing to repair to church, and the exercising any mode of worship; and suspended the laws giving salaries to the clergy, which suspension was made perpetual in October, 1779. Statutory oppressions in religion being thus wiped away, we remain at present under those only imposed by the common law, or by our own acts of assembly. At the common law, heresy was a capital offence, punishable by burning. Its definition was left to the ecclesiastical judges, before whom the conviction was, till the statute of the 1 El. c. 1 circumscribed it, by declaring, that nothing should be deemed heresy, but what had been so determined by authority of the canonical scriptures, or by one of the four first general councils, or by

other council, having for the grounds of their declaration the express and plain words of the scriptures. Heresy, thus circumscribed, being an offence against the common law, our act of assembly of October 1777, c. 17, gives cognizance of it to the general court, by declaring that the jurisdiction of that court shall be general in all matters at the common law. The execution is by the writ *De haeretico comburendo*. By our own act of assembly of 1705, c. 30, if a person brought up in the Christian religion denies the being of a God, or the Trinity, or asserts there are more gods than one, or denies the Christian religion to be true, or the scriptures to be of divine authority, he is punishable on the first offence by incapacity to hold any office or employment ecclesiastical, civil, or military; on the second by disability to sue, to take any gift or legacy, to be guardian, executor, or administrator, and by three years' imprisonment without bail. A father's right to the custody of his own children being founded in law on his right of guardianship, this being taken away, they may of course be severed from him, and put by the authority of a court into more orthodox hands. This is a summary view of that religious slavery under which a people have been willing to remain, who have lavished their lives and fortunes for the establishment of their civil freedom. The error seems not sufficiently eradicated, that the operations of the mind, as well as the acts of the body, are subject to the coercion of the laws. But our rulers can have no authority over such natural rights, only as we have submitted to them. The rights of conscience we never submitted, we could not submit. We are answerable for them to our God. The legitimate powers of government extend to such acts only as are injurious to others. But it does me no injury for my neighbor to say there are twenty gods, or no God. It neither picks my pocket nor breaks my leg. If it be said, his testimony in a court of justice cannot be relied on, reject it then, and be the stigma on him. Constraint may make him worse by making him a hypocrite, but it will never make him a truer man. It may fix him obstinately in his errors, but will not cure them. Reason and free inquiry are the only effectual agents

against error. Give a loose to them, they will support the true religion by bringing every false one to their tribunal, to the test of their investigation. They are the natural enemies of error, and of error only. Had not the Roman government permitted free inquiry, Christianity could never have been introduced. Had not free inquiry been indulged at the era of the Reformation, the corruptions of Christianity could not have been purged away. If it be restrained now, the present corruptions will be protected, and new ones encouraged. Was the government to prescribe to us our medicine and diet, our bodies would be in such keeping as our souls are now. Thus in France the emetic was once forbidden as a medicine, the potato as an article of food. Government is just as infallible, too, when it fixes systems in physics. Galileo was sent to the Inquisition for affirming that the earth was a sphere; the government had declared it to be as flat as a trencher, and Galileo was obliged to abjure his error. This error, however, at length prevailed, the earth became a globe, and Descartes declared it was whirled round its axis by a vortex. The government in which he lived was wise enough to see that this was no question of civil jurisdiction, or we should all have been involved by authority in vortices. In fact, the vortices have been exploded, and the Newtonian principle of gravitation is now more firmly established, on the basis of reason, than it would be were the government to step in, and to make it an article of necessary faith. Reason and experiment have been indulged, and error has fled before them. It is error alone which needs the support of government. Truth can stand by itself. Subject opinion to coercion: whom will you make your inquisitors? Fallible men; men governed by bad passions, by private as well as public reasons. And why subject it to coercion? To produce uniformity. But is uniformity of opinion desirable? No more than of face and stature. Introduce the bed of Procrustes then, and as there is danger that the large men may beat the small, make us all of a size, by lopping the former and stretching the latter. Difference of opinion is advantageous in religion. The several sects perform the office of a censor morum over such

other. Is uniformity attainable? Millions of innocent men, women, and children, since the introduction of Christianity, have been burnt, tortured, fined, imprisoned; yet we have not advanced one inch towards uniformity. What has been the effect of coercion? To make one half the world fools, and the other half hypocrites. To support roguery and error all over the earth. Let us reflect that it is inhabited by a thousand millions of people. That these profess probably a thousand different systems of religion. That ours is but one of that thousand. That if there be but one right, and ours that one, we should wish to see the nine hundred and ninety-nine wandering sects gathered into the fold of truth. But against such a majority we cannot effect this by force. Reason and persuasion are the only practicable instruments. To make way for these, free inquiry must be indulged; and how can we wish others to indulge it while we refuse it ourselves. But every State, says an inquisitor, has established some religion. No two, say I, have established the same. Is this a proof of the infallibility of establishments? Our sister States of Pennsylvania and New York, however, have long subsisted without any establishment at all. The experiment was new and doubtful when they made it. It has answered beyond conception. They flourish infinitely. Religion is well supported; of various kinds, indeed, but all good enough; all sufficient to preserve peace and order; or if a sect arises, whose tenets would subvert morals, good sense has fair play, and reasons and laughs it out of doors, without suffering the State to be troubled with it. They do not hang more malefactors than we do. They are not more disturbed with religious dissensions. On the contrary, their harmony is unparalleled, and can be ascribed to nothing but their unbounded tolerance, because there is no other circumstance in which they differ from every nation on earth. They have made the happy discovery, that the way to silence religious disputes, is to take no notice of them. Let us too give this experiment fair play, and get rid, while we may, of those tyrannical laws. It is true, we are as yet secured against them by the spirit of the times. I doubt whether the people of this country

would suffer an execution for heresy, or a three years' imprisonment for not comprehending the mysteries of the Trinity. But is the spirit of the people an infallible, a permanent reliance? Is it government? Is this the kind of protection we receive in return for the rights we give up? Besides, the spirit of the times may alter, will alter. Our rulers will become corrupt, our people careless. A single zealot may commence persecutor, and better men be his victims. It can never be too often repeated, that the time for fixing every essential right on a legal basis is while our rulers are honest, and ourselves united. From the conclusion of this war we shall be going down hill. It will not then be necessary to resort every moment to the people for support. They will be forgotten, therefore, and their rights disregarded. They will forget themselves, but in the sole faculty of making money, and will never think of uniting to effect a due respect for their rights. The shackles, therefore, which shall not be knocked off at the conclusion of this war, will remain on us long, will be made heavier and heavier, till our rights shall revive or expire in a convulsion.

QUERY XVIII

The particular customs and manners that may happen
to be received
in that State?

It is difficult to determine on the standard by which the manners of a nation may be tried, whether catholic or particular. It is more difficult for a native to bring to that standard the mantiers of his own nation, familiarized to him by habit. There must doubtless be an unhappy influence on the manners of our people produced by the existence of slavery among us. The whole commerce between master and slave is a perpetual exercise of the most boisterous passions, the

most unremitting despotism on the one part, and degrading submissions on the other. Our children see this, and learn to imitate it; for man is an imitative animal. This quality is the germ of all education in him. From his cradle to his grave he is learning to do what he sees others do. If a parent could find no motive either in his philanthropy or his self-love, for restraining the intemperance of passion towards his slave, it should always be a sufficient one that his child is present. But generally it is not sufficient. The parent storms, the child looks on, catches the lineaments of wrath, puts on the same airs in the circle of smaller slaves, gives a loose to the worst of passions, and thus nursed, educated, and daily exercised in tyranny, cannot but be stamped by it with odious peculiarities. The man must be a prodigy who can retain his manners and morals undepraved by such circumstances. And with what execration should the statesman be loaded, who, permitting one half the citizens thus to trample on the rights of the other, transforms those into despots, and these into enemies, destroys the morals of the one part, and the *amor patriae* of the other. For if a slave can have a country in this world, it must be any other in preference to that in which he is born to live and labor for another; in which he must lock up the faculties of his nature, contribute as far as depends on his individual endeavors to the evanishment of the human race, or entail his own miserable condition on the endless generations proceeding from him. With the morals of the people, their industry also is destroyed. For in a warm climate, no man will labor for himself who can make another labor for him. This is so true, that of the proprietors of slaves a very small proportion indeed are ever seen to labor. And can the liberties of a nation be thought secure when we have removed their only firm basis, a conviction in the minds of the people that these liberties are of the gift of God? That they are not to be violated but with His wrath? Indeed I tremble for my country when I reflect that God is just; that his justice cannot sleep forever; that considering numbers, nature and natural means only, a revolution of the wheel of fortune; an exchange of

situation is among possible events; that it may become probably by supernatural interference! The Almighty has no attribute which can take side with us in such a contest. But it is impossible to be temperate and to pursue this subject through the various considerations of policy, of morals, of history natural and civil. We must be contented to hope they will force their way into every one's mind. I think a change already perceptible, since the origin of the present revolution. The spirit of the master is abating, that of the slave rising from the dust, his condition mollifying, the way I hope preparing, under the auspices of heaven, for a total emancipation, and that this is disposed, in the order of events, to be with the consent of the masters, rather than by their extirpation.

QUERY XIX

The present state of manufactures, commerce, interior and exterior trade?

We never had an interior trade of any importance. Our exterior commerce has suffered very much from the beginning of the present contest. During this time we have manufactured within our families the most necessary articles of clothing. Those of cotton will bear some comparison with the same kinds of manufacture in Europe; but those of wool, flax and hemp are very coarse, unsightly, and unpleasant; and such is our attachment to agriculture, and such our preference for foreign manufactures, that be it wise or unwise, our people will certainly return as soon as they can, to the raising raw materials, and exchanging them for finer manufactures than they are able to execute themselves.

The political economists of Europe have established it as a principle, that every State should endeavor to manufacture for itself; and this principle, like many others, we transfer to America, without

calculating the difference of circumstance which should often produce a difference of result. In Europe the lands are either cultivated, or locked up against the cultivator. Manufacture must therefore be resorted to of necessity not of choice, to support the surplus of their people. But we have an immensity of land courting the industry of the husbandman. Is it best then that all our citizens should be employed in its improvement, or that one half should be called off from that to exercise manufactures and handicraft arts for the other? Those who labor in the earth are the chosen people of God, if ever He had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue. It is the focus in which he keeps alive that sacred fire, which otherwise might escape from the face of the earth. Corruption of morals in the mass of cultivators is a phenomenon of which no age nor nation has furnished an example. It is the mark set on those, who, not looking up to heaven, to their own soil and industry, as does the husbandman, for their subsistence, depend for it on casualties and caprice of customers. Dependence begets subservience and venality, suffocates the germ of virtue, and prepares fit tools for the designs of ambition. This, the natural progress and consequence of the arts, has sometimes perhaps been retarded by accidental circumstances; but, generally speaking, the proportion which the aggregate of the other classes of citizens bears in any State to that of its husbandmen, is the proportion of its unsound to its healthy parts, and is a good enough barometer whereby to measure its degree of corruption. While we have land to labor then, let us never wish to see our citizens occupied at a workbench, or twirling a distaff. Carpenters, masons, smiths, are wanting in husbandry; but, for the general operations of manufacture, let our workshops remain in Europe. It is better to carry provisions and materials to workmen there, than bring them to the provisions and materials, and with them their manners and principles. The loss by the transportation of commodities across the Atlantic will be made up in happiness and permanence of government. The mobs of great cities add just so much

to the support of pure government, as sores do to the strength of the human body. It is the manners and spirit of a people which preserve a republic in vigor. A degeneracy in these is a canker which soon eats to the heart of its laws and constitution.

QUERY XX

A notice of the commercial productions particular to the State, and of those objects which the inhabitants are obliged to get from Europe and from other parts of the world?

....

In the year 1758 we exported seventy thousand hogsheads of tobacco, which was the greatest quantity ever produced in this country in one year. But its culture was fast declining at the commencement of this war and that of wheat taken its place; and it must continue to decline on the return of peace. I suspect that the change in the temperature of our climate has become sensible to that plant, which to be good, requires an extraordinary degree of heat. But it requires still more indispensably an uncommon fertility of soil; and the price which it commands at market will not enable the planter to produce this by manure. Was the supply still to depend on Virginia and Maryland alone as its culture becomes more difficult, the price would rise so as to enable the planter to surmount those difficulties and to live. But the western country on the Mississippi, and the midlands of Georgia, having fresh and fertile lands in abundance, and a hotter sun, will be able to undersell these two States, and will oblige them to abandon the raising of tobacco altogether. And a happy obligation for them it will be. It is a culture productive of infinite wretchedness. Those employed in it are in a continual state of exertion

beyond the power of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished. The cultivation of wheat is the reverse in every circumstance. Besides clothing the earth with herbage, and preserving its fertility, it feeds the laborers plentifully, requires from them only a moderate toil, except in the season of harvest, raises great numbers of animals for food and service, and diffuses plenty and happiness among the whole. We find it easier to make an hundred bushels of wheat than a thousand weight of tobacco, and they are worth more when made. The weevil indeed is a formidable obstacle to the cultivation of this grain with us. But principles are already known which must lead to a remedy. Thus a certain degree of heat, to wit, that of the common air in summer, is necessary to hatch the eggs. If subterranean granaries, or others, therefore, can be contrived below that temperature, the evil will be cured by cold. A degree of heat beyond that which hatches the egg we know will kill it. But in aiming at this we easily run into that which produced putrefaction. To produce putrefaction; however, three agents are requisite, heat, moisture, and the external air. If the absence of any one of these be secured, the other two may safely be admitted. Heat is the one we want. Moisture then, or external air, must be excluded. The former has been done by exposing the grain in kilns to the action of fire, which produces heat, and extracts moisture at the same time; the latter, by putting the grain into hogsheds, covering it with a coating of lime, and heading it up. In this situation its bulk produced a heat sufficient to kill the eggs; the moisture is suffered to remain indeed, but the external air is excluded. A nicer operation yet has been attempted; that is, to produce an intermediate temperature of heat between that which kills the egg, and that which produces putrefaction. The threshing the grain as soon as it is cut, and laying it in its chaff in large heaps, has been found very nearly to hit this temperature, though not perfectly, nor always. The heap generates heat sufficient to kill most of the eggs, whilst the chaff

commonly restrains it from rising into putrefaction. But all these methods abridge too much the quantity which the farmer can manage, and enable other countries to undersell him, which are not infested with this insect. There is still a desideratum then to give with us decisive triumph to this branch of agriculture over that of tobacco. The culture of wheat by enlarging our pasture, will render the Arabian horse an article of very considerable profit. Experience has shown that ours is the particular climate of America where he may be raised without degeneracy. Southwardly the heat of the sun occasions a deficiency of pasture, and northwardly the winters are too cold for the short and fine hair, the particular sensibility and constitution of that race. Animals transplanted into unfriendly climates, either change their nature and acquire new senses against the new difficulties in which they are placed, or they multiply poorly and become extinct. A good foundation is laid for their propagation here by our possessing already great numbers of horses of that blood, and by a decided taste and preference for them established among the people. Their patience of heat without injury, their superior wind, fit them better in this and the more southern climates even for the drudgeries of the plough and wagon. Northwardly they will become an object only to persons of taste and fortune, for the saddle and light carriages. To those, and for these uses, their fleetness and beauty will recommend them. Besides these there will be other valuable substitutes when the cultivation of tobacco shall be discontinued such as cotton in the eastern parts of the State, and hemp and flax in the western.

It is not easy to say what are the articles either of necessity, comfort, or luxury, which we cannot raise, and which we therefore shall be under a necessity of importing from abroad, as everything hardier than the olive, and as hardy as the fig, may be raised here in the open air. Sugar, coffee and tea, indeed, are not between these limits; and habit having placed them among the necessities of life

with the wealthy part of our citizens, as long as these habits remain we must go for them to those countries which are able to furnish them.

QUERY XXI

The weights, measures and the currency of the hard money? Some details relating to exchange with Europe?

Our weights and measures are the same which are fixed by acts of parliament in England. How it has happened that in this as well as the other American States the nominal value of coin was made to differ from what it was in the country we had left, and to differ among ourselves too, I am not able to say with certainty....

The first symptom of the depreciation of our present paper money, was that of silver dollars selling at six shillings, which had before been worth but five shillings and ninepence. The assembly thereupon raised them by law to six shillings. As the dollar is now likely to become the money-unit of America, as it passes at this rate in some of our sister States, and as it facilitates their computation in pounds and shillings, &c., converso, this seems to be more convenient than its former denomination. But as this particular coin now stands higher than any other in the proportion of one hundred and thirty-three and a half to one hundred and twenty-five, or sixteen to fifteen, it will be necessary to raise the others in proportion.

QUERY XXII

The public Income and Expenses?

....

To this estimate of our [financial] abilities, let me add a word as to the application of them. If, when cleared of the present contest, and of the debts with which that will charge us, we come to measure force hereafter with any European power, such events are devoutly to be deprecated. Young as we are, and with such a country before us to fill with people and with happiness, we should point in that direction the whole generative force of nature, wasting none of it in efforts of mutual destruction. It should be our endeavor to cultivate the peace and friendship of every nation, even of that which has injured us most, when we shall have carried our point against her. Our interest will be to throw open the doors of commerce, and to knock off all its shackles, giving perfect freedom to all persons for the vent of

whatever they may choose to bring into our ports, and asking the same in theirs. Never was so much false arithmetic employed on any subject, as that which has been employed to persuade nations that it is their interest to go to war. Were the money which it has cost to gain, at the dose of a long war, a little town, or a little territory, the right to cut wood here, or to catch fish there, expended in improving what they already possess, in making roads, opening rivers, building ports, improving the arts, and finding employment for their idle poor, it would render them much stronger, much wealthier and happier. This I hope will be our wisdom. And, perhaps, to remove as much as possible the occasions of making war, it might be better for us to abandon the ocean altogether, that being the element whereon we shall be principally exposed to jostle with other nations; to leave to others to bring what we shall want, and to carry what we can spare. This would make us invulnerable to Europe, by offering none of our property to their prize, and would turn all our citizens to the cultivation of the earth; and, I repeat it again, cultivators of the earth are the most virtuous and independent citizens. It might be time enough to seek employment for them at sea, when the land no longer offers it. But the actual habits of our countrymen attach them to commerce. They will exercise it for themselves. Wars then must sometimes be our lot; and all the wise can do, will be to avoid that half of them which would be produced by our own follies and our own acts of injustice; and to make for the other half the best preparations we can. Of what nature should these be? A land army would be useless for offence, and not the best nor safest instrument of defence. For either of these purposes, the sea is the field on which we should meet an European enemy. On that element it is necessary we should possess some power. To aim at such a navy as the greater nations of Europe possess, would be a foolish and wicked waste of the energies of our countrymen. It would be to pull on our own heads that load of military expense which makes the European laborer go supperless to bed, and moistens his bread with the sweat of his brows.

It will be enough if we enable ourselves to prevent insults from those nations of Europe which are weak on the sea, because circumstances exist, which render even the stronger ones weak as to us. Providence has placed their richest and most defenceless possessions at our door; has obliged their most precious commerce to pass, as it were, in review before us. To protect this, or to assail, a small part only of their naval force will ever be risked across the Atlantic. The dangers to which the elements expose them here are too well known, and the greater dangers to which they would be exposed at home were any general calamity to involve their whole fleet. They can attack us by detachment only; and it will suffice to make ourselves equal to what they may detach. Even a smaller force than they may detach will be rendered equal or superior by the quickness with which any check may be repaired with us, while losses with them will be irreparable till too late. A small naval force then is sufficient for us, and a small one is necessary. What this should be, I will not undertake to say. I will only say, it should by no means be so great as we are able to make it. Suppose the million of dollars, or three hundred thousand pounds, which Virginia could annually spare without distress, to be applied to the creating a navy. A single year's contribution would build, equip, man, and send to sea a force which should carry three hundred guns. The rest of the confederacy, exerting themselves in the same proportion, would equip in the same time fifteen hundred guns more. So that one year's contributions would set up a navy of eighteen hundred guns. The British ships of the line average seventy-six guns; their frigates thirty-eight. Eighteen hundred guns then would form a fleet of thirty ships, eighteen of which might be of the line, and twelve frigates. Allowing eight men, the British average, for every gun, their annual expense, including subsistence, clothing, pay, and ordinary repairs, would be about \$1,280 for every gun, or \$2,304,000 for the whole. I state this only as one year's possible exertion, without deciding whether more or less than a year's exertion should be thus applied.

QUERY XXIII

The histories of the State, the memorials published in its name in the time of its being a colony, and the pamphlets relating to its interior or exterior affairs present or ancient?

Captain Smith, who next to Sir Walter Raleigh may be considered as the founder of our colony, has written its history, from the first adventures to it, till the year 1624. He was a member of the council, and afterwards president of the colony; and to his efforts principally may be ascribed its support against the opposition of the natives. He was honest, sensible, and well informed; but his style is barbarous and uncouth. His history, however, is almost the only source from which we derive any knowledge of the infancy of our State.

The reverend William Stith, a native of Virginia, and president of its college, has also written the history of the same period, in a large octavo volume of small print. He was a man of classical learning, and very exact, but of no taste in style. He is inelegant, therefore, and his details often too minute to be tolerable, even to a native of the country, whose history he writes.

Beverley, a native also, has run into the other extreme; he has comprised our history from the first propositions of Sir Walter Raleigh to the year 1700, in the hundredth part of the space which Stith employs for the fourth part of the period.

Sir Walter Keith has taken it up at its earliest period, and continued it to the year 1725. He is agreeable enough in style, and passes over events of little importance. Of course he is short and would be preferred by a foreigner.

During the regal government, some contest arose on the exaction of an illegal fee by Governor Dinwiddie, and doubtless there were others on other occasions not at present recollected. It is supposed that these are not sufficiently interesting to a foreigner to merit a detail.

The petition of the council and burgesses of Virginia to the king, their memorials to the lords, and remonstrance to the commons in the year 1764, began the present contest; and these having proved ineffectual to prevent the passage of the stamp-act, the resolutions of the house of burgesses of 1765 were passed declaring the independence of the people of Virginia of the parliament of Great Britain, in matters of taxation. From that time till the Declaration of Independence by Congress in 1776, their journals are filled with assertions of the public rights. The pamphlets published in this State on the controverted question, were:

1766, An Inquiry into the rights of the British Colonies, by Richard Bland.

1769, The Monitor's Letters, by Dr. Arthur Lee.

1774, A summary View of the rights of British America.[\[17\]](#)

1774, Considerations, &c., by Robert Carter Nicholas.

Since the Declaration of Independence this State has had no controversy with any other, except with that of Pennsylvania, on their common boundary. Some papers on this subject passed between the executive and legislative bodies of the two States, the result of which was a happy accommodation of their rights.

To this account of our historians, memorials, and pamphlets, it may not be useless to add a chronological catalogue of American state-papers, as far as I have been able to collect their titles. It is far

from being either complete or correct. Where the title alone, and not the paper itself, has come under my observation, I cannot answer for the exactness of the date. Sometimes I have not been able to find any date at all, and sometimes have not been satisfied that such a paper exists. An extensive collection of papers of this description has been for some time in a course of preparation by a gentleman^[18] fully equal to the task, and from whom, therefore, we may hope ere long to receive it. In the meantime accept this as the result of my labors, and as closing the tedious detail which you have so undesignedly drawn upon yourself.

[1] Jefferson's remarks.

[2] Right of three freemen.

[3] The law of retaliation.

[4] On an equal basis.

[5] Most favored nation.

[6] In the impeachment of Judge Pickering, of New Hampshire, a habitual and maniac drunkard, no defence was made. Had there been, the party vote of more than one-third of the Senate would have acquitted him. [Jefferson's footnote.]

[7] Buffon Epoques, 96. [Jefferson's footnote.]

[8] Hunter. [Jefferson's footnote.]

[9] D'Aubenton. [Jefferson's footnote.]

[10] Buffon, xviii. 112 edit. Paris, 1764. [Jefferson's footnote.]

[11] Buffon, xviii. 100, 156. [Jefferson's footnote.]

[12] viii, 134. [Jefferson's note.]

[13] Has the world as yet produced more than two poets, acknowledged to be such by all nations? An Englishman only reads Milton with delight, an Italian, Tasso, a Frenchman the *Henriade*; a Portuguese, Camoens; but Homer and Virgil have been the rapture of every age and nation; they are read with enthusiasm in their originals by those who can read the originals, and in translations by those who cannot. [Jefferson's footnote.]

[14] There are various ways of keeping truth out of sight. Mr. Rittenhouse's model of the planetary system has the plagiarist application of an Orrery; and the quadrant invented by Godfrey, an American also, and with the aid of which the European nations traverse the globe, is called Hadley's quadrant. [Jefferson's footnote.]

[15] The *os sacrum*. [Jefferson's note.]

[16] The instrument proper to them is the Banjar, which they brought hither from Africa, and which is the original of the guitar, its chords being precisely the four lower chords of the guitar. [Jefferson's note.]

[17] By the author of these "Notes". [Jefferson's note.]

[18] Ebenezer Hazard. [Jefferson's note.]

Public Papers

A Summary View of the Rights of British America, 1774

Resolved, That it be an instruction to the said deputies, when assembled in General Congress, with the deputies from the other states of British America, to propose to the said Congress, that an humble and dutiful address be presented to his Majesty, begging leave to lay before him, as Chief Magistrate of the British empire, the united complaints of his Majesty's subjects in America; complaints which are excited by many unwarrantable encroachments and usurpations, attempted to be made by the legislature of one part of the empire, upon the rights which God, and the laws, have given equally and independently to all. To represent to his Majesty that these, his States, have often individually made humble application to his imperial Throne, to obtain, through its intervention, some redress of their injured rights; to none of which, was ever even an answer condescended. Humbly to hope that this, their joint address, penned in the language of truth, and divested of those expressions of servility, which would persuade his Majesty that we are asking favors, and not rights, shall obtain from his Majesty a more respectful acceptance; and this his Majesty will think we have reason to expect, when he reflects that he is no more than the chief officer of the people, appointed by the laws, and circumscribed with definite powers, to assist in working the great machine of government, erected for their use, and, consequently, subject to their superintendence; and, in order that these, our rights, as well as the invasions of them, may be laid more fully before his Majesty, to take a view of them, from the origin and first settlement of these countries.

To remind him that our ancestors, before their emigration to America, were the free inhabitants of the British dominions in Europe, and possessed a right, which nature has given to all men, of departing

from the country in which chance, not choice, has placed them, of going in quest of new habitations, and of there establishing new societies, under such laws and regulations as, to them, shall seem most likely to promote public happiness. That their Saxon ancestors had, under this universal law, in like manner, left their native wilds and woods in the North of Europe, had possessed themselves of the Island of Britain, then less charged with inhabitants, and had established there that system of laws which has so long been the glory and protection of that country. Nor was ever any claim of superiority or dependence asserted over them, by that mother country from which they had migrated: and were such a claim made, it is believed his Majesty's subjects in Great Britain have too firm a feeling of the rights derived to them from their ancestors, to bow down the sovereignty of their state before such visionary pretensions. And it is thought that no circumstance has occurred to distinguish, materially, the British from the Saxon emigration. America was conquered, and her settlements made and firmly established, at the expense of individuals, and not of the British public. Their own blood was spilt in acquiring lands for their settlement, their own fortunes expended in making that settlement effectual. For themselves they fought, for themselves they conquered, and for themselves alone they have right to hold. No shilling was ever issued from the public treasures of his Majesty, or his ancestors, for their assistance, till of very late times, after the colonies had become established on a firm and permanent footing. That then, indeed, having become valuable to Great Britain for her commercial purposes, his Parliament was pleased to lend them assistance against an enemy who would fain have drawn to herself the benefits of their commerce, to the great aggrandisement of herself, and danger of Great Britain. Such assistance, and in such circumstances, they had often before given to Portugal and other allied states, with whom they carry on a commercial intercourse. Yet these states never supposed that by calling in her aid, they thereby submitted themselves to her sovereignty. Had such terms been proposed, they would have rejected

them with disdain, and trusted for better, to the moderation of their enemies, or to a vigorous exertion of their own force. We do not, however, mean to underrate those aids, which, to us, were doubtless valuable, on whatever principles granted: but we would shew that they cannot give a title to that authority which the British Parliament would arrogate over us; and that may amply be repaid by our giving to the inhabitants of Great Britain such exclusive privileges in trade as may be advantageous to them, and, at the same time, not too restrictive to ourselves. That settlement having been thus effected in the wilds of America, the emigrants thought proper to adopt that system of laws, under which they had hitherto lived in the mother country, and to continue their union with her, by submitting themselves to the same common sovereign, who was thereby made the central link, connecting the several parts of the empire thus newly multiplied.

But that not long were they permitted, however far they thought themselves removed from the hand of oppression, to hold undisturbed the rights thus acquired at the hazard of their lives and loss of their fortunes. A family of Princes was then on the British throne, whose treasonable crimes against their people, brought on them, afterwards, the exertion of those sacred and sovereign rights of punishment, reserved in the hands of the people for cases of extreme necessity, and judged by the constitution unsafe to be delegated to any other judicature. While every day brought forth some new and unjustifiable exertion of power over their subjects on that side of the water, it was not to be expected that those here, much less able at that time to oppose the designs of despotism, should be exempted from injury. Accordingly, this country which had been acquired by the lives, the labors, and fortunes of individual adventurers, was by these Princes, several times, parted out and distributed among the favorites and followers of their fortunes; and, by an assumed right of the Crown alone, were erected into distinct and independent governments; a

measure, which it is believed, his Majesty's prudence and understanding would prevent him from imitating at this day; as no exercise of such power, of dividing and dismembering a country, has ever occurred in his Majesty's realm of England, though now of very ancient standing; nor could it be justified or acquiesced under there, or in any part of his Majesty's empire.

That the exercise of a free trade with all parts of the world, possessed by the American colonists, as of natural right, and which no law of their own had taken away or abridged, was next the object of unjust encroachment. Some of the colonies having thought proper to continue the administration of their government in the name and under the authority of his Majesty, King Charles the first, whom, notwithstanding his late deposition by the Commonwealth of England, they continued in the sovereignty of their State, the Parliament, for the Commonwealth, took the same in high offence, and assumed upon themselves the power of prohibiting their trade with all other parts of the world, except the Island of Great Britain. This arbitrary act, however, they soon recalled, and by solemn treaty entered into on the 12th day of March, 1651, between the said Commonwealth, by their Commissioners, and the colony of Virginia by their House of Burgesses, it was expressly stipulated by the eighth article of the said treaty, that they should have 'free trade as the people of England do enjoy to all places and with all nations, according to the laws of that Commonwealth' But that, upon the restoration of his Majesty, King Charles the second, their rights of free commerce fell once more a victim to arbitrary power; and by several acts of his reign, as well as of some of his successors, the trade of the colonies was laid under such restrictions, as show what hopes they might form from the justice of a British Parliament, were its uncontrolled power admitted over these States. History has informed us, that bodies of men as well as of individuals, are susceptible of the spirit of tyranny. A view of these acts of Parliament for regulation, as it has been affectingly called, of

the American trade, if all other evidences were removed out of the case, would undeniably evince the truth of this observation. Besides the duties they impose on our articles of export and import, they prohibit our going to any markets Northward of Cape Finisterra, in the kingdom of Spain, for the sale of commodities which Great Britain will not take from us, and for the purchase of others, with which she cannot supply us; and that, for no other than the arbitrary purpose of purchasing for themselves, by a sacrifice of our rights and interests, certain privileges in their commerce with an allied state, who, in confidence, that their exclusive trade with America will be continued, while the principles and power of the British Parliament be the same, have indulged themselves in every exorbitance which their avarice could dictate or our necessity extort: have raised their commodities called for in America, to the double and treble of what they sold for, before such exclusive privileges were given them, and of what better commodities of the same kind would cost us elsewhere; and, at the same time, give us much less for what we carry thither, than might be had at more convenient ports. That these acts prohibit us from carrying, in quest of other purchasers, the surplus of our tobaccos, remaining after the consumption of Great Britain is supplied: so that we must leave them with the British merchant, for whatever he will please to allow us, to be by him re-shipped to foreign markets, where he will reap the benefits of making sale of them for full value. That, to heighten still the idea of Parliamentary justice, and to show with what moderation they are like to exercise power, where themselves are to feel no part of its weight, we take leave to mention to his Majesty, certain other acts of the British Parliament, by which they would prohibit us from manufacturing, for our own use, the articles we raise on our own lands, with our own labor. By an act passed in the fifth year of the reign of his late Majesty, King George the second, an American subject is forbidden to make a hat for himself, of the fur which he has taken, perhaps, on his own soil; an instance of despotism, to which no parallel can be produced in the most arbitrary

ages of British history. By one other act, passed in the twenty-third year of the same reign, the iron which we make, we are forbidden to manufacture; and, heavy as that article is, and necessary in every branch of husbandry, besides commission and insurance, we are to pay freight for it to Great Britain, and freight for it back again, for the purpose of supporting, not men, but machines, in the island of Great Britain. In the same spirit of equal and impartial legislation, is to be viewed the act of Parliament, passed in the fifth year of the same reign, by which American lands are made subject to the demands of British creditors, while their own lands were still continued unanswerable for their debts; from which, one of these conclusions must necessarily follow, either that justice is not the same thing in America as in Britain, or else, that the British Parliament pay less regard to it here than there. But, that we do not point out to his Majesty the injustice of these acts, with intent to rest on that principle the cause of their nullity: but to show that experience confirms the propriety of those political principles, which exempt us from the jurisdiction of the British Parliament. The true ground on which we declare these acts void, is, that the British Parliament has no right to exercise authority over us.

That these exercises of usurped power have not been confined to instances alone, in which themselves were interested; but they have also intermeddled with the regulation of the internal affairs of the colonies. The act of the 9th of Anne for establishing a post office in America, seems to have had little connection with British convenience, except that of accommodating his Majesty's ministers and favorites with the sale of a lucrative and easy office.

That thus have we hastened through the reigns which preceded his Majesty's, during which the violation of our rights were less alarming, because repeated at more distant intervals, than that rapid and bold succession of injuries, which is likely to distinguish the

present from all other periods of American story. Scarcely have our minds been able to emerge from the astonishment into which one stroke of Parliamentary thunder has involved us, before another more heavy and more alarming is fallen on us. Single acts of tyranny may be ascribed to the accidental opinion of a day; but a series of oppressions, begun at a distinguished period, and pursued unalterably through every change of ministers, too plainly prove a deliberate, systematical plan of reducing us to slavery.

That the act, passed in the 4th year of his majesty's reign, entitled "An act for granting certain duties in the British colonies and plantations in America, &c."

One other act, passed in the 5th year of his reign, entitled "An act for granting and applying certain stamp duties and other duties in the British colonies and plantations in America, &c."

One other act, passed in the 6th year of his reign, entitled "An act for the better securing the dependency of his majesty's dominions in America upon the crown and parliament of Great Britain;" and one other act, passed in the 7th year of his reign, entitled "An act for granting duties on paper, tea, &c." form that connected chain of parliamentary usurpation, which has already been the subject of frequent applications to his majesty, and the houses of lords and commons of Great Britain; and no answers having yet been condescended to any of these, we shall not trouble his majesty with a repetition of the matters they contained.

But that one other act, passed in the same 7th year of the reign, having been a peculiar attempt, must ever require peculiar mention; it is entitled "An act for suspending the legislature of New York."

One free and independent legislature, hereby takes upon itself to suspend the powers of another, free and independent as itself. Thus exhibiting a phenomenon unknown in nature, the creator, and

creature of its own power. Not only the principles of common sense, but the common feelings of human nature must be surrendered up, before his Majesty's subjects here, can be persuaded to believe, that they hold their political existence at the will of a British Parliament. Shall these governments be dissolved, their property annihilated, and their people reduced to a state of nature, at the imperious breath of a body of men whom they never saw, in whom they never confided, and over whom they have no powers of punishment or removal, let their crimes against the American public be ever so great? Can any one reason be assigned, why one hundred and sixty thousand electors in the island of Great Britain, should give law to four millions in the States of America, every individual of whom is equal to every individual of them in virtue, in understanding, and in bodily strength? Were this to be admitted, instead of being a free people, as we have hitherto supposed, and mean to continue ourselves, we should suddenly be found the slaves, not of one, but of one hundred and sixty thousand tyrants; distinguished, too, from all others, by this singular circumstance, that they are removed from the reach of fear, the only restraining motive which may hold the hand of a tyrant.

That, by 'an act to discontinue in such manner, and for such time as are therein mentioned, the landing and discharging, lading or shipping of goods, wares and merchandize, at the town and within the harbor of Boston, in the province of Massachusetts bay, in North America' which was passed at the last session of the British Parliament, a large and populous town, whose trade was their sole subsistence, was deprived of that trade, and involved in utter ruin. Let us for a while, suppose the question of right suspended, in order to examine this act on principles of justice. An act of Parliament had been passed, imposing duties on teas, to be paid in America, against which act the Americans had protested, as inauthoritative. The East India Company, who till that time, had never sent a pound of tea to America on their own account, step forth on that occasion, the

asserters of Parliamentary right, and send hither many ship loads of that obnoxious commodity. The masters of their several vessels, however, on their arrival in America, wisely attended to admonition, and returned with their cargoes. In the province of New-England alone, the remonstrances of the people were disregarded, and a compliance, after being many days waited for, was flatly refused. Whether in this, the master of the vessel was governed by his obstinacy, or his instructions, let those who know, say. There are extraordinary situations which require extraordinary interposition. An exasperated people, who feel that they possess power; are not easily restrained within limits strictly regular. A number of them assembled in the town of Boston, threw the tea into the ocean, and dispersed without doing any other act of violence. If in this they did wrong, they were known, and were amenable to the laws. of the land; against which, it could not be objected, that they had ever, in any instance, been obstructed or diverted from the regular course, in favor of popular offenders. They should, therefore, not have been distrusted on this occasion. But that ill-fated colony had formerly been bold in their enmities against the House of Stuart, and were now devoted to ruin, by that unseen hand which governs the momentous affairs of this great empire. On the partial representations of a few worthless ministerial dependants, whose constant office it has been to keep that government embroiled, and who, by their treacheries, hope to obtain the dignity of British knighthood, without calling for a party accused, without asking a proof, without attempting a distinction between the guilty and the innocent, the whole of that ancient and wealthy town, is in a moment reduced from opulence to beggary. Men who had spent their lives in extending the British commerce, who had invested, in that place, the wealth their honest endeavors had merited, found themselves and their families, thrown at once on the world, for subsistence by its charities. Not the hundredth part of the inhabitants of that town, had been concerned in the act complained of; many of them were in Great Britain, and in other parts beyond the sea; yet all

were involved in one indiscriminate ruin, by a new executive power, unheard of till then, that of a British Parliament. A property of the value of many millions of money, was sacrificed to revenge, not repay, the loss of a few thousands. This is administering justice with a heavy hand indeed! And when is this tempest to be arrested in its course? Two wharves are to be opened again when his Majesty shall think proper: the residue, which lined the extensive shores of the bay of Boston, are forever interdicted the exercise of commerce. This little exception seems to have been thrown in for no other purpose, than that of setting a precedent for investing his Majesty with legislative powers. If the pulse of his people shall beat calmly under this experiment, another and another will be tried, till the measure of despotism be filled up. It would be an insult on common sense, to pretend that this exception was made, in order to restore its commerce to that great town. The trade, which cannot be received at two wharves alone, must of necessity be transferred to some other place; to which it will soon be followed by that of the two wharves. Considered in this light, it would be an insolent and cruel mockery at the annihilation of the town of Boston. By the act for the suppression of riots and tumults in the town of Boston, passed also in the last session of Parliament, a murder committed there, is, if the Governor pleases, to be tried in the court of King's bench, in the island of Great Britain, by a jury of Middlesex. The witnesses, too, on receipt of such a sum as the Governor shall think it reasonable for them to expend, are to enter into recognizance to appear at the trial. This is, in other words, taxing them to the amount of their recognizance; and that amount may be whatever a Governor pleases. For who does his Majesty think can be prevailed on to cross the Atlantic for the sole purpose of bearing evidence to a fact? His expenses are to be borne, indeed, as they shall be estimated by a Governor; but who are to feed the wife and children whom he leaves behind, and who have had no other subsistence but his daily labor? Those epidemical disorders, too, so terrible in a foreign climate, is the cure of them to be estimated

among the articles of expense, and their danger to be warded off by the Almighty power of a Parliament? And the wretched criminal, if he happen to have offended on the American side, stripped of his privilege of trial by peers of his vicinage, removed from the place where alone full evidence could be obtained, without money, without counsel, without friends, without exculpatory proof, is tried before Judges predetermined to condemn. The cowards who would suffer a countryman to be torn from the bowels of their society, in order to be thus offered a sacrifice to Parliamentary tyranny, would merit that everlasting infamy now fixed on the authors of the act! A clause, for a similar purpose, had been introduced into an act passed in the twelfth year of his Majesty's reign, entitled, 'can act for the better securing and preserving his Majesty's Dock-yards, Magazines, Ships, Ammunition and Stores;' against which, as meriting the same censures, the several colonies have already protested.

That these are the acts of power, assumed by a body of men foreign to our constitutions, and unacknowledged by our laws; against which we do, on behalf of the inhabitants of British America, enter this, our solemn and determined protest. And we do earnestly intreat his Majesty, as yet the only mediatory power between the several States of the British empire, to recommend to his Parliament of Great Britain, the total revocation of these acts, which, however nugatory they may be, may yet prove the cause of further discontents and jealousies among us.

That we next proceed to consider the conduct of his Majesty, as holding the Executive powers of the laws of these States, and mark out his deviations from the line of duty. By the Constitution of Great Britain, as well as of the several American States, his Majesty possesses the power of refusing to pass into a law, any bill which has already passed the other two branches of the legislature. His Majesty, however, and his ancestors, conscious of the impropriety of opposing

their single opinion to the united wisdom of two Houses of Parliament, while their proceedings were unbiassed by interested principles, for several ages past, have modestly declined the exercise of this power, in that part of his empire called Great Britain. But, by change of circumstances, other principles than those of justice simply, have obtained an influence on their determinations. The addition of new States to the British empire has produced an addition of new, and, sometimes, opposite interests. It is now, therefore, the great office of his Majesty to resume the exercise of his negative power, and to prevent the passage of laws by any one legislature of the empire, which might bear injuriously on the rights and interests of another. Yet this will not excuse the wanton exercise of this power, which we have seen his Majesty practice on the laws of the American legislature. For the most trifling reasons, and, sometimes for no conceivable reason at all, his Majesty has rejected laws of the most salutary tendency. The abolition of domestic slavery is the great object of desire in those colonies, where it was, unhappily, introduced in their infant state. But previous to the enfranchisement of the slaves we have, it is necessary to exclude all further importations from Africa. Yet our repeated attempts to effect this, by prohibitions, and by imposing duties which might amount to a prohibition, having been hitherto defeated by his Majesty's negative: thus preferring the immediate advantages of a few British corsairs, to the lasting interests of the American States, and to the rights of human nature, deeply wounded by this infamous practice. Nay, the single interposition of an interested individual against a law was scarcely ever known to fail of success, though, in the opposite scale, were placed the interests of a whole country. That this is so shameful an abuse of a power, trusted with his Majesty for other purposes, as if, not reformed, would call for some legal restrictions.

With equal inattention to the necessities of his people here, has his Majesty permitted our laws to lie neglected, in England, for years,

neither confirming them by his assent, nor annulling them by his negative: so, that such of them as have no suspending clause, we hold on the most precarious of all tenures, his Majesty's will; and such of them as suspend themselves till his Majesty's assent be obtained, we have feared might be called into existence at some future and distant period, when time and change of circumstances shall have rendered them destructive to his people here. And, to render this grievance still more oppressive, his Majesty, by his instructions, has laid his Governors under such restrictions, that they can pass no law, of any moment, unless it have such suspending clause: so that, however immediate may be the call for legislative interposition, the law cannot be executed, till it has twice crossed the Atlantic, by which time the evil may have spent its whole force.

But in what terms reconcilable to Majesty, and at the same time to truth, shall we speak of a late instruction to his Majesty's Governor of the colony of Virginia, by which he is forbidden to assent to any law for the division of a county, unless the new county will consent to have no representative in Assembly? That colony has as yet affixed no boundary to the Westward. Their Western counties, therefore, are of an indefinite extent. Some of them are actually seated many hundred miles from their Eastern limits. Is it possible, then, that his Majesty can have bestowed a single thought on the situation of those people, who, in order to obtain justice for injuries, however great or small, must, by the laws of that colony, attend their county court at such a distance, with all their witnesses, monthly, till their litigation be determined? Or does his Majesty seriously wish, and publish it to the world, that his subjects should give up the glorious right of representation, with all the benefits derived from that, and submit themselves the absolute slaves of his sovereign will? Or is it rather meant to confine the legislative body to their present numbers, that they may be the cheaper bargain, whenever they shall become worth a purchase?

One of the articles of impeachment against Tresilian, and the other Judges of Westminster Hall, in the reign of Richard the Second, for which they suffered death, as traitors to their country, was, that they had advised the King, that he might dissolve his Parliament at any time; and succeeding kings have adopted the opinion of these unjust Judges, Since the establishment, however, of the British constitution, at the glorious Revolution, on its free and ancient principles, neither his Majesty, nor his ancestors, have exercised such a power of dissolution in the island of Great Britain;^[1] and when his Majesty was petitioned, by the united voice of his people there, to dissolve the present Parliament, who had become obnoxious to them, his Ministers were heard to declare, in open Parliament, that his Majesty possessed no such power by the constitution. But how different their language, and his practice, here! To declare, as their duty required, the known rights of their country, to oppose the usurpation of every foreign judicature, to disregard the imperious mandates of a Minister or Governor, have been the avowed causes of dissolving Houses of Representatives in America. But if such powers be really vested in his Majesty, can he suppose they are there placed to awe the members from such purposes as these? When the representative body have lost the confidence of their constituents, when they have notoriously made sale of their most valuable rights, when they have assumed to themselves powers which the people never put into their hands, then, indeed, their continuing in office becomes dangerous to the State, and calls for an exercise of the power of dissolution. Such being the cause for which the representative body should, and should not, be dissolved, will it not appear strange, to an unbiassed observer, that that of Great Britain was not dissolved, while those of the colonies have repeatedly incurred that sentence?

But your Majesty, or your Governors, have carried this power beyond every limit known or provided for by the laws, After dissolving one House of Representatives, they have refused to call

another, so that, for a great length of time, the legislature provided by the laws, has been out of existence. From the nature of things, every society must, at all times, possess within itself the sovereign powers of legislation. The feelings of human nature revolt against the supposition of a State so situated, as that it may not, in any emergency, provide against dangers which, perhaps, threaten immediate ruin. While those bodies are in existence to whom the people have delegated the powers of legislation, they alone possess, and may exercise, those powers. But when they are dissolved, by the chopping off one or more of their branches, the power reverts to the people, who may use it to unlimited extent, either assembling together in person, sending deputies, or in any other way they may think proper. We forbear to trace consequences further; the dangers are conspicuous with which this practice is replete.

That we shall, at this time also, take notice of an error in the nature of our land holdings, which crept in at a very early period of our settlement. The introduction of the Feudal tenures into the kingdom of England, though ancient, is well enough understood to set this matter in a proper light. In the earlier ages of the Saxon settlement, feudal holdings were certainly altogether unknown, and very few, if any, had been introduced at the time of the Norman conquest. Our Saxon ancestors held their lands, as they did their personal property, in absolute dominion, disincumbered with any superior, answering nearly to the nature of those possessions which the Feudalist term Allodial. William the Norman, first introduced that system generally. The lands which had belonged to those who fell in the battle of Hastings, and in the subsequent insurrections of his reign, formed a considerable proportion of the lands of the whole kingdom. These he granted out, subject to feudal duties, as did he also those of a great number of his new subjects, who, by persuasions or threats, were induced to surrender them for that purpose. But still, much was left in the hands of his Saxon subjects, held of no superior, and not

subject to feudal conditions. These, therefore, by express laws, enacted to render uniform the system of military defence, were made liable to the same military duties as if they had been feuds; and the Norman lawyers soon found means to saddle them, also, with the other feudal burthens. But still they had not been surrendered to the King, they were not derived from his grant, and therefore they were not holden of him. A general principle was introduced, that "all lands in England were held either mediately or immediately of the Crown;" but this was borrowed from those holdings which were truly feudal, and only applied to others for the purposes of illustration. Feudal holdings were, therefore, but exceptions out of the Saxon laws of possession, under which all lands were held in absolute right. These, therefore, still form the basis or groundwork of the Common law, to prevail wheresoever the exceptions have not taken place. America was not conquered by William the Norman, nor its lands surrendered to him or any of his successors. Possessions there are, undoubtedly, of the Allodial nature. Our ancestors, however, who migrated hither, were laborers, not lawyers. The fictitious principle, that all lands belong originally to the King, they were early persuaded to believe real, and accordingly took grants of their own lands from the Crown. And while the Crown continued to grant for small sums and on reasonable rents, there was no inducement to arrest the error, and lay it open to public view. But his Majesty has lately taken on him to advance the terms of purchase and of holding, to the double of what they were; by which means, the acquisition of lands being rendered difficult, the population of our country is likely to be checked. It is time, therefore, for us to lay this matter before his Majesty, and to declare, that he has no right to grant lands of himself. From the nature and purpose of civil institutions, all the lands within , the limits, which any particular party has circumscribed around itself, are assumed by that society, and subject to their allotment; this may be done by themselves assembled collectively, or by their legislature, to whom they may have delegated sovereign authority; and, if they are allotted in neither of

these ways, each individual of the society, may appropriate to himself such lands as he finds vacant, and occupancy will give him title.

That, in order to enforce the arbitrary measures before complained of, his Majesty has, from time to time, sent among us large bodies of armed forces, not made up of the people here, nor raised by the authority of our laws. Did his Majesty possess such a right as this, it might swallow up all our other rights, whenever he should think proper. But his Majesty has no right to land a single armed man on our shores; and those whom he sends here are liable to our laws, for the suppression and punishment of riots, routs, and unlawful assemblies, or are hostile bodies invading us in defiance of law. When, in the course of the late war, it became expedient that a body of Hanoverian troops should be brought over for the defence of Great Britain, his Majesty's grandfather, our late sovereign, did not pretend to introduce them under any authority he possessed. Such a measure would have given just alarm to his subjects of Great Britain, whose liberties would not be safe if armed men of another country, and of another spirit, might be brought into the realm at any time, without the consent of their legislature. He, therefore, applied to Parliament, who passed an act for that purpose, limiting the number to be brought in, and the time they were to continue. In like manner is his Majesty restrained in every part of the empire. He possesses indeed the executive power of the laws in every State; but they are the laws of the particular State, which he is to administer within that State, and not those of any one within the limits of another. Every State must judge for itself, the number of armed men which they may safely trust among them, of whom they are to consist, and under what restrictions they are to be laid. To render these proceedings still more criminal against our laws, instead of subjecting the military to the civil power, his majesty has expressly made the civil subordinate to the military. But can his Majesty thus put down all law under his feet? Can he erect

a power superior to that which erected himself? He has done it indeed by force; but let him remember that force cannot give right.

That these are our grievances, which we have thus laid before his Majesty, with that freedom of language and sentiment which becomes a free people claiming their rights as derived from the laws of nature, and not as the gift of their Chief Magistrate. Let those flatter, who fear: it is not an American art. To give praise where it is not due might be well from the venal, but would ill beseem those who are asserting the rights of human nature. They know, and will, therefore, say, that Kings are the servants, not the proprietors of the people. Open your breast, Sire; to liberal and expanded thought. Let not the name of George the Third, be a blot on the page of history. You are surrounded by British counsellors, but remember that they are parties. You have no ministers for American affairs, because you have none taken from among us, nor amenable to the laws on which they are to give you advice. It behooves you, therefore, to think and to act for yourself and your people. The great principles of right and wrong are legible to every reader; to pursue them, requires not the aid of many counsellors. The whole art of government consists in the art of being honest. Only aim to do your duty, and mankind will give you credit where you fail. No longer persevere in sacrificing the rights of one part of the empire to the inordinate desires of another; but deal out to all, equal and impartial right. Let no act be passed by any one legislature, which may infringe on the rights and liberties of another. This is the important post in which fortune has placed you, holding the balance of a great, if a well-poised empire. This, Sire, is the advice of your great American council, on the observance of which may perhaps depend your felicity and future fame, and the preservation of that harmony which alone can continue, both to Great Britain and America, the reciprocal advantages of their connection. It is neither our wish nor our interest to separate from her. We are willing, on our part, to sacrifice everything which reason can ask, to the restoration of

that tranquillity for which all must wish. On their part, let them be ready to establish union on a generous plan. Let them name their terms, but let them be just. Accept of every commercial preference it is in our power to give, for such things as we can raise for their use, or they make for ours. But let them not think to exclude us from going to other markets to dispose of those commodities which they cannot use, nor to supply those wants which they cannot supply. Still less, let it be proposed, that our properties, within our own territories, shall be taxed or regulated by any power on earth, but our own. The God who gave us life, gave us liberty at the same time: the hand of force may destroy, but cannot disjoin them. This, Sire, is our last, our determined resolution. And that you will be pleased to interpose, with that efficacy which your earnest endeavors may insure, to procure redress of these our great grievances, to quiet the minds of your subjects in British America against any apprehensions of future encroachment, to establish fraternal love and harmony through the whole empire, and that that may continue to the latest ages of time, is the fervent prayer of all British America.

An Act for Establishing Religious Freedom

[1779] , passed in the Assembly of

Virginia in the beginning of the year 1786

Well aware that Almighty God hath created the mind free; that all attempts to influence it by temporal punishments or burdens, or by civil incapacitations, tend only to beget habits of hypocrisy and meanness, and are a departure from the plan of the Holy Author of our religion, who being Lord both of body and mind, yet chose not to propagate it by coercions on either, as was in his Almighty power to do; that the impious presumption of legislators and rulers, civil as well as ecclesiastical, who, being themselves but fallible and uninspired men have assumed dominion over the faith of others, setting up their own opinions and modes of thinking as the only true and infallible, and as such endeavoring to impose them on others, hath established and maintained false religions over the greatest part of the world, and through all time; that to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves, is sinful and tyrannical; that even the forcing him to support this or that teacher of his own religious persuasion, is depriving him of the comfortable liberty of giving his contributions to the particular pastor whose morals he would make his pattern, and whose powers he feels most persuasive to righteousness, and is withdrawing from the ministry those temporal rewards, which proceeding from an approbation of their personal conduct, are an additional incitement to earnest and unremitting labors for the instruction of mankind; that our civil rights have no dependence on our religious opinions, more than our opinions in physics or geometry; that, therefore, the proscribing any citizen as unworthy the public confidence by laying upon him an incapacity of being called to the offices of trust and emolument, unless he profess or renounce this or that religious

opinion, is depriving him injuriously of those privileges and advantages to which in common with his fellow citizens he has a natural right; that it tends also to corrupt the principles of that very religion it is meant to encourage, by bribing, with a monopoly of worldly honors and emoluments, those who will externally profess and conform to it; that though indeed these are criminal who do not withstand such temptation, yet neither are those innocent who lay the bait in their way; that to suffer the civil magistrate to intrude his powers into the field of opinion and to restrain the profession or propagation of principles, on the supposition of their ill tendency, is a dangerous fallacy, which at once destroys all religious liberty, because he being of course judge of that tendency, will make his opinions the rule of judgment, and approve or condemn the sentiments of others only as they shall square with or differ from his own; that it is time enough for the rightful purposes of civil government, for its offices to interfere when principles break out into overt acts against peace and good order; and finally, that truth is great and will prevail if left to herself, that she is the proper and sufficient antagonist to error, and has nothing to fear from the conflict, unless by human interposition disarmed of her natural weapons, free argument and debate, errors ceasing to be dangerous when it is permitted freely to contradict them.

Be it therefore enacted by the General Assembly, That no man shall be compelled to frequent or support any religious worship, place or ministry whatsoever, nor shall be enforced, restrained, molested, or burthened in his body or goods, nor shall otherwise suffer on account of his religious opinions of belief; but that all men shall be free to profess, and by argument to maintain, their opinions in matters of religion, and that the same shall in nowise diminish, enlarge, or affect their civil capacities.

And though we well know this Assembly, elected by the people

for the ordinary purposes of legislation only, have no power to restrain the acts of succeeding assemblies, constituted with the powers equal to our own, and that therefore to declare this act irrevocable, would be of no effect in law, yet we are free to declare, and do declare, that the rights hereby asserted are of the natural rights of mankind, and that if any act shall be hereafter passed to repeal the present or to narrow its operation, such act will be an infringement of natural right.

Report of Government for the Western Territory. March 22, 1784

The Committee to whom was re-committed the report of a plan for a temporary government of the Western territory have agreed to the following resolutions.

Resolved, that so much of the territory ceded or to be ceded by individual states to the United States as is already purchased or shall be purchased of the Indian inhabitants & offered for sale by Congress, shall be divided into distinct states....

That the settlers on any territory so purchased & offered for sale shall, either on their own petition, or on the order of Congress, receive authority from them with appointments of time & place for their free males of full age, within the limits of their state to meet together for the purpose of establishing a temporary government, to adopt the constitution and laws of any one of the original states, so that such laws nevertheless shall be subject to alteration by their ordinary legislature; & to erect, subject to a like alteration, counties or townships for the election of members for their legislature.

That such temporary government shall only continue in force in any state until it shall have acquired 20,000 free inhabitants, when giving due proof thereof to Congress, they shall receive from them authority with appointment of time & place to call a convention of representatives to establish a permanent Constitution & Government for themselves. Provided that both the temporary and permanent governments be established on these principles as their basis. 1. That they shall forever remain a part of this confederacy of the United States of America. 2. That in their persons, property and territory they shall be subject to the Government of the United States in Congress assembled, & to the articles of Confederation in all those cases in

which the original states shall be so subject. 3. That they shall be subject to pay a part of the federal debts contracted or to be contracted, to be apportioned on them by Congress, according to the same common rule & measure, by which apportionments thereof shall be made on the other states. 4. That their respective Governments shall be in republican forms and shall admit no person to be a citizen who holds any hereditary title. 5. That after the year 1800 of the Christian era, there shall be neither slavery nor involuntary servitude in any of the sd states, otherwise than in punishment of crimes whereof the party shall have been convicted to have been personally guilty.

That whensoever any of ths sd states shall have, of free inhabitants, as many as shall then be in any one the least numerous, of the thirteen original states, such state shall be admitted by it's delegates into the Congress of the United States on an equal footing with the said original states: provided nine States agree to such admission according to the reservation of the 11th of the articles of Confederation, and in order to adopt the sd articles of Confederation, to the state of Congress when it's numbers shall be thus increased, it shall be proposed to the legislatures of states originally parties thereto, to require the assent of two thirds of the United States in Congress assembled in all those cases wherein by the said articles the assent of nine states is now required; which being agreed to by them shall be binding on the new states. Until such admission by their delegates into Congress, any of the said states after the establishment of their temporary government shall have authority to keep a sitting member in Congress, with a right of debating, but not of voting.

That the preceding articles shall be formed into a charter of compact, shall be duly executed by the president of the United States in Congress assembled, under his hand & the seal of the United States, shall be promulgated & shall stand as fundamental constitutions

between the thirteen original states and each of the several states now newly described, unalterable but by the joint consent of the United States in Congress assembled, & of the particular state within which such alteration is proposed to be made.

That measures not inconsistent with the principles of the Confedn. & necessary for the preservation of peace & good order among the settlers in any of the said new states until they shall assume a temporary Government as aforesaid, may from time to time be taken by the U S in C. assembled.

**Opinion upon the question whether the
President should veto the Bill, declaring
that the seat of government shall be
transferred to the Potomac, in the year
1790. July 15, 1790**

....

Every man, and every body of men on earth, possesses the right of self-government. They receive it with their being from the hand of nature. Individuals exercise it by their single will; collections of men by that of their majority; for the law of the majority is the natural law of every society of men. When a certain description of men are to transact together a particular business, the times and places of their meeting and separating, depend on their own will; they make a part of the natural right of self-government. This, like all other natural rights, may be abridged or modified in its exercise by their own consent, or by the law of those who depute them, if they meet in the right of others; but as far as it is not abridged or modified, they retain it as a natural right and may exercise them in what form they please, either exclusively by themselves, or in association with others, or by others altogether, as they shall agree.

March 18, 1792. Paper on the rights to navigate the Mississippi.

....

But our right is built on ground still broader and more unquestionable, to wit:

On the law of nature and nations.

If we appeal to this, as we feel it written on the heart of man, what sentiment is written in deeper characters than that the ocean is free to all men, and their rivers to all their inhabitants? Is there a man, savage or civilized, unbiased by habit, who does not feel and attest this truth? Accordingly, in all tracts of country united under the same political society, we find this natural right universally acknowledged and protected by laying the navigable rivers open to all their inhabitants. When their rivers enter the limits of another society, if the right of the upper inhabitants to descend the stream is in any case obstructed, it is an act of force by a stronger society against a weaker, condemned by the judgment of mankind. The late case of Antwerp and the Scheldt was a striking proof of a general union of sentiment on this point; as it is believed that Amsterdam had scarcely an advocate out of Holland, and even there its pretensions were advocated on the ground of treaties, and not of natural right.... The United States hold 600,000 square miles of habitable territory on the Mississippi and its branches, and this river and its branches afford many thousands of miles of navigable waters penetrating this territory in all its parts. The inhabitable grounds of Spain below our boundary and bordering on the river, which alone can pretend any fear of being incommoded by our use of the river, are not the thousandth part of that extent. This vast portion of the territory of the United States has no other outlet for its productions, and these productions are of the

bulkiest kind. And in truth, their passage down the river may not only be innocent, as to the Spanish subjects on the river, but cannot fail to enrich them far beyond their present condition. The real interest then of all the inhabitants, upper and lower, concur in fact with their rights.

....

**Opinion on the question whether the
United States have a right to renounce
their treaties with France, or to hold
them suspended till the government of
that country shall be established. April
28, 1793**

....

I consider the people who constitute a society or nation as the source of all authority in that nation; as free to transact their common concerns by any agents they think proper; to change these agents individually, or the organization of them in form or function whenever they please; that all the acts done by these agents under the authority of the nation, are the acts of the nation, are obligatory to them and enure to their use, and can in no wise be annulled or affected by any change in the form of the government, or of the persons administering it, consequently the treaties between the United States and France, were not treaties between the United States and Louis Capet, but between the two nations of America and France; and the nations remaining in existence, though both of them have since changed their forms of government, the treaties are not annulled by these changes. The law of nations, by which this question is to be determined, is composed of three branches, 1. The moral law of our nature. 2. The usages of nations. 3. Their special conventions. The first of these only concerns this question, that is to say the moral law to which man has been subjected by his creator, and of which his feelings or conscience, as it is sometimes called, are the evidence with which his creator has furnished him. The moral duties which exist between individual and individual in a state of nature, accompany them into a state of society, and the aggregate of the duties of all the

individuals composing the society constitutes the duties of that society towards any other; so that between society and society the same moral duties exist as did between the individuals composing them, while in an unassociated state, and their maker not having released them from those duties on their forming themselves into a nation. Compacts then, between nation and nation, are obligatory on them by the same moral law which obliges individuals to observe their compacts. There are circumstances, however, which sometimes excuse the non-performance of contracts between man and man; so are there also between nation and nation. When performance, for instance, becomes impossible, non-performance is not immoral; so if performance becomes self-destructive to the party, the law of self-preservation overrules the laws of obligation in others. For the reality of these principles I appeal to the true fountains of evidence, the head and heart of every rational and honest man. It is there nature has written her moral laws, and where every man may read them for himself. He will never read there the permission to annul his obligations for a time, or forever, whenever they become dangerous, useless, or disagreeable; certainly not when merely useless or disagreeable.... and though he may, under certain degrees of danger, yet the danger must be imminent, and the degree great, Of these, it is true, that nations are to be judges for themselves; since no one nation has a right to sit in judgment over another, but the tribunal of our conscience remains, and that also of the opinion of the world. These will revise the sentence we pass in our own case, and as we respect these, we must see that in judging ourselves we have honestly done the part of impartial and rigorous judges.

.... Questions of natural right are triable by their conformity with the moral sense and reason of man. Those who write treatises of natural law, can only declare what their own moral sense and reason dictate in the several cases they state. Such of them as happen to have feelings and a reason coincident with those of the wise and honest

part of mankind, are respected and quoted as witnesses of what is morally right or wrong in particular cases. Grotius, Puffendorf, Wolf, and Vattel are of this number. Where they agree their authority is strong; but where they differ (and they often differ), we must appeal to our own feelings and reason to decide between them....

Report on the privileges and restrictions on the commerce of the United States in foreign countries. December 16, 1793

.... As to commerce, two methods occur, 1. By friendly arrangements with the several nations with whom these restrictions exist: Or, 2. By the separate act of our own legislatures for countervailing their effects.

There can be no doubt but that of these two, friendly arrangement is the most eligible. Instead of embarrassing commerce under piles of regulating laws, duties and prohibitions, could it be relieved from all its shackles in all parts of the world, could every country be employed in producing that which nature has best fitted it to produce, and each be free to exchange with others mutual surplusses for mutual wants, the greatest mass possible would then be produced of those things which contribute to human life and human happiness; the numbers of mankind would be increased, and their condition bettered....

But should any nation, contrary to our wishes, suppose it may better find its advantage by continuing its system of prohibitions, duties and regulations, it behooves us to protect our citizens, their commerce and navigation, by counter prohibitions, duties and regulations, also. Free commerce and navigation are not to be given in exchange for restrictions and vexations; nor are they likely to produce a relaxation of them....

Where a nation imposes high duties on our productions, or prohibits them altogether, it may be proper for us to do the same by theirs; first burdening or excluding those productions which they bring here, in competition with our own of the same kind; selecting next, such manufactures as we take from them in greatest quantity,

and which, at the same time, we could the soonest furnish to ourselves, or obtain from other countries; imposing on them duties lighter at first, but heavier and heavier afterwards as other channels of supply open. Such duties having the effect of indirect encouragement to domestic manufactures of the same kind, may induce the manufacturer to come himself into these States, where cheaper subsistence, equal laws, and a vent of his wares, free of duty, may ensure him the highest profits from his skill and industry. And here, it would be in the power of the State governments to co-operate essentially, by opening the resources of encouragement which are under their control, extending them liberally to artists in those particular branches of manufacture for which their soil, climate, population and other circumstances have matured them, and fostering the precious efforts and progress of household manufacture, by some patronage suited to the nature of its objects, guided by the local informations they possess, and guarded against abuse by their presence and attentions. The oppressions on our agriculture, in foreign ports, would thus be made the occasion of relieving it from a dependence on the councils and conduct of others, and of promoting arts, manufactures and population at home....

Inauguration Address. March 4, 1801

Friends and Fellow Citizens:

Called upon to undertake the duties of the first executive office of our country, I avail myself of the presence of that portion of my fellow citizens which is here assembled, to express my grateful thanks for the favor with which they have been pleased to look toward me, to declare a sincere consciousness that the task is above my talents, and that I approach it with those anxious and awful presentiments which the greatness of the charge and the weakness of my powers so justly inspire. A rising nation, spread over a wise and fruitful land, traversing all the seas with the rich productions of their industry, engaged in commerce with nations who feel power and forget right, advancing rapidly to destinies beyond the reach of mortal eye—when I contemplate these transcendent objects, and see the honor, the happiness, and the hopes of this beloved country committed to the issue and the auspices of this day, I shrink from the contemplation, and humble myself before the magnitude of the undertaking. Utterly indeed, should I despair, did not the presence of many whom I here see remind me, that in the other high authorities provided by our constitution, I shall find resources of wisdom, of virtue, and of zeal, on which to rely under all difficulties. To you, then, gentlemen, who are charged with the sovereign functions of legislation, and to those associated with you, I look with encouragement for that guidance and support which may enable us to steer with safety the vessel in which we are all embarked amid the conflicting elements of a troubled world.

During the contest of opinion through which we have passed, the animation of discussion and of exertions has sometimes worn an aspect which might impose on strangers unused to think freely and to speak and to write what they think; but this being now decided by the

voice of the nation, announced according to the rules of the constitution, all will, of course, arrange themselves under the will of the law, and unite in common efforts for the common good. All, too, will bear in mind this sacred principle, that though the will of the majority is in all cases to prevail, that will, to be rightful, must be reasonable; that the minority possess their equal rights, which equal laws must protect, and to violate which would be oppression. Let us, then, fellow citizens, unite with one heart and one mind. Let us restore to social intercourse that harmony and affection without which liberty and even life itself are but dreary things. And let us reflect that having banished from our land that religious intolerance under which mankind so long bled and suffered, we have yet gained little if we countenance a political intolerance as despotic, as wicked, and capable of as bitter and bloody persecutions. During the throes and convulsions of the ancient world, during the agonizing spasms of infuriated man, seeking through blood and slaughter his long-lost liberty, it was not wonderful that the agitations of the billows should reach even this distant and peaceful shore; that this should be more felt and feared by some and less by others; that this should divide opinions as to measures of safety. But every difference of opinion is not a difference of principle. We have called by different names brethren of the same principle. We are all republicans we are federalists. If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it. I know, indeed, that some honest men fear that a republican government cannot be strong; that this government is not strong enough. But would the honest patriot, in the full tide of successful experiment, abandon a government which has so far kept us free and firm, on the theoretic and visionary fear that this government, the world's best hope, may by possibility want energy to preserve itself? I trust not. I believe this, on the contrary, the strongest government on earth. I believe it is the only one where

every man, at the call of the laws, would fly to the standard of the law, and would meet invasions of the public order as his own personal concern. Sometimes it is said that man cannot be trusted with the government of himself. Can he, then, be trusted with the government of others? Or have we found angels in the forms of kings to govern him? Let history answer this question.

Let us, then, with courage and confidence pursue our own federal and republican principles, our attachment to our union and representative government. Kindly separated by nature and a wide ocean from the exterminating havoc of one quarter of the globe; too high-minded to endure the degradations of the others; possessing a chosen country, with room enough for our descendants to the hundredth and thousandth generation; entertaining a due sense of our equal right to the use of our own faculties, to the acquisitions of our industry, to honor and confidence from our fellow citizens, resulting not from birth but from our actions and their sense of them; enlightened by a benign religion, professed, indeed, and practiced in various forms, yet all of them including honesty, truth, temperance, gratitude, and the love of man; acknowledging and adoring an overruling Providence, which by all its dispensations proves that it delights in the happiness of man here and his greater happiness hereafter; with all these blessings, what more is necessary to make us a happy and prosperous people? Still one thing more, fellow citizens—a wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned. This is the sum of good government, and this is necessary to close the circle of our felicities.

About to enter, fellow citizens, on the exercise of duties which comprehend everything dear and valuable to you, it is proper that you should understand what I deem the essential principles of our

government, and consequently those which ought to shape its administration. I will compress them within the narrowest compass they will bear, stating the general principle, but not all its limitations. Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce, and honest friendship, with all nations—entangling alliances with none; the support of the state governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against anti-republican tendencies; the preservation of the general government in its whole constitutional vigor, as the sheet anchor of our peace at home and safety abroad; a jealous care of the right of election by the people—a mild and safe corrective of abuses which are lopped by the sword of the revolution where peaceable remedies are unprovided; absolute acquiescence in the decisions of the majority—the vital principle of republics, from which there is no appeal but to force, the vital principle and immediate parent of despotism; a well-disciplined militia—our best reliance in peace and for the first moments of war, till regulars may relieve them; the supremacy of the civil over the military authority; economy in the public expense, that labor may be lightly burdened ; the honest payment of our debts and sacred preservation of the public faith; encouragement of agriculture, and of commerce as its handmaid; the diffusion of information and the arraignment of all abuses at the bar of public reason; freedom of religion; freedom of the press; freedom of person under the protection of the habeas corpus; and trial by juries impartially selected—these principles form the bright constellation which has gone before us, and guided our steps through an age of revolution and reformation. The wisdom of our sages and the blood of our heroes have been devoted to their attainment. They should be the creed of our political faith—the text of civil instruction—the touchstone by which to try the services of those we trust; and should we wander from them in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety.

I repair, then, fellow citizens, to the post you have assigned me. With experience enough in subordinate offices to have seen the difficulties of this, the greatest of all, I have learned to expect that it will rarely fall to the lot of imperfect man to retire from this station with the reputation and the favor which bring him into it. Without pretensions to that high confidence reposed in our first and great revolutionary character, whose preeminent services had entitled him to the first place in his country's love, and destined for him the fairest page in the volume of faithful history, I ask so much confidence only as may give firmness and effect to the legal administration of your affairs. I shall often go wrong through defect of judgment. When right, I shall often be thought wrong by those whose positions will not command a view of the whole ground. I ask your indulgence for my own errors, which will never be intentional; and your support against the errors of others, who may condemn what they would not if seen in all its parts. The approbation implied by your suffrage is a consolation to me for the past; and my future solicitude will be to retain the good opinion of those who have bestowed it in advance, to conciliate that of others by doing them all the good in my power, and to be instrumental to the happiness and freedom of all.

Relying, then, on the patronage of your good will, I advance with obedience to the work, ready to retire from it whenever you become sensible how much better choice it is in your power to make. And may that Infinite Power which rules the destinies of the universe, lead our councils to what is best, and give them a favorable issue for your peace and prosperity.

First Annual Message. —December 8, 1801

Fellow citizens of the Senate and House of Representatives:

It is a circumstance of sincere gratification to me that on meeting the great council of our nation, I am able to announce to them, on the grounds of reasonable certainty, that the wars and troubles which have for so many years afflicted our sister nations have at length come to an end, and that the communications of peace and commerce are once more opening among them. While we devoutly return thanks to the beneficent Being who has been pleased to breathe into them the spirit of conciliation and forgiveness, we are bound with peculiar gratitude to be thankful to him that our own peace has been preserved through so perilous a season, and ourselves permitted quietly to cultivate the earth and to practice and improve those arts which tend to increase our comforts. The assurances, indeed, of friendly disposition, received from all the powers with whom we have principal relations, had inspired a confidence that our peace with them would not have been disturbed. But a cessation of the irregularities which had affected the commerce of neutral nations, and of the irritations and injuries produced by them, cannot but add to this confidence; and strengthens, at the same time, the hope, that wrongs committed on unoffending friends, under a pressure of circumstances, will now be reviewed with candor, and will be considered as founding just claims of retribution for the past and new assurance for the future.

Among our Indian neighbors, also, a spirit of peace and friendship generally prevails; and I am happy to inform you that the continued efforts to introduce among them the implements and the practice of husbandry, and of the household arts, have not been without success; that they are becoming more and more sensible of the superiority of

this dependence for clothing and subsistence over the precarious resources of hunting and fishing; and already we are able to announce, that instead of that constant diminution of their numbers, produced by their wars and their wants, some of them begin to experience an increase of population.

To this state of general peace with which we have been blessed, one only exception exists. Tripoli, the least considerable of the Barbary States, had come forward with demands unfounded either in right or in compact, and had permitted itself to denounce war, on our failure to comply before a given day. The style of the demand admitted but one answer. I sent a small squadron of frigates into the Mediterranean, with assurances to that power of our sincere desire to remain in peace, but with orders to protect our commerce against the threatened attack. The measure was seasonable and salutary. The bey had already declared war in form. His cruisers were out. Two had arrived at Gibraltar. Our commerce in the Mediterranean was blockaded, and that of the Atlantic in peril. The arrival of our squadron dispelled the danger. One of the Tripolitan cruisers having fallen in with, and engaged the small schooner *Enterprise*, commanded by Lieutenant Sterret, which had gone as a tender to our larger vessels, was captured, after a heavy slaughter of her men, without the loss of a single one on our part. The bravery exhibited by our citizens on that element, will, I trust, be a testimony to the world that it is not the want of that virtue which makes us seek their peace, but a conscientious desire to direct the energies of our nation to the multiplication of the human race, and not to its destruction. Unauthorized by the constitution, without the sanction of Congress, to go beyond the line of defence, the vessel being disabled from committing further hostilities, was liberated with its crew. The legislature will doubtless consider whether, by authorizing measures of offence, also, they will place our force on an equal footing with that of its adversaries. I communicate all material information on this

subject, that in the exercise of the important function confided by the constitution to the legislature exclusively, their judgment may form itself on a knowledge and consideration of every circumstance of weight....

I lay before you the result of the census lately taken of our inhabitants, to a conformity with which we are to reduce the ensuing rates of representation and taxation. You will perceive that the increase of numbers during the last ten years, proceeding in geometrical ratio, promises a duplication in little more than twenty-two years. We contemplate this rapid growth, and the prospect it holds up to us, not with a view to the injuries it may enable us to do to others in some future day, but to the settlement of the extensive country still remaining vacant within our limits, to the multiplications of men susceptible of happiness, educated in the love of order, habituated to self-government, and valuing its blessings above all price.

Other circumstances, combined with the increase of numbers, have produced an augmentation of revenue arising from consumption, in a ratio far beyond that of population alone, and though the changes of foreign relations now taking place so desirably for the world, may for a season affect this branch of revenue, yet, weighing all probabilities of expense, as well as of income, there is reasonable ground of confidence that we may now safely dispense with all the internal taxes, comprehending excises, stamps, auctions, licenses, carriages, and refined sugars, to which the postage on newspapers may be added, to facilitate the progress of information, and that the remaining sources of revenue will be sufficient to provide for the support of government, to pay the interest on the public debts, and to discharge the principals in shorter periods than the laws or the general expectations had contemplated. War, indeed, and untoward events, may change this prospect of things, and call for expenses which the

imposts could not meet; but sound principles will not justify our taxing the industry of our fellow citizens to accumulate treasure for wars to happen we know not when, and which might not perhaps happen but from the temptations offered by that treasure.

These views, however, of reducing our burdens, are formed on the expectation that a sensible, and at the same time a salutary reduction, may take place in our habitual expenditures. For this purpose those of the civil government, the army, and navy, will need revisal.

When we consider that this government is charged with the external and mutual relations only of these states; that the states themselves have principal care of our persons, our property, and our reputation, constituting the great field of human concerns, we may well doubt whether our organization is not too complicated, too expensive; whether offices and officers have not been multiplied unnecessarily, and sometimes injuriously to the service they were meant to promote....

A statement has been formed by the secretary of war, on mature consideration, of all the posts and stations where garrisons will be expedient, and of the number of men requisite for each garrison. The whole amount is considerably short of the present military establishment. For the surplus no particular use can be pointed out. For defence against invasion, their number is as nothing; nor is it conceived needful or safe that a standing army should be kept up in time of peace for that purpose. Uncertain as we must ever be of the particular point in our circumference where an enemy may choose to invade us, the only force which can be ready at every point and competent to oppose them, is the body of neighboring citizens as formed into a militia. On these, collected from the parts most convenient, in numbers proportioned to the invading foe, it is best to rely, not only to meet the first attack, but if it threatens to be

permanent, to maintain the defence until regulars may be engaged to relieve them. These considerations render it Important that we should at every session continue to amend the defects which from time to time show themselves in the laws for regulating the militia, until they are sufficiently perfect. Nor should we now or at any time separate, until we can say we have done everything for the militia which we could do were an enemy at our door.

The provisions of military stores on hands will be laid before you, that you may judge of the additions still requisite.

With respect to the extent to which our naval preparations should be carried, some difference of opinion may be expected to appear; but just attention to the circumstances of every part of the Union will doubtless reconcile all. A small force will probably continue to be wanted for actual service in the Mediterranean. Whatever annual sum beyond that you may think proper to appropriate to naval preparations, would perhaps be better employed in providing those articles which may be kept without waste or consumption, and be in readiness when any exigence calls them into use. Progress has been made, as will appear by papers now communicated, in providing materials for seventy-four gun ships as directed by law....

Agriculture, manufacture, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise. Protection from casual embarrassments, however, may sometimes be seasonably interposed. If in the course of your observations or inquiries they should appear to need any aid within the limits of our constitutional powers, your sense of their importance is a sufficient assurance they will occupy your attention. We cannot, indeed, but all feel an anxious solicitude for the difficulties under which our carrying trade will soon be placed. How far it can be relieved, otherwise than by time, is a subject of important consideration.

The judiciary system of the United States, and especially that portion of it recently erected, will of course present itself to the contemplation of Congress; and that they may be able to judge of the proportion which the institution bears to the business it has to perform, I have caused to be procured from the several States, and now lay before Congress, an exact statement of all the causes decided since the first establishment of the courts, and of those which were depending when additional courts and judges were brought into their aid.

And while on the judiciary organization, it will be worthy your consideration, whether the protection of the inestimable institution of juries has been extended to all the cases involving the security of our persons and property. Their impartial selection also being essential to their value, we ought further to consider whether that is sufficiently secured in those States where they are named by a marshal depending on executive will, or designated by the court or by officers dependent on them.

I cannot omit recommending a revisal of the laws on the subject of naturalization. Considering the ordinary chances of human life, a denial of citizenship under a residence of fourteen years is a denial to a great proportion of those who ask it, and controls a policy pursued from their first settlement by many of these States, and still believed of consequence to their prosperity. And shall we refuse the unhappy fugitives from distress that hospitality which the savages of the wilderness extended to our fathers arriving in this land? Shall oppressed humanity find no asylum on this globe? The constitution, indeed, has wisely provided that, for admission to certain offices of important trust, a residence shall be required sufficient to develop character and design. But might not the general character and capabilities of a citizen be safely communicated to every one manifesting a bona fide purpose of embarking his life and fortunes

permanently with us? with restrictions, perhaps, to guard against the fraudulent usurpation of our flag; an abuse which brings so much embarrassment and loss on the genuine citizen, and so much danger to the nation of being involved in war, that no endeavor should be spared to detect and suppress it.

These, fellow citizens, are the matters respecting the state of the nation, which I have thought of importance to be submitted to your consideration at this time. Some others of less moment, or not yet ready for communication, will be the subject of separate messages. I am happy in this opportunity of committing the arduous affairs of our government to the collected wisdom of the Union. Nothing shall be wanting on my part to inform, as far as in my power, the legislative judgment, nor to carry that judgment into faithful execution. The prudence and temperance of your discussions will promote, within your own walls, that conciliation which so much befriends rational conclusion; and by its example will encourage among our constituents that progress of opinion which is tending to unite them in object and in will. That all should be satisfied with any one order of things is not to be expected, but I indulge the pleasing persuasion that the great body of our citizens will cordially concur in honest and disinterested efforts, which have for their object to preserve the general and State governments in their constitutional form and equilibrium; to maintain peace abroad, and order and obedience to the laws at home; to establish principles and practices of administration favorable to the security of liberty and property, and to reduce expenses to what is necessary for the useful purposes of government.

**Messrs. Nehemiah Dodge, Ephraim
Robbins, and Stephen S. Nelson, A
Committee of the Danbury Baptist
Association, in the State of Connecticut.
Washington, January 1, 1802**

Gentlemen: —The affectionate sentiments of esteem and approbation which you are so good as to express towards me, on behalf of the Danbury Baptist Association, give me the highest satisfaction. My duties dictate a faithful and zealous pursuit of the interests of my constituents, and in proportion as they are persuaded of my fidelity to those duties, the discharge of them becomes more and more pleasing.

Believing with you that religion is a matter which lies solely between man and his God, that he owes account to none other for his faith or his worship, that the legislative powers of government reach actions only, and not opinions, I contemplate with sovereign reverence that act of the whole American people which declared that their legislature should “make no law respecting an establishment of religion, or prohibiting the free exercise thereof,” thus building a wall of separation between Church and State. Adhering to this expression of the supreme will of the nation in behalf of the rights of conscience, I shall see with sincere satisfaction the progress of those sentiments which tend to restore to man all his natural rights, convinced he has no natural right in opposition to his social duties.

I reciprocate your kind prayers for the protection and blessing of the common Father and Creator of man, and tender you for yourselves and your religious association, assurances of my high respect and esteem.

Washington, January 7, 1802

Brothers and friends of the Miamis, Powtewatamies, and Weeauks: —

I receive with great satisfaction the visit you have been so kind as to make us at this place, and I thank the Great Spirit who has conducted you to us in health and safety. It is well that friends should sometimes meet, open their minds mutually, and renew the chain of affection. Made by the same Great Spirit, and living in the same land with our brothers, the red men, we consider ourselves as of the same family; we wish to live with them as one people, and to cherish their interests as our own. The evils which of necessity encompass the life of man are sufficiently numerous. Why should we add to them by voluntarily distressing and destroying one another? Peace, brothers, is better than war. In a long and bloody war, we lose many friends, and gain nothing. Let us then live in peace and friendship together, doing to each other all the good we can. The wise and good on both sides desire this, and we must take care that the foolish and wicked among us shall not prevent it. On our part, we shall endeavor in all things to be just and generous towards you, and to aid you in meeting those difficulties which a change of circumstances is bringing on. We shall, with great pleasure, see your people become disposed to cultivate the earth, to raise herds of the useful animals, and to spin and weave, for their food and clothing. These resources are certain; they will never disappoint you: while those of hunting may fail, and expose your women and children to the miseries of hunger and cold. We will with pleasure furnish you with implements for the most necessary arts, and with persons who may instruct you how to make and use them.

Second Annual Message. December 15,

1802

....

To cultivate peace and maintain commerce and navigation in all their lawful enterprises; to foster our fisheries and nurseries of navigation and for the nurture of man, and protect the manufactures adapted to our circumstances; to preserve the faith of the nation by an exact discharge of its debts and contracts, expend the public money with the same care and economy we would practise with our own, and impose on our citizens no unnecessary burden; to keep in all things within the pale of our constitutional powers, and cherish the federal union as the only rock of safety—these, fellow citizens, are the landmarks by which we are to guide ourselves in all our proceedings. By continuing to make these our rule of action, we shall endear to our countrymen the true principles of their constitution, and promote a union of sentiment and of action equally auspicious to their happiness and safety. On my part, you may count on a cordial concurrence in every measure for the public good, and on all the information I possess which may enable you to discharge to advantage the high functions with which you are invested by your country.

Third Annual Message. —October 17,

1803

To the Senate and House of Representatives of the United States:

—

In calling you together, fellow citizens, at an earlier day than was contemplated by the act of the last session of Congress, I have not been insensible to the personal inconveniences necessarily resulting from an unexpected change in your arrangements. But matters of great public concernment have rendered this call necessary, and the interest you feel in these will supersede in your minds all private considerations.

Congress witnessed, at their last session, the extraordinary agitation produced in the public mind by the suspension of our right of deposit at the port of New Orleans, no assignment of another place having been made according to treaty. They were sensible that the continuance of that privation would be more injurious to our nation than any consequences which could flow from any mode of redress, but reposing just confidence in the good faith of the government whose officer had committed the wrong, friendly and reasonable representations were resorted to, and the right of deposit was restored.

Previous, however, to this period, we had not been unaware of the danger to which our peace would be perpetually exposed while so important a key to the commerce of the western country remained under foreign power. Difficulties, too, were presenting themselves as to the navigation of other streams, which, arising within our territories, pass through those adjacent. Propositions had, therefore, been authorized for obtaining, on fair conditions, the sovereignty of New Orleans, and of other possessions in that quarter interesting to

our quiet, to such extent as was deemed practicable; and the provisional appropriation of two millions of dollars, to be applied and accounted for by the president of the United States, intended as part of the price, was considered as conveying the sanction of Congress to the acquisition proposed. The enlightened Government of France saw, with just discernment, the importance to both nations of such liberal arrangements as might best and permanently promote the peace, friendship, and interests of both; and the property and sovereignty of all Louisiana, which had been restored to them, have on certain conditions been transferred to the United States by instruments bearing date the 30th of April last. When these shall have received the constitutional sanction of the senate, they will without delay be communicated to the representatives also, for the exercise of their functions, as to those conditions which are within the powers vested by the constitution in Congress. While the property and sovereignty of the Mississippi and its waters secure an independent outlet for the produce of the western States, and an uncontrolled navigation through their whole course, free from collision with other powers and the dangers to our peace from that source, the fertility of the country, its climate and extent, promise in due season important aids to our treasury, an ample provision for our posterity, and a widespread field for the blessings of freedom and equal laws.

With the wisdom of Congress it will rest to take those ulterior measures which may be necessary for the immediate occupation and temporary government of the country; for its incorporation into our Union; for rendering the change of government a blessing to our newly-adopted brethren; for securing to them the rights of conscience and of property; for confirming to the Indian inhabitants their occupancy and self-government, establishing friendly and commercial relations with them, and for ascertaining the geography of the country acquired. Such materials for your information, relative to its affairs in general, as the short space of time has permitted me to collect, will be

laid before you when the subject shall be in a state for your consideration.

Another important acquisition of territory has also been made since the last session of Congress. The friendly tribe of Kaskaskia Indians with which we have never had a difference, reduced by the wars and wants of savage life to a few individuals unable to defend themselves against the neighboring tribes, has transferred its country to the United States, reserving only for its members what is sufficient to maintain them in an agricultural way. The considerations stipulated are, that we shall extend to them our patronage and protection, and give them certain annual aids in money, in implements of agriculture, and other articles of their choice. This country, among the most fertile within our limits, extending along the Mississippi from the mouth of the Illinois to and up the Ohio, though not so necessary as a barrier since the acquisition of the other bank, may yet be well worthy of being laid open to immediate settlement, as its inhabitants may descend with rapidity in support of the lower country should future circumstances expose that to foreign enterprize. As the stipulations in this treaty also involve matters within the competence of both houses only, it will be laid before Congress as soon as the senate shall have advised its ratification.

With many other Indian tribes, improvements in agriculture and household manufacture are advancing, and with all our peace and friendship are established on grounds much firmer than heretofore. The measure adopted of establishing trading houses among them, and of furnishing them necessaries in exchange for their commodities, at such moderated prices as leave no gain, but cover us from loss, has the most conciliatory and useful effect upon them, and is that which will best secure their peace and good will....

Should the acquisition of Louisiana be constitutionally confirmed and carried into effect, a sum of nearly thirteen millions of dollars will

then be added to our public debt, most of which is payable after fifteen years; before which term the present existing debts will all be discharged by the established operation of the sinking fund. When we contemplate the ordinary annual augmentation of imposts from increasing population and wealth, the augmentation of the same revenue by its extension to the new acquisition, and the economies which may still be introduced into our public expenditures, I cannot but hope that Congress in reviewing their resources will find means to meet the intermediate interests of this additional debt without recurring to new taxes, and applying to this object only the ordinary progression of our revenue. Its extraordinary increase in times of foreign war will be the proper and sufficient fund for any measures of safety or precaution which that state of things may render necessary in our neutral position....

We have seen with sincere concern the flames of war lighted up again in Europe, and nations with which we have the most friendly and useful relations engaged in mutual destruction. While we regret the miseries in which we see others involved, let us bow with gratitude to that kind Providence which, inspiring with wisdom and moderation our late legislative councils while placed under the urgency of the greatest wrongs, guarded us from hastily entering into the sanguinary contest, and left us only to look on and to pity its ravages. These will be heaviest on those immediately engaged. Yet the nations pursuing peace will not be exempt from all evil. In the course of this conflict, let it be our endeavor, as it is our interest and desire, to cultivate the friendship of the belligerent nations by every act of justice and of incessant kindness; to receive their armed vessels with hospitality from the distresses of the sea, but to administer the means of annoyance to none; to establish in our harbors such a police as may maintain law and order; to restrain our citizens from embarking individually in a war in which their country takes no part; to punish severely those persons, citizen or alien, who shall usurp the cover of

our flag for vessels not entitled to it, infecting thereby with suspicion those of real Americans, and committing us into controversies for the redress of wrongs not our own; to exact from every nation the observance, toward our vessels and citizens, of those principles and practices which all civilized people acknowledge; to merit the character of a just nation, and maintain that of an independent one, preferring every consequence to insult and habitual wrong.... Separated by a wide ocean from the nations of Europe, and from the political interests which entangle them together, with productions and wants which render our commerce and friendship useful to them and theirs to us, it cannot be the interest of any to assail us, nor ours to disturb them. We should be most unwise, indeed, were we to cast away the singular blessings of the position in which nature has placed us, the opportunity she has endowed us with of pursuing, at a distance from foreign contentions, the paths of industry, peace, and happiness; of cultivating general friendship, and of bringing collisions of interest to the umpirage of reason rather than of force....

Fourth Annual Message. —November 8, 1804

....

While noticing the irregularities committed on the ocean by others, those on our own part should not be omitted nor left unprovided for. Complaints have, been received that persons residing within the United States have taken on themselves to arm merchant vessels, and to force a commerce into certain ports and countries in defiance of the laws of those countries. That individuals should undertake to wage private war, independently of the authority of their country, cannot be permitted in a well-ordered society. Its tendency to produce aggression on the laws and rights of other nations, and to endanger the peace of our own is so obvious, that I doubt not you will adopt measures for restraining it effectually in future....

Second Inaugural Address. —March 4, 1805

Proceeding, fellow citizens, to that qualification which the constitution requires, before my entrance on the charge again conferred upon me, it is my duty to express the deep sense I entertain of this new proof of confidence from my fellow citizens at large, and the zeal with which it inspires me, so to conduct myself as may best satisfy their just expectations.

On taking this station on a former occasion, I declared the principles on which I believed it my duty to administer the affairs of our commonwealth. My conscience tells me that I have, on every occasion, acted up to that declaration, according to its obvious import, and to the understanding of every candid mind.

In the transaction of your foreign affairs, we have endeavored to cultivate the friendship of all nations, and especially of those with which we have the most important relations. We have done them justice on all occasions, favored where favor was lawful and cherished mutual interests and intercourse on fair and equal terms. We are firmly convinced, and we act on that conviction, that with nations as with individuals, our interests soundly calculated, will ever be found inseparable from our moral duties; and history bears witness to the fact, that a just nation is taken on its word, when recourse is had to armaments and wars to bridle others.

At home, fellow citizens, you best know whether we have done well or ill. The suppression of unnecessary offices, of useless establishments and expenses, enabled us to discontinue our internal taxes. These covering our land with officers, and opening our doors to their intrusions, had already begun that process of domiciliary vexation which, once entered, is scarcely to be restrained from

reaching successively every article of produce and property. If among these taxes some minor ones fell which had not been inconvenient, it was because their amount would not have paid the officers who collected them, and because, if they had any merit, the state authorities might adopt them, instead of others less approved.

The remaining revenue on the consumption of foreign articles, is paid cheerfully by those who can afford to add foreign luxuries to domestic comforts, being collected on our seaboard and frontiers only, and incorporated with the transactions of our mercantile citizens, it may be the pleasure and pride of an American to ask, what farmer, what mechanic, what laborer, ever sees a taxgatherer of the United States? These contributions enable us to support the current expenses of the government, to fulfill contracts with foreign nations, to extinguish the native right of soil within our limits, to extend those limits, and to apply such a surplus to our public debts, as places at a short day their final redemption, and that redemption once effected, the revenue thereby liberated may, by a just repartition among the states, and a corresponding amendment of the constitution, be applied, in time of peace, to rivers, canals, roads, arts, manufactures, education, and other great objects within each state. In time of war, if injustice, by ourselves or others, must sometimes produce war, increased as the same revenue will be increased by population and consumption, and aided by other resources reserved for that crisis, it may meet within the year all the expenses of the year, without encroaching on the rights of future generations, by burdening them with the debts of the past. War will then be but a suspension of useful works, and a return to a state of peace, a return to the progress of improvement.

I have said, fellow citizens, that the income reserved had enabled us to extend our limits; but that extension may possibly pay for itself before we are called on, and in the meantime, may keep down the

accruing interest; in all events, it will repay the advances we have made. I know that the acquisition of Louisiana has been disapproved by some, from a candid apprehension that the enlargement of our territory would endanger its union. But who can limit the extent to which the federative principle may operate effectively? The larger our association, the less will it be shaken by local passions; and in any view, is it not better that the opposite bank of the Mississippi should be settled by our own brethren and children, than by strangers of another family? With which shall we be most likely to live in harmony and friendly intercourse?

In matters of religion, I have considered that its free exercise is placed by the constitution independent of the powers of the general government. I have therefore undertaken, on no occasion, to prescribe the religious exercises suited to it; but have left them, as the constitution found them, under the direction and discipline of State or Church authorities acknowledged by the several religious societies.

The aboriginal inhabitants of these countries I have regarded with the commiseration their history inspires. Endowed with the faculties and the rights of men, breathing an ardent love of liberty and independence, and occupying a country which left them no desire but to be undisturbed, the stream of overflowing population from other regions directed itself on these shores; without power to divert, or habits to contend against, they have been overwhelmed by the current, or driven before it; now reduced within limits too narrow for the hunter's state, humanity enjoins us to teach them agriculture and the domestic arts; to encourage them to that industry which alone can enable them to maintain their place in existence, and to prepare them in time for that state of society, which to bodily comforts adds the improvement of the mind and morals. We have therefore liberally furnished them with the implements of husbandry and household use; we have placed among them instructors in the arts of first necessity;

and they are covered with the aegis of the law against aggressors from among ourselves.

But the endeavors to enlighten them on the fate which awaits their present course of life, to induce them to exercise their reason, follow its dictates, and change their pursuits with the change of circumstances, have powerful obstacles to encounter; they are combated by the habits of their bodies, prejudice of their minds, ignorance, pride, and the influence of interested and crafty individuals among them, who feel themselves something in the present order of things, and fear to become nothing in any other. These persons inculcate a sanctimonious reverence for the customs of their ancestors; that whatsoever they did, must be done through all time; that reason is a false guide, and to advance under its counsel, in their physical, moral or political condition, is perilous innovation; that their duty is to remain as their Creator made them, ignorance being safety, and knowledge full of danger; in short, my friends, among them is seen the action and counteraction of good sense and bigotry; they, too, have their anti-philosophers, who find an interest in keeping things in their present state, who dread reformation, and exert all their faculties to maintain the ascendancy of habit over the duty of improving our reason, and obeying its mandates.

In giving these outlines, I do not mean, fellow citizens, to arrogate to myself the merit of the measures; that is due, in the first place, to the reflecting character of our citizens at large, who, by the weight of public opinion, influence and strengthen the public measures; it is due to the sound discretion with which they select from among themselves those to whom they confide the legislative duties; it is due to the zeal and wisdom of the characters thus selected, who lay the foundations of public happiness in wholesome laws, the execution of which alone remains for others; and it is due to the able and faithful auxiliaries, whose patriotism has associated with me in the

executive functions.

During this course of administration, and in order to disturb it, the artillery of the press has been levelled against us, charged with whatsoever its licentiousness could devise or dare, These abuses of an institution so important to freedom and science, are deeply to be regretted, inasmuch as they tend to lessen its usefulness, and to sap its safety; they might, indeed, have been corrected by the wholesome punishments reserved and provided by the laws of the several States against falsehood and defamation; but public duties more urgent press on the time of public servants, and the offenders have therefore been left to find their punishment in the public indignation.

Nor was it uninteresting to the world, that an experiment should be fairly and fully made, whether freedom of discussion, unaided by power, is not sufficient for the propagation and protection of truth—whether a government, conducting itself in the true spirit of its constitution, with zeal and purity, and doing no act which it would be unwilling the whole world should witness, can be written down by falsehood and defamation. The experiment has been tried; you have witnessed the scene; our fellow citizens have looked on, cool and collected; they saw the latent source from which these outrages proceeded; they gathered around their public functionaries, and when the constitution called them to the decision by suffrage, they pronounced their verdict, honorable to those who had served them, and consolatory to the friend of man, who believes he may be intrusted with his own affairs.

No inference is here intended, that the laws, provided by the State against false and defamatory publications, should not be enforced; he who has time, renders a service to public morals and public tranquillity, in reforming these abuses by the salutary coercions of the law; but the experiment is noted, to prove that, since truth and reason have maintained their ground against false opinions in league

with false facts, the press, confined to truth, needs no other legal restraint; the public judgment will correct false reasonings and opinions, on a full hearing of all parties; and no other definite line can be drawn between the inestimable liberty of the press and its demoralizing licentiousness. If there be still improprieties which this rule would not restrain, its supplement must be sought in the censorship of public opinion.

Contemplating the union of sentiment now manifested so generally, as auguring harmony and happiness to our future course, I offer to our country sincere congratulations. With those, too, not yet rallied to the same point, the disposition to do so is gaining strength; facts are piercing through the veil drawn over them; and our doubting brethren will at length see, that the mass of their fellow citizens, with whom they cannot yet resolve to act, as to principles and measures, think as they think, and desire what they desire; that our wish, as well as theirs, is, that the public efforts may be directed honestly to the public good, that peace be cultivated, civil and religious liberty unassailed, law and order preserved, equality of rights maintained, and that state of property, equal or unequal, which results to every man from his own industry, or that of his fathers. When satisfied of these views, it is not in human nature that they should not approve and support them; in the meantime, let us cherish them with patient affection; let us do them justice, and more than justice, in all competitions of interest; and we need not doubt that truth, reason, and their own interests, will at length prevail, will gather them into the fold of their country, and will complete their entire union of opinion, which gives to a nation the blessing of harmony, and the benefit of all its strength.

I shall now enter on the duties to which my fellow citizens have again called me, and shall proceed in the spirit of those principles which they have approved. I fear not that any motives of interest may

lead me astray; I am sensible of no passion which could seduce me knowingly from the path of justice; but the weakness of human nature, and the limits of my own understanding, will produce errors of judgment sometimes injurious to your interests. I shall need, therefore, all the indulgence I have heretofore experienced—the want of it will certainly not lessen with increasing years. I shall need, too, the favor of that Being in whose hands we are, who led our forefathers, as Israel of old, from their native land, and planted them in a country flowing with all the necessities and comforts of life; who has covered our infancy with his providence, and our riper years with his wisdom and power; and to whose goodness I ask you to join with me in supplications, that he will so enlighten the minds of your servants, guide their councils, and prosper their measures, that whatsoever they do, shall result in your good, and shall secure to you the peace, friendship, and approbation of all nations.

To the General Assembly of North Carolina. Washington, January 10, 1808

The wrongs our country has suffered, fellow citizens, by violations of those moral rules which the Author of our nature has implanted in man as the law of his nature, to govern him in his associated, as well as individual character, have been such as justly to excite the sensibilities you express, and a deep abhorrence at indications threatening a substitution of power for right in the intercourse between nations. Not less worthy of your indignation have been the machinations of parricides who have endeavored to bring into danger the union of these States, and to subvert, for the purposes of inordinate ambition, a government founded in the will of its citizens, and directed to no object but their happiness.

I learn, with the liveliest sentiments of gratitude and respect, your approbation of my conduct, in the various charges which my country has been pleased to confide to me at different times; and especially that the administration of our public affairs, since my accession to the chief magistracy, has been so far satisfactory, that my continuance in that office after its present term, would be acceptable to you. But, that I should lay down my charge at a proper period, is as much a duty as to have borne it faithfully. If some termination to the services of the chief magistrate be not fixed by the Constitution, or supplied by practice, his office, nominally for years, will in fact become for life; and history shows how easily that degenerates into an inheritance. Believing that a representative government, responsible at short periods of election, is that which produces the greatest sum of happiness to mankind, I feel it a duty to do no act which shall essentially impair that principle; and I should unwillingly be the person who, disregarding the sound precedent set by an illustrious predecessor, should furnish the first example of prolongation beyond

the second term of office.

Truth also obliges me to add, that I am sensible of that decline which advancing years bring on; and feeling their physical, I ought not to doubt their mental effect. Happy if I am the first to perceive and obey this admonition of nature, and to solicit a retreat from cares too great for the wearied faculties of age.

Declining a re-election on grounds which cannot but be approved, it will be the great comfort of my future days, and the satisfactory reward of a service of forty years, to carry into retirement such testimonies as you have been pleased to give, of the approbation and good will of my fellow citizens generally. And I supplicate the Being in whose hands we all are, to preserve our county in freedom and independence, and to bestow on yourselves the blessings of His favor.

**To the Society of Tammany, or Columbian
Order, No.1, of the City of New York.
Washington, February 29, 1808**

I have received your address, fellow citizens, and, thankful for the expressions so personally gratifying to myself, I contemplate with high satisfaction the ardent spirit it breathes of love to our country, and of devotion to its liberty and independence. The crisis in which it is placed, cannot but be unwelcome to those who love peace, yet spurn at a tame submission to wrong. So fortunately remote from the theatre of European contests, and carefully avoiding to implicate ourselves in them, we had a right to hope for an exemption from the calamities which have afflicted the contending nations, and to be permitted unoffendingly to pursue paths of industry and peace.

But the ocean, which, like the air, is the common birthright of mankind, is arbitrarily wrested from us, and maxims consecrated by time, by usage, and by an universal sense of right, are trampled on by superior force. To give time for this demoralizing tempest to pass over, one measure only remained which might cover our beloved country from its overwhelming fury: an appeal to the deliberate understanding of our fellow citizens in a cessation of all intercourse with the belligerent nations, until it can be resumed under the protection of a returning sense of the moral obligations which constitute a law for nations as well as individuals. There can be no question, in a mind truly American, whether it is best to send our citizens and property into certain captivity, and then wage war for their recovery, or to keep them at home, and to turn seriously to that policy which plants the manufacturer and the husbandman side by side, and establishes at the door of every one that exchange of mutual labors and comforts, which we have hitherto sought in distant regions, and under perpetual risks of broils with them.

Eighth Annual Message. —November 8, 1808

....

Considering the extraordinary character of the times in which we live, our attention should unremittingly be fixed on the safety of our country. For a people who are free, and who mean to remain so, a well-organized and armed militia is their best security. It is, therefore, incumbent on us, at every meeting, to revise the condition of the militia, and to ask ourselves if it is prepared to repel a powerful enemy at every point of our territories exposed to invasion. Some of the States have paid a laudable attention to this object; but every degree of neglect is to be found among others. Congress alone have power to produce a uniform state of preparation in this great organ of defence; the interests which they so deeply feel in their own and their country's security will present this as among the most important objects of their deliberation....

The suspension of our foreign commerce, produced by the injustice of the belligerent powers, and the consequent losses and sacrifices of our citizens, are subjects of just concern. The situation into which we have thus been forced, has impelled us to apply a portion of our industry and capital to internal manufactures and improvements. The extent of this conversion is daily increasing, and little doubt remains that the establishments formed and forming will under the auspices of cheaper materials and subsistence, the freedom of labor from taxation with us, and of protecting duties and prohibitions—become permanent....

Availing myself of this the last occasion which will occur of addressing the two houses of the legislature at their meeting, I cannot omit the expression of my sincere gratitude for the repeated proofs of

confidence manifested to me by themselves and their predecessors since my call to the administration, and the many indulgences experienced at their hands. The same grateful acknowledgments are due to my fellow citizens generally, whose support has been my great encouragement under all embarrassments. In the transaction of their business I cannot have escaped error. It is incident to our imperfect nature. But I may say with truth, my errors have been of the understanding, not of intention; and that the advancement of their rights and interests has been the constant motive for every measure. On these considerations I solicit their indulgence. Looking forward with anxiety to their future destinies, I trust that, in their steady character unshaken by difficulties, in their love of liberty, obedience to law, and support of the public authorities, I see a sure guaranty of the permanence of our republic; and retiring from the charge of their affairs, I carry with me the consolation of a firm persuasion that Heaven has in store for our beloved country long ages to come of prosperity and happiness.

[1] On further inquiry, I find two instances of dissolutions before the Parliament would, of itself, have been at an end: viz., the Parliament called to meet August 24, 1698, was dissolved by King William, December 19, 1700, and a new one called, to meet February 6, 1701, which was also dissolved, November 11, 1701, and a new one met December 30, 1701. [Jefferson's note.]

Letters

TO JOHN HARVIE

Shadwell, Jan. 14, 1760

SIR, —I was at Colo. Peter Randolph's about a Fortnight ago, & my Schooling falling into Discourse, he said he thought it would be to my Advantage to go to the College, & was desirous I should go, as indeed I am myself for several Reasons. In the first place as long as I stay at the Mountains the loss of one fourth of my Time is inevitable, by Company's coming here & detaining me from School. And likewise my Absence will in a great measure put a Stop to so much Company, & by that Means lessen the Expences of the Estate in House-Keeping. And on the other Hand by going to the College I shall get a more universal Acquaintance, which may hereafter be serviceable to me; & I suppose I can pursue my studies in the Greek & Latin as well there as here, & likewise learn something of the Mathematics. I shall be glad of your opinion.

TO JOHN PAGE

Fairfield, December 25, 1762

DEAR PAGE, —This very day, to others the day of greatest mirth and jollity, sees me overwhelmed with more and greater misfortunes than have befallen a descendant of Adam for these thousand years past, I am sure; and perhaps, after excepting Job, since the creation of the world. I think his misfortunes were somewhat greater than mine; for, although we may be pretty nearly on a level in other respects, yet, I thank my God, I have the advantage of brother Job in this, that Satan has not as yet put forth his hand to load me with bodily afflictions. You must know, dear Page, that I am now in a house surrounded with enemies, who take counsel together against my soul; and when I lay me down to rest, they say among themselves, come let us destroy him. I am sure if there is such a thing as a Devil in this world, he must have been here last night, and have had some hand in contriving what happened to me. Do you think the cursed rats (at his instigation, I suppose) did not eat up my pocket-book, which was in my pocket, within a foot of my head? And not contented with plenty for the present, they carried away my jemmy-worked silk garters, and half a dozen new minuets I had just got, to serve, I suppose, as provision for the winter. But of this I should not have accused the Devil (because, you know rats will be rats, and hunger, without the addition of his instigations, might have urged them to do this), if something worse, and from a different quarter, had not happened. You know it rained last night, or if you do not know it, I am sure I do. When I went to bed, I laid my watch in the usual place, and going to take her up after I arose this morning, I found her in the same place, it's true, but Quantum mutatus ab illo!^[1] all afloat in water, let in at a leak in the roof of the house, and as silent and still as the rats that had

eaten my pocket-book. Now, you know, if chance had had anything to do in this matter, there were a thousand other spots where it might have chanced to leak as well as at this one, which was perpendicularly over my watch. But I'll tell you, it's my opinion that the Devil came and bored the hole over it on purpose. Well, as I was saying, my poor watch had lost her speech. I should not have cared much for this, but something worse attended it; the subtle particles of the water with which the case was filled, had, by their penetration, so overcome the cohesion of the particles of the paper, of which my dear picture and watch-paper were composed, that, in attempting to take them out to dry them, good God! *Mens horret referre!*^[2] My cursed fingers gave them such a rent, as I fear I never shall get over. This, cried I, was the last stroke Satan had in reserve for me; he knew I cared not for anything else he could do to me, and was determined to try his last most fatal expedient. "*Multis fortune vulneribus percussus, huic uni me imperem sensi, et penitus succubui!*"^[3] I would have cried bitterly, but I thought it beneath the dignity of a man... However, whatever misfortunes may attend the picture or lover, my hearty prayers shall be, that all the health and happiness which Heaven can send may be the portion of the original, and that so much goodness may ever meet with what may be most agreeable in this world, as I am sure it must be in the next. And now, although the picture be defaced, there is so lively an image of her imprinted in my mind, that I shall think of her too often, I fear, for my peace of mind; and too often, I am sure, to get through old Coke this winter; for God knows I have not seen him since I packed him up in my trunk in Williamsburg. Well, Page, I do wish the Devil had old Coke, for I am sure I never was so tired of an old dull scoundrel in my life. What! are there so few inquietudes tacked to this momentary life of ours, that we must need be loading ourselves with a thousand more? Or, as brother Job says (who, by-the-bye, I think began to whine a little under his afflictions), "Are not my days few? Cease then, that I may take comfort a little before I go whence I shall not return, even to the land of darkness, and the shadow of

death." But the old fellows say we must read to gain knowledge, and gain knowledge to make us happy and admired. Mere jargon! Is there any such thing as happiness in this world? No. And as for admiration, I am sure the man who powders most, perfumes most, embroiders most, and talks most nonsense, is most admired. Though to be candid, there are some who have too much good sense to esteem such monkey-like animals as these, in whose formation, as the saying is, the tailors and barbers go halves with God Almighty; and since these are the only persons whose esteem is worth a wish, I do not know but that, upon the whole, the advice of these old fellows may be worth following.

You cannot conceive the satisfaction it would give me to have a letter from you. Write me very circumstantially everything which happened at the wedding. Was she there? because, if she was, I ought to have been at the Devil for not being there too. If there is any news stirring in town or country, such as deaths, courtships, or marriages, in the circle of my acquaintance, let me know it. Remember me affectionately to all the young ladies of my acquaintance, particularly the Miss Burwells, and Miss Potters, and tell them that though that heavy earthly part of me, my body, be absent, the better half of me, my soul, is ever with them, and that my best wishes shall ever attend them. Tell Miss Alice Corbin that I verily believe the rats knew I was to win a pair of garters from her, or they never would have been so cruel as to carry mine away. This very consideration makes me so sure of the bet, that I shall ask everybody I see from that part of the world what pretty gentleman is making his addresses to her. I would fain ask the favor of Miss Becca Burwell to give me another watch-paper of her own cutting, which I should esteem much more, though it were a plain round one, than the nicest in the world cut by other hands; however, I am afraid she would think this presumption, after my suffering the other to get spoiled. If you think you can excuse me to

her for this, I should be glad if you would ask her. Tell Miss Sukey Potter that I heard, just before I came out of town, that she was offended with me about something, what it is I do not know; but this I know, that I never was guilty of the least disrespect to her in my life, either in word or deed; as far from it as it has been possible for one to be. I suppose when we meet next, she will be endeavoring to repay an imaginary affront with a real one; but she may save herself the trouble, for nothing that she can say or do to me shall ever lessen her in my esteem, and I am determined always to look upon her as the same honest-hearted, goodhumored, agreeable lady I ever did. Tell—tell—in short, tell them all ten thousand things more than either you or I can now or ever shall think of as long as we live.

My mind has been so taken up with thinking of my acquaintances, that, till this moment, I almost imagined myself in Williamsburg, talking to you in our old unreserved way; and never observed, till I turned over the leaf, to what an immoderate size I had swelled my letter; however, that I may not tire your patience by further additions, I will make but this one more, that I am sincerely and affectionately,

Dear Page, your friend and servant.

P. S. I am now within an easy day's ride of Shadwell, whither I shall proceed in two or three days.

TO JOHN PAGE

Shadwell, July 15th, 1763

.... The most fortunate of us, in our journey through life, frequently meet with calamities and misfortunes which may greatly afflict us; and, to fortify our minds against the attacks of these calamities and misfortunes, should be one of the principal studies and endeavors of our lives. The only method of doing this is to assume a perfect resignation to the Divine will, to consider that whatever does happen, must happen; and that, by our uneasiness, we cannot prevent the blow before it does fall, but we may add to its force after it has fallen. These considerations, and others such as these, may enable us in some measure to surmount the difficulties thrown in our way; to bear up with a tolerable degree of patience under this burthen of life; and to proceed with a pious and unshaken resignation, till we arrive at our journey's end, when we may deliver up our trust into the hands of him who gave it, and receive such reward as to him shall seem proportioned to our merit. Such, dear Page, will be the language of the man who considers his situation in this life, and such should be the language of every man who would wish to render that situation as easy as the nature of it will admit. Few things will disturb him at all: nothing will disturb him much....

TO JOHN PAGE

Williamsburg, October 7, 1763

DEAR PAGE, —In the most melancholy fit that ever any poor soul was, I sit down to write to you. Last night, as merry as agreeable company and dancing with Belinda in the Apollo could make me, I never could have thought the succeeding sun would have seen me so wretched as I now am! I was prepared to say a great deal: I had dressed up, in my own mind, such thoughts as occurred to me, in as moving a language as I knew how, and expected to have performed in a tolerably creditable manner. But, good God! When I had an opportunity of venting them, a few broken sentences, uttered in great disorder, and interrupted with pauses of uncommon length, were the too visible marks of my strange confusion! The whole confab I will tell you, word for word, if I can, when I see you, which God send may be soon. Affairs at W. and M. are in the greatest confusion. Walker, M'Clurg and Wat Jones are expelled pro tempore, or, as Horrox softens it, rusticated for a month. Lewis Burwell, Warner Lewis, and one Thompson, have fled to escape flagellation. I should have excepted Warner Lewis, who came off of his own accord. Jack Walker leaves town on Monday. The court is now at hand, which I must attend constantly, so that unless you come to town, there is little probability of my meeting with you anywhere else. For God sake come. I am, dear Page, your sincere friend.

TO ROBERT SKIPWITH

Monticello, Aug. 3, 1771

.... A little attention however to the nature of the human mind evinces that the entertainments of fiction are useful as well as pleasant. That they are pleasant when well written every person feels who reads. But wherein is its utility asks the reverend sage, big with the notion that nothing can be useful but the learned lumber of Greek and Roman reading with which his head is stored?

I answer, everything is useful which contributes to fix in the principles and practices of virtue. When any original act of charity or of gratitude, for instance, is presented either to our sight or imagination, we are deeply impressed with its beauty and feel a strong desire in ourselves of doing charitable and grateful acts also. On the contrary when we see or read of any atrocious deed, we are disgusted with its deformity, and conceive an abhorrence of vice. Now every emotion of this kind is an exercise of our virtuous dispositions, and dispositions of the mind, like limbs of the body acquire strength by exercise. But exercise produces habit, and in the instance of which we speak the exercise being of the moral feelings produces a habit of thinking and acting virtuously. We never reflect whether the story we read be truth or fiction. If the painting be lively, and a tolerable picture of nature, we are thrown into a reverie, from which if we awaken it is the fault of the writer. I appeal to every reader of feeling and sentiment whether the fictitious murder of Duncan by Macbeth in Shakespeare does not excite in him as great a horror of villainy, as the real one of Henry IV, by Ravaillac as related by Davila? And whether the fidelity of Nelson and generosity of Blandford in Marmontel do not dilate his breast and elevate his sentiments as much as any similar incident which real history can furnish? Does he not in fact feel

himself a better man while reading them, and privately covenant to copy the fair example? We neither know nor care whether Lawrence Sterne really went to France, whether he was there accosted by the Franciscan, at first rebuked him unkindly, and then gave him a peace offering; or whether the whole be not fiction. In either case we equally are sorrowful at the rebuke, and secretly resolve we will never do so: we are pleased with the subsequent atonement, and view with emulation a soul candidly acknowledging its fault and making a just reparation. Considering history as a moral exercise, her lessons would be too infrequent if confined to real life. Of those recorded by historians few incidents have been attended with such circumstances as to excite in any high degree this sympathetic emotion of virtue. We are, therefore, wisely framed to be as warmly interested for a fictitious as for a real personage. The field of imagination is thus laid open to our use and lessons may be formed to illustrate and carry home to the heart every moral rule of life. Thus a lively and lasting sense of filial duty is more effectually impressed on the mind of a son or daughter by reading King Lear, than by all the dry volumes of ethics, and divinity that ever were written. This is my idea of well-written Romance, of Tragedy, Comedy and Epic poetry....

TO DR. WILLIAM SMALL

May 7, 1775

DEAR SIR, —Within this week we have received the unhappy news of an action of considerable magnitude, between the King's troops and our brethren of Boston, in which it is said five hundred of the former, with the Earl of Percy, are slain. That such an action has occurred, is undoubted, though perhaps the circumstances may not have reached us with truth. This accident has cut off our last hope of reconciliation, and a phrensy of revenge seems to have seized all ranks of people. It is a lamentable circumstance, that the only mediatory power, acknowledged by both parties, instead of leading to a reconciliation his divided people, should pursue the incendiary purpose of still blowing up the flames, as we find him constantly doing, in every speech and public declaration. This may, perhaps, be intended to intimidate into acquiescence, but the effect has been most unfortunately otherwise. A little knowledge of human nature, and attention to its ordinary workings, might have foreseen that the spirits of the people here were in a state, in which they were more likely to be provoked, than frightened, by haughty deportment. And to fill up the measure of irritation, a proscription of individuals has been substituted in the room of just trial. Can it be believed, that a grateful people will suffer those to be consigned to execution, whose sole crime has been the developing and asserting their rights? Had the Parliament possessed the power of reflection, they would have avoided a measure as impotent, as it was inflammatory. When I saw Lord Chatham's bill, I entertained high hope that a reconciliation could have been brought about. The difference between his terms, and those offered by our Congress, might have been accommodated, if entered on, by both parties, with a disposition to accommodate. But

the dignity of Parliament, it seems, can brook no opposition to its power. Strange, that a set of men, who have made sale of their virtue to the Minister, should yet talk of retaining dignity! But I am getting into politics, though I sat down only to ask your acceptance of the wine, and express my constant wishes for your happiness.

TO JOHN RANDOLPH, ESQ.

Philadelphia, November 29, 1775

.... This day, certain intelligence has reached us, that our General, Montgomery, is received into Montreal; and we expect, every hour, to be informed that Quebec has opened its arms to Colonel Arnold, who, with eleven hundred men, was sent from Boston up the Kennebec, and down the Chaudiere river to that place. He expected to be there early this month. Montreal acceded to us on the 13th, and Carleton set out, with the shattered remains of his little army, for Quebec, where we hope he will be taken up by Arnold. In a short time, we have reason to hope, the delegates of Canada will join us in Congress, and complete the American union, as far as we wish to have it completed. We hear that one of the British transports has arrived at Boston; the rest are beating off the coast, in very bad weather. You will have heard, before this reaches you, that Lord Dunmore has commenced hostilities in Virginia. That people bore with everything, till he attempted to burn the town of Hampton. They opposed and repelled him, with considerable loss on his side, and none on ours. It has raised our countrymen into a perfect phrensy. It is an immense misfortune, to the whole empire, to have a King of such a disposition at such a time. We are told, and everything proves it true, that he is the bitterest enemy we have. His Minister is able, and that satisfies me that ignorance or wickedness, somewhere, controls him. In an earlier part of this contest, our petitions told him, that from our King there was but one appeal. The admonition was despised, and that appeal forced on us. To undo his empire, he has but one truth more to learn; that, after colonies have drawn the sword, there is but one step more they can take. That step is now pressed upon us, by the measures adopted; as if they were afraid we would not take it. Believe me, dear Sir, there is

not in the British empire a man who more cordially loves a union with Great Britain than I do. But by the God that made me, I will cease to exist before I yield to a connection on such terms as the British Parliament propose; and in this, I think I speak the sentiments of America. We want neither inducement nor power, to declare and assert a separation. It is will, alone, which is wanting, and that is growing apace under the fostering hand of our King. One bloody campaign will probably decide, everlastingly, our future course; and I am sorry to find a bloody campaign is decided on. If our winds and waters should not combine to rescue their shores from slavery, and General Howe's reinforcements should arrive in safety, we have hopes he will be inspirited to come out of Boston and take another drubbing; and we must drub him soundly, before the sceptred tyrant will know we are not mere brutes, to crouch under his hand, and kiss the rod with which he designs to scourge us.

TO FRANCIS EPPES

Philadelphia, July 15th, 1776

.... Admiral Howe is himself arrived at New York, and two or three vessels, supposed to be of his fleet, were coming in. The whole is expected daily.

Washington's numbers are greatly increased, but we do not know them exactly. I imagine he must have from 30 to 35,000 by this time. The enemy the other day ordered two of their men-of-war to hoist anchor and push by our batteries up the Hudson River. Both wind and tide were very fair. They passed all the batteries with ease, and, as far as is known, without receiving material damage; though there was an incessant fire kept up on them. This experiment of theirs, I suppose, is a prelude to the passage of their whole fleet, and seems to indicate an intention of landing above New York. I imagine General Washington, finding he cannot prevent their going up the river, will prepare to amuse them wherever they shall go. Our army from Canada is now at Crown Point, but still one half down with the small pox. You ask about Arnold's behavior at the Cedars. It was this. The scoundrel, Major Butterfield, having surrendered three hundred and ninety men, in a fort with twenty or thirty days' provision, and ammunition enough, to about forty regulars, one hundred Canadians, and five hundred Indians, before he had lost a single man—and Major Sherburne, who was coming to the relief of the fort with one hundred men, having, after bravely engaging the enemy an hour and forty minutes, killing twenty of them and losing twelve of his own, been surrounded by them, and taken prisoners also—General Arnold appeared on the opposite side of the river and prepared to attack them. His numbers I know not, but believe they were about equal to the enemy. Captain Foster, commander of the king's troops, sent over

a flag to him, proposing an exchange of prisoners for as many of the king's in our possession, and, moreover, informed Arnold that if he should attack, the Indians would put every man of the prisoners to death. Arnold refused, called a council of war, and, it being now in the night, it was determined to attack next morning. A second flag came over; he again refused, though in an excruciating situation, as he saw the enemy were in earnest about killing the prisoners. His men, too, began to be importunate for the recovery of their fellow-soldiers. A third flag came, the men grew more clamorous and Arnold, now almost raving with rage and compassion, was obliged to consent to the exchange and six days suspension of hostilities, Foster declaring he had not boats to deliver them in less time. However, he did deliver them so much sooner as that before the six days were expired, himself and party had fled out of all reach. Arnold then retired to Montreal. You have long before this heard of General Thompson's defeat. The truth of that matter has never appeared till lately. You will see it in the public papers. No men on earth ever behaved better than ours did. The enemy behaved dastardly. Colonel Allen (who was in the engagement) assured me this day, that such was the situation of our men, half way up to the thighs in mud for several hours, that five hundred men of spirit must have taken the whole; yet the enemy were repulsed several times, and our people had time to extricate themselves and come off. It is believed the enemy suffered considerably. The above account of Arnold's affair you may rely on, as I was one of a committee appointed to inquire into the whole of that matter, and have it from those who were in the whole transaction, and were taken prisoners.

My sincere affections to Mrs. Eppes, and adieu.

TO [JOHN FABRONI]

Williamsburg, Virginia, June 8th, 1778

.... If there is a gratification, which I envy any people in this world, it is to your country its music. This is the favorite passion of my soul, and fortune has cast my lot in a country where it is in a state of deplorable barbarism. From the line of life in which we conjecture you to be, I have for some time lost the hope of seeing you here. Should the event prove so, I shall ask your assistance in procuring a substitute, who may be a proficient in singing, &, on the Harpsichord. I should be contented to receive such an one two or three years hence; when it is hoped he may come more safely and find here a greater plenty of those useful things which commerce alone can furnish.

The bounds of an American fortune will not admit the indulgence of a domestic band of musicians, yet I have thought that a passion for music might be reconciled with that economy which we are obliged to observe. I retain among my domestic servants a gardener, a weaver, a cabinet-maker, and a stone-cutter, to which I would add a vigneron In a country where, like yours, music is cultivated and practiced by every class of men, I suppose there might be found persons of these trades who could perform on the French horn, clarinet, or hautboy, and bassoon, so that one might have a band of two French horns, two clarinets, two hautboys, and a bassoon, without enlarging their domestic expenses. A certainty of employment for a half dozen years, and at the end of that time, to find them, if they chose, a conveyance to their own country, might induce them to come here on reasonable wages. Without meaning to give you trouble, perhaps it might be practicable for you, in your ordinary intercourse with your people, to find out such men disposed to come to America. Sobriety and good nature would be desirable parts of their characters. If you think such a

plan practicable, and will be so kind as to inform me what will be necessary to be done on my part, I will take care that it shall be done. The necessary expenses, when informed of them, I can remit before they are wanting, to any port in France, with which country alone we have safe correspondence I am, Sir, with much esteem, your humble servant.

TO COLONEL JAMES MONROE

Monticello, May 20th, 1782

.... If we are made in some degree for others, yet, in a greater, are we made for ourselves. It were contrary to feeling, and indeed ridiculous to suppose that a man had less rights in himself than one of his neighbors, or indeed all of them put together. This would be slavery, and not that liberty which the bill of rights has made inviolable, and for the preservation of which our government has been charged. Nothing could so completely divest us of that liberty as the establishment of the opinion, that the State has a perpetual right to the services of all its members. This, to men of certain ways of thinking, would be to annihilate the blessings of existence, and to contradict the Giver of life, who gave it for happiness and not for wretchedness. And certainly, to such it were better that they had never been born. However, with these, I may think public service and private misery inseparably linked together. I have not the vanity to count myself among those whom the State would think worth oppressing with perpetual service. I have received a sufficient memento to the contrary. I am persuaded that, having hitherto dedicated to them the whole of the active and useful part of my life, I shall be permitted to pass the rest in mental quiet. I hope, too, that I did not mistake modes any more than the matter of right when I preferred a simple act of renunciation, to the taking sanctuary under those disqualifications (provided by the law for other purposes indeed but) after affording asylum also for rest to the wearied. I dare say you did not expect by the few words you dropped on the right of renunciation to expose yourself to the fatigue of so long a letter, but I wished you to see that, if I had done wrong, I had been betrayed by a semblance of right at least....

TO FRANÇOIS JEAN, CHEVALIER DE CHASTELLUX

Ampthill, Nov. 26, 1782

.... It [your letter] found me a little emerging from the stupor of mind which had rendered me as dead to the world as she whose loss occasioned it. Your letter recalled to my memory that there were persons still living of much value to me. If you should have thought me remiss in not testifying to you sooner how deeply I had been impressed with your worth in the little time I had the happiness of being with you, you will I am sure ascribe it to it's true cause, the state of the dreadful suspense in which I had been kept all the summer & the catastrophe which closed it. Before that event my scheme of life had been determined. I had folded myself in the arms of retirement,, and rested all prospects of future happiness on domestic & literary objects. A single event wiped away all my plans and left me a blank which I had not the spirits to fill up. In this state of mind an appointment from Congress found me, requiring me to cross the Atlantic....

TO MARTHA JEFFERSON

Annapolis, Dec. 22, 1783

.... I omitted ... to advise you on the subject of dress, which I know you are a little apt to neglect. I do not wish you to be gaily clothed at this time of life, but what you wear should be fine of its kind. But above all things and at all times let your clothes be clean, whole, and properly put on. Do not fancy you must wear them till the dirt is visible to the eye. You will be the last who is sensible of this. Some ladies think they may, under the privileges of the dishabillé, be loose and negligent of their dress in the morning. But be you, from the moment you rise till you go to bed, as cleanly and properly dressed as at the hours of dinner or tea. A lady who has been seen as a sloven or a shu in the morning, will never efface the impression she has made, with all the dress and pageantry she can afterwards involve herself in. Nothing is so disgusting to our sex as a want of cleanliness and delicacy in yours. I hope, therefore, the moment you rise from bed, your first work will be to dress yourself in such style, as that you may be seen by any gentleman without his being able to discover a pin amiss, or any other circumstance of neatness wanting....

TO COLONEL MONROE

Paris, June 17, 1785

.... I sincerely wish you may find it convenient to come here; the pleasure of the trip will be less than you expect, but the utility greater. It will make you adore your own country, its soil, its climate, its equality, liberty, laws, people, and manners. My God! how little do my countrymen know what precious blessings they are in possession of, and which no other people on earth enjoy. I confess I had no idea of it myself. While we shall see multiplied instances of Europeans going to live in America, I will venture to say, no man now living will ever see an instance of an American removing to settle in Europe, and continuing there. Come, then, and see the proofs of this, and on your return add your testimony to that of every thinking American, in order to satisfy our countrymen how much it is their interest to preserve, uninfected by contagion, those peculiarities in their governments and manners, to which they are indebted for those blessings....

TO DR. PRICE

Paris, August 7, 1785

SIR, —Your favor of July the 2d came duly to hand. The concern you therein express as to the effect of your pamphlet in America, induces me to trouble you with some observations on that subject.

From my acquaintance with that country, I think I am able to judge, with some degree of certainty, of the manner in which it will have been received. Southward of the Chesapeake, it will find but few readers concurring with it in sentiment, on the subject of slavery. From the mouth to the head of the Chesapeake, the bulk of the people will approve it in theory, and it will find a respectable minority ready to adopt it in practice; a minority, which for weight and worth of character, preponderates against the greater number, who have not the courage to divest their families of a property, which, however, keeps their conscience unquiet. Northward of the Chesapeake, you may find, here and there, an opponent to your doctrine, as you find, here and there, a robber and murderer- but in no greater number. In that part of America, there being but few slaves, they can easily disencumber themselves of them; and emancipation is put into such a train, that in a few years there will be no slaves northward of Maryland. In Maryland, I do not find such a disposition to begin the redress of this enormity, as in Virginia. This is the next State to which we may turn our eyes for the interesting spectacle of justice, in conflict with avarice and oppression; a conflict wherein the sacred side is gaining daily recruits, from the influx into office of young men grown, and growing up. These have sucked in the principles of liberty, as it were, with their mother's milk; and it is to them I look with anxiety to turn the fate of this question. Be not therefore discouraged. What you have written will do a great deal of good; and could you

still trouble yourself with our welfare, no man is more able to give aid to the laboring side. The College of William and Mary, in Williamsburg, since the remodelling of its plan, is the place where are collected together all the young men of Virginia, under preparation for public life. They are there under the direction (most of them) of a Mr. Wythe, one of the most virtuous of characters, and whose sentiments on the subject of slavery are unequivocal. I am satisfied, if you could resolve to address an exhortation to those young men, with all that eloquence of which you are master, that its influence on the future decision of this important question would be great, perhaps decisive. Thus you see, that, so far from thinking you have cause to repent of what you have done, I wish you to do more, and wish it, on an assurance of its effect. The information I have received from America, of the reception of your pamphlet in the different States, agrees with the expectations I had formed.

Our country is getting into a ferment against yours, or rather has caught it from yours. God knows how this will end; but assuredly in one extreme or the other. There can be no medium between those who have loved so much. I think the decision is in your power as yet, but will not be so long.

I pray you to be assured of the sincerity of the esteem and respect with which I have the honor to be, Sir, your most obedient humble servant.

TO THE COUNT DE VERGENNES

Paris, August 15, 1785

.... The monopoly of the purchase of tobacco in France discourages both the French and American merchant from bringing it here, and from taking in exchange the manufactures and productions of France. It is contrary to the spirit of trade, and to the dispositions of merchants, to carry a commodity to any market where but one person is allowed to buy it, and where, of course, that person fixes its price, which the seller must receive, or re-export his commodity, at the loss of his voyage thither. Experience accordingly shows, that they carry it to other markets, and that they take in exchange the merchandise of the place where they deliver it. I am misinformed, if France has not been furnished from a neighboring nation with considerable quantities of tobacco since the peace, and been obliged to pay there in coin, what might have been paid here in manufactures, had the French and American merchants brought the tobacco originally here. I suppose, too, that the purchases made by the Farmers General, in America, are paid for chiefly in coin, which coin is also remitted directly hence to England, and makes an important part of the balance supposed to be in favor of that nation against this. Should the Farmers General, by themselves, or by the company to whom they may commit the procuring these tobaccos from America, require, for the satisfaction of government on this head, the exportation of a proportion of merchandise in exchange for them, it would be an unpromising expedient. It would only commit the exports, as well as imports, between France and America, to a monopoly, which, being secure against rivals in the sale of the merchandise of France, would not be likely to sell at such moderate prices as might encourage its consumption there, and enable it to bear a competition with similar

articles from other countries. I am persuaded this exportation of coin may be prevented, and that of commodities effected, by leaving both operations to the French and American merchants, instead of the Farmers General. They will import a sufficient quantity of tobacco, if they are allowed a perfect freedom in the sale; and they will receive in payment, wines, oils, brandies, and manufactures, instead of coin; forcing each other, by their competition, to bring tobaccos of the best quality; to give to the French manufacturer the full worth of his merchandise, and to sell to the American consumer at the lowest price they can afford; thus encouraging him to use, in preference, the merchandise of this country....

While the advantages of an increase of revenue to the crown, a diminution of impost on the people, and a payment in merchandise, instead of money, are conjectured as likely to result to France from a suppression of the monopoly on tobacco, we have also reason to hope some advantages on our part; and this hope alone could justify my entering into the present details. I do not expect this advantage will be by any augmentation of price. The other markets of Europe have too much influence on this article to admit any sensible augmentation of price to take place. But the advantage I principally expect is an increase of consumption. This will give us a vent for so much more, and, of consequence, find employment for so many more cultivators of the earth; and in whatever proportion it increases this production for us, in the same proportion will it procure additional vent for the merchandise of France, and employment for the hands which produce it. I expect, too, that by bringing our merchants here, they would procure a number of commodities in exchange, better in kind, and cheaper in price. It is with sincerity I add, that warm feelings are indulged in my breast by the further hope, that it would bind the two nations still closer in friendship, by binding them in interest. In truth, no two countries are better calculated for the exchanges of commerce.

France wants rice, tobacco, potash, furs, and ship-timber. We want wines, brandies, oils, and manufactures. There is an affection, too, between the two people, which disposes them to favor one another. If they do not come together, then, to make the exchanges in their own ports, it shows there is some substantial obstructions in the way. We have had the benefit of too many proofs of his Majesty's friendly disposition towards the United States, and know too well his affectionate care of his own subjects, to doubt his willingness to remove these obstructions, if they can be unequivocally pointed out. It is for his wisdom to decide, whether the monopoly, which is the subject of this letter, be deservedly classed with the principal of these. It is a great comfort to me, too, that, in presenting this to the mind of his Majesty, your Excellency will correct my ideas where an insufficient knowledge of facts may have led me into error; and that, while the interests of the King and of his people are the first objects of your attention, an additional one will be presented by those dispositions toward us, which have heretofore so often befriended our nation.

I avail myself of this occasion to repeat the assurance of that high respect and esteem, with which I have the honor to be your Excellency's most obedient, and most humble servant.

TO MRS. TRIST

Paris, August 18, 1785

DEAR MADAM, —

I am much pleased with the people of this country. The roughness of the human mind is so thoroughly rubbed off with them, that it seems as if one might glide through a whole life among them without a jostle. Perhaps, too, their manners may be the best calculated for happiness to a people in their situation, but I am convinced they fall far short of effecting a happiness so temperate, so uniform, and so lasting as is generally enjoyed with us. The domestic bonds here are absolutely done away, and where can their compensation be found? Perhaps they may catch some moments of transport above the level of the ordinary tranquil joy we experience, but they are separated by long intervals, during which all the passions are at sea without rudder or compass. Yet, fallacious as the pursuits of happiness are, they seem on the whole to furnish the most effectual abstraction from a contemplation of the hardness of their government. Indeed, it is difficult to conceive how so good a people, with so good a King, so well-disposed rulers in general, so genial a climate, so fertile a soil, should be rendered so ineffectual for producing human happiness by one single curse—that of a bad form of government. But it is a fact, in spite of the mildness of their governors, the people are ground to powder by the vices of the form of government. Of twenty millions of people supposed to be in France, I am of opinion there are nineteen millions more wretched, more accursed in every circumstance of human existence than the most conspicuously wretched individual of the whole United States. I beg your pardon for getting into politics. I will add only one sentiment more of that character, that is, nourish peace with their persons, but war against their manners. Every step

we take towards the adoption of their manners is a step to perfect misery. I pray you to write to me often. Do not you turn politician too; but write me all the small news—the news about persons and about states; tell me who dies, that I may meet these disagreeable events in detail, and not all at once when I return; who marry, who hang themselves because they cannot marry, &c....

TO PETER CARR

Paris, August 19, 1785

DEAR PETER, —I received, by Mr. Mazzei, your letter of April the 20th. I am much mortified to hear that you have lost so much time; and that, when you arrived in Williamsburg, you were not at all advanced from what you were when you left Monticello. Time now begins to be precious to you. Every day you lose will retard a day your entrance on that public stage whereon you may begin to be useful to yourself. However, the way to repair the loss is to improve the future time. I trust, that with your dispositions, even the acquisition of science is a pleasing employment. I can assure you, that the possession of it is, what (next to an honest heart) will above all things render you dear to your friends, and give you fame and promotion in your own country. When your mind shall be well improved with science, nothing will be necessary to place you in the highest points of view, but to pursue the interests of your country, the interests of your friends, and your own interests also, with the purest integrity, the most chaste honor. The defect of these virtues can never be made up by all the other acquirements of body and mind. Make these, then, your first object. Give up money, give up fame, give up science, give up the earth itself and all it contains, rather than do an immoral act. And never suppose, that in any possible situation, or under any circumstances, it is best for you to do a dishonorable thing, however slightly so it may appear to you. Whenever you are to do a thing, though it can never be known but to yourself, ask yourself how you would act were all the world looking at you, and act accordingly. Encourage all your virtuous dispositions, and exercise them whenever an opportunity arises; being assured that they will gain strength by exercise, as a limb of the body does, and that exercise will make them

habitual. From the practice of the purest virtue, you may be assured you will derive the most sublime comforts in every moment of life, and in the moment of death. If ever you find yourself environed with difficulties and perplexing circumstances, out of which you are at a loss how to extricate yourself, do what is right, and be assured that that will extricate you the best out of the worst situations. Though you cannot see, when you take one step, what will be the next, yet follow truth, justice, and plain dealing, and never fear their leading you out of the labyrinth, in the easiest manner possible. The knot which you thought a Gordian one, will untie itself before you. Nothing is so mistaken as the supposition, that a person is to extricate himself from a difficulty, by intrigue, by chicanery, by dissimulation, by trimming, by an untruth, by an injustice. This increases the difficulties tenfold; and those, who pursue these methods, get themselves so involved at length, that they can turn no way but their infamy becomes more exposed. It is of great importance to set a resolution, not to be shaken, never to tell an untruth. There is no vice so mean, so pitiful, so contemptible; and he who permits himself to tell a lie once, finds it much easier to do it a second and third time, till at length it becomes habitual ; he tells lies without attending to it, and truths without the world's believing him. This falsehood of the tongue leads to that of the heart, and in time depraves all its good dispositions.

An honest heart being the first blessing, a knowing head is the second. It is time for you now to begin to be choice in your reading; to begin to pursue a regular course in it; and not to suffer yourself to be turned to the right or left by reading anything out of that course. I have long ago digested a plan for you, suited to the circumstances in which you will be placed. This I will detail to you, from time to time, as you advance. For the present, I advise you to begin a course of ancient history, reading everything in the original and not in translations. First read Goldsmith's history of Greece. This will give

you a digested view of that field. Then take up ancient history in the detail, reading the following books, in the following order: Herodotus, Thucydides, Xenophontis Anabasis, Arrian, Quintus Curtius, Diodorus Siculus, Justin. This shall form the first stage of your historical reading, and is all I need mention to you now. The next will be of Roman history.^[4] From that, we will come down to modern history. In Greek and Latin poetry, you have read or will read at school, Virgil, Terence, Horace, Anacreon, Theocritus, Homer, Euripides, Sophocles. Read also Milton's Paradise Lost, Shakspeare, Ossian, Pope's and Swift's works, in order to form your style in your own language. In morality, read Epictetus, Xenophontis Memorabilia, Plato's Socratic dialogues, Cicero's philosophies, Antoninus, and Seneca. In order to assure a certain progress in this reading, consider what hours you have free from the school and the exercises of the school. Give about two of them, every day, to exercise; for health must not be sacrificed to learning. A strong body makes the mind strong. As to the species of exercise, I advise the gun. While this gives a moderate exercise to the body, it gives boldness, enterprise, and independence to the mind. Games played with the ball, and others of that nature, are too violent for the body, and stamp no character on the mind. Let your gun, therefore, be the constant companion of your walks. Never think of taking a book with you. The object of walking is to relax the mind. You should therefore not permit yourself even to think while you walk; but divert yourself by the objects surrounding you. Walking is the best possible exercise. Habituate yourself to walk very far. The Europeans value themselves on having subdued the horse to the uses of man; but I doubt whether we have not lost more than we have gained, by the use of this animal. No one has occasioned so much the degeneracy of the human body. An Indian goes on foot nearly as far in a day, for a long journey, as an enfeebled white does on his horse; and he will tire the best horses. There is no habit you will value so much as that of walking far without fatigue. I would advise you to take your exercise in the afternoon: not because it is the best time for exercise,

for certainly it is not; but because it is the best time to spare from your studies; and habit will soon reconcile it to health, and render it nearly as useful as if you gave to that the more precious hours of the day. A little walk of half an hour, in the morning, when you first rise, is advisable also. It shakes off sleep, and produces other good effects in the animal economy. Rise at a fixed and an early hour, and go to bed at a fixed and early hour also. Sitting up late at night is injurious to the health, and not useful to the mind. Having ascribed proper hours to exercise, divide what remain (I mean of your vacant hours) into three portions. Give the principal to History, the other two, which should be shorter, to Philosophy and Poetry. Write to me once every month or two, and let me know the progress you make. Tell me in what manner you employ every hour in the day. The plan I have proposed for you is adapted to your present situation only. When that is changed, I shall propose a corresponding change of plan. I have ordered the following books to be sent to you from London, to the care of Mr. Madison: Herodotus, Thucydides, Xenophon's Hellenics, Anabasis and Memorabilia, Cicero's works, Baretti's Spanish and English Dictionary, Martin's Philosophical Grammar, and Martin's Philosophia Britannica. I will send you the following from hence: Bezout's Mathematics, De la Lande's Astronomy, Muschenbrock's Physics, Quintus Curtius, Justin, a Spanish Grammar, and some Spanish books. You will observe that Martin, Bezout, De la Lande, and Muschenbrock, are not in the preceding plan. They are not to be opened till you go to the University. You are now, I expect, learning French. You must push this; because the books which will be put into your hands when you advance into Mathematics, Natural philosophy, Natural history, &c., will be mostly French, these sciences being better treated by the French than the English writers. Our future connection with Spain renders that the most necessary of the modern languages, after the French. When you become a public man, you may have occasion for it, and the circumstance of your possessing that language, may give you a preference over other candidates. I have nothing

further to add for the present, but husband well your time, cherish your instructors, strive to make everybody your friend; and be assured that nothing will be so pleasing as your success to, Dear Peter,

Yours affectionately.

TO JOHN JAY

(Private)

Paris, August 23, 1785

.... We have now lands enough to employ an infinite number of people in their cultivation. Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, and they are tied to their country, and wedded to its liberty and interests, by the most lasting bonds. As long, therefore, as they can find employment in this line, I would not convert them into mariners, artisans, or anything else. But our citizens will find employment in this line, till their numbers, and of course their productions, become too great for the demand, both internal and foreign. This is not the case as yet, and probably will not be for a considerable time. As soon as it is, the surplus of hands must be turned to something else. I should then, perhaps, wish to turn them to the sea in preference to manufactures; because, comparing the characters of the two classes, I find the former the most valuable citizens. I consider the class of artificers as the panders of vice, and the instruments by which the liberties of a country are generally overturned. However, we are not free to decide this question on principles of theory only. Our people are decided in the opinion, that it is necessary for us to take a share in the occupation of the ocean, and their established habits induce them to require that the sea be kept open to them, and that that line of policy be pursued, which will render the use of that element to them as great as possible. I think it a duty in those entrusted with the administration of their affairs, to conform themselves to the decided choice of their constituents; and that therefore, we should, in every instance, preserve an equality of right to them in the transportation of commodities, in the right of

fishing, and in the other uses of the sea.

But what will be the consequence? Frequent wars without a doubt. Their property will be violated on the sea, and in foreign ports, their persons will be insulted, imprisoned, &c., for pretended debts, contracts, crimes, contraband, &c., &c. These insults must be resented, even if we had no feelings, yet to prevent their eternal repetition; or, in other words, our commerce on the ocean and in other countries, must be paid for by frequent war. The justest dispositions possible in ourselves, will not secure us against it. It would be necessary that all other nations were just also. Justice indeed, on our part, will save us from those wars which would have been produced by a contrary disposition. But how can we prevent those produced by the wrongs of other nations? By putting ourselves in a condition to punish them. Weakness provokes insult and injury, while a condition to punish, often prevents them. This reasoning leads to the necessity of some naval force; that being the only weapon by which we can reach an enemy. I think it to our interest to punish the first insult; because an insult unpunished is the parent of many others. We are not, at this moment, in a condition to do it, but we should put ourselves into it, as soon as possible....

约翰·杰伊像

TO BARON GEISMER

Paris, September 6, 1785

DEAR SIR, —Your letter of March the 28th, which I received about a month after its date, gave me a very real pleasure, as it assured me of an existence which I valued, and of which I had been led to doubt. You are now too distant from America, to be much interested in what passes there. From the London gazettes, and the papers copying them, you are led to suppose that all there is anarchy, discontent and civil war. Nothing, however, is less true. There are not, on the face of the earth, more tranquil governments than ours, nor a happier and more contented people. Their commerce has not as yet found the channels, which their new relations with the world will offer to best advantage, and the old ones remain as yet unopened by new conventions. This occasions a stagnation in the sale of their produce, the only truth among all the circumstances published about them. Their hatred against Great Britain, having lately received from that nation new cause and new aliment, has taken a new spring.... The character in which I am here at present, confines me to this place, and will confine me as long as I continue in Europe. How long this will be, I cannot tell. I am now of an age which does not easily accommodate itself to new manners and new modes of living; and I am savage enough to prefer the woods, the wilds, and the independence of Monticello, to all the brilliant pleasures of this gay Capital. I shall, therefore, rejoin myself to my native country, with new attachments, and with exaggerated esteem for its advantages; for though there is less wealth there, there is more freedom, more ease, and less misery. I should like it better, however, if it could tempt you once more to visit it; but that is not to be expected. Be this as it may, and whether fortune means to allow or deny me the pleasure of ever seeing you

again, be assured that the worth which gave birth to my attachment, and which still animates it, will continue to keep it up while we both live, and that it is with sincerity I subscribe myself, dear Sir, your friend and servant.

TO JAMES MADISON

Paris, September 20, 1785

.... I received this summer a letter from Messrs. Buchanan and Hay, as Directors of the public buildings, desiring I would have drawn for them, plans of sundry buildings, and, in the first place, of a capitol. They fixed, for their receiving this plan, a day which was within about six weeks of that on which their letter came to my hand. I engaged an architect of capital abilities in this business. Much time was requisite, after the external form was agreed on, to make the internal distribution convenient for the three branches of government. This time was much lengthened by my avocations to other objects, which I had no right to neglect. The plan, however, was settled. The gentlemen had sent me one which they had thought of. The one agreed on here, is more convenient, more beautiful, gives more room, and will not cost more than two-thirds of what that would. We took for our model what is called the Maison Quarrée of Nismes, one of the most beautiful, if not the most beautiful and precious morsel of architecture left us by antiquity. It was built by Caius and Lucius Caesar, and repaired by Louis X IV, and has the suffrage of all the judges of architecture who have seen it, as yielding to no one of the beautiful monuments of Greece, Rome, Palmyra, and Balbec, which late travellers have communicated to us. It is very simple, but it is noble beyond expression, and would have done honor to our country, as presenting to travellers a specimen of taste in our infancy, promising much for our maturer age. I have been much mortified with information, which I received two days ago from Virginia, that the first brick of the capitol would be laid within a few days. But surely, the delay of this piece of a summer would have been repaired by the savings in the plan preparing here, were we to value its other

superiorities as nothing. But how is a taste in this beautiful art to be formed in our countrymen unless we avail ourselves of every occasion when public buildings are to be erected, of presenting to them models for their study and imitation? Pray try if you can effect the stopping of this work....

The loss will be only of the laying the bricks already laid, or a part of them. The bricks themselves will do again for the interior walls, and one side wall and one end wall may remain, as they will answer equally well for our plan. This loss is not to be weighed against the saving of money which will arise, against the comfort of laying out the public money for something honorable, the satisfaction of seeing an object and proof of national good taste, and the regret and mortification of erecting a monument of our barbarism, which will be loaded with execrations as long as it shall endure. The plans are in good forwardness, and I hope will be ready within three or four weeks. They could not be stopped now, but on paying their whole price, which will be considerable. If the undertakers are afraid to undo what they have done, encourage them to it by a recommendation from the Assembly. You see I am an enthusiast on the subject of the arts. But it is an enthusiasm of which I am not ashamed, as its object is to improve the taste of my countrymen, to increase their reputation, to reconcile to them the respect of the world, and procure them its praise....

TO MR. BELLINI

Paris, September 30, 1785

.... Behold me at length on the vaunted scene of Europe! It is not necessary for your information, that I should enter into details concerning it. But you are, perhaps, curious to know how this new scene has struck a savage of the mountains of America. Not advantageously, I assure you. I find the general fate of humanity here most deplorable. The truth of Voltaire's observation, offers itself perpetually, that every man here must be either the hammer or the anvil. It is a true picture of that country to which they say we shall pass hereafter, and where we are to see God and his angels in splendor, and crowds of the damned trampled under their feet. While the great mass of the people are thus suffering under physical and moral oppression, I have endeavored to examine more nearly the condition of the great, to appreciate the true value of the circumstances in their situation, which dazzle the bulk of spectators, and, especially, to compare it with that degree of happiness which is enjoyed in America, by every class of people. Intrigues of love occupy the younger, and those of ambition, the elder part of the great. Conjugal love having no Existence among them, domestic happiness, of which that is the basis, is utterly unknown. In lieu of this, are substituted pursuits which nourish and invigorate all our bad passions, and which offer only moments of ecstasy, amidst days and months of restlessness and torment. Much, very much inferior, this, to the tranquil, permanent felicity with which domestic society in America blesses most of its inhabitants; leaving them to follow steadily those pursuits which health and reason approve, and rendering truly delicious the intervals of those pursuits.

In science, the mass of the people are two centuries behind ours;

their literati, half a dozen years before us. Books, really good, acquire just reputation in that time, and so become known to us, and communicate to us all their advances in knowledge. Is not this delay compensated, by our being placed out of the reach of that swarm of nonsensical publications which issues daily from a thousand presses, and perishes almost in issuing? With respect to what are termed polite manners, without sacrificing too much the sincerity of language, I would wish my countrymen to adopt just so much of European politeness, as to be ready to make all those little sacrifices of self, which really render European manners amiable, and relieve society from the disagreeable scenes to which rudeness often subjects it. Here, it seems that a man might pass a life without encountering a single rudeness. In the pleasures of the table, they are far before us, because, with good taste they unite temperance. They do not terminate the most sociable meals by transforming themselves into brutes. I have never yet seen a man drunk in France, even among the lowest of the people. Were I to proceed to tell you how much I enjoy their architecture, sculpture, painting, music, I should want words. It is in these arts they shine. The last of them, particularly, is an enjoyment, the deprivation of which with us, cannot be calculated. I am almost ready to say, it is the only thing which from my heart I envy them, and which, in spite of all the authority of the Decalogue, I do covet. But I am running on in an estimate of things infinitely better known to you than to me, and which will only serve to convince you, that I have brought with me all the prejudices of country, habit, and age. But whatever I may allow to be charged to me as prejudice, in every other instance, I have one sentiment at least, founded on reality: it is that of the perfect esteem which your merit and that of Mrs. Bellini have produced, and which will forever enable me to assure you of the sincere regard with which I am, dear Sir, your friend and servant.

TO HOGENDORP

Paris, October 13, 1785

.... You ask what I think on the expediency of encouraging our States to be commercial? Were I to indulge my own theory, I should wish them to practise neither commerce nor navigation, but to stand, with respect to Europe, precisely on the footing of China. We should thus avoid wars, and all our citizens would be husbandmen. Whenever, indeed, our numbers should so increase as that our produce would overstock the markets of those nations who should come to seek it, the farmers must either employ the surplus of their time in manufactures, or the surplus of our hands must be employed in manufactures or in navigation. But that day would, I think, be distant, and we should long keep our workmen in Europe, while Europe should be drawing rough materials, and even subsistence from America. But this is theory only, and a theory which the servants of America are not at liberty to follow. Our people have a decided taste for navigation and commerce. They take this from their mother country; and their servants are in duty bound to calculate all their measures on this datum: we wish to do it by throwing open all the doors of commerce, and knocking off its shackles. But as this cannot be done for others, unless they will do it for us, and there is no great probability that Europe will do this, I suppose we shall be obliged to adopt a system which may shackle them in our ports, as they do us in theirs.

With respect to the sale of our lands, that cannot begin till a considerable portion shall have been surveyed. They cannot begin to survey till the fall of the leaf of this year, nor to sell probably till the ensuing spring. So that it will be yet a twelvemonth before we shall be able to judge of the efficacy of our land office to sink our national

debt. It is made a fundamental, that the proceeds shall be solely and sacredly applied as a sinking fund to discharge the capital only of the debt.

It is true that the tobaccos of Virginia go almost entirely to England. The reason is, the people of that State owe a great debt there, which they are paying as fast as they can. I think I have now answered your several queries, and shall be happy to receive your reflections on the same subjects, and at all times to hear of your welfare, and to give you assurances of the esteem, with which I have the honor to be, dear sir, your most obedient, and most humble servant.

TO J. BANISTER, JUNIOR

Paris, October 15 1785

DEAR SIR, —I should sooner have answered the paragraph in your letter, of September the 19th, respecting the best seminary for the education of youth in Europe, but that it was necessary for me to make inquiries on the subject. The result of these has been, to consider the competition as resting between Geneva and Rome. They are equally cheap, and probably are equal in the course of education pursued. The advantage of Geneva is, that students acquire there the habit of speaking French. The advantages of Rome are, the acquiring a local knowledge of a spot so classical and so celebrated; the acquiring the true pronunciation of the Latin language; a just taste in the fine arts, more particularly those of painting, sculpture, architecture, and music; a familiarity with those objects and processes of agriculture which experience has shown best adapted to a climate like ours; and lastly, the advantage of a fine climate for health. It is probable, too, that by being boarded in a French family, the habit of speaking that language may be obtained. I do not count on any advantage to be derived, in Geneva, from a familiar acquaintance with the principles of that government. The late revolution has rendered it a tyrannical aristocracy, more likely to give ill than good ideas to an American. I think the balance in favor of Rome. Pisa is sometimes spoken of as a place of education. But it does not offer the first and third of the advantages of Rome. But why send an American youth to Europe for education? What are the objects of an useful American education? Classical knowledge, modern languages, chiefly French, Spanish, and Italian; Mathematics, Natural philosophy, Natural history, Civil history, and Ethics. In Natural philosophy, I mean to include Chemistry and Agriculture, and in Natural history, to include Botany,

as well as the other branches of those departments. It is true that the habit of speaking the modern languages cannot be so well acquired in America; but every other article can be as well acquired at William and Mary college, as at any place in Europe. When college education is done with, and a young man is to prepare himself for public life, he must cast his eyes (for America) either on Law or Physics. For the former, where can he apply so advantageously as to Mr. Wythe? For the latter, he must come to Europe: the medical class of students, therefore, is the only one which need come to Europe. Let us view the disadvantages of sending a youth to Europe. To enumerate them all, would require a volume. I will select a few. If he goes to England, he learns drinking, horse racing, and boxing. These are the peculiarities of English education. The following circumstances are common to education in that, and the other countries of Europe. He acquires a fondness for European luxury and dissipation, and a contempt for the simplicity of his own country; he is fascinated with the privileges of the European aristocrats, and sees, with abhorrence, the lovely equality which the poor enjoy with the rich, in his own country; he contracts a partiality for aristocracy or monarchy; he forms foreign friendships which will never be useful to him, and loses the seasons of life for forming, in his own country, those friendships which, of all others, are the most faithful and permanent; he is led, by the strongest of all the human passions, into a spirit for female intrigue, destructive of his own and others' happiness, or a passion for whores, destructive of his health, and, in both cases, learns to consider fidelity to the marriage bed as an ungentlemanly practice, and inconsistent with happiness; he recollects the voluptuary dress and arts of the European women, and pities and despises the chaste affections and simplicity of those of his own country; he retains, through life, a fond recollection, and a hankering after those places, which were the scenes of his first pleasures and of his first connections; he returns to his own country, a foreigner, unacquainted with the practices of domestic economy necessary to preserve him from ruin, speaking and writing his native

tongue as a foreigner, and therefore unqualified to obtain those distinctions, which eloquence of the pen and tongue ensures in a free country; for I would observe to you, that what is called style in writing or speaking is formed very early in life, while the imagination is warm, and impressions are permanent. I am of opinion, that there never was an instance of a man's writing or speaking his native tongue with elegance, who passed from fifteen to twenty years of age out of the country where it was spoken. Thus, no instance exists of a person's writing two languages perfectly. That will always appear to be his native language, which was most familiar to him in his youth. It appears to me, then, that an American, coming to Europe for education, loses in his knowledge, in his morals, in his health, in his habits, and in his happiness. I had entertained only doubts on this head before I came to Europe: what I see and hear, since I came here, proves more than I had even suspected. Cast your eye over America: who are the men of most learning, of most eloquence, most beloved by their countrymen and most trusted and promoted by them? They are those who have been Educated among them, and whose manners, morals, and habits, are perfectly homogeneous with those of the country.

Did you expect by so short a question, to draw such a sermon on yourself? I dare say you did not. But the consequences of foreign education are alarming to me, as an American. I sin, therefore, through zeal, whenever I enter on the subject. You are sufficiently American to pardon me for it. Let me hear of your health, and be assured of the esteem with which I am, dear Sir, your friend and servant.

TO REVEREND JAMES MADISON

Fontainebleau, Oct. 28, 1785

DEAR SIR, —Seven o'clock, and retired to my fireside, I have determined to enter into conversation with you. This is a village of about 15,000 inhabitants when the court is not here, and 20,000 when they are, occupying a valley through which runs a brook and on each side of it a ridge of small mountains, most of which are naked rock. The King comes here, in the fall always, to hunt. His court attends him, as do also the foreign diplomatic corps; but as this is not indispensably required and my finances do not admit the expense of a continued residence here, I propose to come occasionally to attend the King's levees, returning again to Paris, distant forty miles. This being the first trip I set out yesterday morning to take a view of the place. For this purpose I shaped my course towards the highest of the mountains in sight, to the top of which was about a league.

As soon as I had got clear of the town I fell in with a poor woman walking at the same rate with myself and going the same course. Wishing to know the condition of the laboring poor I entered into conversation with her, which I began by enquiries for the path which would lead me to the mountain: and thence proceeded to enquiries into her vocation, condition and circumstances. She told me she was a day laborer at 8 sous or 4d. sterling the day: that she had two children to maintain, and to pay a rent of 30 livres for her house (which would consume the hire of 75 days), that often she could get no employment and of course was without bread. As we had walked together near a mile and she had so far served me as a guide, I gave her, on parting, 24 sous. She burst into tears of a gratitude which I could perceive was unfeigned because she was unable to utter a word. She had probably never before received so great an aid. This little attentissement, with

the solitude of my walk, led me into a train of reflections on that unequal division of property which occasions the numberless instances of wretchedness which I had observed in this country and is to be observed all over Europe.

詹姆斯·麦迪逊像

The property of this country is absolutely concentrated in a very few hands, having revenues of from half a million of guirieas a year downwards. These employ the flower of the country as servants, some of them having as many as 200 domestics, not laboring. They employ also a great number of manufacturers and tradesmen, and lastly the class of laboring husbandmen. But after all these comes the most numerous of all classes, that is, the poor who cannot find work. I asked myself what could be the reason so many should be permitted to beg who are willing to work, in a country where there is a very considerable proportion of uncultivated lands? These lands are undisturbed only for the sake of game. It should seem then that it must be because of the enormous wealth of the proprietors which places them above attention to the increase of their revenues by permitting these lands to be labored. I am conscious that an equal division of property is impracticable, but the consequences of this enormous inequality producing so much misery to the bulk of

mankind, legislators cannot invent too many devices for subdividing property, only taking care to let their subdivisions go hand in hand with the natural affections of the human mind. The descent of property of every kind therefore to all the children, or to all the brothers and sisters, or other relations in equal degree, is a politic measure and a practicable one. Another means of silently lessening the inequality of property is to exempt all from taxation below a certain point, and to tax the higher portions of property in geometrical progression as they rise. Whenever there are in any country uncultivated lands and unemployed poor, it is clear that the laws of property have been so far extended as to violate natural right. The earth is given as a common stock for man to labor; and live on. If for the encouragement of industry we allow it to be appropriated, we must take care that other employment be provided to those excluded from the appropriation. If we do not, the fundamental right to labor the earth returns to the unemployed. It is too soon yet in our country to say that every man who cannot find employment, but who can find uncultivated land, shall be at liberty to cultivate it, paying a moderate rent. But it is not too soon to provide by every possible means that as few as possible shall be without a little portion of land. The small landholders are the most precious part of a state....

TO A. STUART, ESQ.

Paris, January 25, 1786

.... The quiet of Europe, at this moment, furnishes little which can attract your notice. Nor will that quiet be soon disturbed, at least for the current year. Perhaps it hangs on the life of the King of Prussia, and that hangs by a very slender thread. American reputation in Europe is not such as to be flattering to its citizens. Two circumstances are particularly objected to us: the non-payment of our debts, and the want of energy in our government. These discourage a connection with us. I own it to be my opinion, that good will arise from the destruction of our credit. I see nothing else which can restrain our disposition to luxury, and to the change of those manners which alone can preserve republican government. As it is impossible to prevent credit, the best way would be to cure its ill effects, by giving an instantaneous recovery to the creditor. This would be reducing purchases on credit to purchases for ready money. A man would then see a prison painted on everything he wished, but had not ready money to pay for.

I fear from an expression in your letter, that the people of Kentucky think of separating, not only from Virginia (in which they are right), but also from the confederacy. I own, I should think this a most calamitous event, and such a one as every good citizen should set himself against. Our present federal limits are not too large for good government, nor will the increase of votes in Congress produce any ill effect. On the contrary, it will drown the little divisions at present existing there. Our confederacy must be viewed as the nest, from which all America, North and South, is to be peopled. We should take care, too, not to think it for the interest of that great Continent to press too soon on the Spaniards. Those countries cannot be in better

hands. My fear is, that they are too feeble to hold them till our population can be sufficiently advanced to gain it from them, piece by piece. The navigation of the Mississippi we must have. This is all we are, as yet, ready to receive. I have made acquaintance with a very sensible, candid gentleman here, who was in South America during the revolt which took place there, while our Revolution was going on. He says, that those disturbances (of which we scarcely heard anything) cost, on both sides, an hundred thousand lives.

I have made a particular acquaintance here, with Monsieur de Buffon, and have a great desire to give him the best idea I can of our elk. Perhaps your situation may enable you to aid me in this. You could not oblige me more than by sending me the horns, skeleton, and skin of an elk, were it possible to procure them. The most desirable form of receiving them would be, to have the skin slit from the under jaw along the belly to the tail, and down the thighs to the knee, to take the animal out, leaving the legs and hoofs, the bones of the head, and the horns attached to the skin. By sewing up the belly, &c., and stuffing the skin, it would present the form of the animal. However, as an opportunity of doing this is scarcely to be expected, I shall be glad to receive them detached, packed in a box, and sent to Richmond, to the care of Dr. Currie. Everything of this kind is precious here....

TO JAMES MADISON

Paris, February 8, 1786

.... I am persuaded, that a gift of lands by the State of Virginia to the Marquis de La Fayette would give a good opinion here of our character, and would reflect honor on the Marquis. Nor, am I sure that the day will not come when it might be an useful asylum to him. The time of life at which he visited America was too well adapted to receive good and lasting impressions to permit him ever to accommodate himself to the principles of monarchical government; and it will need all his own prudence, and that of his friends, to make this country a safe residence for him. How glorious, how comfortable in deflection, will it be, to have prepared a refuge for him in case of a reverse. In the meantime, he could settle it with tenants from the freest part of this country, Bretagne. I have never suggested the smallest idea of this kind to him; because the execution of it should convey the first notice. If the State has not a right to give him lands with their own officers, they could buy up, at cheap prices, the shares of others....

TO JOHN PAGE

Paris, May 4, 1786

.... I returned but three or four days ago from a two months, trip to England. I traversed that country much, and own both town and country fell short of my expectations. Comparing it with this, I found a much greater proportion of barrens, a soil, in other parts, not naturally so good as this, not better cultivated, but better manured, and, therefore, more productive. This proceeds from the practice of long leases there, and short ones here. The laboring people here are poorer than in England. They pay about one half their produce in rent; the English, in general, about a third. The gardening, in that country, is the article in which it surpasses all the earth. I mean their pleasure gardening. This, indeed, went far beyond my ideas. The city of London, though handsomer than Paris, is not so handsome as Philadelphia. Their architecture is in the most wretched style I ever saw, not meaning to except America, where it is bad, nor even Virginia, where it is worse than in any other part of America which I have seen. The mechanical arts in London are carried to a wonderful perfection. But of these I need not speak, because of them my countrymen have unfortunately too many samples before their eyes. I consider the extravagance, which has seized them, as a more baneful evil than toryism was during the war. It is the more so, as the example is set by the best and most amiable characters among us. Would a missionary appear, who would make frugality the basis of his religious system, and go through the land, preaching it up as the only road to salvation, I would join his school, though not generally disposed to seek my religion out of the dictates of my own reason, and feelings of my own heart. These things have been more deeply impressed on my mind, by what I have heard and seen in England. That nation hate us,

their ministers hate us, and their King, more than all other men. They have the impudence to avow this, though they acknowledge our trade important to them. But they think, we cannot prevent our countrymen from bringing that into their laps. A conviction of this determines them to make no terms of commerce with us. They say, they will pocket our carrying trade as well as their own. Our overtures of commercial arrangements have been treated with a derision, which shows their firm persuasion, that we shall never unite to suppress their commerce, or even to impede it. I think their hostility towards us is much more deeply rooted at present, than during the war. In the arts, the most striking thing I saw there, new, was the application of the principle of the steam-engine to grist mills. I saw eight pair of stones which are worked by steam, and there are to be set up thirty pair in the same house. An hundred bushels of coal a day, are consumed at present. I do not know in what proportion the consumption will be increased by the additional geer....

TO MR. WYTHE

Paris, August 13, 1786

.... If all the sovereigns of Europe were to set themselves to work, to emancipate the minds of their subjects from their present ignorance and prejudices, and that, as zealously as they now endeavor the contrary, a thousand years would not place them on that high ground, on which our common people are now setting out. Ours could not have been so fairly placed under the control of the common sense of the people, had they not been separated from their parent stock, and kept from contamination, either from them, or the other people of the old world, by the intervention of so wide an ocean. To know the worth of this, one must see the want of it here. I think by far the most important bill in our whole code, is that for the diffusion of knowledge among the people. No other sure foundation can be devised, for the preservation of freedom and happiness. If anybody thinks that kings, nobles, or priests are good conservators of the public happiness, send him here. It is the best school in the universe to cure him of that folly. He will see here, with his own eyes, that these descriptions of men are an abandoned confederacy against the happiness of the mass of the people. The omnipotence of their effect cannot be better proved, than in this country particularly, where, notwithstanding the finest soil upon earth, the finest climate under heaven, and a people of the most benevolent, the most gay and amiable character of which the human form is susceptible; where such a people, I say, surrounded by so many blessings from nature, are loaded with misery, by kings, nobles, and priests, and by them alone. Preach, my dear Sir, a crusade against ignorance; establish and improve the law for educating the common pea pie. Let our countrymen know, that the people alone can protect us against these

evils, and that the tax which will be paid for this purpose, is not more than the thousandth part of what will be paid to kings, priests and nobles, who will rise up among us if we leave the people in ignorance. The people of England, I think, are less oppressed than here. But it needs but half an eye to see, when among them, that the foundation is laid in their dispositions for the establishment of a despotism. Nobility, wealth, and pomp are the objects of their admiration. They are by no means the free-minded people we suppose them in America. Their learned men, too, are few in number, and are less learned, and infinitely less emancipated from prejudice, than those of this country....

TO MRS. COSWAY

Paris, October 12, 1786

MY DEAR MADAM, —Having performed the last sad office of handing you into your carriage, at the pavilion de St. Denis, and seen the wheels get actually into motion, I turned on my heel and walked, more dead than alive, to the opposite door, where my own was awaiting me. Mr. Danquerville was missing. He was sought for, found, and dragged down stairs. We were crammed into the carriage, like recruits for the Bastille, and not having soul enough to give orders to the coachman, he presumed Paris our destination, and drove off. After a considerable interval, silence was broke, with a “Je suis vraiment affligé du départ de ces bons gens.” This was a signal for a mutual confession of distress. We began immediately to talk of Mr. and Mrs. Cosway, of their goodness, their talents, their amiability; and, though we spoke of nothing else, we seemed hardly to have entered into the matter, when the coachman announced the rue St. Denis, and that we were opposite Mr. Danquerville’s. He insisted on descending there, and traversing a short passage to his lodgings. I was carried home. Seated by my fireside, solitary and sad, the following dialogue took place between my Head and my Heart.

Head. Well, friend, you seem to be in a pretty trim.

Heart. I am indeed the most wretched of all earthly beings. Overwhelmed with grief, every fibre of my frame distended beyond its natural powers to bear, I would willingly meet whatever catastrophe should leave me no more to feel, or to fear.

Head. These are the eternal consequences of your warmth and precipitation. This is one of the scrapes into which you are ever leading us. You confess your follies, indeed; but still you hug and

cherish them; and no reformation can be hoped where there is no repentance.

Heart. Oh, my friend! this is no moment to upbraid my foibles. I am rent into fragments by the force of my grief! If you have any balm, pour it into my wounds; if none, do not harrow them by new torments. Spare me in this awful moment! At any other, I will attend with patience to your admonitions.

Head. On the contrary, I never found that the moment of triumph, with you, was the moment of attention to my admonitions. While suffering under your follies, you may perhaps be made sensible of them, but the paroxysm over, you fancy it can never return. Harsh, therefore, as the medicine may be, it is my office to administer it. You will be pleased to remember, that when our friend Trumbull used to be telling us of the merits and talents of these good people, I never ceased whispering to you that we had no occasion for new acquaintances; that the greater their merits and talents, the more dangerous their friendship to our tranquillity, because the regret at parting would be greater.

Heart. Accordingly, Sir, this acquaintance was not the consequence of my doings. It was one of your projects, which threw us in the way of it. It was you, remember, and not I, who desired the meeting at Legrand and Molinos. I never trouble myself with domes nor arches. The Halle aux Bleds might have rotted down, before I should have gone to see it. But you, forsooth, who are eternally getting us to sleep with your diagrams and crotchets, must go and examine this wonderful piece of architecture; and when you had seen it, oh! it was the most superb thing on earth! What you had seen there was worth all you had yet seen in Paris! I thought so, too. But I meant it of the lady and gentleman to whom we had been presented; and not of a parcel of sticks and chips put together in pens. You, then, Sir, and not I, have been the cause of the present distress.

Head. It would have been happy for you if my diagrams and crotchets had gotten you to sleep on that day, as you are pleased to say they eternally do. My visit to Legrand and Molinos had public utility for its object. A market is to be built in Richmond. What a commodious plan is that of Legrand and Molinos; especially, if we put on it the noble dome of the Halle aux Bleds. If such a bridge as they showed us can be thrown across the Schuylkill, at Philadelphia, the floating bridges taken up, and the navigation of that river opened, what a copious resource will be added, of wood and provisions, to warm and feed the poor of that city? While I was occupied with these objects, you were dilating with your new acquaintances, and contriving how to prevent a separation from them. Every soul of you had an engagement for the day. Yet all these were to be sacrificed, that you might dine together. Lying messengers were to be despatched into every quarter of the city, with apologies for your breach of engagement. You, particularly, had the effrontery to send word to the Duchess Danville, that on the moment we were setting out to dine with her, despatches came to hand, which required immediate attention. You wanted me to invent a more ingenious excuse; but I knew you were getting into a scrape, and I would have nothing to do with it. Well; after dinner to St. Cloud, from St. Cloud to Ruggieri's, from Ruggieri's to Krumfoltz; and if the day had been as long as a Lapland summer day, you would still have contrived means among you to have filled it.

Heart. Oh! My dear friend, how you have revived me by recalling to my mind the transactions of that day! How well I remember them all, and that, when I came home at night, and looked back to the morning, it seemed to have been a month ago. Go on, then, like a kind comforter, and paint to me the day We went to St. Germain. How beautiful was every object! the Port de Neuilly, the hills along the Seine, the rainbows of the machine of Marly, the terrace of St. Germain, the chateaux, the gardens, the statues of Marly, the pavilion

of Lucienne. Recollect, too, Madrid, Bagatelle, the King's garden, the Dessert. How grand the idea excited by the remains of such a column. The spiral staircase, too, was beautiful. Every moment was filled with something agreeable. The wheels of time moved on with a rapidity, of which those of our carriage gave but a faint idea. And yet, in the evening, when one took a retrospect of the day, what a mass of happiness had we travelled over! Retrace all those scenes to me, my good companion, and I will forgive the unkindness with which you were chiding me. The day we went to St. Germain was a little too warm, I think; was it not?

Head. Thou art the most incorrigible of all the beings that ever sinned! I reminded you of the follies of the first day, intending to deduce from thence some useful lessons for you; but instead of listening to them, you kindle at the recollection, you retrace the whole series with a fondness, which shows you nothing, but the opportunity, to act it over again. I often told you, during its course, that you were imprudently engaging your affections, under circumstances that must have cost you a great deal of pain; that the persons, indeed, were of the greatest merit, possessing good sense, good humor, honest hearts, honest manners, and eminence in a lovely art; that the lady had, moreover, qualities and accomplishments belonging to her sex, which might form a chapter apart for her; such as music, modesty, beauty, and that softness of disposition, which is the ornament of her sex and charm of ours; but that all these considerations would increase the pang of separation; that their stay here was to be short; that you rack our whole system when you are parted from those you love, complaining that such a separation is worse than death, inasmuch as this ends our sufferings, whereas that only begins them; and that the separation would, in this instance, be the more severe, as you would probably never see them again.

Heart. But they told me they would come back again, the next

year.

Head. But, in the meantime, see what you suffer; and their return, too, depends on so many circumstances, that if you had a grain of prudence, you would not count upon it. Upon the whole, it is improbable, and therefore you should abandon the idea of ever seeing them again.

Heart. May heaven abandon me if I do!

Head. Very well. Suppose, then, they come back. They are to stay two months, and, when these are expired, what is to follow? Perhaps you flatter yourself they may come to America?

Heart. God only knows what is to happen. I see nothing impossible in that supposition; and I see things wonderfully contrived sometimes, to make us happy. Where could they find such objects as in America, for the exercise of their enchanting; art? especially the lady, who paints landscapes so inimitably. She wants only subjects worthy of immortality, to render her pencil immortal. The Falling Spring, the Cascade of Niagara, the passage of the Potomac through the Blue Mountains, the Natural Bridge; it is worth a voyage across the Atlantic to see these objects; much more to paint, and make them, and thereby ourselves, known to all ages. And our own dear Monticello; where has nature spread so rich a mantle under the eye? mountains, forest, rocks, rivers. With what majesty do we there ride above the storms! How sublime to look down into the workhouse of nature, to see her clouds, hail, snow, rain, thunder, all fabricated at our feet! and the glorious sun, when rising as if out of a distant water, just gilding the tops of the mountains, and giving life to all nature! I hope in God, no circumstance may ever make either seek an asylum from grief! With what sincere sympathy I would open every cell of my composition, to receive the effusion of their woes! I would pour my tears into their wounds; and if a drop of balm could be found on the

top of the Cordilleras, or at the remotest sources of the Missouri, I would go thither myself to seek and to bring it. Deeply practised in the school of affliction, the human heart knows no joy which I have not lost, no sorrow of which I have not drunk! Fortune ran present no grief of unknown form to me! Who, then, can so softly bind up the wound of another, as he who has felt the same wound himself? But heaven forbid they should ever know a sorrow! Let us turn over another leaf, for this has distracted me.

Head. Well. Let us put this possibility to trial then, on another point. When you consider the character which is given of our country, by the lying newspapers of London, and their credulous copiers in other countries; when you reflect that all Europe is made to believe we are a lawless banditti, in a state of absolute anarchy, cutting one another's throats, and plundering without distinction, how could you expect that any reasonable creature would venture among us?

Heart. But you and I know that all this is false: that there is not a country on earth, where there is greater tranquillity; where the laws are milder, or better obeyed; where every one is more attentive to his own business, or meddles less with that of others; where strangers are better received, more hospitably treated, and with a more sacred respect.

Head. True, you and I know this, but your friends do not know it.

Heart. But they are sensible people, who think for themselves. They will ask of impartial foreigners, who have been among us, whether they saw or heard on the spot, any instance of anarchy. They will judge, too, that a people, occupied as we are, in opening rivers, digging navigable canals, making roads, building public schools, establishing academies, erecting busts and statues to our great men, protecting religious freedom, abolishing sanguinary punishments, reforming and improving our laws in general; they will judge, I say,

for themselves, whether these are not the occupations of a people at their ease; whether this is not better evidence of our true state, than a London newspaper, hired to lie, and from which no truth can ever be extracted but by reversing everything it says.

Head. I did not begin this lecture, my friend, with a view to learn from you what America is doing. Let us return, then, to our point. I wish to make you sensible how imprudent it is to place your affections, without reserve, on objects you must so soon lose, and whose loss, when it comes, must cost you such severe pangs. Remember the last night. You knew your friends were to leave Paris to-day. This was enough to throw you into agonies. All night you tossed us from one side of the bed to the other; no sleep, no rest. The poor crippled wrist, too, never left one moment in the same position; now up, now down, now here, now there; was it to be wondered at, if its pains returned? The surgeon then was to be called, and to be rated as an ignoramus, because he could not divine the cause of this extraordinary change. In fine, my friend, you must mend your manners. This is not a world to live at random in, as you do. To avoid those eternal distresses, to which you are forever exposing us, you must learn to look forward, before you take a step which may interest our peace. Everything in this world is a matter of calculation. Advance then with caution, the balance in your hand. Put into one scale the pleasures which any object may offer; but put fairly into the other, the pains which are to follow, and see which preponderates. The making an acquaintance, is not a matter of indifference. When a new one is proposed to you, view it all round. Consider what advantages it presents, and to what inconveniences it may expose you. Do not bite at the bait of pleasure, till you know there is no hook beneath it. The art of life is the art of avoiding pain; and he is the best pilot, who steers clearest of the rocks and shoals with which it is beset. Pleasure is always before us; but misfortune is at our side: while running after that, this arrests us. The most effectual means of being secure against

pain, is to retire within ourselves, and to suffice for our own happiness. Those which depend on ourselves, are the only pleasures a wise man will count on: for nothing is ours, which another may deprive us of. Hence the inestimable value of intellectual pleasures. Ever in our power, always leading us to something new, never cloying, we ride serene and sublime above the concerns of this mortal world, contemplating truth and nature, matter and motion, the laws which bind up their existence, and that Eternal Being who made and bound them up by those laws. Let this be our employ. Leave the bustle and tumult of society to those who have not talents to occupy themselves without them. Friendship is but another name for an alliance with the follies and the misfortunes of others. Our own share of miseries is sufficient: why cuter then as volunteers into those of an other? Is there so lil tie gall poured into our cup, that we must need help to drink fiat of our neighbor? A friend dies, or leaves us: we feel as if a limb were cut off. He is sick: we must watch over him, and participate of his pains. His fortune is shipwrecked: ours must be laid under contribution. He loses a child, a parent, or a partner: we must mourn the loss as if it were our own.

Heart. And what more sublime delight than to mingle tears with one whom the hand of heaven hath smitten! to watch over the bed of sickness, and to beguile its tedious and its painful moments! to share our bread with one to whom misfortune has left none, This world abounds indeed with misery; to lighten its burthen, we must divide it with one another. But let us now try the virtue of your mathematical balance, and as you have put into one scale the burthens of friendship, let me put its comforts into the other. When languishing then under disease, how grateful is the solace of our friends! how are we penetrated with their assiduities and attentions! how much are we supported by their encouragements and kind offices! When heaven has taken from us some object of our love, how sweet is it to have a

bosom whereon to recline our heads, and into which we may pour the torrent of our tears! Grief, with such a comfort, is almost a luxury! In a life, where we are perpetually exposed to want and accident, yours is a wonderful proposition, to insulate ourselves, to retire from all aid, and to wrap ourselves in the mantle of self-sufficiency! For, assuredly, nobody will care for him who cares for nobody. But friendship is precious, not only in the shade, but in the sunshine of life; and thanks to a benevolent arrangement of things, the greater part of life is sunshine. I will recur for proof to the days we have lately passed. On these, indeed, the sun shone brightly. How gay did the face of nature appear! Hills, valleys, chateaux, gardens, rivers, every object wore its liveliest hue! Whence did they borrow it? From the presence of our charming companion. They were pleasing, because she seemed pleased. Alone, the scene would have been dull and insipid: the participation of it with her gave it relish. Let the gloomy monk, sequestered from the world, seek unsocial pleasures in the bottom of his cell! Let the sublimated philosopher grasp visionary happiness, while pursuing phantoms dressed in the garb of truth! Their supreme wisdom is supreme folly; and they mistake for happiness the mere absence of pain. Had they ever felt the solid pleasure of one generous spasm of the heart, they would exchange for it all the frigid speculations of their lives, which you have been vaunting in such elevated terms. Believe me, then, my friend, that that is a miserable arithmetic which could estimate friendship at nothing, or at less than nothing. Respect for you has induced me to enter into this discussion, and to hear principles uttered which I detest and abjure. Respect for myself now obliges me to recall you into the proper limits of your office. When nature assigned us the same habitation, she gave us over it a divided empire. To you, she allotted the field of science; to me, that of morals. When the circle is to be squared, or the orbit of a comet to be traced; when the arch of greatest strength, or the solid of least resistance, is to be investigated, take up the problem; it is yours; nature has given me no cognizance of it. In like manner, in denying to

you the feelings of sympathy, of benevolence, of gratitude, of justice, of love, of friendship, she has excluded you from their control. To these, she has adapted the mechanism of the heart. Morals were too essential to the happiness of man, to be risked on the uncertain combinations of the head. She laid their foundation, therefore, in sentiment, not in science. That she gave to all, as necessary to all; this to a few only, as sufficing with a few. I know, indeed, that you pretend authority to the sovereign control of our conduct, in all its parts; and a respect for your grave saws and maxims, a desire to do what is right, has sometimes induced me to conform to your counsels. A few facts, however, which I can readily recall to your memory, will suffice to prove to you, that nature has not organized you for our moral direction. When the poor, wearied soldier whom we overtook at Chickahominy, with his pack on his back, begged us to let him get up behind our chariot, you began to calculate that the road was full of soldiers, and that if all should be taken up, our horses would fail in their journey. We drove on therefore. But, soon becoming sensible you had made me do wrong, that, though we cannot relieve all the distressed, we should relieve as many as we can, I turned about to take up the soldier; but he had entered a bye-path, and was no more to be found; and from that moment to this, I could never find him out, to ask his forgiveness. Again, when the poor woman came to ask a charity in Philadelphia, you whispered that she looked like a drunkard, and that half a dollar was enough to give her for the alehouse. Those who want the dispositions to give, easily find reasons why they ought not to give. When I sought her out afterwards, and did what I should have done at first, you know that she employed the money immediately towards placing her child at school. If our country, when pressed with wrongs at the point of the bayonet, had been governed by its heads instead of its hearts, where should we have been now? Hanging on a gallows as high as Hainan's. You began to calculate, and to compare wealth and numbers: we threw up a few pulsations of our blood; we supplied enthusiasm against wealth and

numbers; we put our existence to the hazard, when the hazard seemed against us, and We saved our country: justifying, at the same time, the ways of Providence, whose precept is, to do always what is right, and leave the issue to Him. In short, my friend, as far as my recollection serves me, I do not know that I fever did a good thing on your suggestion, or a dirty one without it. I do forever, then, disclaim your interference in my province. Fill paper as you please with triangles and squares: try how many ways you can hang and combine them together. I shall never envy nor control your sublime delights. But leave me to decide, when and where friendships are to be contracted, You say, I contract them at random. So you said the woman at Philadelphia was a drunkard. I receive none into my esteem, till I know they are worthy of it. Wealth, title, office, are no recommendations to my friendship. On the contrary, great good qualities are requisite to make amends for their having wealth, title, and office. You confess, that, in the present case, I could not have made a worthier choice. You only object, that I was so soon to lose them. We are not immortal ourselves, my friend; how can we expect our enjoyments to be so? We have no rose without its thorn; no pleasure without alloy. It is the law of our existence; and we must acquiesce. It is the condition annexed to all our pleasures, not by us who receive, but by him who gives them. True, this condition is pressing cruelly on me at this moment. I feel more fit for death than life. But, when I look back on the pleasures of which it is the consequence, I am conscious they were worth the price I am paying. Notwithstanding your endeavors, too, to damp my hopes, I comfort myself with expectations of their promised return. Hope is sweeter than despair; and they were too good to mean to deceive me. "In the summer," said the gentleman; but "in the spring," said the lady; and I should love her forever, were it only for that! Know, then, my friend, that I have taken these good people into my bosom; that I have lodged them in the warmest cell I could find; that I love them, and will continue to love them through life; that if fortune should dispose them

on one side the globe, and me on the other, my affections shall pervade its whole mass to reach them. Knowing then my determination, attempt not to disturb it. If you can, at any time, furnish matter for their amusement, it will be the office of a good neighbor to do it. I will, in like manner, seize any occasion which may offer, to do the like good turn for you with Condorcet, Rittenhouse, Madison, La Cretelle, or any other of those worthy sons of science, whom you so justly prize.

I thought this a favorable proposition whereon to rest the issue of the dialogue. So I put an end to it by calling for my nightcap. Methinks, I hear you wish to heaven I had called a little sooner, and so spared you the ennui of such a sermon. I did not interrupt them sooner, because I was in a mood for hearing sermons. You too were the subject; and on such a thesis, I never think the theme long; not even if I am to write it, and that slowly and awkwardly, as now, with the left hand. But, that you may not be discouraged from a correspondence which begins so formidably, I will promise you, on my honor, that my future letters shall be of a reasonable length. I will even agree to express but half my esteem for you, for fear of cloying you with too full a dose. But, on your part, no curtailings. If your letters are as long as the Bible, they will appear short to me. Only let them be brimful of affection. I shall read them with the dispositions with which Arlequin, in *Les deux billets*, spelt the words “je t’aime,” and wished that the whole alphabet had entered into their composition.

We have had incessant rains since your departure. These make me fear for your health, as well as that you had an uncomfortable journey. The same cause has prevented me from being able to give you any account of your friends here. This voyage to Fontainebleau will probably send the Count de Moustier and the Marquise de Brehan, to America. Danquerville promised to visit me, but has not

done it as yet. De la Tude comes sometimes to take family soup with me, and entertains me with anecdotes of his five and thirty years' imprisonment. How fertile is the mind of man, which can make the Bastile and dungeon of Vincennes yield interesting anecdotes! You know this was for making four verses on Madame de Pompadour. But I think you told me you did not know the verses. They were these: "Sans esprit, sans sentiments, Sans etre belle, ni neuve, En France on peut avoir le premier ament: Pompadour en est l'épreuve"[5] I have read the memoir of his three escapes. As to myself, my health is good, except my wrist which mends slowly, and my mind which mends not at all, but broods constantly over your departure. The lateness of the season obliges me to decline my journey into the south of France. Present me in the most friendly terms to Mr. Cosway, and receive me into your own recollection with a partiality and warmth, proportioned not to my own poor merit, but to the sentiments of sincere affection and esteem, with which I have the honor to be, my dear Madam, your most obedient humble servant.

TO JAMES MADISON

Paris, December 16, 1786

.... To make us one nation as to foreign concerns, and keep us distinct in domestic ones, gives the outline of the proper division of powers between the general and particular governments. But, to enable the federal head to exercise the powers given it to best advantage, it should be organized as the particular ones are, into legislative, executive, and judiciary. The first and last are already separated. The second should be. When last with Congress, I often proposed to members to do this, by making of the committee of the States, an executive committee during the recess of Congress, and, during its sessions, to appoint a committee to receive and despatch all executive business, so that Congress itself should meddle only with what should be legislative. But I question if any Congress (much less all successively) can have self-denial enough to go through with this distribution. The distribution, then, should be imposed on them. I find Congress have reversed their division of the western States, and proposed to make them fewer and larger. This is reversing the natural order of things. A tractable people may be governed in large bodies; but, in proportion as they depart from this character, the extent of their government must be less. We see into what small divisions the Indians are obliged to reduce their societies. This measure, with the disposition to shut up the Mississippi, gives me serious apprehensions of the severance of the eastern and western parts of our confederacy. It might have been made the interest of the western States to remain united with us, by managing their interests honestly, and for their own good. But, the moment we sacrifice their interest to our own, they will see it better to govern themselves. The moment they resolve to do this, the point is settled. A forced connection is neither our

interest, nor within our power.

The Virginia act for religious freedom has been received with infinite approbation in Europe, and propagated with enthusiasm. I do not mean by the governments, but by the individuals who compose them. It has been translated into French and Italian, has been sent to most of the courts of Europe, and has been the best evidence of the falsehood of those reports which stated us to be in anarchy. It is inserted in the new "Encyclopédic," and is appearing in most of the publications respecting America. In fact, it is comfortable to see the standard of reason at length erected, after so many ages, during which the human mind has been held in vassalage by kings, priests, and nobles; and it is honorable for us, to have produced the first legislature who had the courage to declare, that the reason of man may be trusted with the formation of his own opinions....

TO JOHN JAY

Paris, January 9, 1787

.... You will have seen in the public papers, that the King has called an assembly of the Notables of this country. This has not been done for one hundred and sixty years past. Of course, it calls up all the attention of the people. The objects of this assembly are not named: several are conjectured. The tolerating the Protestant religion; removing all the internal Custom houses to the frontier; equalizing the gabelles on salt through the kingdom; the sale of the King's domains, to raise money; or, finally, the effecting this necessary end by some other means, are talked of. But in truth, nothing is known about it. This government practises secrecy so systematically, that it never publishes its purposes or its proceedings, sooner or more extensively than necessary. I send you a pamphlet, which, giving an account of the last Assemblée des Notables, may give an idea of what the present will be....

TO MONSIEUR DE CREVE- COEUR

Paris, January 15, 1787

DEAR SIR, —I see by the Journal of this morning, that they are robbing us of another of our inventions to give it to the English. The writer, indeed, only admits them to have revived what he thinks was known to the Greeks, that is, the making the circumference of a wheel of one single piece. The farmers in New Jersey were the first who practised it, and they practised it commonly. Dr. Franklin, in one of his trips to London, mentioned this practice to the man now in London, who has the patent for making those wheels. The idea struck him. The Doctor promised to go to his shop, and assist him in trying to make the wheel of one piece. The Jersey farmers do it by cutting a young sapling, and bending it, while green and juicy, into a circle; and leaving it so until it becomes perfectly seasoned. But in London there are no saplings. The difficulty was, then, to give to old wood the pliancy of young. The Doctor and the workman labored together some weeks, and succeeded; and the man obtained a patent for it, which has made his fortune. I was in his shop in London, he told me the whole story himself, and acknowledged, not only the origin of the idea, but how much the assistance of Dr. Franklin had contributed to perform the operation on dry wood. He spoke of him with love and gratitude. I think I have had a similar account from Dr. Franklin, but cannot be quite certain. I know, that being in Philadelphia when the first set of patent wheels arrived from London, and were spoken of by the gentleman (an Englishman) who brought them, as a wonderful discovery, the idea of its being a new discovery was laughed at by the Philadelphians, who, in their Sunday parties across the Delaware, had seen every farmer's cart mounted on such wheels. The writer in the

paper, supposes the English workman got his idea from Homer. But it is more likely the Jersey farmer got his idea from thence, because ours are the only farmers who can read Homer; because, too, the Jersey practice is precisely that stated by Homer: the English practice very different. Homer's words are (comparing a young hero killed by Ajax to poplar felled by a workman) literally thus: "He fell on the ground, like a poplar, which has grown smooth, in the west part of a great meadow; with its branches shooting from its summit. But the chariot maker, with the sharp axe, has felled it, that he may bend a wheel for a beautiful chariot. It lies drying on the banks of the river." Observe the circumstances which coincide with the Jersey practice, 1. It is a tree growing in a moist place, full of juices and easily bent. 2. It is cut while green. 3. It is bent into the circumference of a wheel. 4. It is left to dry in that form. You, who write French well and readily, should write a line for the Journal, to reclaim the honor of our farmers. Adieu. Yours affectionately.

TO COLONEL EDWARD CARRINGTON

Paris, January 16, 1787

.... The tumults in America I expected would have produced in Europe an unfavorable opinion of our political state. But it has not. On the contrary, the small effect of these tumults seems to have given more confidence in the firmness of our governments. The interposition of the people themselves on the side of government has had a great effect on the opinion here. I am persuaded myself that the good sense of the people will always be found to be the best army. They may be led astray for a moment, but will soon correct themselves. The people are the only censors of their governors; and even their errors will tend to keep these to the true principles of their institution. To punish these errors too severely would be to suppress the only safeguard of the public liberty. The way to prevent these irregular interpositions of the people, is to give them full information of their affairs through the channel of the public papers, and to contrive that those papers should penetrate the whole mass of the people. The basis of our governments being the opinion of the people, the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter. But I should mean that every man should receive those papers, and be capable of reading them. I am convinced that those societies (as the Indians) which live without government, enjoy in their general mass an infinitely greater degree of happiness than those who live under the European governments. Among the former, public opinion is in the place of law, and restrains morals as powerfully as laws ever did anywhere. Among the latter, under pretence of governing, they have

divided their nations into two classes, wolves and sheep. I do not exaggerate. This is a true picture of Europe. Cherish, therefore, the spirit of our people, and keep alive their attention. Do not be too severe upon their errors, but reclaim them by enlightening them. If once they become inattentive to the public affairs, you and I, and Congress and Assemblies, Judges and Governors, shall all become wolves. It seems to be the law of our general nature, in spite of individual exceptions; and experience declares that man is the only animal which devours his own kind; for I can apply no milder term to the governments of Europe, and to the general prey of the rich on the poor....

TO JAMES MADISON

Paris, January 30, 1787

.... I am impatient to learn your sentiments on the late troubles in the Eastern States. So far as I have yet seen, they do not appear to threaten serious consequences. Those States have suffered by the stoppage of the channels of their commerce, which have not yet found other issues. This must render money scarce, and make the people uneasy. This uneasiness has produced acts absolutely unjustifiable; but I hope they will provoke no severities from their governments. A consciousness of those in power that their administration of the public affairs has been honest, may, perhaps, produce too great a degree of indignation; and those characters, wherein fear predominates over hope, may apprehend too much from these instances of irregularity. They may conclude too hastily, that nature has formed man insusceptible of any other government than that of force, a conclusion not founded in truth nor experience. Societies exist under three forms, sufficiently distinguishable, 1. Without government, as among our Indians. 2. Under governments, wherein the will of every one has a just influence; as is the case in England, in a slight degree, and in our States, in a great one. 3. Under governments of force; as is the case in all other monarchies, and in most of the other republics. To have an idea of the curse of existence under these last, they must be seen. It is a government of wolves over sheep. It is a problem, not clear in my mind, that the first condition is not the best. But I believe it to be inconsistent with any great degree of population. The second state has a great deal of good in it. The mass of mankind under that, enjoys a precious degree of liberty and happiness. It has its evils, too; the principal of which is the turbulence to which it is subject. But weigh this against the oppressions of monarchy, and it becomes nothing.

Malo periculosem libertatem quam quietam servitutem.^[6] Even this evil is productive of good. It prevents the degeneracy of government, and nourishes a general attention to the public affairs. I hold it, that a little rebellion, now and then, is a good thing, and as necessary in the political world as storms in the physical. Unsuccessful rebellions, indeed, generally establish the encroachments on the rights of the people, which have produced them. An observation of this truth should render honest republican governors so mild in their punishment of rebellions, as not to discourage them too much. It is a medicine necessary for the sound health of government.

.... The Marquis de La Fayette is a most valuable auxiliary to me. His zeal is unbounded, and his weight with those in power, great. His education having been merely military, commerce was an unknown field to him. But his good sense enabling him to comprehend perfectly whatever is explained to him, his agency has been very efficacious. He has a great deal of sound genius, is well remarked by the King, and rising in popularity. He has nothing against him, but the suspicion of republican principles. I think he will one day be of the ministry. His foible is, a canine appetite for popularity and fame; but he will get above this. The Count de Vergennes is ill. The possibility of his recovery, renders it dangerous for us to express a doubt of it; but he is in danger. He is a great minister in European affairs, but has very imperfect ideas of our institutions, and no confidence in them. His devotion to the principles of pure despotism, renders him unaffectionate to our governments. But his fear of England makes him value us as a make weight. He is cool, reserved in political conversations, but free and familiar on other subjects, and a very attentive, agreeable person to do business with. It is impossible to have a clearer, better organized head; but age has chilled his heart....

TO MADAME LA COMTESSE DE TESSÉ

Nismes, March 20, 1787

Here I am, Madam, gazing whole hours at the Maison Quarrée, like a lover at his mistress. The stocking weavers and silk spinners around it consider me a hypochondriac Englishman, about to write with a pistol the last chapter of his history. This is the second time I have been in love since I left Paris. The first was with a Diana at the Chateau de Laye-Epinaye in Beaujolois, a delicious morsel of sculpture, by M. A. Slodtz. This, you will say, was in rule, to fall in love with a female beauty; but with a house! it is out of all precedent. No, Madam, it is not without a precedent in my own history. While in Paris, I was violently smitten with the Hotel de Salm, and used to go to the Tuileries almost daily, to look at it....

From Lyons to Nismes I have been nourished with the remains of Roman grandeur. They have always brought you to my mind, because I know your affection for whatever is Roman and noble. At Vienna I thought of you. But I am glad you were not there; for you would have seen me more angry than, I hope, you will ever see me. The Praetorian Palace, as it is called, comparable, for its fine proportions, to the Maison Quarrée, defaced by the barbarians who have converted it to its present purpose, its beautiful fluted Corinthian columns cut out, in part, to make space for Gothic windows, and hewed down, in the residue, to the plane of the building, was enough, you must admit, to disturb my composure. At Orange, too, I thought of you. I was sure you had seen with pleasure the sublime triumphal arch of Marius at the entrance of the city. I went then to the Arenae. Would you believe, Madam, that in this eighteenth century, in France, under the reign of

Louis X VI, they are at this moment pulling down the circular wall of this superb remain, to pave a road? ...

A propos of Paris. I have now been three weeks from there, without knowing anything of what has passed. I suppose I shall meet it all at Aix, where I have directed my letters to be lodged, *poste restante*. My journey has given me leisure to reflect on this *Assemblée des Notables*. Under a good and a young King, as the present, I think good may be made of it. I would have the deputies then, by all means, so conduct themselves as to encourage him to repeat the calls of this Assembly. Their first steps should be, to get themselves divided into two chambers instead of seven; the Noblesse and the Commons separately. The second, to persuade the King, instead of choosing the deputies of the Commons himself, to summon those chosen by the people for the Provincial administrations. The third, as the Noblesse is too numerous to be all of the *Assemblée*, to obtain permission for that body to choose its own deputies. Two Houses, so elected, would contain a mass of wisdom which would make the people happy, and the King great; would place him in history where no other act can possibly place him. They would thus put themselves in the track of the best guide they can follow; they would soon overtake it, become its guide in turn, and lead to the wholesome modifications wanting in that model, and necessary to constitute a rational government. Should they attempt more than the established habits of the people are ripe for, they may lose all, and retard indefinitely the ultimate object of their aim. These, Madam, are my opinions; but I wish to know yours, which, I am sure, will be better.

From a correspondent at Nismes, you will not expect news. Were I to attempt to give you news, I should tell you stories one thousand years old. I should detail to you the intrigues of the courts of the Caesars, how they affect us here, the oppressions of their praetors, prefects, &c. I am immersed in antiquities from morning to night. For

me, the city of Rome is actually existing in all the splendor of its empire. I am filled with alarms for the event of the irruptions daily making on us, by the Goths, the Visigoths, Ostrogoths, and Vandals, lest they should re-conquer us to our original barbarism. If I am sometimes induced to look forward to the eighteenth century, it is only when Recalled to it by the recollection of your goodness and friendship, and by those sentiments of sincere esteem and respect with which I have the honor to be Madam, your most obedient, and most humble servant.

TO MARTHA JEFFERSON

Aix-en Provence, March 28, 1787

I was happy, my dear Patsy, to receive, on my arrival here, your letter, informing me of your good health and occupations. I have not written you sooner because I have been almost constantly on the road. My journey hitherto has been a very pleasing one. It was undertaken with the hope that the mineral waters of this place might restore strength to my wrist. Other considerations also concurred, instruction, amusement, and abstraction from business, of which I had too much at Paris. I am glad to learn that you are employed in things new and good, in your music and drawing. You know what have been my fears for some time past—that you do not employ yourself so closely as I could wish. You have promised me a more assiduous attention, and I have great confidence in what you promise. It is your future happiness which interests me, and nothing can contribute more to it (moral rectitude always excepted) than the contracting a habit of industry and activity. Of all the cankers of human happiness none corrodes with so silent, yet so baneful a tooth, as indolence. Body and mind both unemployed, our being becomes a burthen, and tevery object about us loathsome, even the dearest. Idleness begets ennui, ennui the hypochondria, and that a diseased body. No laborious person was ever yet hysterical. Exercise and application produce order in our affairs, health of body, cheerfulness of mind, and these make us precious to our friends. It is while we are young that the habit of industry is formed. If not then, it never is afterwards. The fortune of our lives, therefore, depends on employing well the short period of youth. If at any moment, my dear, you catch yourself in idleness, start from it as you would from the precipice of a gulf. You are not, however, to consider yourself as unemployed while taking exercise. That is

necessary for your health, and health is the first of all objects. For this reason, if you leave your dancing-master for the summer, you must increase your other exercise.

I do not like your saying that you are unable to read the ancient print of your Livy, but with the aid of your master. We are always equal to what we undertake with resolution. A little degree of this will enable you to decipher your Livy. If you always lean on your master, you will never be able to proceed without him. It is a part of the American character to consider nothing as desperate—to surmount every difficulty by resolution and contrivance. In Europe there are shops for every want: its inhabitants therefore have no idea that their wants can be furnished otherwise. Remote from all other aid, we are obliged to invent and to execute; to find means within ourselves, and not to lean on others. Consider, therefore, the conquering your Livy as an exercise in the habit of surmounting difficulties; a habit which will be necessary to you in the country where you are to live, and without which you will be thought a very helpless animal, and less esteemed. Music, drawing, books, invention, and exercise, will be so many resources to you against ennui. But there are others which, to this object, add that of utility. These are the needle and domestic economy. The latter you cannot learn here, but the former you may. In the country life of America there are many moments when a woman can have recourse to nothing but her needle for employment. In a dull company and in dull weather, for instance, it is ill manners to read; it is ill manners to leave them; no card-playing there among genteel people—that is abandoned to blackguards. The needle is then a valuable resource. Besides, without knowing how to use it herself, how can the mistress of a family direct the works of her servants?

You ask me to write you long letters. I will do it, my dear, on condition you will read them from time to time, and practice what they will inculcate. Their precepts will be dictated by experience, by a

perfect knowledge of the situation in which you will be placed, and by the fondest love for you. This it is which makes me wish to see you more qualified than common. My expectations from you are high yet not higher than you may attain. Industry and resolution are all that are wanting. Nobody in this world can make me so happy, or so miserable, as you. Retirement from public life will ere long become necessary for me. To your sister and yourself I look to render the evening of my life serene and contented. Its morning has been clouded by loss after loss, till I have nothing left but you. I do not doubt either your affection or dispositions. But great exertions are necessary, and you have little time left to make them. Be industrious, then, my dear child. Think nothing unsurmountable by resolution and application and you will be all that I wish you to be.

.... Continue to love me with all the warmth with which you are beloved.... my dear Patsy....

TO MARTHA JEFFERSON

Toulon, April 7, 1787

MY DEAR PATSY:

I received yesterday at Marseilles your letter of March 25th; and I received it with pleasure, because it announced to me that you were well. Experience learns us to be always anxious about the health of those whom we love. I have not been able to write to you as often as I expected, because I am generally on the road; and when I stop anywhere, I am occupied in seeing what is to be seen. It will be some time now, perhaps three weeks, before I shall be able to write you again. But this need not slacken your writing to me, because you have leisure, and your letters come regularly to me. I have received letters which inform me that our dear Polly will certainly come to us this summer. By the time I return, it will be time to expect her. When she arrives, she will become a precious charge on your hands. The difference of your age and your common loss of a mother, will put that office on you. Teach her to be always true; no vice is so mean as the want of truth, and at the same time so useless. Teach her never to be angry: anger only serves to torment ourselves, to divert others, and alienate their esteem. And teach her industry and application to useful pursuits. I will venture to assure you, that if you inculcate this in her mind, you will make her a happy being herself, a most inestimable friend to you, and precious to all the world. In teaching her these dispositions of mind, you will be more fixed in them yourself, and render yourself dear to all your acquaintances. Practice them, then, my dear, without ceasing. If ever you find yourself in difficulty, and doubt how to extricate yourself, do what is right, and you will find it the easiest way of getting out of the difficulty. Do it for the additional incitement of increasing the happiness of him who loves you

infinitely....

TO THE MARQUIS DE LAFAYETTE

Nice, April 11, 1787

Your head, my dear friend, is full of notable things; and being better employed, therefore, I do not expect letters from you. I am constantly roving about, to see what I have never seen before, and shall never see again. In the great cities, I go to see what travellers think alone worthy of being seen; but I make a job of it, and generally gulp it all down in a day. On the other hand, I am never satiated with rambling through the fields and farms, examining the culture and cultivators, with a degree of curiosity which makes some take me to be a fool, and others to be much wiser than I am. I have been pleased to find among the people a less degree of physical misery than I had expected. They are generally well clothed, and have a plenty of food, not animal indeed, but vegetable, which is as wholesome. Perhaps they are overworked, the excess of the rent required by the landlord obliging them to too many hours of labor in order to produce that, and wherewith to feed and clothe themselves. The soil of Champagne and Burgundy I have found more universally good than I had expected, and as I could not help making a comparison with England, I found that comparison more unfavorable to the latter than is generally admitted. The soil, the climate, and the productions are superior to those of England, and the husbandry as good, except in one point; that of manure. In England, long leases for twenty-one years, or three lives, to wit, that of the farmer, his wife, and son, renewed by the son as soon as he comes to the possession, for his own life, his wife's and eldest child's, and so on, render the farms there almost hereditary, make it worth the farmer's while to manure the lands highly, and give the landlord an opportunity of occasionally

making his rent keep pace with the improved state of the lands. Here the leases are either during pleasure, or for three, six, or nine years, which does not give the farmer time to repay himself for the expensive operation of well manuring, and, therefore, he manures ill, or not at all. I suppose, that could the practice of leasing for three lives be introduced in the whole kingdom, it would, within the term of your life, increase agricultural productions fifty per cent; or were any one proprietor to do it with his own lands, it would increase his rents fifty per cent., in the course of twenty-five years. But I am told the laws do not permit it. The laws then, in this particular, are unwise and unjust, and ought to give that permission. In the southern provinces, where the soil is poor, the climate hot and dry, and there are few animals, they would learn the art, found so precious in England, of making vegetable manure, and thus improving these provinces in the article in which nature has been least kind to them. Indeed, these provinces afford a singular spectacle. Calculating on the poverty of their soil, and their climate by its latitude only, they should have been the poorest in France. On the contrary, they are the richest, from one fortuitous circumstance. Spurs or ramifications of high mountains, making down from the Alps, and, as it were, reticulating these provinces, give to the valleys the protection of a particular inclosure to each, and the benefit of a general stagnation of the northern winds produced by the whole of them, and thus countervail the advantage of several degrees of latitude. From the first olive fields of Pierrelatte, to the orangeries of Hieres, has been continued rapture to me. I have often wished for you. I think you have not made this journey. It is a pleasure you have to come, and an improvement to be added to the many you have already made. It will be a great comfort to you, to know, from your own inspection, the condition of all the provinces of your own country, and it will be interesting to them at some future day, to be known to you. This is, perhaps, the only moment of your life in which you can acquire that knowledge. And to do it most effectually, you must be absolutely incognito, you must ferret the

people out of their hovels as I have done, look into their kettles, eat their bread, loll on their beds under pretence of resting yourself, but in fact, to find if they are soft. You will feel a sublime pleasure in the course of this investigation, and a sublimer one hereafter, when you shall be able to apply your knowledge to the softening of their beds, or the throwing a morsel of meat into their kettle of vegetables.

You will not wonder at the subjects of my letters; they are the only ones which have been presented to my mind for some time past; and the waters must always be what are the fountains from which they flow. According to this, indeed, I should have intermixed, from beginning to end, warm expressions of friendship to you. But according to the ideas of our country, we do not permit ourselves to speak even truths, when they may have the air of flattery. I content myself, therefore, with saying once for all, that I love you, your wife and children. Tell them so, and adieu. Yours affectionately.

TO JAMES MADISON

Paris, June 20, 1787

.... The idea of separating the executive business of the confederacy from Congress, as the judiciary is already, in some degree, is just and necessary. I had frequently pressed on the members individually, while in Congress, the doing this by a resolution of Congress for appointing an executive committee, to act during the sessions of Congress, as the committee of the States was to act during their vacations. But the referring to this committee all executive business, as it should present itself, would require a more persevering self-denial than I suppose Congress to possess. It will be much better to make that separation by a federal act. The negative, proposed to be given them on all the acts of the several legislatures, is now, for the first time, suggested to my mind. *Prima facie*, I do not like it. It fails in an essential character; that the hole and the patch should be commensurate. But this proposes to mend a small hole by covering the whole garment. Not more than one out of one hundred State acts concern the confederacy. This proposition, then, in order to give them one degree of power, which they ought to have, gives them ninety-nine more, which they ought not to have, upon a presumption that they will not exercise the ninety-nine. But upon every act, there will be a preliminary question, Does this act concern the confederacy? And was there ever a proposition so plain, as to pass Congress without a debate? Their decisions are almost always wise; they are like pure metal. But you know of how much dross this is the result. Would not an appeal from the State judicature to a federal court, in all cases where the act of Confederation controlled the question, be as effectual a remedy, and exactly commensurate to the defect? A British creditor, for example, sues for his debt in Virginia; the defendant pleads an act

of the State, excluding him from their courts; the plaintiff urges the Confederation, and the treaty made under that, as controlling the State law; the judges are weak enough to decide according to the views of their legislature. An appeal to a federal court sets all to rights. It will be said, that this court may encroach on the jurisdiction of the State courts. It may. But there will be a power, to wit, Congress, to watch and restrain them. But place the same authority in Congress itself, and there will be no power above them, to perform the same office. They will restrain within due bounds, a jurisdiction exercised by others, much more rigorously than if exercised by themselves....

The late changes in the ministry here excite considerable hopes. I think we gain in them all. I am particularly happy at the re-entry of Malesherbes into the Council. His knowledge and integrity render his value inappreciable, and the greater to me, because, while he had no views of office, we had established together the most unreserved intimacy. So far, too, I am pleased with Montmorin. His honesty proceeds from the heart as well as the head, and therefore may be more surely counted on. The King loves business, economy, order, and justice, and wishes sincerely the good of his people; but he is irascible, rude, very limited in his understanding, and religious, bordering on bigotry. He has no mistress, loves his queen, and is too much governed by her. She is capricious like her brother, and governed by him; devoted to pleasure and expense; and not remarkable for any other vices or virtues. Unhappily the King shows a propensity for the pleasures of the table. That for drink has increased lately, or, at least, it has become more known....

TO T. M. RANDOLPH, JUNIOR

Paris, July 6, 1787

.... I am glad to find, that among the various branches of science presenting themselves to your mind, you have fixed on that of politics as your principal pursuit. Your country will derive from this a more immediate and sensible benefit. She has much for you to do. For, though we may say with confidence, that the worst of the American constitutions is better than the best which ever existed before, in any other country, and that they are wonderfully perfect for a first essay, yet every human essay must have defects. It will remain, therefore, to those now coming on the stage of public affairs, to perfect what has been so well begun by those going off it. Mathematics, Natural Philosophy, Natural History, Anatomy, Chemistry, Botany, will become amusements for your hours of relaxation, and auxiliaries to your principal studies. Precious and delightful ones they will be. As soon as such a foundation is laid in them, as you may build on as you please, hereafter, I suppose you will proceed to your main objects, Politics, Law, Rhetoric, and History. As to these, the place where you study them is absolutely indifferent. I should except Rhetoric, a very essential member of them, and which I suppose must be taught to advantage where you are. You would do well, therefore, to attend the public exercises in this branch also, and to do it with very particular diligence. This being done, the question arises, where you shall fix yourself for studying Politics, Law, and History? I should not hesitate to decide in favor of France, because you will, at the same time, be learning to speak the language of that country, become absolutely essential under our present circumstances. The best method of doing this, would be to fix yourself in some family where there are women and children, in Passy, Auteuil, or some other of the little towns in

reach of Paris. The principal hours of the day, you will attend to your studies, and in those of relaxation, associate with the family. You will learn to speak better from women and children in three months, than from men in a year. Such a situation, too, will render more easy a due attention to economy of time and money. Having pursued your main studies here, about two years, and acquired a facility in speaking French, take a tour of four or five months through this country and Italy, return then to Virginia, and pass a year in Williamsburg, under the care of Mr. Wythe; and you will be ready to enter on the public stage, with superior advantages. I have proposed to you, to carry on the study of the law with that of politics and history. Every political measure will, forever, have an intimate connection with the laws of the land; and he, who knows nothing of these, will always be perplexed, and often foiled by adversaries having the advantage of that knowledge over him. Besides, it is a source of infinite comfort to reflect, that under every chance of fortune, we have a resource in ourselves from which we may be able to derive an honorable subsistence. I would, therefore, propose not only the study, but the practice of the law for some time, to possess yourself of the habit of public speaking. With respect to modern languages, French, as I have before observed, is indispensable. Next to this, the Spanish is most important to an American. Our connection with Spain is already important, and will become daily more so. Besides this, the ancient part of American history is written chiefly in Spanish. To a person who would make a point of reading and speaking French and Spanish, I should doubt the utility of learning Italian. These three languages, being all degeneracies from the Latin, resemble one another so much, that I doubt the probability of keeping in the head a distinct knowledge of them all. I suppose that he who learns them all, will speak a compound of the three, and neither perfectly. The journey which I propose to you need not be expensive, and would be very useful. With your talents and industry, with science, and that steadfast honesty which eternally pursues right, regardless of consequences, you

may promise yourself everything—but health, without which there is no happiness. An attention to health, then, should take place of every other object. The time necessary to secure this by active exercises, should be devoted to it, in preference to every other pursuit. I know the difficulty with which a studious man tears himself from his studies, at any given moment of the day. But his happiness, and that of his family, depend on it. The most uninformed mind, with a healthy body, is happier than the wisest valetudinarian. I need not tell you, that if I can be useful to you in any part of this, or any other plan you shall adopt, you will make me happy by commanding my services....

TO EDWARD CARRINGTON

Paris, August 4, 1787

DEAR SIR, —Since mine of the 16th of January, I have been honored by your favors of April the 24th and June the 9th. I am happy to find that the States have come so generally into the schemes of the federal convention, from which, I am sure, we shall see wise propositions. I confess, I do not go as far in the reforms thought necessary, as some of my correspondents in America, but if the convention should adopt such propositions, I shall suppose them necessary. My general plan would be, to make the States one as to everything connected with foreign nations, and several as to everything purely domestic. But with all the imperfections of our present government, it is without comparison the best existing, or that ever did exist. Its greatest defect is the imperfect manner in which matters of commerce have been provided for. It has been so often said, as to be generally believed, that Congress have no power by the Confederation to enforce anything; for example, contributions of money. It was not necessary to give them that power expressly; they have it by the law of nature. When two parties make a compact, there results to each a power of compelling the other to execute it. Compulsion was never so easy as in our case, where a single frigate would soon levy on the commerce of any State the deficiency of its contributions; nor more safe than in the hands of Congress, which has always shown that it would wait, as it ought to do, to the last extremities, before it would execute any of its powers which are disagreeable. I think it very material, to separate, in the hands of Congress, the executive and legislative powers, as the judiciary already are, in some degree. This, I hope, will be done. The want of it has been the source of more evil than we have experienced from any

other cause. Nothing is so embarrassing nor so mischievous, in a great assembly, as the details of execution. The smallest trifle of that kind occupies as long as the most important act of legislation, and takes place of everything else. Let any man recollect, or look over, the files of Congress; he will observe the most important propositions hanging over, from week to week, and month to month, till the occasions have passed them, and the things never done. I have ever viewed the executive details as the greatest cause of evil to us, because they in fact place us as if we had no federal head, by diverting the attention of that head from great to small subjects; and should this division of power not be recommended by the convention, it is my opinion Congress should make it itself, by establishing an executive committee....

TO COLONEL MONROE

Paris, August 5, 1787

DEAR SIR, —A journey of between three and four months, into the southern parts of France and northern of Italy, has prevented my writing to you. In the meantime, you have changed your ground, and engaged in different occupations, so that I know not whether the news of this side the water will even amuse you. However, it is all I have for you. The storm which seemed to be raised suddenly in Brabant, will probably blow over. The Emperor, on his return to Vienna, pretended to revoke all the concessions which had been made by his Governors General, to his Brabantine subjects; but he, at the same time, called for deputies from among them to consult with. He will use their agency to draw himself out of the scrape, and all there, I think, will be quieted. Hostilities go on occasionally in Holland. France espouses the cause of the Patriots, as you know, and England and Prussia that of the Stadtholder. France and England are both unwilling to bring on war, but a hasty move of the King of Prussia will perplex them. He has thought the stopping his sister sufficient cause for sacrificing a hundred or two thousand of his subjects, and as many Hollanders and French. He has therefore ordered twenty thousand men to march, without consulting England, or even his own ministers. He may thus drag England into a war, and of course this country, against their will. But it is certain they will do everything they can to prevent it; and that in this at least they agree. Though such a war might be gainful to us, yet it is much to be deprecated by us at this time. In all probability, France would be unequal to such a war by sea and by land, and it is not our interest, or even safe for us, that she should be weakened. The great improvements in their constitution, effected by the Assemblée des Notables, you are apprized of. That of partitioning

the country into a number of subordinate governments, under the administration of Provincial Assemblies, chosen by the people, is a capital one. But to the delirium of joy which these improvements gave the nation, a strange reverse of temper has suddenly succeeded. The deficiencies of their revenue were exposed, and they were frightful. Yet there was an appearance of intention to economise, and reduce the expenses of government. But expenses are still very inconsiderately incurred, and all reformation in that point despaired of. The public credit is affected; and such a spirit of discontent has arisen, as has never been seen. The parliament refused to register the edict for a stamp tax, or any other tax, and call for the States General, who alone, they say, can impose a new tax. They speak with a boldness unexampled. The King has called them to Versailles tomorrow, where he will hold a lit de justice, and compel them to register the tax. How the chapter will finish, we must wait to see....

TO PETER CARR

Paris, August 10, 1787

DEAR PETER, — I have received your two letters of December the 30th and April the 18th, and am very happy to find by them, as well as by letters from Mr. Wythe, that you have been so fortunate as to attract his notice and good will; I am sure you will find this to have been one of the most fortunate events of your life, as I have ever been sensible it was of mine. I enclose you a sketch of the sciences to which I would wish you to apply, in such order as Mr. Wythe shall advise; I mention, also, the books in them worth your reading, which submit to his correction. Many of these are among your father's books, which you should have brought to you. As I do not recollect those of them not in his library, you must write to me for them, making out a catalogue of such as you think you shall have occasion for, in eighteen months from the date of your letter, and consulting Mr. Wythe on the subject. To this sketch, I will add a few particular observations:

1. Italian. I fear the learning this language will confound your French and Spanish. Being all of them degenerated dialects of the Latin, they are apt to mix in conversation. I have never seen a person speaking the three languages, who did not mix them. It is a delightful language, but late events having Tendered the Spanish more useful, lay it aside to prosecute that.

2. Spanish. Bestow great attention on this, and endeavor to acquire an accurate knowledge of it. Our future connections with Spain and Spanish America, will render that language a valuable acquisition. The ancient history of that part of America, too, is written in that language. I send you a dictionary.

3. Moral Philosophy. I think it lost time to attend lectures on this

branch. He who made us would have been a pitiful bungler, if he had made the rules of our moral conduct a matter of science. For one man of science, there are thousands who are not. What would have become of them? Man was destined for society. His morality, therefore, was to be formed to this object. He was endowed with a sense of right and wrong, merely relative to this. This sense is as much a part of his nature, as the sense of hearing, seeing, feeling; it is the true foundation of morality, and not the *το καλον*,^[7] truth, &c., as fanciful writers have imagined. The moral sense, or conscience, is as much a part of man as his leg or arm. It is given to all human beings in a stronger or weaker degree, as force of members is given them in a greater or less degree. It may be strengthened by exercise, as may any particular limb of the body. This sense is submitted, indeed, in some degree, to the guidance of reason; but it is a small stock which is required for this: even a less one than what we call common sense. State a moral case to a ploughman and a professor. The former will decide it as well, and often better than the latter, because he has not been led astray by artificial rules. In this branch, therefore, read good books, because they will encourage, as well as direct your feelings. The writings of Sterne, particularly, form the best course of morality that ever was written. Besides these, read the books mentioned in the enclosed paper; and, above all things, lose no occasion of exercising your dispositions to be grateful, to be generous, to be charitable, to be humane, to be true, just, firm, orderly, courageous, &c. Consider every act of this kind will strengthen your moral faculties and increase your worth.

4. Religion. Your reason is now mature enough to examine this object. In the first place, divest yourself of all bias in favor of novelty and singularity of opinion. Indulge them in any other subject rather than that of religion. It is too important, and the consequences of error may be too serious. On the other hand, shake off all the fears and servile prejudices, under which weak minds are servilely crouched. Fix

reason firmly in her seat, and call to her tribunal every fact, every opinion. Question with boldness even the existence of a God; because, if there be one, he must more approve of the homage of reason, than that of blindfolded fear. You will naturally examine first, the religion of your own country. Read the Bible, then, as you would read Livy or Tacitus. The facts which are within the ordinary course of nature, you will believe on the authority of the writer, as you do those of the same kind in Livy and Tacitus. The testimony of the writer weighs in their favor, in one scale, and their not being against the laws of nature, does not weigh against them. But those facts in the Bible which contradict the laws of nature, must be examined with more care, and under a variety of faces. Here you must recur to the pretensions of the writer to inspiration from God. Examine upon what evidence his pretensions are founded, and whether that evidence is so strong, as that its falsehood would be more improbable than a change in the laws of nature, in the case he relates. For example, in the book of Joshua, we are told, the sun stood still several hours. Were we to read that fact in Livy or Tacitus, we should class it with their showers of blood, speaking of statues, beasts, etc. But it is said, that the writer of that book was inspired. Examine, therefore, candidly, what evidence there is of his having been inspired. The pretension is entitled to your inquiry, because millions believe it. On the other hand, you are astronomer enough to know how contrary it is to the law of nature that a body revolving on its axis, as the earth does, should have stopped, should not, by that sudden stoppage, have prostrated animals, trees, buildings, and should after a certain time have resumed its revolution, and that without a second general prostration. Is this arrest of the earth's motion, or the evidence which affirms it, most within the law of probabilities? You will next read the New Testament. It is the history of a personage called Jesus. Keep in your eye the opposite pretensions: 1, of those who say he was begotten by God, born of a virgin, suspended and reversed the laws of nature at will, and ascended bodily into heaven; and 2, of those who say he was

a man of illegitimate birth, of a benevolent heart, enthusiastic mind, who set out without pretensions to divinity, ended in believing them, and was punished capitally for sedition, by being gibbeted, according to the Roman law, which punished the first commission of that offence by whipping, and the second by exile, or death in furea....

Do not be frightened from this inquiry by any fear of its consequences. If it ends in a belief that there is no God, you will find incitements to virtue in the comfort and pleasantness you feel in its exercise, and the love of others which it will procure you. If you find reason to believe there is a God, a consciousness that you are acting under his eye, and that he approves you, will be a vast additional incitement; if that there be a future state, the hope of a happy existence in that increases the appetite to deserve it; if that Jesus was also a God, you will be comforted by a belief of his aid and love. In fine, I repeat, you must lay aside all prejudice on both sides, and neither believe nor reject anything, because any other persons, or description of persons, have rejected or believed it. Your own reason is the only oracle given you by heaven, and you are answerable, not for the rightness, but uprightness of the decision. I forgot to observe, when speaking of the New Testament, that you should read all the histories of Christ, as well of those whom a council of ecclesiastics have decided for us, to be Pseudo-evangelists, as those they named Evangelists. Because these Pseudo-evangelists pretended to inspiration, as much as the others, and you are to judge their pretensions by your own reason, and not by the reason of those ecclesiastics. Most of these are lost. There are some, however, still extant, collected by Fabricius, which I will endeavor to get and send you.

5. Travelling. This makes men wiser, but less happy. When men of sober age travel, they gather knowledge, which they may apply usefully for their country; but they are subject ever after to

recollections mixed with regret; their affections are weakened by being extended over more objects; and they learn new habits which cannot be gratified when they return home. Young men, who travel, are exposed to all these inconveniences in a higher degree, to others still more serious, and do not acquire that wisdom for which a previous foundation is requisite, by repeated and just observations at home. The glare of pomp and pleasure is analogous to the motion of the blood; it absorbs all their affection and attention, they are torn from it as from the only good in this world, and return to their home as to a place of exile and condemnation. Their eyes are forever turned back to the object they have lost, and its recollection poisons the residue of their lives. Their first and most delicate passions are hackneyed on unworthy objects here, and they carry home the dregs, insufficient to make themselves or anybody else happy. Add to this, that a habit of idleness, an inability to apply themselves to business is acquired, and renders them useless to themselves and their country. These observations are founded in experience. There is no place where your pursuit of knowledge will be so little obstructed by foreign objects, as in your own country, nor any, wherein the virtues of the heart will be less exposed to be weakened. Be good, be learned, and be industrious, and you will not want the aid of travelling, to render you precious to your country, dear to your friends, happy within yourself. I repeat my advice, to take a great deal of exercise, and on foot. Health is the first requisite after morality. Write to me often, and be assured of the interest I take in your success, as well as the warmth of those sentiments of attachment with which I am, dear Peter, your affectionate friend.

TO JOHN ADAMS

Paris, August 30, 1787

.... all tongues in Paris (and in France as it is said) have been let loose, and never was a license of speaking against the government exercised in London more freely or more universally. Caricatures, placards, bons mots, have been indulged in by all ranks of people, and I know of no well-attested instance of a single punishment. For some time mobs of ten, twenty and thirty thousand people collected daily, surrounded the parliament house, huzzaed the members, even entered the doors and examined into their conduct, took the horses out of the carriages of those who did well, and drew them home. The government thought it prudent to prevent these, drew some regiments into the neighborhood, multiplied the guards, had the streets constantly patrolled by strong parties, suspended privileged places, forbade all clubs, etc. The mobs have ceased; perhaps this may be partly owing to the absence of parliament. The Count d'Artois, sent to hold a bed of justice in the Cour des Aides, was hissed and hooted without reserve, by the populace; the carriage of Madame de (I forget the name) in the Queen's livery was stopped by the populace, under a belief that it was Madame de Polignac, whom they would have insulted; the Queen, going to the theatre at Versailles with Madame de Polignac, was received with a general hiss. The King, long in the habit of drowning his cares in wine, plunges deeper and deeper. The Queen cries, but sins on. The Count d'Artois is detested, and Monsieur, the general favorite....

约翰·亚当斯像

TO JOHN ADAMS

Paris, November 13, 1787

.... How do you like our new constitution? I confess there are things in it which stagger all my disposition to subscribe to what such an Assembly has proposed. The house of federal representatives will not be adequate to the management of affairs, either foreign or federal. Their President seems a bad edition of a Polish King. He may be elected from four years to four years, for life. Reason and experience prove to us, that a chief magistrate, so continuable, is an office for life. When one or two generations shall have proved that this is an office for life, it becomes, on every occasion, worthy of intriguer of bribery, of force, and even of foreign interference. It will be of great consequence to France and England, to have America governed by a Galloman or Angloman. Once in office, and possessing the military force of the Union, without the aid or check of a council, he would not be easily dethroned, even if the people could be induced to withdraw their votes from him. I wish that at the end of the four years, they had made him forever ineligible a second time. Indeed, I think all the good of this new constitution might have been couched in three or four new articles, to be added to the good, old and venerable fabric, which should have been preserved even as a religious relique....

制宪会议

TO COLONEL SMITH

Paris, November 13, 1787

.... can history produce an instance of rebellion so honorably conducted? I say nothing of its motives. They were founded in ignorance, not wickedness. God forbid we should ever be twenty years without such a rebellion. The people cannot be all, and always, well informed. The part which is wrong will be discontented, in proportion to the importance of the facts they misconceive. If they remain quiet under such misconceptions, it is a lethargy, the forerunner of death to the public liberty. We have had thirteen States independent for eleven years. There has been one rebellion. That comes to one rebellion in a century and a half, for each State. What country before, ever existed a century and a half without a rebellion? And what country can preserve its liberties, if its rulers are not warned from time to time, that this people preserve the spirit of resistance? Let them take arms. The remedy is to set them right as to facts, pardon and pacify them. What signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time, with the blood of patriots and tyrants. It is its natural manure....

TO JAMES MADISON

Paris, December 20, 1787

.... I like much the general idea of framing a government, which should go on of itself, peaceably, without needing continual recurrence to the State legislatures. I like the organization of the government into legislative, judiciary and executive. I like the power given the legislature to levy taxes, and for that reason solely, I approve of the greater House being chosen by the people directly. For though I think a House so chosen, will be very far inferior to the present Congress, will be very illy qualified to legislate for the Union, for foreign nations, etc., yet this evil does not weigh against the good, of preserving inviolate the fundamental principle, that the people are not to be taxed but by representatives chosen immediately by themselves. I am captivated by the compromise of the opposite claims of the great and little States, of the latter to equal, and the former to proportional influence. I am much pleased, too, with the substitution of the method of voting by person, instead of that of voting by States; and I like the negative given to the Executive, conjointly with a third of either House; though I should have liked it better, had the judiciary been associated for that purpose, or invested separately with a similar power. There are other good things of less moment. I will now tell you what I do not like. First, the omission of a bill of rights, providing clearly, and without the aid of sophism, for freedom of religion, freedom of the press, protection against standing armies, restriction of monopolies, the eternal and unremitting force of the habeas corpus laws, and trials by jury in all matters of fact triable by the laws of the land, and not by the laws of nations. To say, as Mr. Wilson does, that a bill of rights was not necessary, because all is reserved in the case of the general government which is not given, while in the particular

ones, all is given which is not reserved, might do for the audience to which it was addressed; but it is surely a gratis dictum, the reverse of which might just as well be said; and it is opposed by strong inferences from the body of the instrument, as well as from the omission of the cause of our present Confederation, which had made the reservation in express terms. It was hard to conclude, because there has been a want of uniformity among the States as to the cases triable by jury, because some have been so incautious as to dispense with this mode of trial in certain cases, therefore, the more prudent States shall be reduced to the same level of calamity. It would have been much more just and wise to have concluded the other way, that as most of the States had preserved with jealousy this sacred palladium of liberty, those who had wandered, should be brought back to it; and to have established general right rather than general wrong. For I consider all the ill as established, which may be established. I have a right to nothing, which another has a right to take away; and Congress will have a right to take away trials by jury in all civil cases. Let me add, that a bill of rights is what the people are entitled to against every government on earth, general or particular; and what no just government should refuse, or rest on inference.

The second feature I dislike, and strongly dislike, is the abandonment, in every instance, of the principle of rotation in office, and most particularly in the case of the President. Reason and experience tell us, that the first magistrate will always be re-elected if he may be re-elected. He is then an officer for life. This once observed, it becomes of so much consequence to certain nations to have a friend or a foe at the head of our affairs, that they will interfere with money and with arms. A Galloman, or an Angloman, will be supported by the nation he befriends. If once elected, and at a second or third election outvoted by one or two votes, he will pretend false votes, foul play, hold possession of the reins of government, be supported by the States

voting for him, especially if they be the central ones, lying in a compact body themselves, and separating their opponents; and they will be aided by one nation in Europe, while the majority are aided by another. The election of a President of America, some years hence, will be much more interesting to certain nations of Europe, than ever the election of a King of Poland was. Reflect on all the instances in history, ancient and modern, of elective monarchies, and say if they do not give foundation for my fears; the Roman Emperors, the Popes while they were of any importance, the German Emperors till they became hereditary in practice, the Kings of Poland, the Deys of the Ottoman dependencies. It may be said, that if elections are to be attended with these disorders, the less frequently they are repeated the better. But experience says, that to free them from disorder, they must be rendered less interesting by a necessity of change. No foreign power, nor domestic party, will waste their blood and money to elect a person, who must go out at the end of a short period. The power of removing every fourth year by the vote of the people, is a power which they will not exercise, and if they were disposed to exercise it, they would not be permitted. The King of Poland is removable every day by the diet. But they never remove him. Nor would Russia, the Emperor, etc., permit them to do it. Smaller objections are, the appeals on matters of fact as well as laws; and the binding all persons, legislative, executive, and judiciary by oath, to maintain that constitution. I do not pretend to decide, what would be the best method of procuring the establishment of the manifold good things in this constitution, and of getting rid of the bad. Whether by adopting it, in hopes of future amendment; or after it shall have been duly weighed and canvassed by the people, after seeing the parts they generally dislike, and those they generally approve, to say to them, "We see now what you wish. You are willing to give to your federal government such and such powers; but you wish, at the same time, to have such and such fundamental rights secured to you, and certain sources of convulsion taken away. Be it so. Send together deputies

again. Let them establish your fundamental rights by a sacrosanct declaration, and let them pass the parts of the Constitution you have approved. These will give powers to your federal government sufficient for your happiness.”

This is what might be said, and would probably produce a speedy, more perfect and more permanent form of government. At all events, I hope you will not be discouraged from making other trials, if the present one should fail. We are never permitted to despair of the commonwealth. I have thus told you freely what I like, and what I dislike, merely as a matter of curiosity; for I know it is not in my power to offer matter of information to your judgment, which has been formed after hearing and weighing everything which the wisdom of man could offer on these subjects. I own, I am not a friend to a very energetic government. It is always oppressive. It places the governors indeed more at their ease, at the expense of the people. The late rebellion in Massachusetts has given more alarm, than I think it should have done. Calculate that one rebellion in thirteen States in the course of eleven years, is but one for each State in a century and a half. No country should be so long without one. Nor will any degree of power in the hands of government, prevent insurrections. In England, where the hand of power is heavier than with us, there are seldom half a dozen years without an insurrection. In France, where it is still heavier, but less despotic, as Montesquieu supposes, than in some other countries, and where there are always two or three hundred thousand men ready to crush insurrections, there have been three in the course of the three years I have been here, in every one of which greater numbers were engaged than in Massachusetts, and a great deal more blood was spilt. In Turkey, where the sole nod of the despot is death, insurrections are the events of every day. Compare again the ferocious depredations of their insurgents, with the order, the moderation and the almost self-extinguishment of ours. And say,

finally, whether peace is best preserved by giving energy to the government, or information to the people. This last is the most Certain, and the most legitimate engine of government. Educate and inform the whole mass of the people. Enable them to see that it is their interest to preserve peace and order, and they will preserve them. And it requires no very high degree of education to convince them of this. They are the only sure reliance for the preservation of our liberty. After all, it is my principle that the will of the majority should prevail. If they approve the proposed constitution in all its parts, I shall concur in it cheerfully, in hopes they will amend it, whenever they shall find it works wrong. This reliance cannot deceive us, as long as we remain virtuous; and I think we shall be so, as long as agriculture is our principal object, which will be the case, while there remains vacant lands in any part of America. When we get piled upon one another in large cities, as in Europe, we shall become corrupt as in Europe, and go to eating one another as they do there. I have tired you by this time with disquisitions which you have already heard repeated by others a thousand and a thousand times; and therefore, shall only add assurances of the esteem and attachment with which I have the honor to be, dear Sir, your affectionate friend and servant.

P. S. The instability of our laws is really an immense evil. I think it would be well to provide in our constitutions, that there shall always be a twelvemonth between the engrossing a bill and passing it; that it should then be offered to its passage without changing a word; and that if circumstances should be thought to require a speedier passage, it should take two-thirds of both Houses, instead of a bare majority.

TO E. CARRINGTON

Paris, Dec. 21, 1787

.... I often doubt whether I should trouble Congress or my friends with ... details of European politics. I know they do not excite that interest in America, of which it is impossible for one to divest himself here. I know, too, that it is a maxim with us, and I think it a wise one, not to entangle ourselves with the affairs of Europe. Still, I think, we should know them. The Turks have practiced the same maxim of not meddling in the complicated wrangles of this continent. But they have unwisely chosen to be ignorant of them also, and it is this total ignorance of Europe, its combinations and its movements, which exposes them to that annihilation possibly about taking place. While there are powers in Europe which fear our views, or have views on us, we should keep an eye on them, their connections and oppositions, that in a moment of need, we may avail ourselves of their weakness with respect to others as well as ourselves, and calculate their designs and movements, on all the circumstances under which they exist. Though I am persuaded, therefore, that these details are read by many with great indifference, yet I think it my duty to enter into them, and to run the risk of giving too much, rather than too little information....

TO MR. A. DONALD

Paris, February 7, 1788

.... I wish with all my soul, that the nine first conventions may accept the new constitution, because this will secure to us the good it contains, which I think great and important. But I equally wish, that the four latest conventions, whichever they be, may refuse to accede to it, till a declaration of rights be annexed. This would probably command the offer of such a declaration, and thus give to the whole fabric, perhaps, as much perfection as any one of that kind ever had. By a declaration of rights, I mean one which shall stipulate freedom of religion, freedom of the press, freedom of commerce against monopolies, trial by juries in all cases, no suspensions of the habeas corpus, no standing armies. These are fetters against doing evil, which no honest government should decline. There is another strong feature in the new Constitution, which I as strongly dislike. That is, the perpetual re-eligibility of the President. Of this I expect no amendment at present, because I do not see that anybody has objected to it on your side the water. But it will be productive of cruel distress to our country, even in your day and mine. The importance to France and England, to have our government in the hands of a friend or a foe, will occasion their interference by money, and even by arms. Our President will be of much more consequence to them than a King of Poland. We must take care, however, that neither this, nor any other objection to the new form, produces a schism in our Union. That would be an incurable evil, because near friends falling out, never reunite cordially; whereas, all of us going together, we shall be sure to cure the evils of our new Constitution, before they do great harm.... I do not see, at present, any symptoms strongly indicating war. It is true, that the distrust existing between the two courts of Versailles and

London, is so great, that they can scarcely do business together. However, the difficulty and doubt of obtaining money make both afraid to enter into war. The little preparations for war, which we see, are the effect of distrust, rather than of a design to commence hostilities. And in such a state of mind, you know, small things may produce a rupture; so that though peace is rather probable, war is very possible.

Your letter has kindled all the fond recollections of ancient times; recollections much dearer to me than anything I have known since. There are minds which can be pleased by honors and preferments; but I see nothing in them but envy and enmity. It is only necessary to possess them, to know how little they contribute to happiness, or rather how hostile they are to it. No attachments soothe the mind so much as those contracted in early life; nor do I recollect any societies which have given me more pleasure, than those of which you have partaken with me. I had rather be shut up in a very modest cottage, with my books, my family and a few old friends, dining on simple bacon, and letting the world roll on as it liked, than to occupy the most splendid post, which any human power can give....

TO THE COUNT DE MOUSTIER

Paris, May 17, 1788

DEAR SIR, —I have at length an opportunity of acknowledging the receipt of your favors of February, and March the 14th, and congratulating you on your resurrection from the dead, among whom you had been confidently entombed by the newsdealers of Paris. I am sorry that your first impressions have been disturbed by matters of etiquette, where surely they should least have been expected to occur. These disputes are the most insusceptible of determination, because they have no foundation in reason. Arbitrary and senseless in their nature, they are arbitrarily decided by every nation for itself. These decisions are meant to prevent disputes, but they produce ten where they prevent one. It would have been better, therefore, in a new country, to have excluded etiquette altogether; or if it must be admitted in some form or other, to have made it depend on some circumstance founded in nature, such as the age or station of the parties. However, you have got over all this, and, I am in hopes, have been able to make up a society suited to your own dispositions. Your situation will doubtless be improved by the adoption of the new constitution, which I hope will have taken place before you receive this. I see in this instrument, a great deal of good. The consolidation of our government, a just representation, an administration of some permanence, and other features of great value, will be gained by it. There are, indeed, some faults, which revolted me a good deal in the first moment; but we must be contented to travel on towards perfection, step by step. We must be contented with the ground which this constitution will gain for us, and hope that a favorable moment will come for correcting what is amiss in it. I view in the same light, the innovations making here. The new organization of the judiciary

department is undoubtedly for the better. The reformation of the criminal code, is an immense step taken towards good. The composition of the Plenary court is, indeed, vicious in the extreme; but the basis of that court may be retained, and its composition changed. Make of it a representative of the people, by composing it of members sent from the Provincial Assemblies, and it becomes a valuable member of the constitution. But it is said, the court will not consent to do this; the court, however, has consented to call the States General, who will consider the Plenary court but as a canvas for them to work on. The public mind is manifestly advancing on the abusive prerogatives of their governors, and bearing them down. No force in the government can withstand this, in the long run. Courtiers had rather give up power than pleasures; they will barter, therefore, the usurped prerogatives of the King, for the money of the people. This is the agent by which modern nations will recover their rights. I sincerely wish that in this country, they may be contented with a peaceable and passive opposition. At this moment, we are not sure of this, though as yet it is difficult to say what form the opposition will take. It is a comfortable circumstance, that their neighboring enemy is under the administration of a minister disposed to keep the peace. Engage in war who will, may my country long continue your peaceful residence, and merit your good offices with that nation, whose affections it is their duty and interest to cultivate.

TO WILLIAM CARMICHAEL

Paris, May 27, 1788

.... A riot has taken place in New York, which I will state to you from an eye witness. It has long been a practice with the surgeons of that city, to steal from the grave bodies recently buried. A citizen had lost his wife: he went the first or second evening after her burial, to pay a visit to her grave. He found that it had been disturbed, and suspected from what quarter. He found means to be admitted to the anatomical lecture of that day, and on his entering the room, saw the body of his wife, naked and under dissection. He raised the people immediately. The body, in the meantime, was secreted. They entered into, and searched the houses of the physicians whom they most suspected, but found nothing. One of them, however, more guilty or more timid than the rest, took asylum in the prison. The mob considered this an acknowledgment of guilt. They attacked the prison. The Governor ordered militia to protect the culprit, and suppress the mob. The militia, thinking the mob had just provocation, refused to turn out. Hereupon the people of more reflection, thinking it more dangerous that even a guilty person should be punished without the forms of law, than that he should escape, armed themselves, and went to protect the physician. They were received by the mob with a volley of stones, which wounded several of them. They hereupon fired on the mob, and killed four. By this time, they received a reinforcement of other citizens of the militia horse, the appearance of which, in the critical moment, dispersed the mob. So ended this chapter of history, which I have detailed to you, because it may be represented as a political riot, when politics had nothing to do with it. Mr. Jay and Baron Steuben were both grievously wounded in the head by stones. The former still kept his bed, and the latter his room, when the packet

sailed, which was the 24th of April....

TO COLONEL CARRINGTON

Paris, May 27, 1788

I learn with great pleasure the progress of the new Constitution. Indeed I have presumed it would gain on the public mind, as I confess it has on my own. At first, though I saw that the great mass and groundwork was good, I disliked many appendages. Reflection and discussion have cleared off most of these. You have satisfied me as to the query I had put to you about the right of direct taxation. My first wish was that nine States would adopt it in order to ensure what was good in it, and that the others might, by holding off, produce the necessary amendments. But the plan of Massachusetts is far preferable, and will, I hope, be followed by those who are yet to decide. There are two amendments only which I am anxious for: 1. A bill of rights, which it is so much the interest of all to have, that I conceive it must be yielded. The 1st amendment proposed by Massachusetts will in some degree answer this end, but not so well. It will do too much in some instances, and too little in others. It will cripple the Federal Government in some cases where it ought to be free, and not restrain in some others where restraint would be right. The 2d amendment which appears to me essential is the restoring the principle of necessary rotation, particularly to the Senate and Presidency: but most of all to the last. Re-eligibility makes him an officer for life, and the disasters inseparable from an elective monarchy, render it preferable if we cannot tread back that step, that we should go forward and take refuge in an hereditary one. Of the correction of this article, however, I entertain no present hope, because I find it has scarcely excited an objection in America. And if it does not take place ere long, it assuredly never will. The natural progress of things is for liberty to yield and government to gain

ground. As yet our spirits are free. Our jealousy is only put to sleep by the unlimited confidence we all repose in the person to whom we all look as our president. After him inferior characters may perhaps succeed, and awaken us to the danger which his merit has led us into. For the present, however, the general adoption is to be prayed for, and I wait with great anxiety for the news from Maryland and South Carolina, which have decided before this, and with that Virginia, now in session, may give the ninth vote of approbation. There could then be no doubt of North Carolina, New York, and New Hampshire. But what do you propose to do with Rhode Island? As long as there is hope we should give her time. I cannot conceive but that she will come to rights in the long run. Force, in whatever form, would be a dangerous precedent....

TO MR. IZARD

Paris, July 17, 1788

.... The war in Europe threatens to spread. Sweden, we suppose, has commenced hostilities against Russia, though we do not yet certainly know it. I have hoped this country would settle her internal disputes advantageously and without bloodshed. As yet none has been spilt, though the British newspapers give the idea of a general civil war. Hitherto, I had supposed both the King and parliament would lose authority, and the nation gain it, through the medium of its States General and provincial Assemblies, but the arrest of the deputies of Bretagne two days ago, may kindle a civil war. Its issue will depend on two questions, 1. Will other provinces rise? 2. How will the army conduct itself? A stranger cannot predetermine these questions. Happy for us that abuses have not yet become patrimonies, and that every description of interest is in favor of national and moderate government. That we are yet able to send our wise and good men together to talk over our form of government, discuss its weaknesses and establish its remedies with the same sang-froid as they would a subject of agriculture. The example we have given to the world is single, that of changing our form of government under the authority of reason only, without bloodshed....

TO E. KUTLEDGE

Paris, July 18, 1788

.... We can surely boast of having set the world a beautiful example of a government reformed by reason alone, without bloodshed. But the world is too far oppressed, to profit by the example. On this side of the Atlantic, the blood of the people is become an inheritance, and those who fatten on it, will not relinquish it easily. The struggle in this country is, as yet, of doubtful issue. It is, in fact, between the monarchy and the parliaments. The nation is no otherwise concerned, but as both parties may be induced to let go some of its abuses, to court the public favor. The danger, is that the people, deceived by a false cry of liberty, may be led to take side with one party, and thus give the other a pretext for crushing them still more. If they can avoid the appeal to arms, the nation will be sure to gain much by this controversy. But if that appeal is made, it will depend entirely on the disposition of the army, whether it issue in liberty or despotism. Those dispositions are not as yet known. In the meantime, there is great probability that the war kindled in the east, will spread from nation to nation and in the long run, become general....

TO MR. CUTTING

Paris, July 24, 1788

.... The internal affairs here do not yet clear up. Most of the late innovations have been much for the better. Two only must be fundamentally condemned; the abolishing, in so great a degree, of the parliaments, and the substitution of so ill-composed a body as the *cour plénière*. If the King has power to do this, the government of this country is a pure despotism. I think it a pure despotism in theory, but moderated in practice by the respect which the public opinion commands. But the nation repeats, after Montesquieu, that the different bodies of magistracy, of priests, and nobles, are barriers between the King and the people. It would be easy to prove that these barriers can only appeal to public opinion, and that neither these bodies, nor the people, can oppose any legal check to the will of the monarch. But they are manifestly advancing fast to a constitution. Great progress is already made. The provincial assemblies, which will be a very perfect representative of the people, will secure them a great deal against the power of the crown. The confession lately made by the government, that it cannot impose a new tax, is a great thing: the convocation of the States General, which cannot be avoided, will produce a national assembly, meeting at certain epochs, possessing at first probably only a negative on the laws, but which will grow into the right of original legislation, and prescribing limits to the expenses of the King. These are improvements which will assuredly take place, and which will give an energy to this country they have never yet had. Much may be hoped from the States General, because the King's dispositions are solidly good; he is capable of great sacrifices; all he wants to induce him to do a thing, is to be assured it will be for the good of the nation. He will probably believe what the States General

shall tell him, and will do it. It is supposed they will reduce the parliament to a mere judiciary. I am in hopes all this will be effected without convulsions....

TO JAMES MADISON

Paris, July 31, 1788

I sincerely rejoice at the acceptance of our new constitution by nine States. It is a good canvas, on which some strokes only want retouching. What these are, I think are sufficiently manifested by the general voice from north to south, which calls for a bill of rights. It seems pretty generally understood, that this should go to juries, habeas corpus, standing armies, printing, religion and monopolies. I conceive there may be difficulty in finding general modifications of these, suited to the habits of all the States. But if such cannot be found, then it is better to establish trials by jury, the right of habeas corpus, freedom of the press and freedom of religion, in all cases, and to abolish standing armies in time of peace, and monopolies in all cases, than not to do it in any. The few cases wherein these things may do evil, cannot be weighed against the multitude wherein the want of them will do evil. In disputes between a foreigner and a native, a trial by jury may be improper. But if this exception cannot be agreed to, the remedy will be to model the jury, by giving the *mediatas linguae*, in civil as well as criminal cases. Why suspend the habeas corpus in insurrections and rebellions? The parties who may be arrested, may be charged instantly with a well-defined crime; of course, the judge will remand them. If the public safety requires that the government should have a man imprisoned on less probable testimony, in those than in other emergencies, let him be taken and tried, retaken and retried, while the necessity continues, only giving him redress against the government, for damages. Examine the history of England. See how few of the cases of the suspension of the habeas corpus law, have been worthy of that suspension. They have been either real treason, wherein the parties might as well have been

charged at once, or sham plots, where it was shameful they should ever have been suspected. Yet for the few cases wherein the suspension of the habeas corpus has done real good, that operation is now become habitual, and the minds of the nation almost prepared to live under its constant suspension. A declaration, that the federal government will never restrain the presses from printing anything they please, will not take away the liability of the printers for false facts printed. The declaration, that religious faith shall be unpunished, does not give impunity to criminal acts, dictated by religious error. The saying there shall be no monopolies, lessens the incitements to ingenuity, which is spurred on by the hope of a monopoly for a limited time, as of fourteen years; but the benefit of even limited monopolies is too doubtful, to be opposed to that of their general suppression. If no check can be found to keep the number of standing troops within safe bounds, while they are tolerated as far as necessary, abandon them altogether, discipline well the militia, and guard the magazines with them. More than magazine guards will be useless, if few, and dangerous, if many. No European nation can ever send against us such a regular army as we need fear, and it is hard, if our militia are not equal to those of Canada or Florida. My idea then, is, that though proper exceptions to these general rules are desirable, and probably practicable, yet if the exceptions cannot be agreed on, the establishment of the rules, in all cases, will do ill in very few. I hope, therefore, a bill of rights will be formed, to guard the people against the federal government, as they are already guarded against their State governments, in most instances. The abandoning the principle of necessary rotation in the Senate, has, I see, been disapproved by many; in the case of the President, by none. I readily, therefore, suppose my opinion wrong, when opposed by the majority, as in the former instance, and the totality, as in the latter. In this, however, I should have done it with more complete satisfaction, had we all judged from the same position....

TO JAMES MADISON

Paris, November 18, 1788

.... With respect to the Federalist, the three authors had been named to me. I read it with care, pleasure and improvement, and was satisfied there was nothing in it by one of those hands, and not a great deal by a second. It does the highest honor to the third, as being, in my opinion, the best commentary on the principles of government, which ever was written. In some parts, it is discoverable that the author means only to say what may be best said in defence of opinions, in which he did not concur. But in general, it establishes firmly the plan of government. I confess, it has rectified me on several points. As to the bill of rights, however, I still think it should be added; and I am glad to see, that three States have at length considered the perpetual re-eligibility of the President, as an article which should be amended....

TO DR. PRICE

Paris, January 8, 1789

DEAR SIR, —I was favored with your letter of October 26th, and far from finding any of its subjects uninteresting as you apprehend, they were to me, as everything which comes from you, pleasing and instructive. I concur with you strictly in your opinion of the comparative merits of atheism and demonism, and really see nothing but the latter in the Being worshipped by many who think themselves Christians. Your opinions are writings will have effect in bringing others to reason on this subject. Our new Constitution, of which you speak also, has succeeded beyond what I apprehended it would have done. I did not at first believe that eleven States out of thirteen would have consented to a plan consolidating them as much into one. A change in their dispositions, which had taken place since I left them, had rendered this consolidation necessary, that is to say, had called for a federal government which could walk upon its own legs, without leaning for support on the State legislatures. A sense of necessity, and a submission to it, is to me a new and consolatory proof that, whenever the people are well-informed, they can be trusted with their own government; that, whenever things get so far wrong as to attract their notice, they may be relied on to set them to rights. You say you are not sufficiently informed about the nature and circumstances of the present struggle here. Having been on the spot from its first origin, and watched its movements as an uninterested spectator, with no other bias than a love of mankind, I will give you my ideas of it. Though celebrated writers of this and other countries had already sketched good principles on the subject of government, yet the American war seems first to have awakened the thinking part of this nation in general from the sleep of despotism in which they were

sunk. The officers too who had been to America, were mostly young men, less shackled by habit and prejudice, and more ready to assent to the dictates of common sense and common right. They came back impressed with these. The press, notwithstanding its shackles, began to disseminate them; conversation, too, assumed new freedom; politics became the theme of all societies, male and female, and a very extensive and zealous party was formed, which may be called the Patriotic party, who, sensible of the abusive government under which they lived, longed for occasions of reforming it. This party comprehended all the honesty of the kingdom, sufficiently at its leisure to think; the men of letters, the easy bourgeois, the young nobility, partly from reflection, partly from mode; for those sentiments became a matter of mode, and as such united most of the young women to the party. Happily for the nation, it happened that, at the same moment, the dissipations of the court had exhausted the money and credit of the State, and M. de Calonnes found himself obliged to appeal to the nation, and to develop to it the ruin of their finances. He had no idea of supplying the deficit by economies, he saw no means but new taxes. To tempt the nation to consent to these some douceurs were necessary. The Notables were called in 1787. The leading vices of the constitution and administration were ably sketched out, good remedies proposed, and under the splendor of the proposition, a demand for more money was couched. The Notables concurred with the minister in the necessity of reformation, adroitly avoided the demand of money, got him displaced, and one of their leading men placed in his room. The archbishop of Thoulouse, by the aid of the hopes formed of him, was able to borrow some money, and he reformed considerably the expenses of the court. Notwithstanding the prejudices since formed against him, he appeared to me to pursue the reformation of the laws and constitution as steadily as a man could do who had to drag the court after him, and even to conceal from them the consequences of the measures he was leading them into. In his time the criminal laws were reformed, provincial assemblies and

States established in most of the provinces, the States General promised, and a solemn acknowledgment made by the King that he could not impose a new tax without the consent of the nation. It is true he was continually goaded forward by the public clamors, excited by the writings and workings of the Patriots, who were able to keep up the public fermentation at the exact point which borders on resistance, without entering on it. They had taken into their alliance the Parliaments also, who were led, by very singular circumstances, to espouse, for the first time, the rights of the nation. They had from old causes had personal hostility against M. de Calannes. They refused to register his laws or his taxes, and went so far as to acknowledge they had no power to do it. They persisted in this with his successor, who therefore exiled them. Seeing that the nation did not interest themselves much for their recall, they began to fear that the new judicatures proposed in their place would be established and that their own suppression would be perpetual. In short, they found their own strength insufficient to oppose that of the King. They, therefore, insisted that the States General should be called. Here they became united with and supported by the Patriots, and their joint influence was sufficient to produce the promise of that assembly. I always suspected that the archbishops had no objections to this force under which they laid him. But the Patriots and Parliament insisted it was their efforts which extorted the promise against his will. The re-establishment of the Parliament was the effect of the same coalition between the Patriots and Parliament; but, once re-established, the latter began to see danger in that very power, the States General, which they had called for in a moment of despair, but which they now foresaw might very possibly abridge their powers. They began to prepare grounds for questioning their legality, as a rod over the head of the States, and as a refuge if they should really extend their reformatations to them. Mr. Neckar came in at this period and very dexterously disembarassed the administration of these disputes by calling the Notables to advise the form of calling and constituting the

States. The court was well disposed towards the people, not from principles of justice or love to them; but they want money. No more can be had from the people. They are squeezed to the last drop. The clergy and nobles, by their privileges and influence, have kept their property in a great measure untaxed hitherto. They then remain to be squeezed, and no agent is powerful enough for this but the people. The court therefore must ally itself with the people. But the Notables, consisting mostly of privileged characters, had proposed a method of composing the States, which would have rendered the voice of the people, or *Tiers États*, in the States General, inefficient for the purpose of the court. It concurred then with the Patriots in intriguing with the Parliament to get them to pass a vote in favor of the rights of the people. This vote, balancing that of the Notables, has placed the court at liberty to follow its own views, and they have determined that the *Tiers État* shall have in the States General as many votes as the clergy and nobles put together. Still a great question remains to be decided, that is, shall the States General vote by orders, or by persons? precedents are both ways. The clergy will move heaven and earth to obtain the suffrage by orders, because that parries the effect of all hitherto done for the people. The people will probably send their deputies expressly instructed to consent to no tax, to no adoption of the public debts, unless the unprivileged part of the nation has a voice equal to that of the privileged; that is to say, unless the voice of the *Tiers État* be equalled to that of the clergy and nobles. They will have the young noblesse in general on their side, and the King and court. Against them will be the ancient nobles and the clergy. So that I hope, upon the whole, that by the time they meet, there will be a majority of the nobles themselves in favor of the *Tiers État*. So far history. We are now to come to prophecy; for you will ask, to what will all this lead? I answer, if the States General do not stumble at the threshold on the question before stated, and which must be decided before they can proceed to business, then they will in their first session easily obtain, 1. Their future periodical convocation of the States. 2. Their

exclusive right to raise and appropriate money which includes that of establishing a civil list. 3. A participation in legislation; probably at first, it will only be a transfer to them of the portion of it now exercised by parliament, that is to say, a right to propose amendments and a negative. But it must infallibly end in a right of origination. 4. Perhaps they may make a declaration of rights. It will be attempted at least. Two other objects will be attempted, viz., a habeas corpus law and a free press. But probably they may not obtain these in the first session, or with modifications only, and the nation must be left to ripen itself more for their unlimited adoption. Upon the whole, it has appeared to me that the basis of the present struggle is an illumination of the public mind as to the rights of the nation, aided by fortunate incidents; that they can never retrograde, but from the natural progress of things, must press forward to the establishment of a constitution which shall assure to them a good degree of liberty. They flatter themselves they shall form a better constitution than the English. I think it will be better in some points—worse in others. It will be better in the article of representation, which will be more equal. It will be worse, as their situation obliges them to keep up the dangerous machine of a standing army. I doubt, too, whether they will obtain the trial by jury, because they are not sensible of its value.

I am sure I have by this time heartily tired you with this long epistle, and that you will be glad to see it brought to an end, with assurances of the sentiments of esteem and respect with which I have the honor to be, dear Sir, your most obedient, and most humble servant.

TO JOHN JAY

Paris, January 11, 1789

.... As the character of the Prince of Wales is becoming interesting, I have endeavored to learn what it truly is, This is less difficult in his case, than in that of other persons of his rank, because he has taken no pains to hide himself from the world. The information I most rely on, is from a person here with whom I am intimate, who divides his time between Paris and London, an Englishman by birth, of truth, sagacity and science. He is of a circle, when in London, which has had good opportunities of knowing the Prince; but he has also, himself, had special occasions of verifying their information, by his own personal observation. He happened, when last in London, to be invited to a dinner of three persons. The Prince came by chance, and made the fourth. He ate half a leg of mutton; did not taste of small dishes, because small; drank Champagne and Burgundy, as small beer during dinner, and Bordeaux after dinner, as the rest of the company. Upon thie whole, he ate as much as the other three, and drank about two bottles of wine without seeming to feel it. My informant sat next him, and being till then unknown to the Prince, personally (though not by character), and lately from France, the Prince confined his conversation almost entirely to him. Observing to the Prince that he spoke French without the least foreign accent, the Prince told him, that when very young, his father had put only French servants about him, and that it was to that circumstance he owed his pronunciation. He led him from this to give an account of his education, the total of which was the learning a little Latin. He has not a single element of Mathematics, of Natural or Moral Philosophy, or of any other science on earth, nor has the society he has kept been such as to supply the void of education. It has been that of the lowest, the most illiterate

and profligate persons of the kingdom, without choice of rank or mind, and with whom the subjects of conversation are only horses, drinking-matches, bawdy houses, and in terms the most vulgar. The young nobility, who begin by associating with him, soon leave him, disgusted with the insupportable profligacy of his society; and Mr. Fox, who has been supposed his favorite, and not over-nice in the choice of company, would never keep his company habitually. In fact, he never associated with a man of sense. He has not a single idea of justice, morality, religion, or of the rights of men, or any anxiety for the opinion of the world. He carries that indifference for fame so far, that he would probably not be hurt were he to lose his throne, provided he could be assured of having always meat, drink, horses, and women. In the article of women, nevertheless, he is become more correct, since his connection with Mrs. Fitzherbert, who is an honest and worthy woman: he is even less crapulous than he was. He had a fine person, but it is becoming coarse. He possesses good native common sense; is affable, polite, and very good humored. Saying to my informant, on another occasion, "your friend, such a one, dined with me yesterday, and I made him damned drunk;" he replied, "I am sorry for it; I had heard that your royal highness had left off drinking:" the Prince laughed, tapped him on the shoulder very good naturedly, without saying a word, or ever after showing any displeasure....

TO FRANCIS HOPKINSON

Paris, March 13, 1789

DEAR SIR, —Since my last, which was of December the 21st, yours of December the 9th and 21st are received. Accept my thanks for the papers and pamphlets which accompanied them, and mine and my daughter's, for the book of songs. I will not tell you how much they have pleased us, nor how well the last of them merits praise for its pathos, but relate a fact, only, which is, that while my elder daughter was playing it on the harpsichord, I happened to look towards the fire, and saw the younger one all in tears. I asked her if she was sick? She said "no; but the tune was so mournful."

The Editor of the Encyclopédie has published something as to an advanced price on his future volumes, which, I understand, alarms the subscribers. It was in a paper which I do not take, and therefore I have not yet seen it, nor can I say what it is. I hope that by this time you have ceased to make wry faces about your vinegar, and that you have received it safe and good. You say that I have been dishd up to you as an anti-federalist, and ask me if it be just. My opinion was never worthy enough of notice to merit citing; but since you ask it, I will tell you. I am not a federalist, because I never submitted the whole system of my opinions to the creed of any party of men whatever, in religion, in philosophy, in politics or in anything else, where I was capable of thinking for myself. Such an addiction, is the last degradation of a free and moral agent. If I could not go to heaven but with a party, I would not go there at all. Therefore, I am not of the party of federalists. But I am much farther from that of the anti-federalists. I approved, from the first moment, of the great mass of what is in the new Constitution; the consolidation of the government; the organization into executive, legislative, and judiciary; the subdivision of the legislative; the happy

compromise of interests between the great and little States, by the different manner of voting in the different Houses; the voting by persons instead of States; the qualified negative on laws given to the executive, which, however, I should have liked better if associated with the judiciary also, as in New York; and the power of taxation. I thought at first that the latter might have been limited. A little reflection soon convinced me it ought not to be. What I disapproved from the first moment also, was the want of a bill of rights, to guard liberty against the legislative as well as the executive branches of the government; that is to say, to secure freedom in religion, freedom of the press, freedom from monopolies, freedom from unlawful imprisonment, freedom from a permanent military, and a trial by jury, in all cases determinable by the laws of the land. I disapproved, also, the perpetual re-eligibility of the President. To these points of disapprobation I adhere. My first wish was, that the nine first conventions might accept the constitution, as the means of securing to us the great mass of good it contained, and that the four last might reject it, as the means of obtaining amendments. But I was corrected in this wish, the moment I saw the much better plan of Massachusetts, and which had never occurred to me. With respect to the declaration of rights, I suppose the majority of the United States are of my opinion; for I apprehend, all the anti-federalists and a very respectable proportion of the federalists, think that such a declaration should be now annexed. The enlightened part of Europe have given us the greatest credit for inventing the instrument of security for the rights of the people, and have been not a little surprised to see us so soon give it up. With respect to the re-eligibility of the President, I find myself differing from the majority of my countrymen; for I think there are but three States out of the eleven which have desired an alteration of this. And indeed, since the thing is established, I would wish it not to be altered during the life of our great leader, whose executive talents are superior to those, I believe, of any man in the world, and who, alone, by the authority of his name and the confidence reposed in his

perfect integrity, is fully qualified to put the new government so under way, as to secure it against the efforts of opposition. But, having derived from our error all the good there was in it, I hope we shall correct it, the moment we can no longer have the same name at the helm.

These, my dear friend, are my sentiments, by which you will see I was right in saying I am neither federalist nor anti-federalist; that I am of neither party, nor yet a trimmer between parties. These, my opinions, I wrote within a few hours after I had read the Constitution, to one or two friends in America, I had not then read one single word printed on the subject. I never had an opinion in politics or religion, which I was afraid to own. A costive reserve on these subjects might have procured me more esteem from some people, but less from myself. My great wish is, to go on in a strict but silent performance of my duty; to avoid attracting notice, and to keep my name out of newspapers, because I find the pain of a little censure, even when it is unfounded, is more acute than the pleasure of much praise. The attaching circumstance of my present office, is, that I can do its duties unseen by those for whom they are done. You did not think, by so short a phrase in your letter, to have drawn on yourself such an egotistical dissertation. I beg your pardon for it, and will endeavor to merit that pardon by the constant sentiments of esteem and attachment with which I am, dear Sir, your sincere friend and servant.

TO JAMES MADISON

Paris, March 15, 1789

.... Your thoughts on the subject of the declaration of rights, in the letter of October the 17th, I have weighed with great satisfaction. Some of them had not occurred to me before, but were acknowledged just in the moment they were presented to my mind. In the arguments in favor of a declaration of rights, you omit one which has great weight with me; the legal check which it puts into the hands of the judiciary. This is a body, which, if rendered independent and kept strictly to their own department, merits great confidence for their learning and integrity. In fact, what degree of confidence would be too much, for a body composed of such men as Wythe, Blair and Pendleton? On characters like these, the “*civium ardor prava jubentium*”^[8] would make no impression. I am happy to find that, on the whole, you are a friend to this amendment. The declaration of rights is, like all other human blessings, alloyed with some inconveniences, and not accomplishing fully its object. But the good in this instance, vastly overweighs the evil. I cannot refrain from making short answers to the objections which your letter states to have been raised, 1. That the rights in question are reserved, by the manner in which the federal powers are granted. Answer. A constitutive act may, certainly, be so formed, as to need no declaration of rights. The act itself has the force of a declaration, as far as it goes, and if it goes to all material points, nothing more is wanting. In the draught of a constitution which I had once a thought of proposing in Virginia, and printed afterwards, I endeavored to reach all the great objects of public liberty, and did not mean to add a declaration of rights. Probably the object was imperfectly executed; but the deficiencies would have been supplied by others, in the course of discussion. But

in a constitutive act which leaves some precious articles unnoticed, and raises implications against others, a declaration of rights becomes necessary, by way of supplement. This is the case of our new federal Constitution. This instrument forms us into one State, as to certain objects, and gives us a legislative and executive body for these objects. It should, therefore, guard us against their abuses of power, within the field submitted to them. 2. A positive declaration of some essential rights could not be obtained in the requisite latitude. Answer. Half a loaf is better than no bread. If we cannot secure all our rights, let us secure what we can. 3. The limited powers of the federal government, and jealousy of the subordinate governments, afford a security which exists in no other instance. Answer. The first member of this seems resolvable into the first objection before stated. The jealousy of the subordinate governments is a precious reliance. But observe that those governments are only agents. They must have principles furnished them, whereon to found their opposition. The declaration of rights will be the text, whereby they will try all the acts of the federal government. In this view, it is necessary to the federal government also; as by the same text, they may try the opposition of the subordinate governments. 4. Experience proves the inefficacy of a bill of rights. True. But though it is not absolutely efficacious under all circumstances, it is of great potency always, and rarely inefficacious. A brace the more will often keep up the building which would have fallen, with that brace the less. There is a remarkable difference between the characters of the inconveniences which attend a declaration of rights, and those which attend the want of it. The inconveniences of the declaration are, that it may cramp government in its useful exertions. But the evil of this is short-lived, moderate and reparable. The inconveniences of the want of a declaration are permanent, afflicting and irreparable. They are in constant progression from bad to worse. The executive, in our governments, is not the sole, it is scarcely the principal object of my jealousy. The tyranny of the legislatures is the most formidable dread at present, and will be for

many years. That of the executive will come in its turn; but it will be at a remote period. I know there are some among us, who would now establish a monarchy. But they are inconsiderable in number and weight of character. The rising race are all republicans. We were educated in royalism; no wonder, if some of us retain that idolatry still. Our young people are educated in republicanism; an apostasy from that to royalism, is unprecedented and impossible. I am much pleased with the prospect that a declaration of rights will be added; and I hope it will be done in that way, which will not endanger the whole frame of government, or any essential part of it...

TO COLONEL HUMPHREYS

Paris, March 18, 1789

The change in this country since you left it, is such as you can form no idea of. The frivolities of conversation have given way entirely to politics. Men, women and children talk nothing else; and all, you know, talk a great deal. The press groans with daily productions, which, in point of boldness, makes an Englishman stare, who hitherto has thought himself the boldest of men. A complete revolution in this government has, within the space of two years (for it began with the Notables of 1787), been effected merely by the force of public opinion, aided, indeed, by the want of money, which the dissipations of the court had brought on. And this revolution has not cost a single life, unless we charge to it a little riot lately in Bretagne, which began about the price of bread, became afterwards political, and ended in the loss of four or five lives. The assembly of the States General begins the 27th of April. The representation of the people will be perfect. But they will be alloyed by an equal number of nobility and clergy. The first great question they will have to decide will be, whether they shall vote by orders or persons. And I have hopes that the majority of the Nobles are already disposed to join the Tiers État, in deciding that the vote shall be by persons. This is the opinion à la mode at present, and mode has acted a wonderful part in the present instance. All the handsome young women, for example, are for the Tiers État, and this is an army more powerful in France, than the two hundred thousand men of the King. Add to this, that the court itself is for the Tiers État, as the only agent which can relieve their wants; not by giving money themselves (they are squeezed to the last drop), but by pressing it from the non-contributing orders. The King stands engaged to pretend no more to the power of laying, continuing or

appropriating taxes; to call the States General periodically; to submit lettres de cachet to legal restrictions; to consent to freedom of the press; and that all this shall be fixed by a fundamental constitution, which shall bind his successors. He has not offered a participation in the legislature, but it will surely be insisted on. The public mind is so ripened on all these subjects, that there seems to be now but one opinion. The clergy, indeed, think separately, and the old men among the Nobles; but their voice is suppressed by the general one of the nation. The writings published on this occasion are, some of them, very valuable; because, unfettered by the prejudices under which the English labor, they give a full scope to reason, and strike out truths, as yet unperceived and unacknowledged on the other side the channel. An Englishman, dosing under a kind of half reformation, is not excited to think by such gross absurdities as stare a Frenchman in the face, wherever he looks, whether it be towards the throne or the altar. In fine, I believe this nation will, in the course of the present year, have as full a portion of liberty dealt out to them, as the nation can bear at present, considering how uninformed the mass of their people is....

There are rights which it is useless to surrender to the government, and which governments have yet always been found to invade. These are the rights of thinking, and publishing our thoughts by speaking or writing; the right of free commerce; the right of personal freedom. There are instruments for administering the government, so peculiarly trust-worthy, that we should never leave the legislature at liberty to change them. The new Constitution has secured these in the executive and legislative department; but not in the judiciary. It should have established trials by the people themselves, that is to say, by jury. There are instruments so dangerous to the rights of the nation, and which place them so totally at the mercy of their governors, that those governors, whether legislative or executive, should be restrained from keeping such instruments on foot, but in well-defined cases. Such an instrument is a standing army.

We are now allowed to say, such a declaration of rights, as a supplement to the Constitution where that is silent, is wanting, to secure us in these points. The general voice has legitimated this objection. It has not, however, authorized me to consider as a real defect, what I thought and still think one, the perpetual re-eligibility of the President. But three States out of eleven, having declared against this, we must suppose we are wrong, according to the fundamental law of every society, the *lex majoris partis*, to which we are bound to submit. And should the majority change their opinion, and become sensible that this trait in their Constitution is wrong, I would wish it to remain uncorrected, as long as we can avail ourselves of the services of our great leader, whose talents and whose weight of character, I consider as peculiarly necessary to get the government so under way, as that it may afterwards be carried on by subordinate characters....

TO DOCTOR WILLARD

Paris, March 24, 1789

... In the arts, I think two of our countrymen have presented the most important inventions. Mr. Paine, the author of "Common Sense," has invented an iron bridge, which promises to be cheaper by a great deal than stone, and to admit of a much greater arch. He supposes it may be ventured for an arch of five hundred feet. He has obtained a patent for it in England, and is now executing the first experiment with an arch of between ninety and one hundred feet. Mr. Rumsey has also obtained a patent for his navigation by the force of steam, in England, and is soliciting a similar one here. His principal merit is in the improvement of the boiler, and, instead of the complicated machinery of oars and paddles, proposed by others, the substitution of so simple a thing as the reaction of a stream of water on his vessel. He is building a sea vessel at this time in England, and she will be ready for an experiment in May. He has suggested a great number of mechanical improvements in a variety of branches; and upon the whole, is the most original and the greatest mechanical genius I have ever seen. The return of La Peyrouse (whenever that shall happen) will probably add to our knowledge in Geography, Botany, and Natural History. What a field have we at our doors to signalize ourselves in! The Botany of America is far from being exhausted, its Mineralogy is untouched, and its Natural History or Zoology, totally mistaken and misrepresented. As far as I have seen, there is not one single species of terrestrial birds common to Europe and America, and I question if there be a single species of quadrupeds. (Domestic animals are to be excepted.) It is for such institutions as that over which you preside so worthily. Sir, to do justice to our country, its productions and its genius. It is the work to which the young men,

whom you are forming, should lay their hands. We have spent the prime of our lives in procuring them the precious blessing of liberty. Let them spend theirs in showing that it is the great parent of science and of virtue; and that a nation will be great in both, always in proportion as it is free. Nobody wishes more warmly for the success of your good exhortations on this subject, than he who has the honor to be, with sentiments of great esteem and respect, Sir, your most obedient humble servant.

TO GENERAL WASHINGTON

Paris, May 10, 1789

... I am in great pain for the Marquis de La Fayette. His principles, you know, are clearly with the people; but having been elected for the Noblesse of Auvergne, they have laid him under express instructions, to vote for the decision by orders and not persons. This would ruin him with the Tiers État, and it is not possible he could continue long to give satisfaction to the Noblesse. I have not hesitated to press on him to burn his instructions, and follow his conscience as the only sure clue, which will eternally guide a man clear of all doubts and inconsistencies. If he cannot effect a conciliatory plan, he will surely take his stand manfully at once, with the Tiers État. He will in that case be what he pleases with them, and I am in hopes that base is now too solid to render it dangerous to be mounted on it....

TO MONSIEUR DE ST. ETIENNE

Paris, June 3, 1789

SIR, —After you quitted us yesterday evening, we continued our conversation (Monsieur de La Fayette, Mr. Short and myself) on the subject of the difficulties which environ you. The desirable object being, to secure the good which the King has offered, and to avoid the ill which seems to threaten, an idea was suggested, which appearing to make an impression on Monsieur de La Fayette, I was encouraged to pursue it on my return to Paris, to put it into form, and now to send it to you and him. It is this; that the King, in a séance royale should come forward with a Charter of Rights in his hand, to be signed by himself and by every member of the three orders. This charter to contain the five great points which the Resultat of December offered, on the part of the King, the abolition of pecuniary privileges offered by the privileged orders, and the adoption of the national debt, and a grant of the sum of money asked from the nation. This last will be a cheap price for the preceding articles; and let the same act declare your immediate separation till the next anniversary meeting. You will carry back to your constituents more good than ever was effected before without violence, and you will stop exactly at the point where violence would otherwise begin. Time will be gained, the public mind will continue to ripen and to be informed, a basis of support may be prepared with the people themselves, and expedients occur for gaining still something further at your next meeting, and for stopping again at the point of force. I have ventured to send to yourself and Monsieur de La Fayette a sketch of my ideas of what this act might contain, without endangering any dispute. But it is offered merely as a canvas for you to work on, if it be fit to work on at all. I know too little of the subject, and you know too much of it, to justify me in offering

anything but a hint. I have done it, too, in a hurry; insomuch, that since committing it to writing, it occurs to me that the fifth article may give alarm; that it is in a good degree included in the fourth, and is, therefore, useless. But after all, what excuse can I make, Sir, for this presumption. I have none but an unmeasurable love for your nation, and a painful anxiety lest despotism, after an unaccepted offer to bind its own hands, should seize you again with tenfold fury. Permit me to add to these, very sincere assurances of the sentiments of esteem and respect, with which I have the honor to be, Sir, your most obedient, and most humble servant.

[The annexed is the Charter accompanying the two preceding letters.]

A Charter of Rights, solemnly established by the King and Nation

1. The States General shall assemble, uncalled, on the first day of November, annually, and shall remain together so long as they shall see cause. They shall regulate their own elections and proceedings, and until they shall ordain otherwise, their elections shall be in the forms observed in the present year, and shall be triennial.

2. The States General alone shall levy money on the nation, and shall appropriate it.

3. Laws shall be made by the States General only, with the consent of the King,

4. No person shall be restrained of his liberty, but by regular process from a court of justice, authorized by a general law. (Except that a Noble may be imprisoned by order of a court of justice, on the prayer of twelve of his nearest relations.) On complaint of an unlawful imprisonment, to any judge whatever, he shall have the prisoner

immediately brought before him, and shall discharge him, if his imprisonment be unlawful. The officer in whose custody the prisoner is, shall obey the orders of the judge; and both judge and officer shall be responsible, civilly and criminally, for a failure of duty herein.

5. The military shall be subordinate to the civil authority.

6. Printers shall be liable to legal prosecution for printing and publishing false facts, injurious to the party prosecuting; but they shall be under no other restraint.

7. All pecuniary privileges and exemptions, enjoyed by any description of persons, are abolished.

8. All debts already contracted by the King, are hereby made the debts of the nation; and the faith thereof is pledged for their payment in due time.

9. Eighty millions of livres are now granted to the King, to be raised by loan, and reimbursed by the nation; and the taxes heretofore paid, shall continue to be paid to the end of the present year, and no longer.

10. The States General shall now separate, and meet again on the 1st day of November next.

Done, on behalf of the whole nation, by the King and their representatives in the States General, at Versailler, this——day of June, 1789.

Signed by the King, and by every member individually, And in his presence.

TO JOHN JAY

Paris, June 24, 1789

SIR, —My letter of the 17th and 18th instant, gave you the progress of the States General to the 17th, when the Tiers had declared the illegality of all the existing taxes, and their discontinuance from the end of their present session. The next day being a jour de fête, could furnish no indication of the impression that vote was likely to make on the government. On the 19th, a Council was held at Marly, in the afternoon. It was there proposed, that the King should interpose by a declaration of his sentiments in a séance royale. The declaration prepared by Mr. Neckar, while it censured in general the proceedings both of the Nobles and Commons, announced the King's views, such as substantially to coincide with the Commons. It was agreed to in Council, as also that the séance royale should be held on the 22d, and the meetings till then be suspended. While the Council was engaged in this deliberation at Marly, the Chamber of the Clergy was in debate, whether they should accept the invitation of the Tiers to unite with them in the common chamber. On the first question, to unite simply and unconditionally, it was decided in the negative by a very small majority. As it was known, however, that some members who had voted in the negative, would be for the affirmative with some modifications, the question was put with these modifications, and it was determined by a majority of eleven members, that their body should join the Tiers. These proceedings of the Clergy were unknown to the Council at Marly, and those of the Council were kept secret from everybody. The next morning (the 20th), the members repaired to the House as usual, found the doors shut and guarded, and a proclamation posted up for holding a séance royale on the 22d, and a suspension of their meetings till then. They

presumed, in the first moment, that their dissolution was decided, and repaired to another place, where they proceeded to business. They there bound themselves to each other by an oath, never to separate of their own accord, till they had settled a constitution for the nation on a solid basis, and if separated by force, that they would reassemble in some other place. It was intimated to them, however, that day, privately, that the proceedings of the *séance royale* would be favorable to them. The next day they met in a church, and were joined by a majority of the Clergy. The heads of the aristocracy saw that all was lost without some violent exertion. The King was still at Marly. Nobody was permitted to approach him but their friends. He was assailed by lies in all shapes. He was made to believe that the Commons were going to absolve the army from their oath of fidelity to him, and to raise their pay.... They procured a committee to be held, consisting of the King and his ministers, to which Monsieur and the Count d'Artois should be admitted. At this committee, the latter attacked Mr. Neckar personally, arraigned his plans, and proposed one which some of his engines had put into his hands. Mr. Neckar, whose characteristic is the want of firmness, was browbeaten and intimidated, and the King shaken. He determined that the two plans should be deliberated on the next day, and the *séance royale* put off a day longer. This encouraged a fiercer attack on Mr. Neckar the next day; his plan was totally dislocated, and that of the Count d'Artois inserted into it. Himself and Monsieur de Montmorin offered their resignation, which was refused; the Count d'Artois saying to Mr. Neckar, "No, Sir, you must be kept as the hostage; we hold you responsible for all the ill which shall happen." This change of plan was immediately whispered without doors. The nobility were in triumph, the people in consternation. When the King passed the next day through the lane they formed from the Chateau to the Hotel des États (about half a mile), there was a dead silence. He was about an hour in the House, delivering his speech and declaration, copies of which I enclose you. On his coming out, a feeble cry of "vive le roy" was

raised by some children, but the people remained silent and sullen. When the Duke d'Orleans followed, however, their applauses were excessive. This must have been sensible to the King. He had ordered, in the close of his speech, that the members should follow him, and resume their deliberations the next day. The Noblesse followed him, and so did the Clergy, except about thirty, who, with the Tiers, remained in the room, and entered into deliberation. They protested against what the King had done, adhered to all their former proceedings, and resolved the inviolability of their own persons. An officer came twice to order them out of the room, in the King's name, but they refused to obey. In the afternoon, the people, uneasy, began to assemble in great numbers in the courts and vicinities of the palace. The Queen was alarmed, and sent for Mr. Neckar. He was conducted amidst the shouts and acclamations of the multitude, who filled all the apartments of the palace. He was a few minutes only with the Queen, and about three-quarters of an hour with the King. Not a word has transpired of what passed at these interviews. The King was just going to ride out. He passed through the crowd to his carriage, and into it, without being in the least noticed. As Mr. Neckar followed him, universal acclamations were raised of "Vive Monsieur Neckar, vive le sauveur de la France opprimee." He was conducted back to his house with the same demonstration of affection and anxiety. About two hundred deputies of the Tiers, catching the enthusiasm of the moment, went to his house, and extorted from him a promise that he would not resign. These circumstances must wound the heart of the King, desirous as he is, to possess the affections of his subjects. As soon as the proceedings at Versailles were known at Paris, a run began on the caisse d'escompte, which is the first symptom always of the public diffidence and alarm. It is the less in condition to meet the run, as Mr. Neckar has been forced to make free with its funds, for the daily support of the government. This is the state of things, as late as I am able to give them with certainty, at this moment. My letter not being to go off till to-morrow evening, I shall go to Versailles to-morrow,

and be able to add the transactions of this day and to-morrow.

June 25. Just returned from Versailles, I am enabled to continue my narration. On the 24th, nothing remarkable passed, except an attack by the mob of Versailles on the Archbishop of Paris, who had been one of the instigators of the court, to the proceedings of the *séance royale*. They threw mud and stones at his carriage, broke the windows of it, and he in a fright promised to join the Tiers.

This day (the 25th) forty-eight of the Nobles have joined the Tiers. Among these, is the Duke d'Orleans. The Marquis de La Fayette could not be of the number, being restrained by his instructions. He is writing to his constituents, to change his instructions or to accept his resignation. There are with the Tiers now, one hundred and sixty-four members of the Clergy, so that the common chamber consists of upwards of eight hundred members. The minority of the Clergy, however, call themselves the chamber of the Clergy, and pretend to go on with business. I found the streets of Versailles much embarrassed with soldiers. There was a body of about one hundred horse drawn up in front of the Hotel of the States, and all the avenues and doors guarded by soldiers. Nobody was permitted to enter but the members, and this was by order of the King; for till now, the doors of the common room have been open, and at least two thousand spectators attending their debates constantly. They have named a deputation to wait on the King, and desire a removal of the soldiery from their doors, and seem determined, if this is not complied with, to remove themselves elsewhere.

Instead of being dismayed with what has passed, they seem to rise in their demands, and some of them to consider the erasing every vestige of a difference of order as indispensable to the establishment and preservation of a good constitution. I apprehend there is more courage than calculation in this project. I did imagine, that seeing that

Mr. Neckar and themselves were involved as common enemies in the hatred of the aristocrats, they would have been willing to make common cause with him, and to wish his continuance in office; and that Mr. Neckar, seeing that all the trimmings he has used towards the court and Nobles, has availed him nothing, would engage himself heartily and solely on the popular side, and view his own salvation in that alone. The confidence which the people place in him, seems to merit some attention. However, the mass of the common chamber are absolutely indifferent to his remaining in office. They consider his head as unequal to the planning a good constitution, and his fortitude to a co-operation in the effecting it. His dismissal is more credited to-day than it was yesterday. If it takes place, he will retain his popularity with the nation, as the members of the States will not think it important to set themselves against it, but on the contrary, will be willing that he should continue on their side, on his retirement. The run on the *caisse d'escompte* continues. The members of the States admit, that Mr. Neckar's departure out of office will occasion a stoppage of public payments. But they expect to prevent any very ill effect, by assuring the public against any loss, and by taking immediate measures for continuing payment. They may, perhaps, connect these measures with their own existence, so as to interest the public in whatever catastrophe may be aimed at them. The gazettes of France and Leyden accompany this. During the continuance of this crisis and my own stay, I shall avail myself of every private conveyance to keep you informed of what passes. I have the honor to be, with the most perfect esteem and respect, Sir, your most obedient, and most humble servant.

TO JOHN JAY

Paris, June 29, 1789

SIR—My letter of the 25th gave you the transactions of the States General to the afternoon of that day. On the next, the Archbishop of Paris joined the Tiers, as did some others of the Clergy and Noblesse. On the 27th, the question of the St. Domingo deputation came on, and it was decided that it should be received. I have before mentioned to you the ferment into which the proceedings at the séance royale of the 23d, had thrown the people. The soldiery also were affected by it. It began in the French guards, extended to those of every other denomination, (except the Swiss) and even to the bodyguards of the King. They began to quit their barracks, to assemble in squads, to declare they would defend the life of the King, but would not cut the throats of their fellow-citizens. They were treated and caressed by the people, carried in triumph through the streets, called themselves the soldiers of the nation, and left no doubt on which side they would be, in case of a rupture. Similar accounts came in from the troops in other parts of the kingdom, as well those which had not heard of the séance royale, as those which had, and gave good reason to apprehend that the soldiery, in general, would side with their fathers and brothers, rather than with their officers. The operation of this medicine, at Versailles, was as sudden as it was powerful. The alarm there was so complete, that in the afternoon of the 27th, the King wrote a letter to the President of the Clergy, the Cardinal de La Rochefoucault, in these words:

“My COUSIN, —Wholly engaged in promoting the general good of my kingdom, and desirous, above all things, that the Assembly of the States General should apply themselves to objects of general interest, after the voluntary acceptance by your order of my

declaration of the 23d of the present month; I pass my word that my faithful Clergy will, without delay, unite themselves with the other two orders, to hasten the accomplishment of my paternal views. Those, whose powers are too limited, may decline voting until new powers are procured. This will be a new mark of attachment which my Clergy will give me. I pray God, my Cousin, to have you in his holy keeping. Louis.”

A like letter was written to the Duke de Luxemburgh, President of the Noblesse. The two chambers entered into debate on the question, whether they should obey the letter of the King. There was a considerable opposition; when notes written by the Count d’Artois to sundry members, and handed about among the rest, decided the matter, and they went in a body and took their seats with the Tiers, and thus rendered the union of the orders in one chamber complete. As soon as this was known to the people of Versailles, they assembled about the palace, demanded the King and Queen, who came and showed themselves in a balcony. They rent the skies with cries of “vive le roy” “vive le reine” They called for the Dauphin, who was also produced, and was the subject of new acclamations. After feasting themselves and the royal family with this tumultuary reconciliation, they went to the house of Mr. Neckar and M. de Montmorin, with shouts of thankfulness and affection. Similar emotions of joy took place in Paris, and at this moment, the triumph of the Tiers is considered as complete. To-morrow they will recommence business, voting by persons on all questions; and whatever difficulties may be opposed in debate by the malcontents of the Clergy and Nobility, everything must be finally settled at the will of the Tiers. It remains to see whether they will leave to the Nobility anything but their titular appellations. I suppose they will not. Mr. Neckar will probably remain in office. It would seem natural that he should endeavor to have the hostile part of the Council removed, but I question if he finds himself firm enough for that. A perfect co-operation with the Tiers will be his

wisest game. This great crisis being now over, I shall not have matter interesting enough to trouble you with, as often as I have done lately. There has nothing remarkable taken place in any other part of Europe. I have the honor to be, with the most perfect esteem and respect, Sir, your most obedient, and most humble servant.

TO THOMAS PAINE

Paris, July 11, 1789

.... The National Assembly then (for this is the name they take), having shown through every stage of these transactions a coolness, wisdom, and resolution to set fire to the four corners of the kingdom and to perish with it themselves, rather than to relinquish an iota from their plan of a total change of government, are now in complete and undisputed possession of the sovereignty. The executive and aristocracy are at their feet; the mass of the, nation, the mass of the clergy, and the army are with them; they have prostrated the old government, and are now beginning to build one from the foundation. A committee, charged with the arrangement of their business, gave in, two days ago, the following order of proceedings.

“1. Every government should have for its only end, the preservation of the rights of man; whence it follows, that to recall constantly the government to the end proposed, the constitution should begin by a declaration of the natural and imprescriptable rights of man.

“2. Monarchical government being proper to maintain those rights, it has been chosen by the French nation. It suits especially a great society; it is necessary for the happiness of France. The declaration of the principles of this government, then, should follow immediately the declaration of the rights of man.

“3. It results from the principles of monarchy, that the nation, to assure its own rights, has yielded particular rights to the monarch; the constitution, then, should declare, in a precise manner, the rights of both. It should begin by declaring the rights of the French nation, and then it should declare the rights of the King.

“4. The rights of the King and nation not existing but for the happiness of the individuals who compose it, they lead to an examination of the rights of citizens.

“5. The French nation not being capable of assembling individually, to exercise all its rights, it ought to be represented. It is necessary, then, to declare the form of its representation and the rights of its representatives.

“6. From the union of the powers of the nation and King, should result the enacting and execution of the laws; thus, then, it should first be determined how the laws shall be established, afterwards should be considered, how they shall be executed.

“7. Laws have for their object the general administration of the kingdom, the property and the actions of the citizens. The execution of the laws which concern the general administration, requires Provincial and Municipal Assemblies. It is necessary to examine, therefore, what should be the organization of the Provincial Assemblies, and what of the Municipal.

“8. The execution of the laws which concern the property and actions of the citizens, call for the judiciary power. It should be determined how that should be confided, and then its duties and limits.

“9. For the execution of the laws and the defence of the kingdom, there exists a public force. It is necessary, then, to determine the principles which should direct it, and how it should be employed.

“Recapitulation

“Declaration of the rights of man. Principles of the monarchy. Rights of the nation. Rights of the King. Rights of the citizens.

“Organization and rights of the National Assembly. Forms

necessary for the enactment of laws. Organization and functions of the Provincial and Municipal Assemblies. Duties and limits of the judiciary power. Functions and duties of the military power.”

You see that these are the materials of a superb edifice, and the hands which have prepared them, are perfectly capable of putting them together, and of filling up the work of which these are only the outlines. While there are some men among them of very superior abilities, the mass possess such a degree of good sense, as enables them to decide well. I have always been afraid their numbers might lead to confusion. Twelve hundred men in one room are too many. I have still that fear. Another apprehension is, that a majority cannot be induced to adopt the trial by jury; and I consider that as the only anchor ever yet imagined by man, by which a government can be held to the principles of its constitution....

TO JOHN JAY

Paris, July 19, 1789

.... My letter of the 29th of June, brought down the proceedings of the States and government to the re-union of the orders, which took place on the 27th. Within the Assembly, matters went on well. But it was soon observed, that troops, and particularly the foreign troops, were on their march towards Paris from various quarters, and that this was against the opinion of Mr. Neckar. The King was probably advised to this, under pretext of preserving peace in Paris and Versailles, and saw nothing else in the measure. That his advisers are supposed to have had in view, when he should be secured and inspirited by the presence of the troops, to take advantage of some favorable moment, and surprise him into an act of authority for establishing the declaration of the 23d of June, and perhaps dispersing the States General, is probable. The Marshal de Broglie was appointed to command all the troops within the isle of France, a high flying aristocrat, cool and capable of everything. Some of the French guards were soon arrested under other pretexts, but in reality, on account of their dispositions in favor of the national cause. The people of Paris forced the prison, released them, and sent a deputation to the States General, to solicit a pardon. The States, by a most moderate and prudent Arrêté, recommended these prisoners to the King, and peace to the people of Paris. Addresses came in to them from several of the great cities, expressing sincere allegiance to the King, but a determined resolution to support the States General. On the 8th of July, they voted an address to the King to remove the troops. This piece of masculine eloquence, written by Monsieur de Mirabeau, is worth attention on account of the bold matter it expresses and discovers through the whole. The King refused to remove the troops,

and said they might remove themselves, if they pleased, to Noyons or Soissons. They proceeded to fix the order in which they will take up the several branches of their future constitution, from which it appears, they mean to build it from the bottom, confining themselves to nothing in their ancient form, but a King. A declaration of rights, which forms the first chapter of their work, was then proposed by the Marquis de La Fayette. This was on the 11th. In the meantime, troops, to the number of about twenty-five or thirty thousand, had arrived, and were posted in and between Paris and Versailles. The bridges and passes were guarded. At three o'clock in the afternoon, the Count de La Luzerne was sent to notify Mr. Neckar of his dismissal, and to enjoin him to retire instantly, without saying a word of it to anybody. He went home, dined, proposed to his wife a visit to a friend, but went in fact to his country-house at St. Ouen, and at midnight, set out from thence, as is supposed, for Brussels. This was not known till the next day, when the whole ministry was changed, except Villedieu, of the domestic department, and Barentin, Garde des Sceaux. These changes were as follows: the Baron de Breteuil, President of the Council of Finance; and de La Galaisiere, Comptroller General in the room of Mr. Neckar; the Marshal de Broglie, minister of war, and Foulon under him, in the room of Puy-Segur; Monsieur de La Vauguyon, minister of foreign affairs, instead of Monsieur de Montmorin; de La Porte, minister of marine, in place of the Count de La Luzerne; St. Priest was also removed from the Council. It is to be observed, that Luzerne and Puy-Segur had been strongly of the aristocratical party in Council; but they were not considered as equal to bear their shares in the work now to be done. For this change, however sudden it may have been in the mind of the King, was, in that of his advisers, only one chapter of a great plan, of which the bringing together the foreign troops had been the first. He was now completely in the hands of men, the principal among whom, had been noted through their lives, for the Turkish despotism of their characters, and who were associated about the King, as proper

Instruments for what was to be executed. The news of this change began to be known in Paris about one or two o'clock. In the afternoon, a body of about one hundred German cavalry were advanced and drawn up in the Place Louis X V and about two hundred Swiss posted at a little distance in their rear. This drew the people to that spot, who naturally formed themselves in front of the troops, at first merely to look at them. But as their numbers increased their indignation arose; they retired a few steps, posted themselves on and behind large piles of loose stone, collected in that place for a bridge adjacent to it, and attacked the horse with stones. The horse charged, but the advantageous position of the people, and the showers of stones, obliged them to retire, and even to quit the field altogether, leaving one of their number on the ground. The Swiss in their rear were observed never to stir. This was the signal for universal insurrection, and this body of cavalry, to avoid being massacred, retired towards Versailles. The people now armed themselves with such weapons as they could find in armorers' shops and private houses, and with bludgeons, and were roaming all night through all parts of the city, without any decided practicable object. The next day, the States pressed on the King to send away the troops, to permit the Bourgeoise of Paris to arm for the preservation of order in the city, and offered to send a deputation from their body to tranquillize them. He refused all the propositions. A committee of magistrates and electors of the city were appointed by their bodies, to take upon them its government. The mob, now openly joined by the French guards, forced the prison of St. Lazare, released all the prisoners, and took a great store of corn, which they carried to the corn market. Here they got some arms, and the French guards began to form and train them. The committee determined to raise forty-eight thousand Bourgeoise, or rather to restrain their numbers to forty-eight thousand. On the 14th, they sent one of their members (Monsieur de Corny, whom we knew in America) to the Hotel des Invalides, to ask arms for their Garde Bourgeoise. He was followed by, or he found there, a great mob. The

Governor of the Invalides came out, and represented the impossibility of his delivering arms, without the orders of those from whom he received them. De Corny advised the people then to retire, and retired himself; and the people took possession of the arms. It was remarkable, that not only the Invalides themselves made no opposition, but that a body of five thousand foreign troops, encamped within four hundred yards, never stirred. Monsieur de Corny and five others were then sent to ask arms of Monsieur de Launai, Governor of the Bastile. They found a great collection of people already before the place, and they immediately planted a flag of truce, which was answered by a like flag hoisted on the parapet. The deputation prevailed on the people to fall back a little, advanced themselves to make their demand of the Governor, and in that instant a discharge from the Bastile killed four people of those nearest to the deputies. The deputies retired; the people rushed against the place, and almost in an instant were in possession of a fortification, defended by one hundred men, of infinite strength, which in other times had stood several regular sieges, and had never been taken. How they got in, has, as yet, been impossible to discover. Those who pretend to have been of the party tell so many different stories, as to destroy the credit of them all. They took all the arms, discharged the prisoners, and such of the garrison as were not killed in the first moment of fury, carried the Governor and Lieutenant Governor to the Grève (the place of public execution), cut off their heads, and sent them through the city in triumph to the Palais Royal. About the same instant, a treacherous correspondence having been discovered in Monsieur de Flesselles, Prevost des Marchands, they seized him in the Hotel de Ville, where he was in the exercise of his office, and cut off his head. These events, carried imperfectly to Versailles, were the subject of two successive deputations from the States to the King, to both of which he gave dry and hard answers; for it has transpired, that it had been proposed and agitated in Council, to seize on the principal members of the States General, to march the whole army down upon Paris, and to suppress

its tumults by the sword. But at night, the Duke de Liancourt forced his way into the King's bed chamber, and obliged him to hear a full and animated detail of the disasters of the day in Paris. He went to bed deeply impressed. The decapitation of de Launai worked powerfully through the night on the whole aristocratical party, insomuch, that in the morning, those of the greatest influence on the Count d'Artois, represented to him the absolute necessity that the King should give up everything to the States. This according well enough with the dispositions of the King, he went about eleven o'clock, accompanied only by his brothers, to the States General, and there read to them a speech, in which he asked their interposition to re-establish order. Though this be couched in terms of some caution, yet the manner in which it was delivered, made it evident that it was meant as a surrender at discretion. He returned to the chateau a foot, accompanied by the States. They sent off a deputation, the Marquis de La Fayette at their head, to quiet Paris. He had, the same morning, been named Commandant-in-Chief of the Milice Bourgeoise, and Monsieur Bailly, former President of the States General, was called for as Prevost des Marchands. The demolition of the Bastille was now ordered, and begun. A body of the Swiss guards of the regiment of Ventimille; and the city horse guards, joined the people. The alarm at Versailles increased instead of abating. They believed that the aristocrats of Paris were under pillage and carnage, that one hundred and fifty thousand men were in arms, coming to Versailles to massacre the royal family, the court, the ministers, and all connected with them, their practices and principles. The aristocrats of the Nobles and Clergy in the States General, vied with each other in declaring how sincerely they were converted to the justice of voting by persons, and how determined to go with the nation all its lengths. The foreign troops were ordered off instantly. Every minister resigned. The King confirmed Bailly as Prevost des Marchands, wrote to Mr. Neckar to recall him, sent his letter open to the States General, to be forwarded by them, and invited them to go with him to Paris the next day, to

satisfy the city of his dispositions; and that night and the next morning, the Count d'Artois and Monsieur de Montisson (a deputy connected with him), Madame de Polignac, Madame de Guiche, and the Count de Vaudreuil, favorites of the Queen, the Abbé de Vermont, her confessor, the Prince of Condé and Duke de Bourbon, all fled; we know not whither. The King came to Paris, leaving the Queen in consternation for his return. Omitting the less important figures of the procession, I will only observe, that the King's carriage was in the centre, on each side of it the States General, in two ranks, a foot, and at their head the Marquis de La Fayette, as Commander-in-Chief, on horseback, and Bourgeoise guards before and behind. About sixty thousand citizens of all forms and colors, armed with the muskets of the Bastile and Invalides, as far as they would go, the rest with pistols, swords, pikes, pruning hooks, scythes, etc., lined all the streets through which the procession passed, and, with the crowds of people in the streets, cloors and windows, saluted them everywhere with cries of "vive la nation;" but not a single "vive le roy" was heard. The King stopped at the Hotel de Ville. There Monsieur Bailly presented and put into his hat the popular cockade, and addressed him. The King being unprepared and unable to answer, Bailly went to him, gathered from him some scraps of sentences, and made out an answer, which he delivered to the audience as from the King. On their return, the popular cries were "vive le roy et la nation." He was conducted by a Garde Bourgeoise to his palace at Versailles, and thus concluded such an amende honorable, as no sovereign ever made, and no people ever received. Letters written with his own hand to the Marquis de La Fayette, remove the scruples of his position. Tranquillity is now restored to the capital: the shops are again opened; the people resuming their labors, and if the want of bread does not disturb our peace, we may hope a continuance of it. The demolition of the Bastile is going on, and the Milice Bourgeoise organizing and training. The ancient police of the city is abolished by the authority of the people, the introduction of the King's troops will probably be proscribed, and

a watch or city guards substituted, which shall depend on the city alone. But we cannot suppose this paroxysm confined to Paris alone. The whole country must pass successively through it, and happy if they get through it as soon and as well as Paris has done.

I went yesterday to Versailles, to satisfy myself what had passed there; for nothing can be believed but what one sees, or has from an eye witness. They believe there still, that three thousand people have fallen victims to the tumults of Paris. Mr. Short and myself have been every day among them, in order to be sure what was passing. We cannot find, with certainty, that anybody has been killed but the three before mentioned, and those who fell in the assault or defence of the Bastille. How many of the garrison were killed, nobody pretends to have ever heard. Of the assailants, accounts vary from six to six hundred. The most general belief is, that there fell about thirty. There have been many reports of instantaneous executions by the mob, on such of their body as they caught in acts of theft or robbery. Some of these may perhaps be true. There was a severity of honesty observed, of which no example has been known. Bags of money offered on various occasions through fear or guilt, have been uniformly refused by the mobs. The churches are now occupied in singing "De profundis" and "Requiems" "for the repose of the souls of the brave and valiant citizens who have sealed with their blood the liberty of the nation." Monsieur de Montmorin is this day replaced in the department of foreign affairs, and Monsieur de St. Priest is named to the home department. The gazettes of France and Leyden accompany this. I send, also, a paper (called the Point du Jour), which will give you some idea of the proceedings of the National Assembly. It is but an indifferent thing; however, it is the best....

TO JAMES MADISON

Paris, September 6, 1789

DEAR SIR, — I sit down to write to you without knowing by what occasion I shall send my letter. I do it, because a subject comes into my head, which I would wish to develop a little more than is practicable in the hurry of the moment of making up general despatches.

The question, whether one generation of men has a right to bind another, seems never to have been started either on this or our side of the water. Yet it is a question of such consequences as not only to merit decision, but place also among the fundamental principles of every government. The course of reflection in which we are immersed here, on the elementary principles of society, has presented this question to my mind; and that no such obligation can be transmitted, I think very capable of proof. I set out on this ground, which I suppose to be self-evident, that the earth belongs in usufruct to the living; that the dead have neither powers nor rights over it. The portion occupied by any individual ceases to be his when himself ceases to be, and reverts to the society. If the society has formed no rules for the appropriation of its lands in severality, it will be taken by the first occupants, and these will generally be the wife and children of the decedent. If they have formed rules of appropriation, those rules may give it to the wife and children, or to some one of them, or to the legatee of the deceased. So they may give it to its creditor. But the child, the legatee or creditor, takes it, not by natural right, but by a law of the society of which he is a member, and to which he is subject. Then, no man can, by natural right, oblige the lands he occupied, or the persons who succeed him in that occupation, to the payment of debts contracted by him. For if he could, he might during

his own life, eat up the usufruct of the lands for several generations to come; and then the lands would belong to the dead, and not to the living, which is the reverse of our principle.

What is true of every member of the society, individually, is true of them all collectively; since the rights of the whole can be no more than the sum of the rights of the individuals, To keep our ideas clear when applying them to a multitude, let us suppose a whole generation of men to be born on the same day, to attain mature age on the same day, and to die on the same day, leaving a succeeding generation in the moment of attaining their mature age, all together. Let the ripe age be supposed of twenty-one years, and their period of life thirty-four years more, that being the average term given by the bills of mortality to persons of twenty-one years of age. Each successive generation would, in this way, come and go off the stage at a fixed moment, as individuals do now. Then I say, the earth belongs to each of these generations during its course, fully and in its own right. The second generation receives it clear of the debts and incumbrances of the first, the third of the second, and so on. For if the first could charge it with a debt, then the earth would belong to the dead and not to the living generation. Then, no generation can contract debts greater than may be paid during the course of its own existence At twenty-one years of age, they may bind themselves and their lands for thirty-four years to come; at twenty-two, for thirty-three; at twenty-three, for thirty-two; and at fifty-four, for one year only; because these are the terms of life which remain to them at the respective epochs. But a material difference must be noted, between the succession of an individual and that of a whole generation. Individuals are parts only of a society, subject to the laws of a whole. These laws may appropriate the portion of land occupied by a decedent, to his creditor, rather than to any other, or to his child, on condition he satisfies the creditor. But when a whole generation, that is, the whole society, dies, as in the case we have supposed, and another generation

or society succeeds, this forms a whole, and there is no superior who can give their territory to a third society, who may have lent money to their predecessors, beyond their faculties of paying.

What is true of generations succeeding one another at fixed epochs, as has been supposed for clearer conception, is true for those renewed daily, as in the actual course of nature. As a majority of the contracting generation will continue in being thirty-four years, and a new majority will then come into possession, the former may extend their engagement to that term, and no longer. The conclusion then, is, that neither the representatives of a nation, nor the whole nation itself assembled, can validly engage debts beyond what they may pay in their own time, that is to say, within thirty-four years of the date of the engagement.

To render this conclusion palpable, suppose that Louis the X IV and X V had contracted debts in the name of the French nation, to the amount of ten thousand millions, and that the whole had been contracted in Holland. The interest of this sum would be five hundred millions, which is the whole rent-roll or net proceeds of the territory of France. Must the present generation of men have retired from the territory in which nature produces them, and ceded it to the Dutch creditors? No; they have the same rights over the soil on which they were produced, as the preceding generations had. They derive these rights not from them, but from nature. They, then, and their soil are, by nature, clear of the debts of their predecessors. To present this in another point of view, suppose Louis X V and his contemporary generation, had said to the money lenders of Holland, give us money, that we may eat, drink, and be merry in our day; and on condition you will demand no interest till the end of thirty-four years, you shall then, forever after, receive an annual interest of fifteen per cent. The money is lent on these conditions, is divided among the people, eaten, drunk, and squandered. Would the present generation be obliged to

apply the produce of the earth and of their labor, to replace their dissipations? Not at all.

I suppose that the received opinion, that the public debts of one generation devolve on the next, has been suggested by our seeing, habitually, in private life, that he who succeeds to lands is required to pay the debts of his predecessor; without considering that this requisition is municipal only, not moral, flowing from the will of the society, which has found it convenient to appropriate the lands of a decedent on the condition of a payment of his debts; but that between society and society, or generation and generation, there is no municipal obligation, no umpire but the law of nature.

The interest of the national debt of France being, in fact, but a two thousandth part of its rent-roll, the payment of it is practicable enough; and so becomes a question merely of honor or of expediency. But with respect to future debts, would it not be wise and just for that nation to declare in the constitution they are forming, that neither the legislature nor the nation itself, can validly contract more debt than they may pay within their own age, or within the term of thirty-four years? And that all future contracts shall be deemed void, as to what shall remain unpaid at the end of thirty-four years from their date? This would put the lenders, and the borrowers also, on their guard. By reducing, too, the faculty of borrowing within its natural limits, it would bridle the spirit of war, to which too free a course has been procured by the inattention of money lenders to this law of nature, that succeeding generations are not responsible for the preceding.

On similar ground it may be proved, that no society can make a perpetual constitution, or even a perpetual law. True earth belongs always to the living generation: they may manage it, then, and what proceeds from it, as they please, during their usufruct. They are masters, too, of their own persons, and consequently may govern them as they please. But persons and property make the sum of the objects

of government. The constitution and the laws of their predecessors are extinguished then, in their natural course, with those whose will gave them being. This could preserve that being, till it ceased to be itself, and no longer. Every constitution, then, and every law, naturally expires at the end of thirty-four years. If it be enforced longer, it is an act of force, and not of right. It may be said, that the succeeding generation exercising, in fact, the power of repeal, this leaves them as free as if the constitution or law had been expressly limited to thirty-four years only. In the first place, this objection admits the right, in proposing an equivalent. But the power of repeal is not an equivalent. It might be, indeed, if every form of government were so perfectly contrived, that the will of the majority could always be obtained, fairly and without impediment. But this is true of no form. The people cannot assemble themselves; their representation is unequal and vicious. Various checks are opposed to every legislative proposition. Factions get possession of the public councils, bribery corrupts them, personal interests lead them astray from the general interests of their constituents; and other impediments arise, so as to prove to every practical man, that a law of limited duration is much more manageable than one which needs a repeal.

This principle, that the earth belongs to the living and not to the dead, is of very extensive application and consequences in every country, and most especially in France. It enters into the resolution of the questions, whether the nation may change the descent of lands holden in tail; whether they may change the appropriation of lands given anciently to the church, to hospitals, colleges, orders of chivalry, and otherwise in perpetuity; whether they may abolish the charges and privileges attached on lands, including the whole catalogue, ecclesiastical and feudal; it goes to hereditary offices, authorities and jurisdictions, to hereditary orders, distinctions and appellations, to perpetual monopolies in commerce, the arts or sciences, with a long train of *et ceteras*; renders the question of reimbursement, a question

of generosity and not of right. In all these cases, the legislature of the day could authorize such appropriations and establishments for their own time, but no longer ; and the present holders, even where they or their ancestors have purchased, are in the case of bona fide purchasers of what the seller had no right to convey.

Turn this subject in your mind, my dear Sir, and particularly as to the power of contracting debts, and develop it with that cogent logic which is so peculiarly yours. Your station in the councils of our country gives you an opportunity of producing it to public consideration, of forcing it into discussion. At first blush it may be laughed at, as the dream of a theorist; but examination will prove it to be solid and salutary. It would furnish matter for a fine preamble to our first law for appropriating the public revenue; and it will exclude, at the threshold of our new government, the ruinous and contagious errors of this quarter of the globe, which have armed despots with means which nature does not sanction, for binding in chains their fellow-men. We have already given, in example, one effectual check to the dog of war, by transferring the power of declaring war from the executive to the legislative body, from those who are to spend, to those who are to pay. I should be pleased to see this second obstacle held out by us also, in the first instance. No nation can make a declaration against the validity of long-contracted debts, so disinterestedly as we, since we do not owe a shilling which will not be paid, principal and interest, by the measures you have taken, within the time of our own lives. I write you no news, because when an occasion occurs, I shall write a separate letter for that. I am always, with great and sincere esteem, dear Sir, your affectionate friend and servant.

TO WM. HUNTER, ESQ., MAYOR OF ALEXANDRIA

Alexandria, March 11, 1790

.... Convinced that the republican is the only form of government which is not eternally at open or secret war with the rights of mankind, my prayers and efforts shall be cordially distributed to the support of that we have so happily established. It is indeed an animating thought, that while we are securing the rights of ourselves and our posterity, we are pointing out the way to struggling nations, who wish like us to emerge from their tyrannies also. Heaven help their struggles, and lead them, as it has done us, triumphantly through them....

TO THE MARQUIS DE LAFAYETTE

New York, April 2, 1790

Behold me, my dear friend, elected Secretary of State, instead of returning to the far more agreeable position which placed me in the daily participation of your friendship. I found the appointment in the newspapers the day of my arrival in Virginia. I had indeed been asked while in France, whether I would accept of any appointment at home, and I had answered that, not meaning to remain long where I was, I meant it to be the last office I should ever act in. Unfortunately this letter had not arrived at the time of arranging the new Government. I expressed freely to the President my desire to return. He left me free, but still showing his own desire. This, and the concern of others, more general than I had a right to expect, induced, after three months parleying, to sacrifice my own inclinations. I have been here, then, ten days harnessed in new gear. Wherever I am, or ever shall be, I shall be sincere in my friendship to you and to your nation. I think with others, that nations are to be governed with regard to their own interests, but I am convinced that it is their interest, in the long run, to be grateful, faithful to their engagements, even in the worst of circumstances, and honorable and generous always. If I had not known that the head of our government was in these sentiments, and that his national and private ethics were the same, I would never have been where I am. I am sorry to tell you his health is less firm than it used to be. However, there is nothing in it to give alarm. The opposition to our new Constitution has almost totally disappeared. Some few indeed had gone such lengths in their declarations of hostility, that they feel it awkward perhaps to come over; but the amendments proposed by Congress, have brought over almost all their

followers. If the President can be preserved a few years till habits of authority and obedience can be established generally, we have nothing to fear. The little vautreien, Rhode Island, will come over with a little more time. Our last news from Paris is of the 8th of January. So far it seemed that your revolution had got along with a steady peace; meeting indeed occasional difficulties and dangers, but we are not to expect to be translated from despotism to liberty in a feather-bed. I have never feared for the ultimate result, though I have feared for you personally. Indeed, I hope you will never see such another 5th or 6th of October. Take care of yourself, my dear friend, for though I think your nation would in any event work out her salvation, I am persuaded, were she to lose you, it would cost her oceans of blood, and years of confusion and anarchy. Kiss and bless your dear children for me. Learn them to be as you are, a cement between our two nations. I write te Madame de LaFayette, so have only to add assurances of the respect of your affectionate friend and humble servant.

TO MARIA JEFFERSON

New York, April 11, 1790

Where are you, my dear Maria? how do you do? how are you occupied? Write me a letter by the first post, and answer me all these questions. Tell me whether you see the sun rise every day? how many pages a day you read in Don Quixote? how far you are advanced in him? whether you repeat a grammar lesson every day? what else you read? how many hours a day you sew? whether you have an opportunity of continuing your music? whether you know how to make a pudding yet, to cut out a beefsteak, to sow spinach? or to set a hen? Be good, my dear, as I have always found you; never be angry with anybody, nor speak harm of them; try to let everybody's faults be forgotten, as you would wish yours to be; take more pleasure in giving what is best to another than in having it yourself, and then all the world will love you, and I more than all the world. If your sister is with you, kiss her and tell her how much I love her also, and present my affections to Mr. Randolph. Love your aunt and uncle and be dutiful and obliging to them for all their kindness to you, What would you do without them and with such a vagrant for a father? Say to both of them a thousand affectionate things for me; and adieu, my dear Maria.

TH. JEFFERSON.

TO MR. THOMAS MANN RANDOLPH

New York, May 30, 1790

.... Your resolution to apply to the study of the law, is wise in my opinion, and at the same time to mix with it a good degree of attention to the farm. The one will relieve the other. The study of the law is useful in a variety of points of view. It qualifies a man to be useful to himself, to his neighbors, and to the public. It is the most certain stepping-stone to preferment in the political line. In political economy, I think Smith's *Wealth of Nations* the best book extant; in the science of government, Montesquieu's *Spirit of Laws* is generally recommended. It contains, indeed, a great number of political truths; but also an equal number of heresies: so that the reader must be constantly on his guard. There has been lately published a letter of Helvetius, who was the intimate friend of Montesquieu, and whom he consulted before the publication of his book. Helvetius advised him not to publish it; and in this letter to a friend he gives us a solution for the mixture of truth and error found in this book. He says Montesquieu was a man of immense reading; that he had commonplaced all his reading, and that his object was to throw the whole contents of his commonplace book into systematical order, and to show his ingenuity by reconciling the contradictory facts it presents. Locke's little book on Government, is perfect as far as it goes. Descending from theory to practice there is no better book than the *Federalist*. Burgh's *Political Disquisitions* are good also, especially after reading De Lome. Several of Hume's *Political Essays* are good. There are some excellent books of theory written by Turgot and the economists of France. For parliamentary knowledge, the *Lex Parliamentaria* is the best book....

TO JOHN GARLAND JEFFERSON

New York, June 11, 1790

DEAR SIR, —Your uncle mr Garland informs me, that, your education being finished, you are desirous of obtaining some clerkship or something else under government whereby you may turn your talents to some account for yourself and he had supposed it might be in my power to provide you with some such office. His commendations of you are such as to induce me to wish sincerely to be of service to you. But there is not, and has not been, a single vacant office at my disposal. Nor would I, as your friend, ever think of putting you into the petty clerkships in the several offices, where you would have to drudge through life for a miserable pittance, without a hope of bettering your situation. But he tells me you are also disposed to the study of the law. This therefore brings it more within my power to serve you. It will be necessary for you in that case to go and live somewhere in my neighborhood in Albemarle. The inclosed letter to Colo. Lewis near Charlottesville will show you what I have supposed could be best done for you there, it is a general practice to study the law in the office of some lawyer. This indeed gives to the student the advantage of his instruction. But I have ever seen that the services expected in return have been more than the instructions have been worth. All that is necessary for a student is access to a library, and directions in what order the books are to be read. This I will take the liberty of suggesting to you, observing previously that as other branches of science, and especially history, are necessary to form a lawyer, these must be carried on together. I will arrange the books to be read into three columns, and propose that you should read those in the first column till 12. oclock every day; those in the 2d. from 12. to 2. those in the 3d. after candlelight, leaving all the afternoon for

exercise and recreation, which are as necessary as reading: I will rather say more necessary, because health is worth more than learning.

	tions.	

Should there by any little intervals in the day not otherwise occupied fill them up by reading Lowthe's grammar, Blair's lectures on rhetoric, Mason on poetic & prosaic numbers, Bolingbroke's works for

the sake of the stile, which is declamatory & elegant, the English poets for the sake of style also.

As mr Peter Carr in Goochland is engaged in a course of law reading, and has my books for that purpose, it will be accessary for you to go to mrs Carr's, and to receive such as he shall be then done with, and settle with him a plan of receiving from him regular[ly] the before mentioned books as fast as he shall get through them. The losses I have sustained by lending my books will be my apology to you for asking your particular attention to the replacing them in the presses as fast as you finish them, and not to lend them to anybody else, nor suffer anybody to have a book out of the Study under cover of your name. You will find, when you get there, that I have had reason to ask this exactness.

I would have you determine beforehand to make yourself a thorough lawyer, & not be contented with a mere smattering. It is superiority of knowledge which can alone lift you above the heads of your competitors, and ensure you success, I think therefore you must calculate on devoting between two & three years to this course of reading, before you think of commencing practice. Whenever that begins, there is an end of reading.

I shall be glad to hear from you from time to time, and shall hope to see you in the fall in Albemarle, to which place I propose a visit in that season. In the meantime wishing you all the industry of patient perseverance which this course of reading will require I am with great esteem Dear Sir Your most obedient friend & servant.

TO MARIA JEFFERSON

New York, June 13th, 1790

MY DEAR MARIA:

I have received your letter of May 23d, which was in answer to mine of May 2d, but I wrote you also on the 23d of May, so that you still owe me an answer to that, which I hope is now on the road. In matters of correspondence as well as of money, you must never be in debt. I am much pleased with the account you give me of your occupations, and the making the pudding is as good an article of them as any. When I come to Virginia I shall insist on eating a pudding of your own making, as well as on trying other specimens of your skill. You must make the most of your time while you are with so good an aunt who can learn you everything. We had not peas nor strawberries here till the 8th day of this month. On the same day I heard the first whip-poor-will whistle. Swallows and martins appeared here on the 21st of April. When did they appear with you? and when had you peas, strawberries, and whip-poor-wills in Virginia? Take notice hereafter whether the whip-poor-wills always come with the strawberries and peas. Send me a copy of the maxims I gave you, also a list, of the books I promised you. I have had a long touch of my periodical headache, but a very moderate one. It has not quite left me yet, Adieu, my dear; love your uncle, aunt, and cousins, and me more than all.

TO COUNT DE MOUSTIER

Philadelphia, December 3, 1790

.... The powers of the government for the collection of taxes, are found to be perfect, so far as they have been tried. This has been as yet only by duties on consumption. As these fall principally on the rich, it is a general desire to make them contribute the whole money we want, if possible. And we have a hope that they will furnish enough for the expenses of government and the interest of our whole public debt, foreign and domestic. If they do this for the present, their increase, from the increase of population and consumption, (which is at the rate of five per centum per annum), will sink the capital in thirteen or fourteen years, as it will operate in the way of compound interest. Independent of this prospect, which is itself a good one, we make the produce of our land office, and some other articles, a sinking fund for the principal....

TO MARTHA JEFFERSON RANDOLPH

Philadelphia, Dec. 23, 1790

MY DEAR DAUGHTER:

This is a scolding letter for you all. I have not received a scrip of a pen from home since I left it. I think it so easy for you to write me one letter every week, which will be but once in the three weeks for each of you, when I write one every week, who have not one moment's repose from business, from the first to the last moment of the week.

Perhaps you think you have nothing to say to me. It is a great deal to say you are well; or that one has a cold, another a fever, etc.: besides that, there is not a sprig of grass that shoots uninteresting to me; nor anything that moves from yourself down to Bergere or Grizzle. Write, then, my dear daughter, punctually on your day, and Mr. Randolph and Polly on theirs. I suspect you may have news to tell me of yourself of the most tender interest to me. Why silent then?

TO MR. HAZARD

Philadelphia, February 18, 1791

SIR, —I return you the two volumes of records, with thanks for the opportunity of looking into them. They are curious monuments of the infancy of our country. I learn with great satisfaction that you are about committing to the press the valuable historical and State papers you have been so long collecting. Time and accident are committing daily havoc on the originals deposited in our public offices. The late war has done the work of centuries in this business. The last cannot be recovered, but let us save what remains; not by vaults and locks which fence them from the public eye and use in consigning them to the waste of time, but by such a multiplication of copies, as shall place them beyond the reach of accident. This being the tendency of your undertaking, be assured there is no one who wishes it more success than, Sir, your most obedient, and most humble servant.

TO MAJOR L'ENFANT

Philadelphia, April 10, 1791

SIR, —I am favored with your letter of the 4th instant, and in compliance with your request, I have examined my papers, and found the plans of Frankfort-on-the-Mayne, Carlsruhe, Amsterdam, Strasburg, Paris, Orleans, Bordeaux, Lyons, Montpelier, Marseilles, Turin, and Milan, which I send in a roll by the post. They are on large and accurate scales, having been procured by me while in those respective cities myself. As they are connected with the notes I made in my travels, and often necessary to explain them to myself, I will beg your care of them, and to return them when no longer useful to you, leaving you absolutely free to keep them as long as useful. I am happy that the President has left the planning of the town in such good hands, and have no doubt it will be done to general satisfaction. Considering that the grounds to be reserved for the public are to be paid for by the acre, I think very liberal reservations should be made for them; and if this be about the Tyber and on the back of the town, it will be of no injury to the commerce of the place, which will undoubtedly establish itself on the deep waters towards the eastern branch and mouth of Rock Creek; the water about the mouth of the Tyber not being of any depth. Those connected with the government will prefer fixing themselves near the public grounds in the centre, which will also be convenient to be resorted to as walks from the lower and upper town. Having communicated to the President, before he went away, such general ideas on the subject of the town as occurred to me, I make no doubt that, in explaining himself to you on the subject, he has interwoven with his own ideas, such of mine as he approved. For fear of repeating therefore what he did not approve, and having more confidence in the unbiassed state of his mind, than

in my own, I avoided interfering with what he may have expressed to you. Whenever it is proposed to prepare plans for the Capitol, I should prefer the adoption of some one of the models of antiquity, which have had the approbation of thousands of years; and for the President's house, I should prefer the celebrated fronts of modern buildings, which have already received the approbation of all good judges. Such are the Galerie du Louire, the Gardes meubles, and two fronts of the Hotel de Salm. But of this it is yet time enough to consider. In the meantime I am, with great esteem, Sir, your most obedient humble servant.

TO THOMAS MANN RANDOLPH

Bennington, in Vermont, June 5, 1791

DEAR SIR, —Mr. Madison and myself are so far on the tour we had projected. We have visited, in the course of it, the principal scenes of General Burgoyne's misfortunes, to wit, the grounds at Stillwater, where the action of that name was fought, and particularly the breastworks, which cost so much blood to both parties, the encampments at Saratoga and ground where the British piled their arms, and the field of the battle of Bennington, about nine miles from this place. We have also visited Forts William, Henry and George, Ticonderoga, Crown Point, etc., which have been scenes of blood from a very early part of our history. We were more pleased, however, with the botanical objects which continually presented themselves. Those either unknown or rare in Virginia, were the sugar maple in vast abundance. The silver fir, white pine, pitch pine, spruce pine, a shrub with decumbent stems, which they call juniper, an aralea, very different from the nudiflora, with very large clusters of flowers, more thickly set on the branches, of a deeper red, and high pink-fragrance. It is the richest shrub I have seen. The honey-suckle of the gardens growing wild on the banks of Lake George, the paper-birch, an aspen with a velvet leaf, a shrub-willow with downy catkins, a wild gooseberry, the wild cherry with single fruit (not the bunch cherry), strawberries in abundance....

TO T. M. RANDOLPH

Philadelphia, July 3, 1791

You will observe by the enclosed and preceding papers that I am mentioned on the subject of Paine's pamphlet on the Rights of Man; and you will have seen a note of mine prefixed to that pamphlet whence it has been inferred that I furnished the pamphlet to the printer and procured its publication. This is not true. The fact was this: Mr. Beckley had the only copy of that pamphlet in town. He lent it to Mr. Madison, who lent it to me under the injunction to return it to Mr. Beckley within the day. Beckley came for it before I had finished reading it and desired as soon as I had done I would send it to a Mr. Jonathan B. Smith whose brother was to reprint it. Being an utter stranger to Mr. J. B. Smith I explained to him in a note that I sent the pamphlet to him by order of Mr. Beckley, and to take off somewhat of the dryness of the note I added that I was glad to find it was to be reprinted here, etc., as you have seen in the printed note. I thought so little of this note that I did not even retain a copy of it; and without the least information or suspicion that it would be published, out it comes the next week at the head of the pamphlet. I knew immediately that it would give displeasure to some gentlemen just by the chair of government who were in sentiment with Burke and as much opposed to the sentiments of Paine.

I could not disavow my note, because I had written it. I could not disavow my approbation of the pamphlet, because I was fully in sentiment with it, and it would have been trifling to have disavowed merely the publication of the note approving at the same time of the pamphlet. I determined, therefore, to be utterly silent except so far as verbal explanations could be made.

The Vice-President, who is at Boston, took up the cudgels under the name of Publicola. He is in turn assailed by a host of republican champions. I think it probable he will be aided by some of his compeers, but, more cautious than he, they will mask themselves better. For my part I am determined to let them write and wrangle as they please without intermeddling in word or deed.

I am unable as yet to fix a time for my trip to Virginia. It must depend on the movements of the President. I foresee nothing in the public affairs which threatens impediment. Present me affectionately to my daughters, and believe me to be, dear Sir, yours sincerely.

TO JOHN ADAMS

Philadelphia, July 17, 1791

DEAR SIR, I have a dozen times taken up my pen to write to you, and as often laid it down again, suspended between opposing considerations. I determine, however, to write from a conviction that truth, between candid minds, can never do harm. The first of Paine's pamphlets on the rights of man, which came to hand here, belonged to Mr. Beckley. He lent it to Mr. Madison, who lent it to me; and while I was reading it, Mr. Beckley called on me for it, and, as I had not finished it, he desired me, as soon as I should have done so, to send it to Mr. Jonathan B. Smith, whose brother meant to reprint it. I finished reading it, and, as I had no acquaintance with Mr. Jonathan B. Smith, propriety required that I should explain to him why I, a stranger to him, sent him the pamphlet. I accordingly wrote a note of compliment, informing him that I did it at the desire of Mr. Beckley, and, to take off a little of the dryness of the note, I added that I was glad it was to be reprinted here, and that something was to be publicly said against the political heresies which had sprung up among us, etc. I thought so little of this note, that I did not even keep a copy of it; nor ever heard a tittle more of it, till, the week following, I was thunderstruck with seeing it come out at the head of the pamphlet. I hoped, however, it would not attract notice. But I found, on my return from a journey of a month, that a writer came forward, under the signature of Publicola, attacking not only the author and principles of the pamphlet, but myself as its sponsor, by name. Soon after came hosts of other writers, defending the pamphlet, and attacking you, by name, as the writer of Publicola. Thus were our names thrown on the public stage as public antagonists. That you and I differ in our ideas of the best form of government, is well known to

us both; but we have differed as friends should do, respecting the purity of each other's motives, and confining our difference of opinion to private conversation. And I can declare with truth, in the presence of the Almighty, that nothing was further from my intention or expectation than to have either my own or your name brought before the public on this occasion. The friendship and confidence which has so long existed between us, required this explanation from me, and I know you too well to fear any misconstruction of the motives of it. Some people here, who would wish me to be, or to be thought, guilty of improprieties, have suggested that I was Agricola, that I was Brutus, etc., etc. I never did in my life, either by myself or by any other, have a sentence of mine inserted in a newspaper without putting my name to it; and I believe I never shall.

TO WILLIAM SHORT

Philadelphia, July 28, 1791

Whenever jealousies are expressed as to any supposed views of ours, on the dominion of the West Indies, you cannot go farther than the truth, in asserting we have none. If there be one principle more deeply rooted than any other in the mind of every American, it is, that we should have nothing to do with conquest. As to commerce, indeed, we have strong sensations. In casting our eyes over the earth, we see no instance of a nation forbidden, as we are, by foreign powers, to deal with neighbors, and obliged, with them, to carry into another hemisphere, the mutual supplies necessary to relieve mutual wants. This is not merely a question between the foreign power and our neighbor. We are interested in it equally with the latter, and nothing but moderation, at least with respect to us, can render us indifferent to its continuance. An exchange of surplusses and wants between neighbor nations, is both a right and a duty under the moral law, and measures against right should be mollified in their exercise, if it be wished to lengthen them to the greatest term possible. Circumstances sometimes require, that rights the most unquestionable should be advanced with delicacy. It would seem that the one now spoken of, would need only a mention, to be assented to by any unprejudiced mind: but with respect to America, Europeans in general, have been too long in the habit of confounding force with right. The Marquis de La Fayette stands in such a relation between the two countries, that I should think him perfectly capable of seeing what is just as to both. Perhaps on some occasion of free conversation, you might find an opportunity of impressing these truths on his mind, and that from him, they might be let out at a proper moment as matters meriting consideration and weight, when they shall be engaged in the work of

forming a constitution for our neighbors. In policy, if not in justice, they should be disposed to avoid oppression, which, falling on us, as well as on their colonies, might tempt us to act together....

TO BENJAMIN BANNEKER

Philadelphia, August 30, 1791

SIR, —I thank you sincerely for your letter of the 19th instant, and for the Almanac it contained. Nobody wishes more than I do to see such proofs as you exhibit, that nature has given to our black brethren, talents equal to those of the other colors of men, and that the appearance of a want of them is owing merely to the degraded condition of their existence, both in Africa and America. I can add with truth, that nobody wishes more ardently to see a good system commenced for raising the condition both of their body and mind to what it ought to be, as fast as the imbecility of their present existence, and other circumstances which cannot be neglected, will admit. I have taken the liberty of sending your Almanac to Monsieur de Condorcet, Secretary of the Academy of Sciences at Paris, and member of the Philanthropic Society, because I considered it as a document to which your color had a right for their justification against the doubts which have been entertained of them. I am, with great esteem, Sir, your most obedient humble servant.

TO MARTHA JEFFERSON RANDOLPH

Philadelphia, January 15th, 1792

MY DEAR MARTHA, —Having no particular subject for a letter, I find none more soothing to my mind than to indulge itself in expressions of the love I bear you, and the delight with which I recall the various scenes through which we have passed together in our wanderings over the world. These reveries alleviate the toils and inquietudes of my present situation, and leave me always impressed with the desire of being at home once more, and of exchanging labor, envy, and malice for ease, domestic occupation, and domestic love and society; where I may once more be happy with you, with Mr. Randolph and dear little Anne, with whom even Socrates might ride on a stick without being ridiculous. Indeed it is with difficulty that my resolution will bear me through what yet lies between the present day and that which, on mature consideration of all circumstances respecting myself and others, my mind has determined to be the proper one for relinquishing my office. Though not very distant, it is not near enough for my wishes. The ardor of these, however, would be abated if I thought that, on coming home, I should be left alone. On the contrary, I hope that Mr. Randolph will find a convenience in making only leisurely preparations for a settlement, and that I shall be able to make you both happier than you have been at Monticello, and relieve you of *désagréments* to which I have been sensible you were exposed, without the power in myself to prevent it, but by my own presence. Remember me affectionately to Mr. Randolph, and be assured of the tender love of yours.

TO THE PRESIDENT OF THE UNITED STATES

Philadelphia, May 23, 1792

DEAR SIR, —I have determined to make the subject of a letter what for some time past has been a subject of inquietude to my mind, without having found a good occasion of disburthening itself to you in conversation, during the busy scenes which occupied you here. Perhaps, too, you may be able in your present situation, or on the road, to give it more time and reflection than you could do here at any moment.

When you first mentioned to me your purpose of retiring from the government, though I felt all the magnitude of the event, I was in a considerable degree silent. I knew that, to such a mind as yours, persuasion was idle and impertinent; that before forming your decision you had weighed all the reasons for and against the measure, had made up your mind on full view of them, and that there could be little hope of changing the result. Pursuing my reflections, too, I knew we were some day to try to walk alone, and if the essay should be made while you should be alive and looking on, we should derive confidence from that circumstance, and resource, if it failed. The public mind, too, was calm and confident, and therefore in a favorable state for making the experiment. Had no change of circumstances intervened, I should not, with any hopes of success, have now ventured to propose to you a change of purpose. But the public mind is no longer confident and serene; and that from causes in which you are no ways personally mixed. Though these causes have been hackneyed in the public papers in detail, it may not be amiss, in order to calculate the effect they are capable of producing, to take a view of

them in the mass, giving to each the form, real or imaginary, under which they have been presented.

It has been urged, then, that a public debt, greater than we can possibly pay, before other causes of adding new debt to it will occur, has been artificially created by adding together the whole amount of the debtor and creditor sides of accounts, instead of only taking their balances, which could have been paid off in a short time: that this accumulation of debt has taken forever out of our power those easy sources of revenue which, applied to the ordinary necessities and exigencies of government, would have answered them habitually, and covered us from habitual murmurings against taxes and tax-gatherers, reserving extraordinary calls for those extraordinary occasions which would animate the people to meet them: that though the calls for money have been no greater than we must expect generally, for the same or equivalent exigencies, yet we are already obliged to strain the impost till it produces clamor, and will produce evasion and war on our own citizens to collect it, and even to resort to an excise law of odious character with the people, partial in its operation, unproductive unless enforced by arbitrary and vexatious means, and committing the authority of the government in parts where resistance is most probable and coercion least practicable. They cite propositions in Congress, and suspect other projects on foot still to increase the mass of debt. They say, that by borrowing at two-thirds of the interest, we might have paid off the principal in two-thirds of the time; but that from this we are precluded by its being made irredeemable but in small portions and long terms; that this irredeemable quality was given it for the avowed purpose of inviting its transfer to foreign countries. They predict that this transfer of the principal, when completed, will occasion an exportation of three millions of dollars annually for the interest, a drain of coin, of which, as there has been no examples, no calculation can be made of its consequences: that the banishment of our coin will be complicated by the creation of ten

millions of paper money, in the form of bank bills now issuing into circulation. They think the ten or twelve per cent, annual profit paid to the lenders of this paper medium taken out of the pockets of the people, who would have had without interest the coin it is banishing: that all the capital employed in paper speculation is barren and useless, producing, like that on a gaming table, no accession to itself, and is withdrawn from commerce and agriculture, where it would have produced addition to the common mass: that it nourishes in our citizens habits of vice and idleness, instead of industry and morality: that it has furnished effectual means of corrupting such a portion of the legislature as turns the balance between the honest voters, whichever way it is directed: that this corrupt squadron, deciding the voice of the legislature, have manifested their dispositions to get rid of the limitations imposed by the Constitution on the general legislature, limitations, on the faith of which, the States acceded to that instrument: that the ultimate object of all this is to prepare the way for a change from the present republican form of government to that of a monarchy, of which the English Constitution is to be the model: that this was contemplated by the convention is no secret, because its partisans have made more of it. To effect it then was impracticable, but they are still eager after their object, and are predisposing everything for its ultimate attainment. So many of them have got into the Legislature, that, aided by the corrupt squadron of paper dealers, who are at their devotion, they make a majority in both houses. The republican party, who wish to preserve the government in its present form, are fewer in number; they are fewer even when joined by the two, three, or half dozen anti-federalists, who, though they dare not avow it, are still opposed to any General Government; but, being less so to a republican than a monarchical one, they naturally join those whom they think pursuing the lesser evil.

Of all the mischiefs objected to the system of measures before

mentioned, none is so afflicting and fatal to every honest hope, as the corruption of the Legislature. As it was the earliest of these measures, it became the instrument for producing the risk, and will be the instrument for producing in future a king, lords and commons, or whatever else those who direct it may choose. Withdrawn such a distance from the eye of their constituents, and these so dispersed as to be inaccessible to public information, and particularly to that of the conduct of their own representatives, they will form the most corrupt government on earth, if the means of their corruption be not prevented. The only hope of safety hangs now on the numerous representation which is to come forward the ensuing year. Some of the new members will be, probably, either in principle or interest, with the present majority; but it is expected that the great mass will form an accession to the republican party. They will not be able to undo all which the two preceding Legislatures, and especially the first, have done. Public faith and right will oppose this. But some parts of the system may be rightfully reformed, a liberation from the rest unremittingly pursued as fast as right will permit, and the door shut in future against similar commitments of the nation. Should the next Legislature take this course, it will draw upon them the whole monarchical and paper interest; but the latter, I think, will not go all lengths with the former, because creditors will never, of their own accord, fly off entirely from their debtors; therefore, this is the alternative least likely to produce convulsion. But should the majority of the new members be still in the same principles with the present, and show that we have nothing to expect but a continuance of the same practices, it is not easy to conjecture what would be the result, nor what means would be resorted to for correction of the evil. True wisdom would direct that they should be temperate and peaceable; but the division of sentiment and interest happens unfortunately to be so geographical, that no mortal can say that what is most wise and temperate would prevail against what is most easy and obvious? I can scarcely contemplate a more incalculable evil than the breaking of the

Union into two or more parts. Yet when we consider the mass which opposed the original coalescence; when we consider that it lay chiefly in the Southern quarter; that the Legislature have availed themselves of no occasion of allaying it, but on the contrary, whenever Northern and Southern prejudices have come into conflict, the latter have been sacrificed and the former soothed; that the owners of the debt are in the Southern, and the holders of it in the Northern division; that the anti-federal champions are now strengthened in argument by the fulfillment of their predictions; that this has been brought about by the monarchical federalists themselves, who, having been for the new government merely as a stepping stone to monarchy, have themselves adopted the very constructions of the Constitution, of which, when advocating its acceptance before the tribunal of the people, they declared it unsusceptible; that the republican federalists who espoused the same government for its intrinsic merits, are disarmed of their weapons; that which they denied as prophecy, having now become true history, who can be sure that these things may not proselyte the small number which was wanting to place the majority on the other side? And this is the event at which I tremble, and to prevent which I consider your continuing at the head of affairs as of the last importance. The confidence of the whole Union is centred in you. Your being at the helm will be more than an answer to every argument which can be used to alarm and lead the people in any quarter, into violence and secession. North and South will hang together if they have you to hang on; and if the first correction of a numerous representation should fail in its effect, your presence will give time for trying others, not inconsistent with the union and peace of the States.

I am perfectly aware of the oppression under which your present office lays your mind, and of the ardor with which you pant for domestic life. But there is sometimes an eminence of character or.

which society have such peculiar claims as to control the predilections of the individual for a particular walk of happiness, and restrain him to that alone arising from the present and future benedictions of mankind. This seems to be your condition, and the law imposed on you by providence in forming your character, and fashioning the events on which it was to operate; and it is to motives like these, and not to personal anxieties of mine or others who have no right to call on you for sacrifices, that I appeal, and urge a revisal of it, on the ground of change in the aspect of things. Should an honest majority result from the new and enlarged representation; should those acquiesce whose principles or interest they may control, your wishes for retirement would be gratified with less danger, as soon as that shall be manifest, without awaiting the completion of the second period of four years. One or two sessions will determine the crisis; and I cannot but hope that you can resolve to add more to the many years you have already sacrificed to the good of mankind.

The fear of suspicion that any selfish motive of continuance in office may enter into this solicitation on my part, obliges me to declare that no such motive exists. It is a thing of mere indifference to the public whether I retain or relinquish my purpose of closing my tour with the first periodical renovation of the government. I know my own measure too well to suppose that my services contribute anything to the public confidence, or the public utility. Multitudes can fill the office in which you have been pleased to place me, as much to their advantage and satisfaction. I have, therefore, no motive to consult but my own inclination, which is bent irresistibly on the tranquil enjoyment of my family, my farm and my books. I should repose among them, it is true, in far greater security, if I were to know that you remained at the watch; and I hope it will be so. To the inducements urged from a view of our domestic affairs, I will add a bare mention, of what indeed need only to be mentioned, that weighty motives for your continuance are to be found in our foreign affairs. I

think it probable that both the Spanish and English negotiations, if not completed before your purpose is known, will be suspended from the moment it is known, and that the latter nation will then use double diligence in fomenting the Indian War. With my wishes for the future, I shall at the same time express my gratitude for the past, at least my portion in it; and beg permission to follow you, whether in public or private life, with those sentiments of sincere attachment and respect, with which I am unalterably, dear Sir, your affectionate friend and humble servant.

托马斯·潘恩像

TO THOMAS PAINE

Philadelphia, June 19, 1792

DEAR SIR, —I received with great pleasure the present of your pamphlets, as well as for the thing itself as that it was a testimony of your recollection. Would you believe it possible that in this country there should be high & important characters who need your lessons in republicanism, & who do not heed them? It is but too true that we have a sect preaching up pouting after an English constitution of king, lords, & commons, & whose heads are itching for crowns, coronets & mitres. But our people, my good friend, are firm and unanimous in their principles of republicanism & there is no better proof of it than that they love what you write and read it with delight. The printers season every newspaper with extracts from your last, as they did before from your first part of the Rights of Man. They have both served here to separate the wheat from the chaff, and to prove that tho' the latter appears on the surface, it is on the surface only. The bulk below is sound & pure. Go on then in doing with your pen what in other times was done with the sword: shew that reformation is more practicable by operating on the mind than on the body of man, and be assured that it has not a more sincere votary nor you a more ardent well-wisher than Yrs. &c.

TO THE PRESIDENT OF THE UNITED STATES

Monticello, September 9, 1792

.... I now take the liberty of proceeding to that part of your letter wherein you notice the internal dissensions which have taken place within our government, and their disagreeable effect on its movements. That such dissensions have taken place is certain, and even among those who are nearest to you in the administration. To no one have they given deeper concern than myself; to no one equal mortification at being myself a part of them. Though I take to myself no more than my share of the general observations of your letter, yet I am so desirous ever that you should know the whole truth, and believe no more than the truth, that I am glad to seize every occasion of developing to you whatever I do or think relative to the government; and shall, therefore, ask permission to be more lengthy now than the occasion particularly calls for, or could otherwise perhaps justify.

When I embarked in the government, it was with a determination to intermeddle not at all with the Legislature, and as little as possible with my co-departments. The first and only instance of variance from the former part of my resolution, I was duped into by the Secretary of the Treasury, and made a tool for forwarding his schemes, not then sufficiently understood by me; and of all the errors of my political life, this has occasioned me the deepest regret. It has ever been my purpose to explain this to you, when, from being actors on the scene, we shall have become uninterested spectators only. The second part of my resolution has been religiously observed with the War Department; and as to that of the Treasury, has never been further swerved from

than by the mere enunciation of my sentiments in conversation, and chiefly among those who, expressing the same sentiments, drew mine from me. If it has been supposed that I have ever intrigued among the members of the Legislature to defeat the plans of the Secretary of the Treasury, it is contrary to all truth. As I never had the desire to influence the members, so neither had I any other means than my friendships, which I valued too highly to risk by usurpation on their freedom of judgment, and the conscientious pursuit of their own sense of duty. That I have utterly, in my private conversations, disapproved of the system of the Secretary of the Treasury, I acknowledge and avow; and this was not merely a speculative difference. His system flowed from principles adverse to liberty, and was calculated to undermine and demolish the Republic, by creating an influence of his department over the members of the Legislature. I saw this influence actually produced, and its first fruits to be the establishment of the great outlines of his project by the votes of the very persons who, having swallowed his bait, were laying themselves out to profit by his plans; and that had these persons withdrawn, as those interested in a question ever should, the vote of the disinterested majority was clearly the reverse of what they made it. These were no longer the votes then of the representatives of the people, but of deserters from the rights and interests of the people; and it was impossible to consider their decisions, which had nothing in view but to enrich themselves, as the measures of the fair majority, which ought always to be respected. If, what was actually doing, begat uneasiness in those who wished for virtuous government, what was further proposed was not less threatening to the friends of the Constitution. For, in a report on the subject of manufactures, (still to be acted on), it was expressly assumed that the General Government has a right to exercise all powers which may be for the general welfare, that is to say, all the legitimate powers of government; since no government has a legitimate right to do what is not for the welfare of the governed. There was, indeed, a sham limitation of the universality of this power

to cases where money is to be employed. But about what is it that money cannot be employed? Thus the object of these plans, taken together, is to draw all the powers of government into the hands of the general Legislature, to establish means for corrupting a sufficient corps in that Legislature to divide the honest votes, and preponderate, by their own, the scale which suited, and to have the corps under the command of the Secretary of the Treasury, for the purpose of subverting, step by step, the principles of the Constitution which he has so often declared to be a thing of nothing, which must be changed. Such views might have justified something more than mere expressions of dissent, beyond which, nevertheless, I never went. Has abstinence from the department, committed to me, been equally observed by him? To say nothing of other interferences equally known, in the case of the two nations, with which we have the most intimate connections, France and England, my system was to give some satisfactory distinctions to the former, of little cost to us, in return for the solid advantages yielded us by them; and to have met the English with some restrictions which might induce them to abate their severities against our commerce. I have always supposed this coincided with your sentiments. Yet the Secretary of the Treasury, by his cabals with members of the Legislature, and by high-toned declamations on other occasions, has forced down his own system, which was exactly the reverse. He undertook, of his own authority, the conferences with the ministers of those two nations, and was, on every consultation, provided with some report of a conversation with the one or the other of them, adapted to his views. These views, thus made to prevail, their execution fell, of course, to me; and I can safely appeal to you, who have seen all my letters and proceedings, whether I have not carried them into execution as sincerely as if they had been my own, though I ever considered them as inconsistent with the honor and interest of our country. That they have been inconsistent with our interest is but too fatally proved by the stab to our navigation given by the French. So that if the question be by whose fault is it that

Colonel Hamilton and myself have not drawn together? the answer will depend on that to two other questions, whose principles of administration best justify, by their purity, conscientious adherence? and which of us has, notwithstanding, stepped farthest into the control of the department of the other?

When I came into this office, it was with a resolution to retire from it as soon as I could with decency. It pretty early appeared to me that the proper moment would be the first of those epochs at which the Constitution seems to have contemplated a periodical change or renewal of the public servants. In this I was confirmed by your resolution respecting the same period; from which, however, I am happy in hoping you have departed. I look to that period with the longing of a wave-worn mariner, who has at length the land in view, and shall count the days and hours which still lie between me and it. In the meanwhile, my main object will be to wind up the business of my office, avoiding as much as possible all new enterprise. With the affairs of the Legislature, as I never did intermeddle, so I certainly shall not now begin. I am more desirous to predispose everything for the repose to which I am withdrawing, than expose it to be disturbed by newspaper contests. If these, however, cannot be avoided altogether, yet a regard for your quiet will be a sufficient motive for my deferring it till I become merely a private citizen, when the propriety or impropriety of what I may say or do, may fall on myself alone. I may then, too, avoid the charge of misapplying that time which now, belonging to those who employ me, should be wholly devoted to their service. If my own justification, or the interests of the republic shall require it, I reserve to myself the right of then appealing to my country, subscribing my name to whatever I write, and using with freedom and truth the facts and names necessary to place the cause in its just form before that tribunal. To a thorough disregard of the honors and emoluments of office, I join as great a value for the

esteem of my countrymen, and conscious of having merited it by an integrity which cannot be reproached, and by an enthusiastic devotion to their rights and liberty, I will not suffer my retirement to be clouded by the slanders of a man whose history, from the moment at which history can stoop to notice him, is a tissue of machinations against the liberty of the country which has not only received and given him bread, but heaped its honors on his head. Still, however, I repeat the hope that it will not be necessary to make such an appeal. Though little known to the people of America, I believe, that as far as I am known, it is not as an enemy to the Republic, nor an intriguer against it, nor a waster of its revenue, nor prostitute of it to the purposes of corruption, as the "American" represents me; and I confide that yourself are satisfied that as to dissensions in the newspapers, not a syllable of them has ever proceeded from me, and that no cabals or intrigues of mine have produced those in the Legislature, and I hope I may promise both to you and myself, that none will receive aliment from me during the short space I have to remain in office, which will find ample employment in closing the present business of the department.

TO WILLIAM SHORT

Philadelphia, January 3, 1793

.... The tone of your letters had for some time given me pain, on account of the extreme warmth with which they censured the proceedings of the Jacobins of France. I considered that sect as the same with the Republican patriots, and the Feuillants as the Monarchical patriots, well known in the early part of the Revolution, and but little distant in their views, both having in object the establishment of a free constitution, differing only on the question whether their chief Executive should be hereditary or not. The Jacobins (as since called) yielded to the Feuillants, and tried the experiment of retaining their hereditary Executive. The experiment failed completely, and would have brought on the re-establishment of despotism had it been pursued. The Jacobins knew this, and that the expunging that office was of absolute necessity. And the nation was with them in opinion, for however they might have been formerly for the constitution framed by the first assembly, they were come over from their hope in it, and were now generally Jacobins. In the struggle which was necessary, many guilty persons fell without the forms of trial, and with them some innocent. These I deplore as much as anybody, and shall deplore some of them to the day of my death. But I deplore them as I should have done had they fallen in battle. It was necessary to use the arm of the people, a machine not quite so blind as balls and bombs, but blind to a certain degree. A few of their cordial friends met at their hands the fate of enemies. But time and truth will rescue and embalm their memories, while their posterity will be enjoying that very liberty for which they would never have hesitated to offer up their lives. The liberty of the whole earth was depending on the issue of the contest, and was ever such a prize won with so

little innocent blood? My own affections have been deeply wounded by some of the martyrs of this cause, but rather than it should have failed I would have seen half the earth desolated; were there but an Adam and an Eve left in every country, and left free, it would be better than as it now is....

TO JAMES MADISON

Philadelphia, June 9, 1793

I have to acknowledge the receipt of your two favors of May 27th and 29th, since the date of my last which was of the 2d instant. In that of the 27th you say you must not make your final exit from public life till it will be marked with justifying circumstances which all good citizens will respect, and to which your friends can appeal. To my fellow-citizens the debt of service has been fully and faithfully paid. I acknowledge that such a debt exists, that a tour of duty, in whatever line he can be most useful to his country, is due from every individual. It is not easy perhaps to say of what length exactly this tour should be, but we may safely say of what length it should not be. Not of our whole life, for instance, for that would be to be born a slave—not even of a very large portion of it. I have now been in the public service four and twenty years; one half of which has been spent in total occupation with their affairs, and absence from my own. I have served my tour then. No positive engagement, by word or deed, binds me to their further service. No commitment of their interests in any enterprise by me requires that I should see them through it. I am pledged by no act which gives any tribunal a call upon me before I withdraw. Even my enemies do not pretend this. I stand clear then of public right on all points—my friends I have not committed. No circumstances have attended my passage from office to office, which could lead them, and others through them, into deception as to the time I might remain, and particularly they and all have known with what reluctance I engaged and have continued in the present one, and of my uniform determination to return from it at an early day. If the public then has no claim on me, and my friends nothing to justify, the decision will rest on my own feelings alone. There has been a time when these were

very different from what they are now; when perhaps the esteem of the world was of higher value in my eye than everything in it. But age, experience and reflection preserving to that only its due value, have set a higher on tranquillity. The motion of my blood no longer keeps time with the tumult of the world. It leads me to seek for happiness in the lap and love of my family, in the society of my neighbors and my books, in the wholesome occupations of my farm and my affairs, in an interest or affection in every bud that opens, in every breath that blows around me, in an entire freedom of rest, of motion of thought, owing account to myself alone of my hours and actions. What must be the principle of that calculation which should balance against these the circumstances of my present existence—worn down with labors from morning to night, and day to day; knowing them as fruitless to others as they are vexatious to myself, committed singly in desperate and eternal contest against a host who are systematically undermining the public liberty and prosperity, even the rare hours of relaxation sacrificed to the society of persons in the same intentions, of whose hatred I am conscious even in those moments of conviviality when the heart wishes most to open itself to the effusions of friendship and confidence, cut off from my family and friends, my affairs abandoned to chaos and derangement, in short, giving everything I love in exchange for everything I hate, and all this without a single gratification in possession or prospect, in present enjoyment or future wish. Indeed, my dear friend, duty being out of the question, inclination cuts off all argument, and so never let there be more between you and me, on this subject.

I enclose you some papers which have passed on the subject of a new town. You will see by them that the paper Coryphaeus is either undaunted or desperate. I believe that the statement enclosed has secured a decision against his proposition. I dined yesterday in a company where Morris and Bingham were, and happened to sit

between them. In the course of a conversation after dinner, Morris made one of his warm declarations that after the expiration of his present senatorial term, nothing on earth should ever engage him to serve again in any public capacity. He did this with such solemnity as renders it impossible he should not be in earnest. The President is not well. Little lingering fevers have been hanging about him for a week or ten days, and affected his looks most remarkably. He is also extremely affected by the attacks made and kept up on him in the public papers. I think he feels those things more than any person I ever yet met with. I am sincerely sorry to see them. I remember an observation of yours, made when I first went to New York, that the satellites and sycophants which surrounded him had wound up the ceremonials of the government to a pitch of stateliness which nothing but his personal character could have supported, and which no character after him could ever maintain. It appears now that even his will be insufficient to justify them in the appeal of the times to common sense as the arbiter of everything. Naked he would have been sanctimoniously revered; but enveloped in the rags of royalty, they can hardly be torn off without laceration. It is the more unfortunate that this attack is planted on popular ground, on the love of the people to France and its cause, which is universal. Genet mentions freely enough in conversation that France does not wish to involve us in the war by our guarantee. The information from St. Domingo and Martinique is, that those two islands are disposed and able to resist any attack which Great Britain can make on them by land. A blockade would be dangerous, could it be maintained in that climate for any length of time. I delivered to Genet your letter to Roland. As the latter is out of office, he will direct it to the Minister of the Interior. I found every syllable of it strictly proper. Your ploughs shall be duly attended to. Have you ever taken notice of Tull's horse-houghing plough? I am persuaded that where you wish your work to be very exact, and our great plough where a less degree will suffice, leave us nothing to wish for from other countries as to ploughs, under our circumstances. I

have not yet received my threshing machine. I fear the late, long, and heavy rains must have extended to us, and affected our wheat. Adieu.
Yours affectionately.

TO THE PRESIDENT OF THE UNITED STATES

Philadelphia, July 31, 1793

DEAR SIR, —When you did me the honor of appointing me to the office I now hold, I engaged in it without a view of continuing any length of time, and I pretty early concluded on the close of the first four years of our Republic as a proper period for withdrawing; which I had the honor of communicating to you. When the period, however, arrived, circumstances had arisen, which, in the opinion of some of my friends, rendered it proper to postpone my purpose for awhile. These circumstances have now ceased in such a degree as to leave me free to think again of a day on which I may withdraw without its exciting disadvantageous opinions or conjectures of any kind. The close of the present quarter seems to be a convenient period, because the quarterly accounts of the domestic department are then settled of course, and by that time, also, I may hope to receive from abroad the materials for bringing up the foreign account to the end of its third year. At the close, therefore, of the ensuing month of September, I shall beg leave to retire to scenes of greater tranquillity, from those which I am every day more and more convinced that neither my talents, tone of mind, nor time of life fit me. I have thought it my duty to mention the matter thus early, that there may be time for the arrival of a successor, from any part of the Union from which you may think proper to call one. That you may find one more able to lighten the burthen of your labors, I most sincerely wish; for no man living more sincerely wishes that your administration could be rendered as pleasant to yourself, as it is useful and necessary to our country, nor feels for you a more rational or cordial attachment and respect than, dear Sir, your most obedient, and most humble servant.

TO ELI WHITNEY

Germantown, November 16, 1793

SIR, —Your favor of Oct. 15 inclosing a drawing of your cotton gin, was received on the 6th inst. The only requisite of the law now uncomplied with is the forwarding a model, which being received, your patent may be made out & delivered to your order immediately, As the state of Virginia, of which I am, carries on household manufactures of cotton to a great extent, as I also do myself, and one of our great embarrassments is the clearing the cotton of the seed, I feel a considerable interest in the success of your invention for family use. Permit me therefore to ask information from you on these points. Has the machine been thoroughly tried in the ginning of cotton, or is it as yet but a machine of theory? What quantity of cotton has it cleaned on on average of several days, & worked by hand, & by how many hands? What will be the cost of one of them made to be worked by hand? Favorable answers to these questions would induce me to engage one of them to be forwarded to Richmond for me....

TO JOHN ADAMS

Monticello, Apr. 25, 1794

DEAR SIR, —I am to thank you for the book you were so good as to transmit me, as well as the letter covering it, and your felicitations on my present quiet. The difference of my present & past situation is such as to leave me nothing to regret, but that my retirement has been postponed four years too long. The principles on which I calculate the value of life, are entirely in favor of my present course. I return to farming with an ardor which I scarcely knew in my youth, and which has got the better entirely of my love of study. Instead of writing 10. or 12. letters a day, which I have been in the habit of doing as a thing of course, I put off answering my letters now, farmer-like, till a rainy day, & then find it sometimes postponed by other necessary occupations. The case of the Pays de Vaud is new to me. The claims of both parties are on grounds which, I fancy, we have taught the world to set little store by. The rights of one generation will scarcely be considered hereafter as depending on the paper transactions of another. My countrymen are groaning under the insults of Gr. Britain. I hope some means will turn up of reconciling our faith & honor with peace. I confess to you I have seen enough of one war never to wish to see another. With wishes of every degree of happiness to you, both public & private, and with my best respects to Mrs. Adams, I am; your affectionate & humble servant.

TO TENCH COXE

Monticello, May 1, 1794

.... Your letters give a comfortable view of French affairs, and later events seem to confirm it. Over the foreign powers I am convinced they will triumph completely, and I cannot but hope that that triumph, and the consequent disgrace of the invading tyrants, is destined, in order of events, to kindle the wrath of the people of Europe against those who have dared to embroil them in such wickedness, and to bring at length, kings, nobles and priests to the scaffolds which they have been so long deluging with human blood. I am still warm whenever I think of these scoundrels, though I do it as seldom as I can, preferring infinitely to contemplate the tranquil growth of my lucerne and potatoes. I have so completely withdrawn myself from these spectacles of usurpation and misrule, that I do not take a single newspaper, nor read one a month; and I feel myself infinitely the happier for it.

We are alarmed here with the apprehensions of war; and sincerely anxious that it may be avoided; but not at the expense either of our faith or honor. It seems much the general opinion here, the latter has been too much wounded not to require reparation, and to seek it even in war, if that be necessary. As to myself, I love peace, and I am anxious that we should give the world still another useful lesson, by showing to them other modes of punishing injuries than by war, which is as much a punishment to the punisher as to the sufferer. I love, therefore, [the] proposition of cutting off all communication with the nation which has conducted itself so atrociously. This, you will say, may bring on war. If it does, we will meet it like men; but it may not bring on war, and then the experiment will have been a happy one. I believe this war would be vastly more unanimously

approved than any one we ever were engaged in; because the aggressions have been so wanton and bare-faced, and so unquestionably against our desire....

TO JAMES MADISON

Monticello, December 28, 1794

.... The denunciation of the democratic societies is one of the extraordinary acts of boldness of which we have seen so many from the faction of monocrats. It is wonderful indeed, that the President should have permitted himself to be the organ of such an attack on the freedom of discussion, the freedom of writing, printing and publishing. It must be a matter of rare curiosity to get at the modifications of these rights proposed by them, and to see what line their ingenuity would draw between democratical societies, whose avowed object is the nourishment of the republican principles of our Constitution, and the society of the Cincinnati, a self-created one, carving out for itself hereditary distinctions, lowering over our Constitution eternally, meeting together in all parts of the Union, periodically, with closed doors, accumulating a capital in their separate treasury, corresponding secretly and regularly, and of which society the very persons denouncing the democrats are themselves the fathers, founders and high officers. Their sight must be perfectly dazzled by the glittering of crowns and coronets, not to see the extravagance of the proposition to suppress the friends of general freedom, while those who wish to confine that freedom to the few, are permitted to go on in their principles and practices. I here put out of sight the persons whose misbehavior has been taken advantage of to slander the friends of popular rights; and I am happy to observe, that as far as the circle of my observation and information extends, everybody has lost sight of them, and views the abstract attempt on their natural and constitutional rights in all its nakedness. I have never heard, or heard of, a single expression or opinion which did not condemn it as an inexcusable aggression....

TO MONSIEUR D'IVERNOIS

Monticello, February 6, 1795

DEAR SIR, —Your several favors on the affairs of Geneva found me here, in the month of December last. It is now more than a year that I have withdrawn myself from public affairs, which I never liked in my life, but was drawn into by emergencies which threatened our country with slavery, but ended in establishing it free. I have returned, with infinite appetite, to the enjoyment of my farm, my family and my books, and had determined to meddle in nothing beyond their limits. Your proposition, however, for transplanting the college of Geneva to my own county, was too analogous to all my attachments to science, and freedom, the first-born daughter of science, not to excite a lively interest in my mind, and the essays which were necessary to try its practicability. This depended altogether on the opinions and dispositions of our State legislature, which was then in session. I immediately communicated your papers to a member of the legislature, whose abilities and zeal pointed him out as proper for it, urging him to sound as many of the leading members of the legislature as he could, and if he found their opinions favorable, to bring forward the proposition; but if he should find it desperate, not to hazard it; because I thought it best not to commit the honor either of our State or of your college, by an useless act of eclat. It was not till within these three days that I have had an interview with him, and an account of his proceedings. He communicated the papers to a great number of the members, and discussed them maturely, but privately, with them. They were generally well-disposed to the proposition, and some of them warmly; however, there was no difference of opinion in the conclusion, that it could not be effected. The reasons which they thought would with certainty prevail against

it, were 1, that our youth, not familiarized but with their mother tongue, were not prepared to receive instructions in any other; 2, that the expense of the institution would excite uneasiness in their constituents, and endanger its permanence; and 3, that its extent was disproportioned to the narrow state of the population with us. Whatever might be urged on these several subjects, yet as the decision rested with others, there remained to us only to regret that circumstances were such, or were thought to be such, as to disappoint your and our wishes.

I should have seen with peculiar satisfaction the establishment of such a mass of science in my country, and should probably have been tempted to approach myself to it, by procuring a residence in its neighborhood, at those seasons of the year at least when the operations of agriculture are less active and interesting. I sincerely lament the circumstances which have suggested this emigration. I had hoped that Geneva was familiarized to such a degree of liberty, that they might without difficulty or danger fill up the measure to its maximum; a term, which, though in the insulated man, bounded only by his natural powers, must, in society, be so far restricted as to protect himself against the evil passions of his associates, and consequently, them against him. I suspect that the doctrine, that small States alone are fitted to be republics, will be exploded by experience, with some other brilliant fallacies accredited by Montesquieu and other political writers. Perhaps it will be found, that to obtain a just republic (and it is to secure our just rights that we resort to government at all) it must be so extensive as that local egoisms may never reach its greater part; that on every particular question, a majority may be found in its councils free from particular interests, and giving, therefore, an uniform prevalence to the principles of justice. The smaller the societies, the more violent and more convulsive their schisms. We have chanced to live in an age which will probably be distinguished in history, for its experiments in

government on a larger scale than has yet taken place. But we shall not live to see the result. The grosser absurdities, such as hereditary magistracies, we shall see exploded in our day, long experience having already pronounced condemnation against them. But what is to be the substitute? This our children or grandchildren will answer. We may we satisfied with the certain knowledge that none can ever be tried, so stupid, so unrighteous, so oppressive, so destructive of every end for which honest men enter into government, as that which their forefathers had established, and their fathers alone venture to tumble headlong from the stations they have so long abused. It is unfortunate, that the efforts of mankind to recover the freedom of which they have been so long deprived, will be accompanied with violence, with errors, and even with crimes. But while we weep over the means, we must pray for the end.

But I have been insensibly led by the general complexion of the times, from the particular case of Geneva, to those to which it bears no similitude. Of that we hope good things. Its inhabitants must be too much enlightened, too well experienced in the blessings of freedom and undisturbed industry, to tolerate long a contrary state of things. I should be happy to hear that their government perfects itself, and leaves room for the honest, the industrious and wise; in which case, your own talents, and those of the persons for whom you have interested yourself, will, I am sure, find welcome and distinction. My good wishes will always attend you, as a consequence of the esteem and regard with which I am, dear Sir, your most obedient, and most humble servant.

TO M. DE MEUSNIER

Monticello, Virginia, Apr. 29, 1795

.... I think it fortunate for the United States to have become the asylum for so many virtuous patriots of different denominations: but their circumstances, with which you were so well acquainted before, enabled them to be but a bare asylum, & to offer nothing for them but an entire freedom to use their own means & faculties as they please. There is no such thing in this country as what would be called wealth in Europe. The richest are but a little at ease, & obliged to pay the most rigorous attention to their affairs to keep them together. I do not mean to speak here of the Beaujons of America. For we have some of these tho' happily they are but ephemeral. Our public economy also is such as to offer drudgery and subsistence only to those entrusted with its administration, a wise & necessary precaution against the degeneracy of the public servants. In our private pursuits it is a great advantage that every honest employment is deemed honorable. I am myself a nail-maker. On returning home after an absence of ten years, I found my farms so much deranged that I saw evidently they would be a burden to me instead of a support till I could regenerate them; & consequently that it was necessary for me to find some other resource in the meantime. I thought for awhile of taking up the manufacture of pot-ash, which requires but small advances of money. I concluded at length however to begin a manufacture of nails, which needs little or no capital, & I now employ a dozen little boys from 10. to 16. years of age, overlooking all the details of their business myself & drawing from it a profit on which I can get along till I can put my farms into a course of yielding, profit. My new trade of nail-making is to me in this country what an additional title of nobility or the ensigns of a new order are in Europe....

TO MANN PAGE

Montkello, August 30, 1795

.... I do most anxiously wish to see the highest degrees of education given to the higher degrees of genius, and to all degrees of it, so much as may enable them to read and understand what is going on in the world, and to keep their part of it going on right: for nothing can keep it right but their own vigilant and distrustful superintendence. I do not believe with the Rochefoucaulds and Montaignes, that fourteen out of fifteen men are rogues: I believe a great abatement from that proportion may be made in favor of general honesty. But I have always found that rogues would be uppermost, and I do not know that the proportion is too strong for the higher orders, and for those who, rising above the swinish multitude, always contrive to nestle themselves into the places of power and profit. These rogues set out with stealing the people's good opinion, and then steal from them the right of withdrawing it, by contriving laws and associations against the power of the people themselves. Our part of the country is in considerable fermentation, on what they suspect to be a recent roguery of this kind. They say that while all hands were below deck mending sails, splicing ropes, and every one at his own business, and the captain in his cabin attending to his log book and chart, a rogue of a pilot has run them into an enemy's port. But metaphor apart, there is much dissatisfaction with Mr. Jay and his treaty. For my part, I consider myself now but as a passenger, leaving the world and its government to those who are likely to live longer in it. That you may be among the longest of these, is my sincere prayer....

TO GEORGE WYTHE

Monticello, January 16, 1796

In my letter which accompanied the box containing my collection of printed laws, I promised to send you by post a statement of the contents of the box. On taking up the subject I found it better to take a more general review of the whole of the laws I possessed, as well manuscript as printed, as also of those which I do not possess, and suppose to be no longer extant. This general view you will have in the enclosed paper, whereof the articles stated to be printed constitute the contents of the box I sent you. Those in manuscript were not sent, because not supposed to have been within your view, and because some of them will not bear removal, being so rotten, that in turning over a leaf it sometimes falls into powder. These I preserve by wrapping and sewing them up in oil cloth, so that neither air nor moisture can have access to them. Very early in the course of my researches into the laws of Virginia, I observed that many of them were already lost, and many more on the point of being lost, as existing only in single copies in the hands of careful or curious individuals, on whose death they would probably be used for waste paper. I set myself therefore to work, to collect all which were then existing, in order that when the day should come in which the public should advert to the magnitude of their loss in these precious monuments of our property, and our history, a part of their regret might be spared by information that a portion had been saved from the wreck, which is worthy of their attention and preservation. In searching after these remains, I spared neither time, trouble, nor expense; and am of opinion that scarcely any law escaped me, which was in being as late as the year 1790 in the middle or southern parts of the State. In the northern parts, perhaps something might still be

found. In the clerk's offices in the ancient counties, some of these manuscript copies of the laws may possibly still exist, which used to be furnished at the public expense to every county, before the use of the press was introduced; and in the same places, and in the hands of ancient magistrates or of their families, some of the fugitive sheets of the laws of separate sessions, which have been usually distributed since the practice commenced of printing them. But recurring to what we actually possess, the question is, what means will be the most effectual for preserving these remains from future loss? All the care I can take of them, will not preserve them from the worm, from the natural decay of the paper, from the accidents of fire, or those of removal when it is necessary for any public purposes, as in the case of those now sent you. Our experience has proved to us that a single copy, or a few, deposited in manuscript in the public offices, cannot be relied on for any great length of time. The ravages of fire and of ferocious enemies have had but too much part in producing the very loss we are now deploring. How many of the precious works of antiquity were lost while they were preserved only in manuscript! Has there ever been one lost since the art of printing has rendered it practicable to multiply and disperse copies? This leads us then to the only means of preserving those remains of our laws now under consideration, that is, a multiplication of printed copies. I think therefore that there should be printed at public expense, an edition of all the laws ever passed by our legislatures which can now be found; that a copy should be deposited in every public library in America, in the principal public offices within the State, and some perhaps in the most distinguished public libraries of Europe, and the rest should be sold to individuals, towards reimbursing the expenses of the edition....

TO PHILIP MAZZEI

Monticello, April 24, 1796

.... The aspect of our politics has wonderfully changed since you left us. In place of that noble love of liberty and republican government which carried us triumphantly through the war, an Anglican monarchical aristocratical party has sprung up, whose avowed object is to draw over us the substance, as they have already done the forms, of the British government. The main body of our citizens, however, remain true to their republican principles; the whole landed interest is republican, and so is a great mass of talents. Against us are the Executive, the Judiciary, two out of three branches of the Legislature, all the officers of the government, all who want to be officers, all timid men who prefer the calm of despotism to the boisterous sea of liberty, British merchants and Americans trading on British capital, speculators and holders in the banks and public funds, a contrivance invented for the purposes of corruption, and for assimilating us in all things to the rotten as well as the sound parts of the British model. It would give you a fever were I to name to you the apostates who have gone over to these heresies, men who were Samsons in the field and Solomons in the council, but who have had their heads shorn by the harlot England. In short, we are likely to preserve the liberty we have obtained only by unremitting labors and perils. But we shall preserve it; and our mass of weight and wealth on the good side is so great, as to leave no danger that force will ever be attempted against us. We have only to awake and snap the Lilliputian cords with which they have been entangling us during the first sleep which succeeded our labors....

TO JOHN ADAMS

Monticello, Dec. 28, 1796

DEAR SIR, —The public and the papers have been much occupied lately in placing us in a point of opposition to each other. I trust with confidence that less of it has been felt by ourselves personally. In the retired canton where I am, I learn little of what is passing: pamphlets I see never: papers but a few; and the fewer the happier. Our latest intelligence from Philadelphia at present is of the 16th instant, but though at that date your election to the first magistracy seems not to have been known as a fact, yet with me it has never been doubted. I knew it impossible you should lose a vote north of the Delaware, and even if that of Pennsylvania should be against you in the mass, yet that you would get enough south of that to place your succession out of danger. I have never one single moment expected a different issue; and though I know I shall not be believed, yet it is not the less true that I have never wished it. My neighbors as my compurgators could aver that fact, because they see my occupations and my attachment to them. Indeed it is possible that you may be cheated of your succession by a trick worthy the subtlety of your arch-friend of New York who has been able to make of your real friends tools to defeat their and your just wishes. Most probably he will be disappointed as to you; and my inclinations place me out of his reach. I leave to others the sublime delights of riding in the storm, better pleased with sound sleep and a warm berth below, with the society of neighbors, friends and fellow-laborers of the earth, than of spies and sycophants. No one then will congratulate you with purer disinterestedness than myself....

TO JAMES MADISON

Monticello, Jan. 1, '97

Yours of Dec. 19 has come safely. The event of the election has never been a matter of doubt in my mind. I knew that the Eastern States were disciplined in the schools of their town meetings to sacrifice differences of opinion to the great object of operating in phalanx, and that the more free and moral agency practiced in the other States would always make up the supplement of their weight. Indeed the vote comes much nearer an equality than I had expected. I know the difficulty of obtaining belief to one's declarations of a disinclination to honors, and that it is greatest with those who still remain in the world. But no arguments were wanting to reconcile me to a relinquishment of the first office or acquiescence under the second. As to the first it was impossible that a more solid unwillingness settled on full calculation, could have existed in any man's mind, short of the degree of absolute refusal. The only view on which I would have gone into it for awhile was to put our vessel on her republican tack before she should be thrown too much to leeward of her true principles. As to the second, it is the only office in the world about which I am unable to decide in my own mind whether I had rather have it or not have it. Pride does not enter into the estimate; for I think with the Romans that the general of to-day should be a soldier to-morrow if necessary. I can particularly have no feelings which would revolt at a secondary position to Mr. Adams. I am his junior in life, was his junior in Congress, his junior in the diplomatic line, his junior lately in the civil government. Before the receipt of your letter I had written the enclosed one to him. I had intended it some time, but had deferred it from time to time under the discouragement of a despair of making him believe I could be sincere

in it. The papers by the last post not rendering it necessary to change anything in the letter I enclose it open for your perusal, not only that you may possess the actual state of dispositions between us, but that if anything should render the delivery of it ineligible in your opinion, you may return it to me. If Mr. Adams can be induced to administer the government on its true principles, and to relinquish his bias to an English constitution, it is to be considered whether it would not be on the whole for the public good to come to a good understanding with him as to his future elections. He is perhaps the only sure barrier against Hamilton's getting in....

TO ELBRIDGE GERRY

Philadelphia, May 13, 1797

.... I entirely commend your dispositions towards Mr. Adams; knowing his worth as intimately and esteeming it as much as any one, and acknowledging the preference of his claims, if any I could have had, to the high office conferred on him. But in truth, I had neither claims nor wishes on the subject, though I know it will be difficult to obtain belief of this. When I retired from this place and the office of Secretary of State, it was in the firmest contemplation of never more returning here. There had indeed been suggestions in the public papers, that I was looking towards a succession to the President's chair, but feeling a consciousness of their falsehood, and observing that the suggestions came from hostile quarters, I considered them as intended merely to excite public odium against me. I never in my life exchanged a word with any person on the subject, till I found my name brought forward generally, in competition with that of Mr. Adams. Those with whom I then communicated, could say, if it were necessary, whether I met the call with desire, or even with a ready acquiescence, and whether from the moment of my first acquiescence, I did not devoutly pray that the very thing might happen which has happened. The second office of the government is honorable and easy, the first is but a splendid misery.

You express apprehensions that stratagems will be used, to produce a misunderstanding between the President and myself. Though not a word having this tendency has ever been hazarded to me by any one, yet I consider as a certainty that nothing will be left untried to alienate him from me. These machinations will proceed from the Hamiltonians by whom he is surrounded, and who are only a little less hostile to him than to me. It cannot but damp the pleasure of

cordiality, when we suspect that it is suspected. I cannot help thinking, that it is impossible for Mr. Adams to believe that the state of my mind is what it really is; that he may think I view him as an obstacle in my way. I have no supernatural power to impress truth on the mind of another, nor he any to discover that the estimate which he may form, on a just view of the human mind as generally constituted, may not be just in its application to a special constitution. This may be a source of private uneasiness to us; I honestly confess that it is so to me at this time. But neither of us is capable of letting it have effect on our public duties. Those who may endeavor to separate us, are probably excited by the fear that I might have influence on the executive councils; but when they shall know that I consider my office as constitutionally confined to legislative functions, and that I could not take any part whatever in executive consultations, even were it proposed, their fears may perhaps subside, and their object be found not worth a machination.

I do sincerely wish with you, that we could take our stand on a ground perfectly neutral and independent towards all nations. It has been my constant object through my public life; and with respect to the English and French, particularly, I have too often expressed to the former my wishes, and made to them propositions verbally and in writing, officially and privately, to official and private characters, for them to doubt of my views, if they would be content with equality. Of this they are in possession of several written and formal proofs, in my own handwriting. But they have wished a monopoly of commerce and influence with us; and they have in fact obtained it. When we take notice that theirs is the workshop to which we go for all we want; that with them centre either immediately or ultimately all the labors of our hands and lands; that to them belongs either openly or secretly the great mass of our navigation; that even the factorage of their affairs here, is kept to themselves by factitious citizenships; that these foreign and false citizens now constitute the great body of what are called our

merchants, fill our sea ports, are planted in every little town and district of the interior country, sway everything in the former places by their own votes, and those of their dependants, in the latter, by their insinuations and the influence of their ledgers; that they are advancing fast to a monopoly of our banks and public funds, and thereby placing our public finances under their control; that they have in their alliance the most influential characters in and out of office; when they have shown that by all these bearings on the different branches of the government, they can force it to proceed in whatever direction they dictate, and bend the interests of this country entirely to the will of another; when all this, I say, is attended to, it is impossible for us to say we stand on independent ground, impossible for a free mind not to see and to groan under the bondage in which it is bound. If anything after this could excite surprise, it would be that they have been able so far to throw dust in the eyes of our own citizens, as to fix on those who wish merely to recover self-government the charge of subserving one foreign influence, because they resist submission to another. But they possess our printing presses, a powerful engine in their government of us. At this very moment, they would have drawn us into a war on the side of England, had it not been for the failure of her bank. Such was their open and loud cry, and that of their gazettes till this event. After plunging us in all the broils of the European nations, there would remain but one act to close our tragedy, that is, to break up our Union; and even this they have ventured seriously and solemnly to propose and maintain by arguments in a Connecticut paper. I have been happy, however, in believing, from the stifling of this effort, that that dose was found too strong, and excited as much repugnance there as it did horror in other parts of our country, and that whatever follies we may be led into as to foreign nations, we shall never give up our Union, the last anchor of our hope, and that alone which is to prevent this heavenly country from becoming an arena of gladiators. Much as I abhor war, and view it as the greatest scourge of mankind, and anxiously as I wish to keep

out of the broils of Europe, I would yet go with my brethren into these, rather than separate from them. But I hope we may still keep clear of them, notwithstanding our present thralldom, and that time may be given us to reflect on the awful crisis we have passed through, and to find some means of shielding ourselves in future from foreign influence, political, commercial, or in whatever other form it may be attempted. I can scarcely withhold myself from joining in the wish of Silas Deane, that there were an ocean of fire between us and the old world.

A perfect confidence that you are as much attached to peace and union as myself, that you equally prize independence of all nations, and the blessings of self-government, has induced me freely to unbosom myself to you, and let you see the light in which I have viewed what has been passing among us from the beginning of the war. And I shall be happy, at all times, in an intercommunication of sentiments with you, believing that the dispositions of the different parts of our country have been considerably misrepresented and misunderstood in each part, as to the other, and that nothing but good can result from an exchange of information and opinions between those whose circumstances and morals admit no doubt of the integrity of their views.

I remain, with constant and sincere esteem, dear Sir, your affectionate friend and servant.

TO EDWARD RUTLEDGE

Philadelphia, June 24, 1797

.... We had, in 1793, the most respectable character in the universe. What the neutral nations think of us now, I know not; but we are low indeed with the belligerents. Their kicks and cuffs prove their contempt. If we weather the present storm, I hope we shall avail ourselves of the calm of peace, to place our foreign connections under a new and different arrangement. We must make the interest of every nation stand surety for their justice, and their own loss to follow injury to us, as effect follows its cause. As to everything except commerce, we ought to divorce ourselves from them all. But this system would require time, temper, wisdom, and occasional sacrifice of interest; and how far all of these will be ours, our children may see, but we shall not. The passions are too high at present, to be cooled in our day. You and I have formerly seen warm debates and high political passions. But gentlemen of different politics would then speak to each other, and separate the business of the Senate from that of society. It is not so now. Men who have been intimate all their lives, cross the streets to avoid meeting, and turn their heads another way, lest they should be obliged to touch their hats. This may do for young men with whom passion is enjoyment. But it is afflicting to peaceable minds. Tranquillity is the old man's milk. I go to enjoy it in a few days, and to exchange the roar and tumult of bulls and bears, for the prattle of my grandchildren and senile rest....

TO ELBRIDGE GERRY

Philadelphia, January 26, 1799

I do then, with sincere zeal, wish an inviolable preservation of our present federal Constitution, according to the true sense in which it was adopted by the States, that in which it was advocated by its friends, and not that which its enemies apprehended, who therefore became its enemies; and I am opposed to the monarchising its features by the forms of its administration, with a view to conciliate a first transition to a President and Senate for life, and from that to an hereditary tenure of these offices, and thus to worm out the elective principle. I am for preserving to the States the powers not yielded by them to the Union, and to the legislature of the Union its constitutional share in the division of powers; and I am not for transferring all the powers of the States to the General Government, and all those of that government to the executive branch. I am for a government rigorously frugal and simple, applying all the possible savings of the public revenue to the discharge of the national debt; and not for a multiplication of officers and salaries merely to make partisans, and for increasing, by every device, the public debt, on the principle of its being a public blessing. I am for relying, for internal defence, on our militia solely, till actual invasion, and for such a naval force only as may protect our coasts and harbors from such depredations as we have experienced; and not for a standing army in time of peace, which may overawe the public sentiment; nor for a navy, which, by its own expenses and the eternal wars in which it will implicate us, will grind us with public burthens, and sink us under them. I am for free commerce with all nations; political connection with none; and little or no diplomatic establishment. And I am not for linking ourselves by new treaties with the quarrels of Europe; entering

that field of slaughter to preserve their balance, or joining in the confederacy of kings to war against the principles of liberty. I am for freedom of religion, and against all manoeuvres to bring about a legal ascendancy of one sect over another: for freedom of the press, and against all violations of the Constitution to silence by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of their agents. And I am for encouraging the progress of science in all its branches; and not for raising a hue and cry against the sacred name of philosophy; for awing the human mind by stories of raw-head and bloody bones to a distrust of its own vision, and to repose implicitly on that of others; to go backwards instead of forwards to look for improvement; to believe that government, religion, morality, and every other science were in the highest perfection in ages of the darkest ignorance, and that nothing can ever be devised more perfect than what was established by our forefathers. To these I will add, that I was a sincere well-wisher to the success of the French revolution, and still wish it may end in the establishment of a free and well-ordered republic; but I have not been insensible under the atrocious depredations they have committed on our commerce. The first object of my heart is my own country. In that is embarked my family, my fortune, and my own existence. I have not one farthing of interest, nor one fibre of attachment out of it, nor a single motive of preference of any one nation to another, but in proportion as they are more or less friendly to us. But though deeply feeling the injuries of France, I did not think war the surest means of redressing them. I did believe, that a mission sincerely disposed to preserve peace, would obtain for us a peaceable and honorable settlement and retribution; and I appeal to you to say, whether this might not have been obtained, if either of your colleagues had been of the same sentiment with yourself.

These, my friend, are my principles; they are unquestionably the principles of the great body of our fellow-citizens, and I know there is

not one of them which is not yours also. In truth, we never differed but on one ground, the funding system; and as, from the moment of its being adopted by the constituted authorities, I became religiously principled in the sacred discharge of it to the uttermost farthing, we are united now even on that single ground of difference....

TO EDMUND PENDLETON

Philadelphia, January 29, 1799

DEAR SIR, —Your patriarchal address to your country is running through all the republican papers, and has a very great effect on the people. It is short, simple, and presents things in a view they readily comprehend. The character and circumstances too of the writer leave them without doubts of his motives. If, like the patriarch of old, you had but one blessing to give us, I should have wished it directed to a particular object. But I hope you have one for this also. You know what a wicked use has been made of the French negotiation; and particularly the X. Y. Z. dish cooked up by Marshall where the swindlers are made to appear as the French government. Art and industry combined, have certainly wrought out of this business a wonderful effect on the people. Yet they have been astonished more than they have understood it, and now that Gerry's correspondence comes out, clearing the French government of that turpitude, and showing them "sincere in their dispositions for peace, not wishing us to break the British treaty, and willing to arrange a liberal one with us," the people will be disposed to suspect they have been duped. But these communications are too voluminous for them, and beyond their reach. A recapitulation is now wanting of the whole story, stating everything according to what we may now suppose to have been the truth, short, simple and levelled to every capacity. Nobody in America can do it so well as yourself, in the same character of the father of your country, any form you like better, and so concise as, omitting nothing material, may yet be printed in hand bills, of which we could print and disperse ten or twelve thousand copies under letter covers, through all the United States, by the members of Congress when they return home. If the understanding of the people could be rallied to the

truth on this subject, by exposing the dupery practised on them, there are so many other things about to bear on them favorably for the resurrection of their republican spirit, that a reduction of the administration to constitutional principles cannot fail to be the effect. These are the alien and sedition laws, the vexations of the stamp act, the disgusting particularities of the direct tax, the additional army without an enemy, and recruiting officers lounging at every courthouse to decoy the laborer from his plough, a navy of fifty ships, five millions to be raised to build it, on the usurious interest of eight per cent, the perseverance in war on our part, when the French government shows such an anxious desire to keep at peace with us, taxes of ten millions now paid by four millions of people, and yet a necessity, in a year or two, of raising five millions more for annual expenses. These things will immediately be bearing on the public mind, and if it remain not still blinded by a supposed necessity, for the purposes of maintaining our independence and defending our country, they will set things to rights....

TO MARIA JEFFERSON EPPES

Philadelphia, Feb. 7, 1799

Your letter, my dear Maria, of January 21st, was received two days ago. It was, as Ossian says, or would say, like the bright beams of the moon on the desolate heath. Environed here in scenes of constant torment, malice and obliquy, worn down in a station where no effort to render service can avail anything, I feel not that existence is a blessing, but when something recalls my mind to my family or farm. This was the effect of your letter, and its affectionate expressions kindled up all those feelings of love for you and our dear connections which now constitute the only real happiness of my life. I am now feeding on the idea of my departure for Monticello, which is but three weeks distant. The roads will then be so dreadful that, as to visit you even by the direct route of Fredericksburg and Richmond would add 100 miles to the length of my journey, I must defer it in hope that about the last of March, or first of April, I may be able to take a trip express to see you. The roads will then be fine; perhaps your sister may join in a flying trip.... Continue always to love me, and be assured that there is no object on earth so dear to my heart as your health and happiness, and that my tenderest affections always hang on you. Adieu, my ever dear Maria.

TO EDMUND RANDOLPH

Monticello, August 18, 1799

DEAR SIR, —I received only two clays ago your favor of the 12th, and as it was on the eve of the return of our post, it was not possible to make so prompt a despatch of the answer. Of all the doctrines which have ever been broached by the federal government, the novel one, of the common law being in force and cognizable as an existing law in their courts, is to me the most formidable. All their other assumptions of ungiven powers have been in the detail. The bank law, the treaty doctrine, the sedition act, alien act, the undertaking to change the State laws of evidence in the State courts by certain parts of the stamp act, etc., etc., have been solitary, unsequential, timid things, in comparison with the audacious, barefaced and sweeping pretension to a system of law for the United States, without the adoption of their Legislature, and so infinitively beyond their power to adopt. If this assumption be yielded to, the State courts may be shut up, as there will then be nothing to hinder citizens of the same State suing each other in the federal courts in every case, as on a bond for instance, because the common law obliges payment of it, and the common law they say is their law. I am happy you have taken up the subject; and I have carefully perused and considered the notes you enclosed, and find but a single paragraph which I do not approve. It is that wherein (page two) you say, that laws being emanations from the legislative department, and, when once enacted, continuing in force from a presumption that their will so continues, that that presumption fails and the laws of course fall, on the destruction of that legislative department. I do not think this is the true bottom on which laws and the administering them rest. The whole body of the nation is the sovereign legislative, judiciary and executive power for itself. The

inconvenience of meeting to exercise these powers in person, and their inaptitude to exercise them, induce them to appoint special organs to declare their legislative will, to judge and to execute it. It is the will of the nation which makes the law obligatory; it is their will which creates or annihilates the organ which is to declare and announce it. They may do it by a single person, as an Emperor of Russia, (constituting his declarations evidence of their will), or by a few persons, as the aristocracy of Venice, or by a complication of councils, as in our former regal government, or our present republican one. The law being law because it is the will of the nation, is not changed by their changing the organ through which they choose to announce their future will; no more than the acts I have done by one attorney lose their obligation by my changing or discontinuing that attorney. This doctrine has been, in a certain degree, sanctioned by the federal executive. For it is precisely that on which the continuance of obligation from our treaty with France was established, and the doctrine was particularly developed in a letter to Gouverneur Morris, written with the approbation of President Washington and his cabinet. Mercer once prevailed on the Virginia Assembly to declare a different doctrine in some resolutions. These met universal disapprobation in this, as well as the other States, and if I mistake not, a subsequent Assembly did something to do away the authority of their former unguarded resolutions. In this case, as in all others, the true principle will be quite as effectual to establish the just deductions. Before the revolution, the nation of Virginia had, by the organs they then thought proper to constitute, established a system of laws, which they divided into three denominations of 1, common law; 2, statute law; 3, chancery: or if you please, into two only, of 1, common law; 2, chancery. When, by the Declaration of Independence, they chose to abolish their former organs of declaring their will, the acts of will already formally and constitutionally declared, remained untouched. For the nation was not dissolved, was not annihilated; its will, therefore, remained in full vigor; and on the establishing the new

organs, first of a convention, and afterwards a more complicated legislature, the old acts of national will continued in force, until the nation should, by its new organs, declare its will changed. The common law, therefore, which was not in force when we landed here, nor till we had formed ourselves into a nation, and had manifested by the organs we constituted that the common law was to be our law, continued to be our law, because the nation continued in being, and because though it changed the organs for the future declarations of its will, yet it did not change its former declarations that the common law was its law. Apply these principles to the present case. Before the revolution there existed no such nation as the United States; they then first associated as a nation, but for special purposes only. They had all their laws to make, as Virginia had on her first establishment as a nation. But they did not, as Virginia had done, proceed to adopt a whole system of laws ready made to their hand. As their association as a nation was only for special purposes, to wit, for the management of their concerns with one another and with foreign nations, and the States composing the association chose to give it powers for those purposes and no others, they could not adopt any general system, because it would have embraced objects on which this association had no right to form or declare a will. It was not the organ for declaring a national will in these cases. In the cases confided to them, they were free to declare the will of the nation, the law; but till it was declared there could be no law. So that the common law did not become, ipso facto, law on the new association; it could only become so by a positive adoption, and so far only as they were authorized to adopt. I think it will be of great importance, when you come to the proper part, to portray at full length the consequences of this new doctrine, that the common law is the law of the United States, and that their courts have, of course, jurisdiction co-extensive with that law, that is to say, general over all cases and persons. But, great heavens! Who could have conceived in 1789, that within ten years we should have to combat such windmills! Adieu. Yours affectionately.

TO DR. JOSEPH PRIESTLEY

Philadelphia, January 18, 1800

.... We have ... in Virginia a College (William and Mary) just well enough endowed to draw out the miserable existence to which a miserable constitution has doomed it. It is moreover eccentric in its position, exposed to all bilious diseases as all the lower country is, and therefore abandoned by the public care, as that part of the country itself is in a considerable degree by its inhabitants. We wish to establish in the upper country, and more centrally for the State, an University on a plan so broad and liberal and modern, as to be worth patronizing with the public support, and be a temptation to the youth of other States to corrie and drink of the cup of knowledge and fraternize with us. The first step is to obtain a good plan; that is, a judicious selection of the sciences, and practicable grouping of some of them together, and ramifying of others, so as to adopt the professorships to our uses and our means. In an institution meant chiefly for use, some branches of science, formerly esteemed, may be now omitted; so may others now valued in Europe, but useless to us foi ages to come. As an example of the former, the Oriental learning, and of the latter, almost the whole of the institution proposed to Congress by the Secretary of War's report of the 5th instant. Now there is no one to whom this subject is so familiar as yourself. There is no one in the world who, equally with yourself, unites this full possession of the subject with such a knowledge of the state of our existence, as enables you to fit the garment to him who is to pay for it and to wear it. To you therefore we address our solicitations, and to lessen to you ar much as possible the ambiguities of our object, I will venture feven to sketch the sciences which seem useful and practicable for us, as they occur to me while holding my pen. Botanyr

chemistry, zoology, anatomy, surgery, medicine, natural philosophy, agriculture, mathematics, astronomy, geography, politics, commerce, history, ethics, law, arts, fine arts. This list is imperfect because I make it hastily, and because I am unequal to the subject. It is evident that some of these articles are too much for one professor and must therefore be ramified; others may be ascribed in groups to a single professor. This is the difficult part of the work, and requires a head perfectly knowing the extent of each branch, and the limits within which it may be circumscribed, so as to bring the whole within the powers of the fewest professors possible, and consequently within the degree of expense practicable for us. We should propose that the professors follow no other calling, so that their whole time may be given to their academical functions; and we should propose to draw from Europe the first characters in science, by considerable temptations, which would not need to be repeated after the first set should have prepared fit successors and given reputation to the institution....

TO DR. JOSEPH PRIESTLEY

Philadelphia, January 27, 1800

DEAR SIR, —In my last letter of the 18th, I omitted to say any thing of the languages as part of our proposed University. It was not that I think, as some do, that they are useless. I am of a very different opinion. I do not think them very essential to the obtaining eminent degrees of science; but I think them very useful towards it. I suppose there is a portion of life during which our faculties are ripe enough for this, and for nothing more useful. I think the Greeks and Romans have left us the present models which exist of fine composition, whether we examine them as works of reason, or of style and fancy; and to them we probably owe these characteristics of modern composition. I know of no composition of any other ancient people, which merits the least regard as a model for its matter or style. To all this I add, that to read the Latin and Greek authors in their original, is a sublime luxury; and I deem luxury in science to be at least as justifiable as in architecture, painting, gardening, or the other arts. I enjoy Homer in his own language infinitely beyond Pope's translation of him, and both beyond the dull narrative of the same events by Dares Phrygius; and it is an innocent enjoyment. I thank on my knees, Him who directed my early education, for having put into my possession this rich source of delight; and I would not exchange it for anything which I could then have acquired, and have not since acquired. With this regard for those languages, you will acquit me of meaning to omit them. About twenty years ago, I drew a bill for our legislature, which proposed to lay off every county into hundreds or townships of five or six miles square, in the Centre of each of them was to be a free English school; the whole State was further laid off into ten districts, in each of which was to be a college for teaching the languages, geography, surveying, and other

useful things of that grade; and then a single University for the sciences. It was received with enthusiasm; but as I had proposed that William and Mary, under an improved form, should be the University, and that was at that time pretty highly Episcopal, the dissenters after awhile began to apprehend some secret design of a preference to that sect. About three years ago they enacted that part of my bill which related to English schools, except that instead of obliging, they left it optional in the court of every county to carry it into execution or not. I think it probable that part of the plan for the middle grade of education, may also be brought forward in due time. In the meanwhile, we are not without a sufficient number of good country schools, where the languages, geography, and the first elements of mathematics, are taught. Having omitted this information in my former letter, I thought it necessary now to supply it, that you might know on what base your superstructure was to be reared. I have a letter from Mr. Dupont, since his arrival at New York, dated the 20th, in which he says he will be in Philadelphia within about a fortnight from that time; but only on a visit. How much would it delight me if a visit from you at the same time, were to show us two such illustrious foreigners embracing each other in my country, as the asylum for whatever is great and good. Pardon, I pray you, the temporary delirium which has been excited here, but which is fast passing away. The Gothic idea that we are to look backwards instead of forwards for the improvement of the human mind, and to recur to the annals of our ancestors for what is most perfect in government, in religion and in learning, is worthy of those bigots in religion and government, by whom it has been recommended, and whose purposes it would answer. But it is not an idea which this country will endure; and the moment of their showing it is fast ripening; and the signs of it will be their respect for you, and growing detestation of those who have dishonored our country by endeavors to disturb our tranquillity in it. No one has felt this with more sensibility than, my dear Sir, your respectful and affectionate friend and servant.

TO DR. WILLIAM BACHE

Philadelphia, Feb. 2, 1800

.... You have seen the afflicting details from Paris. On what grounds a revolution has been made, we are not informed, & are still more at a loss to divine what will be its issue: whether we are to have over again the history of Robespierre, of Caesar, or the new phenomenon of an usurpation of the government for the purpose of making it free. Our citizens, however, should derive from this some useful lessons. They should see in it a necessity to rally firmly and in close bands round their Constitution. Never to suffer an iota of it to be infringed. To inculcate on minorities the duty of acquiescence in the will of the majority; and on majorities a respect for the rights of the minority. To beware of a military force, even of citizens; and to beware of too much confidence in any man. The confidence of the French people in Bonaparte has enabled him to kick down their Constitution and instead of that, to leave them dependent on his will & his life. I have never seen so awful a moment as the present. The prospects too, in this State, important as it is in our union, are very discouraging....

TO SAMUEL ADAMS

Philadelphia, February 26, 1800

.... A letter from you, my respectable friend, after three and twenty years of separation, has given me a pleasure I cannot express. It recalls to my mind the anxious days we then passed in struggling for the cause of mankind. Your principles have been tested in the crucible of time, and have come out pure. You have proved that it was monarchy, and not merely British monarchy, you opposed. A government by representatives, elected by the people at short periods, was our object; and our maxim at that day was, "where annual election ends, tyranny begins;" nor have our departures from it been sanctioned by the happiness of their effects. A debt of an hundred millions growing by usurious interest, and an artificial paper phalanx overruling the agricultural mass of our country, with other et ceteras, have a portentous aspect.

I fear our friends on the other side of the water, laboring in the same cause, have yet a great deal of crime and misery to wade through. My confidence has been placed in the head, not in the heart of Bonaparte. I hoped he would calculate truly the difference between the fame of a Washington and a Cromwell. Whatever his views may be, he has at least transferred the destinies of the republic from the civil to the military arm. Some will use this as a lesson against the practicability of republican government. I read it as a lesson against the danger of standing armies.

Adieu, my ever respected and venerable friend. May that kind overruling providence which has so long spared you to our country, still foster your remaining years with whatever may make them comfortable to yourself and soothing to your friends. Accept the

cordial salutations of your affectionate friend.

TO DR. BENJAMIN RUSH

Monticello, September 23, 1800

.... I promised you a letter on Christianity, which I have not forgotten. On the contrary, it is because I have reflected on it, that I find much more time necessary for it than I can at present dispose of. I have a view of the subject which ought to displease neither the rational Christian nor Deists, and would reconcile many to a character they have too hastily rejected. I do not know that it would reconcile the genus irritabile vatum^[9] who are all in arms against me. Their hostility is on too interesting ground to be softened. The delusion into which the X. Y. Z. plot showed it possible to push the people; the successful experiment made under the prevalence of that delusion on the clause of the Constitution, which, while it secured the freedom of the press, covered also the freedom of religion, had given to the clergy a very favorite hope of obtaining an establishment of a particular form of Christianity through the United States; and as every sect believes its own form the true one, every one perhaps hoped for his own, but especially the Episcopalians and Congregationalists. The returning good sense of our country threatens abortion to their hopes, and they believe that any portion of power confided to me, will be exerted in opposition to their schemes. And they believe rightly: for I have sworn upon the altar of God, eternal hostility against every form of tyranny over the mind of man. But this is all they have to fear from me: and enough too in their opinion....

TO MARTHA JEFFERSON RANDOLPH

Washington, January 26, 1801

MY DEAR MARTHA, —I wrote to Mr. Randolph on the 9th and loth inst., and yesterday received his letter of the loth. It gave me great joy to learn that Lilly had got a recruit of hands from Mr. Allen, though still I would not have that prevent the taking all from the nailery who are able to cut, as I desired in mine of the 9th, as I wish Craven's ground to be got ready for him without any delay. Mr. Randolph writes me you are about to wean Cornelia; this must be right and proper. T long to be in the midst of the children, and have more pleasure in their little follies than in the wisdom of the wise. Here, too, there is such a mixture of the bad passions of the heart, that one feels themselves in an enemy's country. It is an unpleasant circumstance, if I am destined to stay here, that the great proportion of those of the place who figure are Federalists, and most of them of the violent kind. Some have been so personally bitter that they can never forgive me, though I do them with sincerity. Perhaps in time they will get tamed. Our prospect as to the election has been alarming; as a strong disposition exists to prevent an election, and that case not being provided for by the Constitution, a dissolution of the government seemed possible. At present there is a prospect that some, though Federalists, will prefer yielding to the wishes of the people rather than have no government. If I am fixed here, it will be but three easy days' journey from you, so that I should hope you and the family could pay an annual visit here at least; which with mine to Monticello of the spring and fall, might enable us to be together four or five months of the year. On this subject, however, we may hereafter converse, lest we should be counting chickens before they are

hatched. I inclose for Anne a story, too long to be got by heart but worth reading. Kiss them all for me, and keep them in mind of me. Tell Ellen I am afraid she has forgotten me. I shall probably be with you the first week in April, as I shall endeavor to be at our court for that month. Continue to love me, my dear Martha, and be assured of my unalterable and tenderest love to you. Adieu.

P. S. Hamilton is using his uttermost influence to procure my election rather than Colonel Burr's.

TO T. M. RANDOLPH

Washington, February 19, 1801

After exactly a week's balloting there at length appeared ten States for me, four for Burr, and two voted blanks, This was done without a single vote coming over. Morris of Vermont withdrew, so that Lyon's vote became that of the State. The four Maryland federalists put in blanks, so then the vote of the four republicans became that of their State. Mr. Hager of South Carolina (who had constantly voted for me) withdrew by agreement, his colleagues agreeing in that case to put in blanks. Bayard, the sole member of Delaware, voted blank. They had before deliberated whether they would come over in a body, when they saw they could not force Burr on the republicans, or keep their body entire and unbroken to act in phalanx on such ground of opposition as they shall hereafter be able to conjure up. Their vote showed what they had decided on, and is considered as a declaration of perpetual war; but their conduct has completely left them without support. Our information from all quarters is that the whole body of federalists concurred with the republicans in the last elections, and with equal anxiety. They had been made to interest themselves so warmly for the very choice, which while before the people they opposed, that when obtained it came as a thing of their own wishes, and they find themselves embodied with the republicans, and their quondam leaders separated from them, and I verily believe they will remain embodied with us, so that this conduct of the minority has done in one week what very probably could hardly have been effected by years of mild and impartial administration....

TO JOHN DICKINSON

Washington, March 6, 1801

DEAR SIR, —No pleasure can exceed that which I received from reading your letter of the 21st ultimo. It was like the joy we expect in the mansions of the blessed, when received with the embraces of our forefathers, we shall be welcomed with their blessing as having done our part not unworthily of them. The storm through which we have passed, has been tremendous indeed. The tough sides of our Argosy have been thoroughly tried. Her strength has stood the waves into which she was steered, with a view to sink her. We shall put her on her republican tack, and she will now show by the beauty of her motion the skill of her builders. Figure apart, our fellow-citizens have been led hoodwinked from their principles, by a most extraordinary combination of circumstances. But the band is removed, and they now see for themselves. I hope to see shortly a perfect consolidation to effect which, nothing shall be spared on my part, short of the abandonment of the principles of our revolution. A just and solid republican government maintained here, will be a standing monument and example for the aim and imitation of the people of other countries; and I join with you in the hope and belief that they will see, from our example, that a free government is of all others the most energetic; that the inquiry which has been excited among the mass of mankind by our revolution and its consequences, will ameliorate the condition of man over a great portion of the globe. What a satisfaction have we in the contemplation of the benevolent effects of our efforts, compared with those of the leaders on the other side, who have discountenanced all advances in science as dangerous innovations, have endeavored to render philosophy and republicanism terms of reproach, to persuade us that man cannot be governed but by the rod,

etc. I shall have the happiness of living and dying in the contrary hope. Accept assurances of my constant and sincere respect and attachment, and my affectionate salutations.

TO DR. JOSEPH PRIESTLEY

Washington, March 21, 1801

DEAR SIR, —I learned some time ago that you were in Philadelphia, but that it was only for a fortnight; and I supposed you were gone. It was not till yesterday I received information that you were still there, had been very ill, but were on the recovery. I sincerely rejoice that you are so. Yours is one of the few lives precious to mankind, and for the continuance of which every thinking man is solicitous. Bigots may be an exception. What an effort, my dear Sir, of bigotry in politics and religion have we gone through! The barbarians really flattered themselves they should be able to bring back the times of Vandalism, when ignorance put everything into the hands of power and priestcraft. All advances in science were proscribed as innovations. They pretended to praise and encourage education, but it was to be the education of our ancestors. We were to look backwards, not forwards, for improvement; the President himself declaring, in one of his answers to addresses, that we were never to expect to go beyond them in real science. This was the real ground of all the attacks on you. Those who live by mystery and charlatanerie, fearing you would render them useless by simplifying the Christian philosophy, —the most sublime and benevolent, but most perverted system that ever shone on man, —endeavored to crush your well-earned and well-deserved fame. But it was the Lilliputians upon Gulliver. Our countrymen have recovered from the alarm into which art and industry had thrown them; science and honesty are replaced on their high ground; and you, my dear Sir, as their great apostle, are on its pinnacle. It is with heartfelt satisfaction that, in the first moments of my public action, I can hail you with welcome to our land, tender to you the homage of its respect and esteem, cover you

under the protection of those laws which were made for the wise and good like you, and disdain the legitimacy of that libel on legislation, which, under the form of a law, was for some time placed among them.

As the storm is now subsiding, and the horizon becoming serene, it is pleasant to consider the phenomenon with attention. We can no longer say there is nothing new under the sun. For this whole chapter in the history of man is new. The great extent of our republic is new. Its sparse habitation is new. The mighty wave of public opinion which has rolled over it is new. But the most pleasing novelty is, its so quietly subsiding over such an extent of surface to its true level again. The order and good sense displayed in this recovery from delusion, and in the momentous crisis which lately arose, really bespeaks a strength of character in our nation which augurs well for the duration of our republic; and I am much better satisfied now of its stability than I was before it was tried. I have been, above all things, solaced by the prospect which opened on us, in the event of a non-election of a President; in which case, the federal government would have been in the situation of a clock or watch run down. There was no idea of force, nor of any occasion for it. A convention, invited by the republican members of Congress, with the virtual President and Vice-President, would have been on the ground in eight weeks, would have repaired the Constitution where it was defective, and wound it up again. This peaceable and legitimate resource, to which we are in the habit of implicit obedience, superseding all appeal to force and being always within our reach, shows a precious principle of self-preservation in our composition, till a change of circumstances shall take place, which is not within prospect at any definite period....

TO SAMUEL ADAMS

Washington, March 29, 1801

I addressed a letter to you, my very dear and ancient friend, on the 4th of March: not indeed to you by name, but through the medium of some of my fellow-citizens, whom occasion called on me to address. In meditating the matter of that address, I often asked myself, is this exactly in the spirit of the patriarch, Samuel Adams? Is it as he would express it? Will he approve of it? I have felt a great deal for our country in the times we have seen. But individually for no one so much as yourself. When I have been told that you were avoided, insulted, frowned on, I could but ejaculate, "Father, forgive them, for they know not what they do." I confess I felt an indignation for you, which for myself I have been able, under every trial, to keep entirely passive. However, the storm is over, and we are in port. The ship was not rigged for the service she was put on. We will show the smoothness of her motions on her republican tack. I hope we shall once more see harmony restored among our citizens, and an entire oblivion of past feuds. Some of the leaders who have most committed themselves cannot come into this. But I hope the great body of our fellow-citizens will do it. I will sacrifice everything but principle to procure it. A few examples of justice on officers who have perverted their functions to the oppression of their fellow-citizens, must, in justice to those citizens, be made. But opinion, and the just maintenance of it, shall never be a crime in my view: nor bring injury on the individual. Those whose misconduct in office ought to have produced their removal even by my predecessor, must not be protected by the delicacy due only to honest men. How much I lament that time has deprived me of your aid! It would have been a day of glory which should have called you to the first office of the

administration. But give us your counsel, my friend, and give us your blessing; and be assured that there exists not in the heart of man a more faithful esteem than mine to you, and that I shall ever bear you the most affectionate veneration and respect.

TO ROBERT R. LIVINGSTON

Monticello, September 9 1801

.... On an element which nature has not subjected to the jurisdiction of any particular nation, but has made common to all for the purposes to which it is fitted, it would seem that the particular portion of it which happens to be occupied by the vessel of any nation, in the course of its voyage, is for the moment, the exclusive property of that nation, and, with the vessel, is exempt from intrusion by any other, and from its jurisdiction, as much as if it were lying in the harbor of its sovereign. In no country, we believe, is the rule otherwise, as to the subjects of property common to all. Thus the place occupied by an individual in a highway, a church, a theatre, or other public assembly, cannot be intruded on, while its occupant holds it for the purposes of its institution. The persons on board a vessel traversing the ocean, carrying with them the laws of their nation, have among themselves a jurisdiction, a police, not established by their individual will, but by the authority of their nation, of whose territory their vessel still seems to compose a part, so long as it does not enter the exclusive territory of another. No nation ever pretended a right to govern by their laws the ship of another nation navigating the ocean. By what law then can it enter that ship while in peaceable and orderly use of the common element? We recognize no natural precept for submission to such a right; and perceive no distinction between the movable and immovable jurisdiction of a friend, which would authorize the entering the one and not the other, to seize the property of an enemy.

It may be objected that this proves too much, as it proves you cannot enter the ship of a friend to search for contraband of war. But this is not proving too much. We believe the practice of seizing what

is called contraband of war, is an abusive practice, not founded in natural right. War between two nations cannot diminish the rights of the rest of the world remaining at peace. The doctrine that the rights of nations remaining quietly in the exercise of moral and social duties, are to give way to the convenience of those who prefer plundering and murdering one another, is a monstrous doctrine; and ought to yield to the more rational law, that “the wrong which two nations endeavor to inflict on each other, must not infringe on the rights or conveniences of those remaining at peace.” And what is contraband, by the law of nature? Either everything which may aid or comfort an enemy, or nothing. Either all commerce which would accommodate him is unlawful, or none is. The difference between articles of one or another description, is a difference in degree only. No line between them can be drawn. Either all intercourse must cease between neutrals and belligerents, or all be permitted. Can the world hesitate to say which shall be the rule? Shall two nations turning tigers, break up in one instant the peaceable relations of the whole world? Reason and nature clearly pronounce that the neutral is to go on in the enjoyment of all its rights, that its commerce remains free, not subject to the jurisdiction of another, nor consequently its vessels to search, or to enquiries whether their contents are the property of an enemy, or are of those which have been called contraband of war....

TO THE SECRETARY OF THE TREASURY (ALBERT GALLATIN)

Washington, April 1, 1802

.... we might hope to see the finances of the Union as clear and intelligible as a merchant's books, so that every member of Congress, and every man of any mind in the Union, should be able to comprehend them to investigate abuses, and consequently to control them. Our predecessors have endeavored by intricacies of system, and shuffling the investigator over from one officer to another, to cover everything from detection. I hope we shall go in the contrary direction, and that by our honest and judicious reformatations, we may be able, within the limits of our time, to bring things back to that simple and intelligible system on which they should have been organized at first....

TO DOCTOR BENJAMIN RUSH

Washington, April 21, 1803

DEAR SIR, —In some of the delightful conversations with you, in the evenings of 1798-99, and which served as an anodyne to the afflictions of the crisis through which our country was then laboring, the Christian religion was sometimes our topic; and I then promised you, that one day or other, I would give you my views of it. They are the result of a life of inquiry and reflection, and very different from that anti-Christian system imputed to me by those who know nothing of my opinions. To the corruptions of Christianity I am, indeed, opposed; but not to the genuine precepts of Jesus himself. I am a Christian, in the only sense in which he wished any one to be; sincerely attached to his doctrines, in preference to all others; ascribing to himself every human excellence; and believing he never claimed any other. At the short interval since these conversations, when I could justifiably abstract my mind from public affairs, the subject has been under my contemplation. But the more I considered it, the more it expanded beyond the measure of either my time or information. In the moment of my late departure from Monticello, I received from Dr. Priestley, his little treatise of “Socrates and Jesus Compared.” This being a section of the general view I had taken of the field, it became a subject of reflection while on the road, and unoccupied otherwise. The result was, to arrange in my mind a syllabus, or outline of such an estimate of the comparative merits of Christianity, as I wished to see executed by some one of more leisure and information for the task, than myself. This I now send you, as the only discharge of my promise I can probably ever execute. And in confiding it to you, I know it will not be exposed to the malignant perversions of those who make every word from me a text for new

misrepresentations and calumnies. I am moreover averse to the communication of my religious tenets to the public; because it would countenance the presumption of those who have Endeavored to draw them before that tribunal, and to seduce public opinion to erect itself into that inquisition over the rights of conscience, which the laws have so justly proscribed. It behooves every man who values liberty of conscience for himself, to resist invasions of it in the case of others; or their case may, by change of circumstances, become his own. It behooves him, too, in his own case, to give no example of concession, betraying the common right of independent opinion, by answering questions of faith, which the laws have left between God and himself. Accept my affectionate salutations.

Syllabus of an Estimate of the Merit of the Doctrines of Jesus, compared with those of others

In a comparative view of the Ethics of the enlightened nations of antiquity, of the Jews and of Jesus, no notice should be taken of the corruptions of reason among the ancients, to wit, the idolatry and superstition of the vulgar, nor of the corruptions of Christianity by the learned among its professors.

Let a just view be taken of the moral principles inculcated by the most esteemed of the sects of ancient philosophy, or of their individuals; particularly Pythagoras, Socrates, Epicurus, Cicero, Epictetus, Seneca, Antoninus.

1. Philosophers, 1. Their precepts related chiefly to ourselves, and the government of those passions which, unrestrained, would disturb our tranquillity of mind.^[10] In this branch of philosophy they were really great.

2. In developing our duties to others, they were short and defective. They embraced, indeed, the circle of kindred and friends,

and inculcated patriotism, or the love of our country in the aggregate, as a primary obligation: towards our neighbors and countrymen they taught justice, but scarcely viewed them as within the circle of benevolence. Still less have they inculcated peace, charity and love to our fellow men, or embraced with benevolence the whole family of mankind.

II. Jews. 1. Their system was Deism; that is, the belief in one only God. But their ideas of him and of his attributes were degrading and injurious.

2. Their Ethics were not only imperfect, but often irreconcilable with the sound dictates of reason and morality, as they respect intercourse with those around us; and repulsive and anti-social, as respecting other nations. They needed reformation, therefore, in an eminent degree.

III. Jesus. In this state of things among the Jews, Jesus appeared. His parentage was obscure; his condition poor; his education null; his natural endowments great; his life correct and innocent: he was meek, benevolent, patient, firm, disinterested, and of the sublimest eloquence.

The disadvantages under which his doctrines appear are remarkable.

1. Like Socrates and Epictetus, he wrote nothing himself.

2. But he had not, like them, a Xenophon or an Arrian to write for him. I name not Plato, who only used the name of Socrates to cover the whimsies of his own brain. On the contrary, all the learned of his country, entrenched in its power and riches, were opposed to him, lest his labors should undermine their advantages; and the committing to writing his life and doctrines fell on unlettered and ignorant men; who wrote, too, from memory, and not till long after the transactions had

passed.

3. According to the ordinary fate of those who attempt to enlighten and reform mankind, he fell an early victim to the jealousy and combination of the altar and the throne, at about thirty-three years of age, his reason having not yet attained the maximum of its energy, nor the course of his preaching, which was but of three years at most, presented occasions for developing a complete system of morals.

4. Hence the doctrines which he really delivered were defective as a whole, and fragments only of what he did deliver have come to us mutilated, misstated, and often unintelligible.

5. They have been still more disfigured by the corruptions of schismatizing followers, who have found an interest in sophisticating and perverting the simple doctrines he taught, by engrafting on them the mysticisms of a Grecian sophist, frittering them into subtleties, and obscuring them with jargon, until they have caused good men to reject the whole in disgust, and to view Jesus himself as an impostor.

Notwithstanding these disadvantages, a system of morals is presented to us, which, if filled up in the style and spirit of the rich fragments he left us, would be the most perfect and sublime that has never been taught by man.

The question of his being a member of the Godhead, or in direct communication with it, claimed for him by some of his followers, and denied by others, is foreign to the present view, which is merely an estimate of the intrinsic merits of his doctrines.

1. He corrected the Deism of the Jews, confirming them in their belief of one only God, and giving them juster notions of his attributes and government.

2. His moral doctrines, relating to kindred and friends, were more pure and perfect than those of the most correct of the philosophers, and greatly more so than those of the Jews; and they went far beyond both in inculcating universal philanthropy, not only to kindred and friends, to neighbors and countrymen, but to all mankind, gathering all into one family, under the bonds of love, charity, peace, common wants and common aids. A development of this head will evince the peculiar superiority of the system of Jesus over all others.

3. The precepts of philosophy, and of the Hebrew code, laid hold of actions only. He pushed his scrutinies into the heart of man; erected his tribunal in the region of his thoughts, and purified the waters at the fountain head.

4. He taught, emphatically, the doctrines of a future state, which was either doubted, or disbelieved by the Jews; and wielded it with efficacy, as an important incentive, supplementary to the other motives to moral conduct.

TO GENERAL HORATIO GATES

Washington, July 11, 1803

DEAR GENERAL, —I accept with pleasure, and with pleasure reciprocate your congratulations on the acquisition of Louisiana; for it is a subject of mutual congratulation, as it interests every man of the nation. The territory acquired, as it includes all the waters of the Missouri and Mississippi, has mote than doubled the area of the United States, and the new parts is not inferior to the old in soil, climate, productions and important communications. If our Legislature dispose of it with the wisdom we have a right to expect, they may make it the means of tempting all our Indians on the east side of the Mississippi to remove to the west, and of condensing instead of scattering our population. I find our opposition is very willing to pluck feathers from Monroe, although not fond of sticking them into Livingston's coat. The truth is, both have a just portion of merit; and were it necessary or proper, it would be shown that each has rendered peculiar services, and of important value. These grumblers, too, are very uneasy lest the administration should share some little credit for the acquisition, the whole of which they ascribe to the accident of war. They would be cruelly mortified could they see our files from May, 1801, the first organization of the administration, but more especially from April, 1802. They would see, that though we could not say when war would arise, yet We said with energy what would take place when it should arise. We did not, by our intrigues, produce the war; but we availed ourselves of it when it happened. The other party saw the case now existing, on which our representations were predicated, and the wisdom of timely sacrifice. But when these people make the war give us everything, they authorize us to ask what the war gave us in their day? They had a war; what did they make it bring

us? Instead of making our neutrality the ground of gain to their country, they were for plunging into the war. And if they were now in place, they would now be at war against the atheists and disorganizers of France. They were for making their country an appendage to England. We are friendly, cordially and conscientiously friendly to England. We are not hostile to France. We will be rigorously just and sincerely friendly to both. I do not believe we shall have as much to swallow from them as our predecessors had....

TO MONSIEUR CABANIS

Washington, July 12, 1803

DEAR SIR, —I lately received your friendly letter . . . with the two volumes on the relations between the physical and moral faculties of man. This has ever been a subject of great interest to the inquisitive mind, and it could not have got into better hands for discussion than yours. That thought may be a faculty of our material organization, has been believed in the gross; and though the “modus operandi” of nature, in this, as in most other cases, can never be developed and demonstrated to beings limited as we are, yet I feel confident you will have conducted us as far on the road as we can go, and have lodged us within reconnoitering distance of the citadel itself....

TO WILSON C. NICHOLAS

Monticello, September 7, 1803

.... I am aware of the force of the observations you make on the power given by the Constitution to Congress, to admit new States into the Union, without restraining the subject to the territory then constituting the United States. But when I consider that the limits of the United States are precisely fixed by the treaty of 1783, that the Constitution expressly declares itself to be made for the United States, I cannot help believing the intention was not to permit Congress to admit into the Union new States, which should be formed out of the territory for which, and under whose authority alone, they were then acting. I do not believe it was meant that they might receive England, Ireland, Holland, etc. into it, which would be the case on your construction. When an instrument admits two constructions, the one safe, the other dangerous, the one precise, the other indefinite, I prefer that which is safe and precise. I had rather ask an enlargement of power from the nation, where it is found necessary, than to assume it by a construction which would make our powers boundless. Our peculiar security is in the possession of a written Constitution. Let us not make it a blank paper by construction. I say the same as to the opinion of those who consider the grant of the treaty making power as boundless. If it is, then we have no Constitution. If it has bounds, they can be no others than the definitions of the powers which that instrument gives. It specifies and delineates the operations permitted to the federal government, and gives all the powers necessary to carry these into execution. Whatever of these enumerated objects is proper for a law, Congress may make the law; whatever is proper to be executed by way of a treaty, the President and Senate may enter into the treaty; whatever is to be done by a judicial sentence, the judges

may pass the sentence. Nothing is more likely than that their enumeration of powers is defective. This is the ordinary case of all human works. Let us go on then perfecting it, by adding, by way of amendment to the Constitution, those powers which time and trial show are still wanting. But it has been taken too much for granted, that by this rigorous construction the treaty power would be reduced to nothing. I had occasion once to examine its effect on the French treaty, made by the old Congress, and found that out of thirty odd articles which that contained, there were one, two, or three only which could not now be stipulated under our present Constitution. I confess, then, I think it important, in the present case, to set an example against broad construction, by appealing for new power to the people. If, however, our friends shall think differently, certainly I shall acquiesce with satisfaction; confiding, that the good sense of our country will correct the evil of construction when it shall produce ill effects....

TO JEAN BAPTISTE SAY

Washington, February 1, 1804

DEAR SIR, —I have to acknowledge the receipt of your obliging letter, and with it, of two very interesting volumes on Political Economy. These found me engaged in giving the leisure moments I rarely find, to the perusal of Malthus' work on population, a work of sound logic, in which some of the opinions of Adam Smith, as well as of the economists, are ably examined. I was pleased, on turning to some chapters where you treat the same questions, to find his opinions corroborated by yours. I shall proceed to the reading of your work with great pleasure. In the meantime, the present conveyance, by a gentleman of my family going to Paris, is too safe to hazard a delay in making my acknowledgments for this mark of attention, and for having afforded to me a satisfaction, which the ordinary course of literary communications could not have given me for a considerable time.

The differences of circumstance between this and the old countries of Europe, furnish differences of fact whereon to reason, in questions of political economy, and will consequently produce sometimes a difference of result. There, for instance, the quantity of food is fixed, or increasing in a slow and only arithmetical ratio, and the proportion is limited by the same ratio. Supernumerary births consequently add only to your mortality. Here the immense extent of uncultivated and fertile lands enables every one who will labor, to marry young, and to raise a family of any size. Our food, then, may increase geometrically with our laborers, and our births, however multiplied, become effective. Again, there the best distribution of labor is supposed to be that which places the manufacturing hands alongside the agricultural; so that the one part shall feed both, and the

other part furnish both with clothes and other comforts. Would that be best here? Egoism and first appearances say yes. Or would it be better that all our laborers should be employed in agriculture? In this case a double or treble portion of fertile lands would be brought into culture; a double or treble creation of food be produced, and its surplus go to nourish the now perishing births of Europe, who in return would manufacture and send us in exchange our clothes and other comforts. Morality listens to this, and so invariably do the laws of nature create our duties and interests, that when they seem to be at variance, we ought to suspect some fallacy in our reasonings. In solving this question, too, we should allow its just weight to the moral and physical preference of the agricultural, over the manufacturing, man. My occupations permit me only to ask questions. They deny me the time, if I had the information, to answer them. Perhaps, as worthy the attention of the author of the *Traité d'Economie Politique*, I shall find them answered in that work. If they are not, the reason will have been that you wrote for Europe; while I shall have asked them because I think for America. Accept, Sir, my respectful salutations, and assurances of great consideration.

TO JUDGE JOHN TYLER

Washington, June 28, 1804

.... No experiment can be more interesting than that we are now trying, and which we trust will end in establishing the fact, that man may be governed by reason and truth. Our first object should therefore be, to leave open to him all the avenues to truth. The most effectual hitherto found, is the freedom of the press. It is, therefore, the first shut up by those who fear the investigation of their actions. The firmness with which the people have withstood the late abuses of the press, the discernment they have manifested between truth and falsehood, show that they may safely be trusted to hear everything true and false, and to form a correct judgment between them. As little is it necessary to impose on their senses, or dazzle their minds by pomp, splendor, or forms. Instead of this artificial, how much surer is that real respect, which results from the use of their reason, and the habit of bringing everything to the test of common sense.

I hold it, therefore, certain, that to open the doors of truth, and to fortify the habit of testing everything by reason, are the most effectual manacles we can rivet on the hands of our successors to prevent their manacling the people with their own consent. The panic into which they were artfully thrown in 1798, the frenzy which was excited in them by their enemies against their apparent readiness to abandon all the principles established for their own protection, seemed for awhile to countenance the opinions of those who say they cannot be trusted with their own government. But I never doubted their rallying; and they did rally much sooner than I expected. On the whole, that experiment on their credulity has confirmed my confidence in their ultimate good sense and virtue....

TO C. F. C. DE VOLNEY

Washington, February 8, 1805

.... In no case, perhaps, does habit attach our choice or judgment more than in climate. The Canadian glows with delight in his sleigh and snow; the very idea of which gives me the shivers. The comparison of climate between Europe and North America, taking together its corresponding parts, hangs chiefly on three great points, 1. The changes between heat and cold in America are greater and more frequent, and the extremes comprehend a greater scale on the thermometer in America than in Europe. Habit, however, prevents these from affecting us more than the smaller changes of Europe affect the European. But he is greatly affected by ours. 2. Our sky is always clear; that of Europe always cloudy. Hence a greater accumulation of heat here than there, in the same parallel. 3. The changes between wet and dry are much more frequent and sudden in Europe than in America. Though we have double the rain, it falls in half the time. Taking all these together, I prefer much the climate of the United States to that of Europe. I think it a more cheerful one. It is our cloudless sky which has eradicated from our constitutions all disposition to hang ourselves, which we might otherwise have inherited from our English ancestors. During a residence of between six and seven years in Paris, I never, but once, saw the sun shine through a whole day, without being obscured by a cloud in any part of it; and I never saw the moment, in which, viewing the sky through its whole hemisphere, I could say there was not the smallest speck of a cloud in it. I arrived at Monticello, on my return from France, in January; and during only two months' stay there, I observed to my daughters, who had been with me to France, that, twenty odd times within that term, there was not a speck of a cloud in the whole

hemisphere. Still I do not wonder that an European should prefer his gray to our azure sky. Habit decides our taste in this, as in most other cases....

TO THE CHIEFS OF THE CHEROKEE NATION

Washington, January 10, 1806

MY FRIENDS AND CHILDREN, CHIEFLY OF THE CHEROKEE NATION, —Having now finished our business and finished it I hope to mutual satisfaction, I cannot take leave of you without expressing the satisfaction I have received from your visit. I see with my own eyes that the endeavors we have been making to encourage and lead you in the way of improving your situation have not been unsuccessful; it has been like grains sown in good ground, producing abundantly. You are becoming farmers, learning the use of the plough and the hoe, enclosing your grounds and employing that labor in their cultivation which you formerly employed in hunting and in war; and I see handsome specimens of cotton cloth raised, spun and wove by yourselves. You are also raising cattle and hogs for your food, and horses to assist your labors. Go on, my children, in the same way and be assured the further you advance in it the happier and more respectable you will be.

Our brethren, whom you have happened to meet here from the West and Northwest, have tenabled you to compare your situation now with what it was formerly. They also make the comparison, and they see how far you are ahead of them, and seeing what you are they are encouraged to do as you have done. You will find your next want to be mills to grind your corn, which by relieving your women from the loss of time in beating it into meal, will enable them to spin and weave more. When a man has enclosed and improved his farm, builds a good house on it and raised plentiful stocks of animals, he will wish when he dies that these things shall go to his wife and children, whom

he loves more than he does his other relations, and for whom he will work with pleasure during his life. You will, therefore, find it necessary to establish laws for this. When a man has property, earned by his own labor, he will not like to see another come and take it from him because he happens to be stronger, or else to defend it by spilling blood. You will find it necessary then to appoint good men, as judges, to decide contests between man and man, according to reason and to the rules you shall establish. If you wish to be aided by our counsel and experience in these things we shall always be ready to assist you with our advice.

My children, it is unnecessary for me to advise you against spending all your time and labor in warring with and destroying your fellow-men, and wasting your own members. You already see the folly and iniquity of it. Your young men, however, are not yet sufficiently sensible of it. Some of them cross the Mississippi to go and destroy people who have never done them an injury. My children, this is wrong and must not be; if we permit them to cross the Mississippi to war with the Indians on the other side of that river, we must let those Indians cross the river to take revenge on you. I say again, this must not be. The Mississippi now belongs to us. It must not be a river of blood. It is now the water-path along which all our people of Natchez, St. Louis, Indiana, Ohio, Tennessee, Kentucky and the western parts of Pennsylvania and Virginia are constantly passing with their property, to and from New Orleans. Young men going to war are not easily restrained. Finding our people on the river they will rob them, perhaps kill them. This would bring on a war between us and you. It is better to stop this in time by forbidding your young men to go across the river to make war. If they go to visit or to live with the Cherokees on the other side of the river we shall not object to that. That country is ours. We will permit them to live in it.

My children, this is what I wished to say to you. To go on in

learning to cultivate the earth and to avoid war. If any of your neighbors injure you, our beloved men whom we place with you will endeavor to obtain justice for you and we will support them in it. If any of your bad people injure your neighbors, be ready to acknowledge it and to do them justice. It is more honorable to repair a wrong than to persist in it. Tell all your chiefs, your men, women and children, that I take them by the hand and hold it fast. That I am their father, wish their happiness and well-being, and am always ready to promote their good.

My children, I thank you for your visit and pray to the Great Spirit who made us all and planted us all in this land to live together like brothers that He will conduct you safely to your homes, and grant you to find your families and your friends in good health.

TO THE REVEREND DOCTOR G. C. JENNER

Monticello, May 14, 1806

SIR, —I have received a copy of the evidence at large respecting the discovery of the vaccine inoculation which you have been pleased to send me, and for which I return you my thanks. Having been among the early converts, in this part of the globe, to its efficiency, I took an early part in recommending it to my countrymen. I avail myself of this occasion of rendering you a portion of the tribute of gratitude due to you from the whole human family. Medicine has never before produced any single improvement of such utility. Harvey's discovery of the circulation of the blood was a beautiful addition to our knowledge of the animal economy, but on a review of the practice of medicine before and since that epoch, I do not see any great amelioration which has been derived from that discovery. You have erased from the calendar of human afflictions one of its greatest. Yours is the comfortable reflection that mankind can never forget that you have lived. Future nations will know by history only that the loathsome small-pox has existed and by you has been extirpated.

Accept my fervent wishes for your health and happiness and assurances of the greatest respect and consideration.

TO JOHN NORVELL

Washington, June 11, 1807

.... To your request of my opinion of the manier in which a newspaper should be conducted, so as to be most useful, I should answer, "by restraining it to true facts and sound principles only." Yet I fear such a paper would find few subscribers. It is a melancholy truth, that a suppression of the press could not more completely deprive the nation of its benefits, than is done by its abandoned prostitution to falsehood. Nothing can now be believed which is seen in a newspaper. Truth itself becomes suspicious by being put into that polluted vehicle. The real extent of this state of misinformation is known only to those who are in situations to confront facts within their knowledge with the lies of the day. I really look with commiseration over the great body of my fellow citizens, who, reading newspapers, live and die in the belief, that they have known something of what has been passing in the world in their time; whereas the accounts they have read in newspapers are just as true a history of any other period of the world as of the present, except that the real names of the day are affixed to their fables. General facts may indeed be collected from them, such as that Europe is now at war, that Bonaparte has been a successful warrior, that he has subjected a great portion of Europe to his will, etc., etc.; but no details can be relied on. I will add, that the man who never looks into a newspaper is better informed than he who reads them; inasmuch as he who knows nothing is nearer to truth than he whose mind is filled with falsehoods and errors. He who reads nothing will still learn the great facts, and the details are all false.

Perhaps an editor might begin a reformation in some such way as this. Divide his paper into four chapters, heading the 1st, Truths. 2d,

Probabilities. 3d, Possibilities. 4th, Lies. The first chapter would be very short, as it would contain little more than authentic papers, and information from such sources, as the editor would be willing to risk his own reputation for their truth. The second would contain what, from a mature consideration of all circumstances, his judgment should conclude to be probably true. This, however, should rather contain too little than too much. The third and fourth should be professedly for those readers who would rather have lies for their money than the blank paper they would occupy.

Such an editor too, would have to set his face against the demoralizing practice of feeding the public mind habitually on slander, and the depravity of taste which this nauseous aliment induces. Defamation is becoming a necessary of life; insomuch, that a dish of tea in the morning or evening cannot be digested without this stimulant. Even those who do not believe these abominations, still read them with complaisance to their auditors, and instead of the abhorrence and indignation which should fill a virtuous mind, betray a secret pleasure in the possibility that some may believe them, though they do not themselves. It seems to escape them, that it is not he who prints, but he who pays for printing a slander, who is its real author....

TO GOVERNOR JAMES SULLIVAN

Washington, June 19, 1807

.... With respect to the tour my friends of the north have proposed that I should make in that quarter, I have not made up a final opinion. The course of life which General Washington had run, civil and military, the services he had rendered, and the space he, therefore, occupied in the affections of his fellow citizens, take from his examples the weight of precedent for others, because no others can arrogate to themselves the claims which he had on the public homage. To myself, therefore, it comes as a new question, to be viewed under all the phases it may present. I confess that I am not reconciled to the idea of a chief magistrate parading himself through the several States, as an object of public gaze, and in quest of an applause which, to be valuable, should be purely voluntary. I had rather acquire silent goodwill by a faithful discharge of my duties, than owe expressions of it to my putting myself in the way of receiving them. Were I to make such a tour to Portsmouth or Portland, I must do it to Savannah, perhaps to Orleans and Frankfort. As I have never yet seen the time when the public business would have permitted me to be so long in a situation in which I could not carry it on, so I have no reason to expect that such a time will come while I remain in office. A journey to Boston or Portsmouth, after I shall be a private citizen, would much better harmonize with my feelings, as well as duties; and, founded in curiosity, would give no claims to an extension of it. I should see my friends too, more at our mutual ease, and be left more exclusively to their society. However, I end as I began, by declaring I have made up no opinion on the subject, and that I reserve it as a question for future consideration and advice....

TO DOCTOR CASPER WISTAR

Washington, June 21, 1807

...the disorders of the animal body, and the symptoms indicating them, are as various as the elements of which the body is composed. The combinations, too, of these symptoms are so infinitely diversified, that many associations of them appear too rarely to establish a definite disease; and to an unknown disease, there cannot be a known remedy. Here then, the judicious, the moral, the humane physician should stop. Having been so often a witness to the salutary efforts which nature makes to re-establish the disordered functions, he should rather trust to their action, than hazard the interruption of that, and a greater derangement of the system, by conjectural experiments on a machine so complicated and so unknown as the human body, and a subject so sacred as human life. Or, if the appearance of doing something be necessary to keep alive the hope and spirits of the patient, it should be of the most innocent character. One of the most successful physicians I have ever known, has assured me, that he used more bread pills, drops of colored water, and powders of hickory ashes, than of all other medicines put together. It was certainly a pious fraud. But the adventurous physician goes on, and substitutes presumption for knowledge. From the scanty field of what is known, he launches into the boundless region of what is unknown. He establishes for his guide some fanciful theory of corpuscular attraction, of chemical agency, of mechanical powers, of stimuli, of irritability accumulated or exhausted, of depletion by the lancet and repletion by mercury, or some other ingenious dream, which lets him into all nature's secrets at short hand. On the principle which he thus assumes, he forms his table of nosology, arrays his diseases into families, and extends his curative treatment, by analogy, to all the

cases he has thus arbitrarily marshalled together. I have lived myself to see the disciples of Hoffman, Boerhaave, Stahl, Cullen, Brown, succeed one another like the shifting figures of a magic lantern, and their fancies, like the dresses of the annual doll-babies from Paris, becoming, from their novelty, the vogue of the day, and yielding to the next novelty their ephemeral favor. The patient, treated on the fashionable theory, sometimes gets well in spite of the medicine. The medicine, therefore, restored him, and the young doctor receives new courage to proceed in his bold experiments on the lives of his fellow-creatures. I believe we may safely affirm, that the inexperienced and presumptuous band of medical tyros let loose upon the world, destroys more of human life in one year, than all the Robinhoods, Cartouches, and Macheaths do in a century. It is in this part of medicine that I wish to see a reform, an abandonment of hypothesis for sober facts, the first degree of value set on clinical observation, and the lowest on visionary theories. I would wish the young practitioner, especially, to have deeply impressed on his mind, the real limits of his art, and that when the state of his patient gets beyond these, his office is to be a watchful, but quiet spectator of the operations of nature, giving them fair play by a well-regulated regimen, and by all the aid they can derive from the excitement of good spirits and hope in the patient....

TO MONSIEUR DUPONT DE NEMOURS

Washington, July 14, 1807

.... Burr's conspiracy has been one of the most flagitious of which history will ever furnish an example. He had combined the objects of separating the western States from us, of adding Mexico to them, and of placing himself at their head. But he who could expect to effect such objects by the aid of American citizens, must be perfectly ripe for Bedlam. Yet although there is not a man in the United States who is not satisfied of the depth of his guilt, such are the jealous provisions of our laws in favor of the accused, and against the accuser, that I question if he can be convicted. Out of the forty-eight jurors who are to be summoned, he has a right to choose the twelve who are to try him, and if any one of the twelve refuses to concur in finding him guilty, he escapes. This affair has been a great confirmation in my mind of the innate strength of the form of our government. He had probably induced near a thousand men to engage with him, by making them believe the government connived at it. A proclamation alone, by undeceiving them, so completely disarmed him, that he had not above thirty men left, ready to go all lengths with him. The first enterprise was to have been the seizure of New Orleans, which he supposed would powerfully bridle the country above, and place him at the door of Mexico. It has given me infinite satisfaction that not a single native Creole of Louisiana, and but one American, settled there before the delivery of the country to us, were in his interest. His partisans there were made up of fugitives from justice, or from their debts, who had flocked there from other parts of the United States, after the delivery of the country, and of adventurers and speculators of all descriptions....

TO CHARLES PINCKNEY

Washington, March 30, 1808

....With France we are in no immediate danger of war. Her future views it is impossible to estimate. The immediate danger we are in of a rupture with England, is postponed for this year. This is effected by the embargo, as the question was simply between that and war. That may go on a certain time, perhaps through the year, without the loss of their property to our citizens, but only its remaining unemployed on their hands. A time would come, however, when war would be preferable to a continuance of the embargo. Of this Congress may have to decide at their next meeting. In the meantime, we have good information, that a negotiation for peace between France and England is commencing through the medium of Austria. The way for it has been smoothed by a determination expressed by France (through the *Moniteur*, which is their government paper) that herself and her allies will demand from Great Britain no renunciation of her maritime principles; nor will they denounce theirs. Nothing shall be said about them in the treaty, and both sides will be left in the next war to act on their own. No doubt the meaning of this is, that all the Continental powers of Europe will form themselves into an armed neutrality, to enforce their own principles. Should peace be made, we shall have safely rode out the storm in peace and prosperity. If we have anything to fear, it will be after that. Nothing should be spared from this moment in putting our militia in the best condition possible, and procuring arms. I hope, that this summer, we shall get our whole seaports put into that state of defence, which Congress has thought proportioned to our circumstances and situation; that is to say, put hors d'insulte from a maritime attack, by a moderate squadron. If armies are combined with their fleets, then no resource can be

provided, but to meet them in the field. We propose to raise seven regiments only for the present year, depending always on our militia for the operations of the first year of war. On any other plan, we should be obliged always to keep a large standing army....

TO THE PRINCE REGENT OF PORTUGAL

Washington, May 5, 1808

GREAT AND GOOD FRIEND, —Having learnt the safe arrival of your Royal Highness at the city of Rio Janeiro, I perform with pleasure the duty of offering you my sincere congratulations by Mr. Hill, a respected citizen of the United States, who is specially charged with the delivery of this letter.

I trust that this event will be as propitious to the prosperity of your faithful subjects as to the happiness of your Royal Highness, in which the United States of America have ever taken a lively interest. Inhabitants now of the same land, of that great continent which the genius of Columbus has given to the world, the United States feel sensibly that they stand in new and closer relations with your Royal Highness, and that the motives which heretofore nourished the friendly relations which have so happily prevailed, have acquired increased strength on the transfer of your residence to their own shores. They see in prospect, a system of intercourse between the different regions of this hemisphere of which the peace and happiness of mankind may be the essential principle. To this principle your long-tried adherence, for the benefit of those you governed, in the midst of warring powers, is a pledge to the new world that its peace, its free and friendly intercourse, will be your chief concern. On the part of the United States I assure you, that these which have hitherto been their ruling objects, will be most particularly cultivated with your Royal Highness and your subjects at Brazil, and they hope that that country so favored by the gifts of nature, now advanced to a station under your immediate auspices, will find, in the interchange of mutual wants

and supplies, the true aliment of an unchanging friendship with the United States of America.

TO MONSIEUR LASTEYRIE

Washington, July 15, 1808

SIR, —I have duly received your favor of March 28th, and with it your treatises on the culture of the sugar cane and cotton plant in France. The introduction of new cultures, and especially of objects of leading importance to our comfort, is certainly worthy the attention of every government, and nothing short of the actual experiment should discourage an essay of which any hope can be entertained. Till that is made, the result is open to conjecture; and I should certainly conjecture that the sugar cane could never become an article of profitable culture in France. We have within the ancient limits of the United States, a great extent of country which brings the orange to advantage, but not a foot in which the sugar cane can be matured. France, within its former limits, has but two small spots, (Olivreles and Hieres) which brings the orange in open air, and a fortiori, therefore, none proper for the cane. I should think the maple-sugar more worthy of experiment. There is no part of France of which the climate would not admit this tree. I have never seen a reason why every farmer should not have a sugar orchard, as well as an apple orchard. The supply of sugar for his family would require as little ground, and the process of making it as easy as that of cider. Mr. Micheaux, your botanist here, could send you plants as well as seeds, in any quantity from the United States. I have no doubt the cotton plant will succeed in some of the southern parts of France. Whether its culture will be as advantageous as those they are now engaged in, remains to be tried. We could, in the United States, make as great a variety of wines as are made in Europe, not exactly of the same kinds, but doubtless as good. Yet I have ever observed to my countrymen, who think its introduction important, that a laborer cultivating wheat,

rice, tobacco, or cotton here, will be able with the proceeds, to purchase double the quantity of the wine he could make. Possibly the same quantity of land and labor in France employed on the rich produce of your Southern counties, would purchase double the quantity of the cotton they would yield there. This however may prove otherwise on trial, and therefore it is worthy the trial. In general, it is a truth that if every nation will employ itself in what it is fittest to produce, a greater quantity will be raised of the things contributing to human happiness, than if every nation attempts to raise everything it wants within itself....

TO THOMAS JEFFERSON RANDOLPH

Washington, November 24, 1808

MY DEAR JEFFERSON, Your situation, thrown at such a distance from us, and alone, cannot but give us all great anxieties for you. As much has been secured for you, by your particular position and the acquaintance to which you have been recommended, as could be done towards shielding you from the dangers which surround you. But thrown on a wide world, among entire strangers, without a friend or guardian to advise, so young too, and with so little experience of mankind, your dangers are great, and still your safety must rest on yourself. A determination never to do what is wrong, prudence and good humor, will go far towards securing to you the estimation of the world. When I recollect that at fourteen years of age, the whole care and direction of myself was thrown on myself entirely, without a relation or friend qualified to advise or guide me, and recollect the various sorts of bad company with which I associated from time to time, I am astonished I did not turn off with some of them, and become as worthless to society as they were. I had the good fortunate to become acquainted very early with some characters of very high standing, and to feel the incessant wish that I could ever become what they were. Under temptations and difficulties, I would ask myself what would Dr. Small, Mr. Wythe, Peyton Randolph do in this situation? What course in it will insure me their approbation? I am certain that this mode of deciding on my conduct, tended more to correctness than any reasoning powers I possessed. Knowing the even and dignified line they pursued, I could never doubt for a moment which of two courses would be in character for them. Whereas, seeking the same object through a process of moral reasoning, and

with the jaundiced eye of youth, I should often have erred. From the circumstances of my position, I was often thrown into the society of horse racers, card players, fox hunters, scientific and professional men, and of dignified men; and many a time have I asked myself, in the enthusiastic moment of the death of a fox, the victory of a favorite horse, the issue of a question eloquently argued at the bar, or in the great council of the nation, well, which of these kinds of reputation should I prefer? That of a horse jockey? a fox hunter? an orator? or the honest advocate of my country's rights? Be assured, my dear Jefferson that these little returns into ourselves, this self-catechising habit, is not trifling nor useless, but leads to the prudent selection and steady pursuit of what is right.

I have mentioned good humor as one of the preservatives of our peace and tranquillity. It is among the most effectual, and its effect is so well imitated and aided, artificially, by politeness, that this also becomes an acquisition of first rate value. In truth, politeness is artificial good humor, it covers the natural want of it, and ends by rendering habitual a substitute nearly equivalent to the real virtue. It is the practice of sacrificing to those whom we meet in society, all the little conveniences and preferences which will gratify them, and deprive us of nothing worth a moment's consideration; it is the giving a pleasing and flattering turn to our expressions, which will conciliate others, and make them pleased with us as well as themselves. How cheap a price for the good will of another! When this is in return for a rude thing said by another, it brings him to his senses, it mortifies and corrects him in the most salutary way, and places him at the feet of your good nature, in the eyes of the company. But in stating prudential rules for our government in society, I must not omit the important one of never entering into dispute or argument with another. I never saw an instance of one of two disputants convincing the other by argument. I have seen many, on their getting warm, becoming rude, and shooting one another. Conviction is the effect of

our own dispassionate reasoning, either in solitude, or weighing within ourselves, dispassionately, what we hear from others, standing uncommitted in argument ourselves. It was one of the rules which, above all others, made Doctor Franklin the most amiable of men in society, "never to contradict anybody." If he was urged to announce an opinion, he did it rather by asking questions, as if for information, or by suggesting doubts. When I hear another express an opinion which is not mine, I say to myself, he has a right to his opinion, as I to mine; why should I question it? His error does me no injury, and shall I become a Don Quixote, to bring all men by force of argument to one opinion? If a fact be misstated, it is probable he is gratified by a belief of it, and I have no right to deprive him of the gratification. If he wants information, he will ask it, and then I will give it in measured terms; but if he still believes his own story, and shows a desire to dispute the fact with me, I hear him and say nothing. It is his affair, not mine, if he prefers error. There are two classes of disputants most frequently to be met with among us. The first is of young students, just entered the threshold of science, with a first view of its outlines, not yet filled up with the details and modifications which a further progress would bring to their knowledge. The other consists of the ill-tempered and rude men in society, who have taken up a passion for politics. (Good humor and politeness never introduce into mixed society, a question on which they foresee there will be a difference of opinion.) From both of these classes of disputants, my dear Jefferson, keep aloof, as you would from the infected subjects of yellow fever or pestilence. Consider yourself, when with them, as among the patients of Bedlam, needing medical more than moral counsel. Be a listener only, keep within yourself, and endeavor to establish with yourself the habit of silence, especially on politics. In the fevered state of our country, no good can ever result from any attempt to set one of these fiery zealots to rights, either in fact or principle. They are determined as to the facts they will believe, and the opinions on which they will act. Get by them, therefore, as you would by an angry bull; it is not

for a man of sense to dispute the road with such an animal. You will be more exposed than others to have these animals shaking their horns at you, because of the relation in which you stand with me. Full of political venom, and willing to see me and to hate me as a chief in the antagonist party, your presence will be to them what the vomit grass is to the sick dog, a nostrum for producing ejaculation. Look upon them exactly with that eye, and pity them as objects to whom you can administer only occasional ease. My character is not within their power. It is in the hands of my fellow citizens at large, and will be consigned to honor or infamy by the verdict of the republican mass of our country, according to what themselves will have seen, not what their enemies and mine shall have said. Never, therefore, consider these puppies in politics as requiring any notice from you, and always show that you are not afraid to leave my character to the umpirage of public opinion. Look steadily to the pursuits which have carried you to Philadelphia, be very select in the society you attach yourself to, avoid taverns, drinkers, smokers, idlers, and dissipated persons generally; for it is with such that broils and contentions arise; and you will find your path more easy and tranquil. The limits of my paper warn me that it is time for me to close with my affectionate adieu.

TO THOMAS LEIPER

Washington, January 21, 1809

.... I have lately inculcated the encouragement of manufactures to the extent of our own consumption at least, in all articles of which we raise the raw material. On this the federal papers and meetings have sounded the alarm of Chinese policy, destruction of commerce, etc.; that is to say, the iron which we make must not be wrought here into ploughs, axes, hoes, etc., in order that the ship-owner may have the profit of carrying it to Europe, and bringing it back in a manufactured form, as if after manufacturing our own raw materials for our own use, there would not be a surplus produce sufficient to employ a due proportion of navigation in carrying it to market and exchanging it for those articles of which we have not the raw material. Yet this absurd hue and cry has contributed much to federalize New England, their doctrine goes to the sacrificing agriculture and manufactures to commerce; to the calling all our people from the interior country to the sea-shore to turn merchants, and to convert this great agricultural country into a city of Amsterdam. But I trust the good sense of our country will see that its greatest prosperity depends on a due balance between agriculture, manufactures and commerce, and not in this protuberant navigation which has kept us in hot water from the commencement of our government, and is now engaging us in war. That this may be avoided, if it can be done without a surrender of rights, is my sincere prayer. Accept the assurances of my constant esteem and respect.

TO JOHN HOLLINS

Washington, February 19, 1809

.... General Washington, in his time, received from the same Society the seed of the perennial succory, which Arthur Young had carried over from France to England, and I have since received from a member of it the seed of the famous turnip of Sweden, now so well known here. I mention these things, to show the nature of the correspondence which is carried on between societies instituted for the benevolent purpose of communicating to all parts of the world whatever useful is discovered in any one of them. These societies are always in peace, however their nations may be at war. Like the republic of letters, they form a great fraternity spreading over the whole earth, and their correspondence is never interrupted by any civilized nation....

TO M. HENRI GRÉGOIRE, ÉVÊQUE ET SÉNATEUR À PARIS

Washington, February 25, 1809

SIR, —I have received the favor of your letter of August 17th, and with it the volume you were so kind as to send me on the “Literature of Negroes.” Be assured that no person living wishes more sincerely than I do, to see a complete refutation of the doubts I have myself entertained and expressed on the grade of understanding allotted to them by nature, and to find that in this respect they are on a par with ourselves. My doubts were the result of personal observation on the limited sphere of my own State, where the opportunities for the development of their genius were not favorable, and those of exercising it still less so. I expressed them therefore with great hesitation; but whatever be their degree of talent it is no measure of their rights. Because Sir Isaac Newton was superior to others in understanding, he was not therefore lord of the person or property of others. On this subject they are gaining daily in the opinions of nations, and hopeful advances are making towards their re-establishment on an equal footing with the other colors of the human family. I pray you therefore to accept my thanks for the many instances you have enabled me to observe of respectable intelligence in that race of men, which cannot fail to have effect in hastening the day of their relief; and to be assured of the sentiments of high and just esteem and consideration which I tender to yourself with all sincerity.

TO MONSIEUR DUPONT DE NEMOURS

Washington, March 2, 1809

.... Within a few days I retire to my family, my books and farms; and having gained the harbor myself, I shall look on my friends still buffeting the storm with anxiety indeed, but not with envy. Never did a prisoner, released from his chains, feel such relief as I shall on shaking off the shackles of power. Nature intended me for the tranquil pursuits of science, by rendering them my supreme delight. But the enormities of the times in which I have lived, have forced me to take a part in resisting them, and to commit myself on the boisterous ocean of political passions. I thank God for the opportunity of retiring from them without censure, and carrying with me the most consoling proofs of public approbation. I leave everything in the hands of men so able to take care of them, that if we are destined to meet misfortunes, it will be because no human wisdom could avert them. Should you return to the United States, perhaps your curiosity may lead you to visit the hermit of Monticello. He will receive you with affection and delight; hailing you in the meantime with his affectionate salutations and assurances of constant esteem and respect.

P. S. If you return to us, bring a couple of pair of true-bred shepherd's dogs. You will add a valuable possession to a country now beginning to pay great attention to the raising sheep.

TO THE INHABITANTS OF ALBEMARLE COUNTY, IN VIRGINIA

Monticello, April 3, 1809

Returning to the scenes of my birth and early life, to the society of those with whom I was raised, and who have been ever dear to me, I receive, fellow citizens and neighbors, with inexpressible pleasure, the cordial welcome you are so good as to give me. Long absent on duties which the history of a wonderful era made incumbent on those called to them, the pomp, the turmoil, the bustle and splendor of office, have drawn but deeper sighs for the tranquil and irresponsible occupations of private life, for the enjoyment of an affectionate intercourse with you, my neighbors and friends, and the endearments of family love, which nature has given us all, as the sweetener of every hour. For these I gladly lay down the distressing burden of power, and seek, with my fellow citizens, repose and safety under the watchful cares, the labors and perplexities of younger and abler minds. The anxieties you express to administer to my happiness, do, of themselves, confer that happiness; and the measure will be complete, if my endeavors to fulfil my duties in the several public stations to which I have been called, I have obtained for me the approbation of my country. The part which I have acted on the theatre of public life, has been before them; and to their sentence I submit it; but the testimony of my native county, of the individuals who have known me in private life, to my conduct in its various duties and relations, is the more grateful, as proceeding from eye witnesses and observers, from triers of the vicinage. Of you, then, my neighbors, I may ask, in the face of the world, “whose ox have I taken, or whom have I defrauded? Whom have I oppressed, or of whose hand have I received a bribe to

blind mine eyes therewith?” On your verdict I rest with conscious security. Your wishes for my happiness are received with just sensibility, and I offer sincere prayers for your own welfare and prosperity.

杰斐逊故居蒙蒂塞罗

TO JOHN WYCHE

Monticello, May 19, 1809

SIR, —Your favor of March 19th came to hand but a few days ago, and informs me of the establishment of the Westward Mill Library Society, of its general views and progress. I always hear with pleasure of institutions for the promotion of knowledge among my countrymen. The people of every country are the only safe guardians of their own rights, and are the only instruments which can be used for their destruction. And certainly they would never consent to be so used were they not deceived. To avoid this, they should be instructed to a certain degree. I have often thought that nothing would do more extensive good at small expense than the establishment of a small circulating library in every county, to consist of a few well-chosen books, to be lent to the people of the country, under such regulations as would secure their safe return in due time. These should be such as would give them a general view of other history, and particular view of that of their own country, a tolerable knowledge of Geography, the elements of Natural Philosophy, of Agriculture and Mechanics. Should your example lead to this, it will do great good. Having had more favorable opportunities than fall to every man's lot of becoming acquainted with the best books on such subjects as might be selected, I do not know that I can be otherwise useful to your society than by offering them any information respecting these which they might wish. My services in this way are freely at their command, and I beg leave to tender to yourself my salutations and assurances of respect.

TO DOCTOR B. S. BARTON

Monticello, September 21, 1809

DEAR SIR, —I received last night your favor of the 14th, and would with all possible pleasure have communicated to you any part or the whole of the Indian vocabularies which I had collected, but an irreparable misfortune has deprived me of them. I have now been thirty years availing myself of every possible opportunity of procuring Indian vocabularies to the same set of words; my opportunities Were probably better than will ever occur again to any person having the same desire. I had collected about fifty, and had digested most of them in collateral columns, and meant to have printed them the last of my stay in Washington. But not having yet digested Captain Lewis' collection, nor having leisure then to do it, I put it off till I should return home. The whole, as well digest as originals, were packed in a trunk of stationery, and sent round by water with about thirty other packages of my effects from Washington, and while ascending James river, this package on account of its weight and presumed precious contents, was singled out and stolen. The thief being disappointed on opening it, threw into the river all its contents, of which he thought he could make no use. Among them were the whole of the vocabularies. Some leaves floated ashore and were found in the mud; but these were very few, and so defaced by the mud and water that no general use can be made of them. On the receipt of your letter I turned to them, and was very happy to find, that the only morsel of an original vocabulary among them, was Captain Lewis' of the Pani language, of which you say you have not one word. I therefore enclose it to you as it is, and a little fragment of some other, which I see is in his handwriting, but no indication remains on it of what language it is. It is a specimen of the condition of the little which was recovered. I am

the more concerned at this accident, as of the two hundred and fifty words of my vocabularies, and the one hundred and thirty words of the great Russian vocabularies of the languages of the other quarters of the globe, seventy-three were common to both, and would have furnished materials for a comparison from which something might have resulted. Although I believe no general use can ever be made of the wrecks of my loss, yet I will ask the return of the Pani vocabulary when you are done with it. Perhaps I may make another attempt to collect, although I am too old to expect to make much progress in it....

TO REV. SAMUEL KNOX

Monticello, February 12, 1810

.... The boys of the rising generation are to be the men of the next, and the sole guardians of the principles we deliver over to them. That I have acted through life of those on sincere republicanism I feel in every fibre of my constitution. And when men who feel like myself, bear witness in my favor, my satisfaction is complete.... The times which brought us within mutual observation were awfully trying. But truth and reason are eternal. They have prevailed. And they will eternally prevail, however in times and places they may be overborne for a while by violence, military, civil, or ecclesiastical. The preservation of the holy fire is confided to us by the world, and the sparks which will emanate from it will ever serve to rekindle it in other quarters of the globe, numinibus secundis^[11]

TO GENERAL THADDEUS KOSCIUSKO

Monticello, February 26, 1810

MY DEAR GENERAL AND FRIEND, —I have rarely written to you; never but by safe conveyances; and avoiding everything political, lest coming from one in the station I then held, it might be imputed injuriously to our country, or perhaps even excite jealousy of you. Hence my letters were necessarily dry. Retired now from public concerns, totally unconnected with them, and avoiding all curiosity about what is done or intended, what I say is from myself only, the workings of my own mind, imputable to nobody else.

The anxieties which I know you have felt, on being exposed to the jostlings of a warring world, a country to which, in early life, you devoted your sword and services when oppressed by foreign dominion, were worthy of your philanthropy and disinterested attachment to the freedom and happiness of man. Although we have not made all the provisions which might be necessary for a war in the field of Europe, yet we have not been inattentive to such as would be necessary here. From the moment that the affair of the Chesapeake rendered the prospect of war imminent, every faculty was exerted to be prepared for it, and I think I may venture to solace you with the assurance, that we are, in a good degree, prepared. Military stores for many campaigns are on hand, all the necessary articles (sulphur excepted), and the art of preparing them among ourselves, abundantly; arms in our magazines for more men than will ever be required in the field, and forty thousand new stand yearly added, of our own fabrication, superior to any we have ever seen from Europe; heavy artillery much beyond our need; an increasing stock of field

pieces, several foundries casting one every other day each; a military school of about fifty students, which has been in operation a dozen years; and the manufacture of men constantly going on, and adding forty thousand young soldiers to our force every year that the war is deferred; at all our seaport towns of the least consequence we have erected works of defence, and assigned them gunboats, carrying one or two heavy pieces, either eighteen, twenty-four, or thirty-two pounders, sufficient in the smaller harbors to repel the predatory attacks of privateers or single armed ships, and proportioned in the larger harbors to such more serious attacks as they may probably be exposed to. All these were nearly completed, and their gunboats in readiness, when I retired from the government. The works of New York and New Orleans alone, being on a much larger scale, are not yet completed. The former will be finished this summer, mounting four hundred and thirty-eight guns, and, with the aid of from fifty to one hundred gunboats, will be adequate to the resistance of any fleet which will ever be trusted across the Atlantic. The works for New Orleans are less advanced. These are our preparations. They are very different from what you will be told by newspapers, and travellers, even Americans. But it is not to them the government communicates the public condition. Ask one of them if he knows the exact state of any particular harbor, and you will find probably that he does not know even that of the one he comes from. You will ask, perhaps, where are the proofs of these preparations for one who cannot go and see them. I answer, in the acts of Congress, authorizing such preparations, and in your knowledge of me, that, if authorized, they would be executed.

Two measures have not been adopted, which I pressed on Congress repeatedly at their meetings. The one, to settle the whole ungranted territory of Orleans, by donations of land to able-bodied young men, to be engaged and carried there at the public expense,

who would constitute a force always ready on the spot to defend New Orleans. The other was, to class the militia according to the years of their birth, and make all those from twenty to twenty-five liable to be trained and called into service at a moment's warning. This would have given us a force of three hundred thousand young men, prepared by proper training, for service in any part of the United States; while those who had passed through that period would remain at home, liable to be used in their own or adjacent States. These two measures would have completed what I deemed necessary for the entire security of our country. They would have given me, on my retirement from the government of the nation, the consolatory reflection, that having found, when I was called to it, not a single seaport town in a condition to repel a levy of contribution by a single privateer or pirate, I had left every harbor so prepared by works and gunboats, as to be in a reasonable state of security against any probable attack; the territory of Orleans acquired, and planted with an internal force sufficient for its protection; and the whole territory of the United States organized by such a classification of its male force, as would give it the benefit of all its young population for active service, and that of a middle and advanced age for stationary defence. But these measures will, I hope, be completed by my successor, who, to the purest principles of republican patriotism, adds a wisdom and foresight second to no man on earth.

So much as to my country. Now a word as to myself. I am retired to Monticello, where, in the bosom of my family, and surrounded by my books, I enjoy a repose to which I have been long a stranger. My mornings are devoted to correspondence. From breakfast to dinner, I am in my shops, my garden, or on horseback among my farms; from dinner to dark, I give to society and recreation with my neighbors and friends; and from candle light to early bed-time, I read. My health is perfect; and my strength considerably reinforced by the activity of the course I pursue; perhaps it is as great as usually falls to the lot of near

sixty-seven years of age. I talk of ploughs and harrows, of seeding and harvesting, with my neighbors, and of politics too, if they choose, with as little reserve as the rest of my fellow citizens, and feel, at length, the blessing of being free to say and do what I please, without being responsible for it to any mortal. A part of my occupation, and by no means the least pleasing, is the direction of the studies of such young men as ask it. They place themselves in the neighboring village, and have the use of my library and counsel, and make a part of my society. In advising the course of their reading, I endeavor to keep their attention fixed on the main objects of all science, the freedom and happiness of man. So that coming to bear a share in the councils and government of their country, they will keep ever in view the sole objects of all legitimate government....

TO GOVERNOR JOHN LANGDON

Monticello, March 5, 1810

.... The practice of Kings marrying only in the families of Kings, has been that of Europe for some centuries. Now, take any race of animals, confine them in idleness and inaction, whether in a sty, a stable or a state-room, pamper them with high diet, gratify all their sexual appetites, immerse them in sensualities, nourish their passions, let everything bend before them, and banish whatever might lead them to think, and in a few generations they become all body and no mind; and this, too, by a law of nature, by that very law by which we are in the constant practice of changing the characters and propensities of the animals we raise for our own purposes. Such is the regimen in raising Kings, and in this way they have gone on for centuries. While in Europe, I often amused myself with contemplating the characters of the then reigning sovereigns of Europe. Louis the XVI was a fool, of my own knowledge, and in despite of the answers made for him at his trial. The King of Spain was a fool, and of Naples the same. They passed their lives in hunting, and despatched two couriers a week, one thousand miles, to let each other know what game they had killed the preceding days. The King of Sardinia was a fool. All these were Bourbons. The Queen of Portugal, a Braganza, was an idiot by nature. And so was the King of Denmark. Their sons, as regents, exercised the powers of government. The King of Prussia, successor to the great Frederick, was a mere hog in body as well as in mind. Gustavus of Sweden, and Joseph of Austria, were really crazy, and George of England, you know, was in a straight waistcoat. There remained, then, none but old Catharine, who had been too lately picked up to have lost her common sense. In this state Bonaparte found Europe; and it was this state of its rulers which lost it with

scarce a struggle. These animals had become without mind and powerless; and so will every hereditary monarch be after a few generations. Alexander, the grandson of Catharine, is as yet an exception. He is able to hold his own. But he is only of the third generation. His race is not yet worn out. And so endeth the book of Kings, from all of whom the Lord deliver us, and have you, my friend, and all such good men and true, in His holy keeping.

TO GOVERNOR JOHN TYLER

Monticello, May 26, 1810

.... I have indeed two great measures at heart, without which no republic can maintain itself in strength, 1. That of general education, to enable every man to judge for himself what will secure or endanger his freedom. 2. To divide every county into hundreds, of such size that all the children of each will be within reach of a central school in it. But this division looks to many other fundamental provisions. Every hundred, besides a school, should have a justice of the peace, a constable and a captain of militia. These officers, or some others within the hundred, should be a corporation to manage all its concerns, to take care of its roads, its poor, and its police by patrols, etc. (as the selectment of the eastern townships). Every hundred should elect one or two jurors to serve where requisite, and all other elections should be made in the hundreds separately, and the votes of all the hundreds be brought together. Our present captaincies might be declared hundreds for the present, with a power to the courts to alter them occasionally. These little republics would be the main strength of the great one. We owe to them the vigor given to our revolution in its commencement in the Eastern States, and by them the Eastern States were enabled to repeal the embargo in opposition to the Middle, Southern and Western States, and their large and lubberly division into counties which can never be assembled. General orders are given out from a centre to the foreman of every hundred, as to the sergeants of an army, and the whole nation is thrown into energetic action, in the same direction in one instant and as one man, and becomes absolutely irresistible. Could I once see this I should consider it as the dawn of the salvation of the republic, and say with old Simeon, “mine dimittis Domine.” But our children will be as wise as

we are, ana will establish in the fullness of time those things not yet ripe for establishment. So be it, and to yourself health, happiness and long life.

TO COLONEL WILLIAM DUANE

Monticello, August 12, 1810

.... Our laws, language, religion, politics and manners are so deeply laid in English foundations, that we shall never cease to consider their history as a part of ours, and to study ours in that as its origin. Every one knows that judicious matter and charms of style have rendered Hume's history the manual of every student. I remember well the enthusiasm with which I devoured it when young, and the length of time, the research and reflection which were necessary to eradicate the poison it had instilled into my mind. It was unfortunate that he first took up the history of the Stuarts, became their apologist, and advocated all their enormities. To support his work, when done, he went back to the Tudors, and so selected and arranged the materials of their history as to present their arbitrary acts only, as the genuine samples of the constitutional power of the crown, and, still writing backwards, he then reverted to the early history, and wrote the Saxon and Norman periods with the same perverted view. Although all this is known, he still continues to be put into the hands of all our young people, and to infect them with the poison of his own principles of government. It is this book which has undermined the free principles of the English government, has persuaded readers of all classes that these were usurpations on the legitimate and salutary rights of the crown, and has spread universal toryism over the land. And the book will still continue to be read here as well as there....

TO J. B. COLVIN

Monticello, September 20, 1810

.... A strict observance of the written laws is doubtless one of the high duties of a good citizen, but it is not the highest. The laws of necessity, of self-preservation, of saving our country when in danger, are of higher obligation. To lose our country by a scrupulous adherence to written law, would be to lose the law itself, with life, liberty, property and all those who are enjoying them with us; thus absurdly sacrificing the end to the means. When, in the battle of Germantown, General Washington's army was annoyed from Chew's house, he did not hesitate to plant his cannon against it, although the property of a citizen. When he besieged Yorktown, he leveled the suburbs, feeling that the laws of property must be postponed to the safety of the nation. While the army was before York, the Governor of Virginia took horses, carriages, provisions and even men by force, to enable that army to stay together till it could master the public enemy; and he was justified. A ship at sea in distress for provisions, meets another having abundance, yet refusing a supply; the law of self-preservation authorizes the distressed to take a supply by force. In all these cases, the unwritten laws of necessity, of self-preservation, and of the public safety, control the written laws of meum and tuum....

TO DR. BENJAMIN RUSH

Monticello, January 16, 1811

.... My present course of life admits less reading than I wish. From breakfast, or noon at latest, to dinner, I am mostly on horseback, attending to my farm or other concerns, which I find healthful to my body, mind and affairs; and the few hours I can pass in my cabinet, are devoured by correspondences; not those with my intimate friends, with whom I delight to interchange sentiments, but with others, who, writing to me on concerns of their own in which I have had an agency, or from motives of mere respect and approbation, are entitled to be answered with respect and a return of good will. My hope is that this obstacle to the delights of retirement, will wear away with the oblivion which follows that, and that I may at length be indulged in those studious pursuits, from which nothing but revolutionary duties would ever have called me.

I shall receive your proposed publication and read it with the pleasure which everything gives me from your pen. Although much of a sceptic in the practice of medicine, I read with pleasure its ingenious theories.

I receive with sensibility your observations on the discontinuance of friendly correspondence between Mr. Adams and myself, and the concern you take in its restoration. This discontinuance has not proceeded from me, nor from the want of sincere desire and of effort on my part, to renew our intercourse. You know the perfect coincidence of principle and of action, in the early part of the Revolution, which produced a high degree of mutual respect and esteem between Mr. Adams and myself. Certainly no man was ever truer than he was, in that day, to those principles of rational

republicanism which, after the necessity of throwing off our monarchy, dictated all our efforts in the establishment of a new government. And although he swerved, afterwards, towards the principles of the English constitution, our friendship did not abate on that account. While he was Vice-President, and I Secretary of State, I received a letter from President Washington, then at Mount Vernon, desiring me to call together the Heads of departments, and to invite Mr. Adams to join us (which, by-the-bye, was the only instance of that being done) in order to determine on some measure which required despatch; and he desired me to act on it, as decided, without again recurring to him. I invited them to dine with me, and after dinner, sitting at our wine, having settled our question, other conversation came on, in which a collision of opinion arose between Mr. Adams and Colonel Hamilton, on the merits of the British constitution, Mr. Adams giving it as his opinion, that, if some of its defects and abuses were corrected, it would be the most perfect constitution of government ever devised by man. Hamilton, on the contrary, asserted, that with its existing vices, it was the most perfect model of government that could be formed; and that the correction of its vices would render it an impracticable government. And this you may be assured was the real line of difference between the political principles of these two gentlemen. Another incident took place on the same occasion, which will further delineate Mr. Hamilton's political principles. The room being hung around with a collection of the portraits of remarkable men, among them were those of Bacon, Newton and Locke, Hamilton asked me who they were. I told him they were my trinity of the three greatest men the world had ever produced, naming them. He paused for some time: "the greatest man," said he, "that ever lived, was Julius Caesar." Mr. Adams was honest as a politician, as well as a man; Hamilton honest as a man, but, as a politician, believing in the necessity of either force or corruption to govern men.

You remember the machinery which the federalists played off, about that time, to beat down the friends to the real principles of our Constitution, to silence by terror every expression in their favor, to bring us into war with France and alliance with England, and finally to homologize our Constitution with that of England. Mr. Adams, you know, was overwhelmed with feverish addresses, dictated by the fear, and often by the pen, of the bloody buoy, and was seduced by them into some open indications of his new principles of government, and in fact, was so elated as to mix with his kindness a little superciliousness towards me. Even Mrs. Adams, with all her good sense and prudence, was sensibly flushed. And you recollect the short suspension of our intercourse, and the circumstance which gave rise to it, which you were so good as to bring to an early explanation, and have set to rights, to the cordial satisfaction of us all. The nation at length passed condemnation on the political principles of the federalists, by refusing to continue Mr. Adams in the Presidency. On the day on which we learned in Philadelphia the vote of the city of New York, which it was well known would decide the vote of the State and that, again, the vote of the Union, I called on Mr. Adams on some official business. He was very sensibly affected, and accosted me with these words: "Well, I understand that you are to beat me in this contest, and I will only say that I will be as faithful a subject as any you will have." "Mr. Adams" said I, "this is no personal contest between you and me. Two systems of principles on the subject of government divide our fellow citizens into two parties. With one of these you concur, and I with the other. As we have been longer on the public stage than most of those now living, our names happen to be more generally known. One of these parties, therefore, has put your name at its head, the other mine. Were we both to die to-day, to-morrow two other names would be in the place of ours, without any change in the motion of the machinery. Its motion is from its principle, not from you or myself." "I believe you are right," said he, "that we are but passive instruments, and should not suffer this matter

to affect our personal dispositions.” But he did not long retain this just view of the subject. I have always believed that the thousand calumnies which the federalists, in bitterness of heart, and mortification at their ejection, daily invented against me, were carried to him by their busy intriguers, and made some impression. When the election between Burr and myself was kept in suspense by the federalists, and they were meditating to place the President of the Senate at the head of the government, I called on Mr. Adams with a view to have this desperate measure prevented by his negative. He grew warm in an instant, and said with a vehemence he had not used towards me before, “Sir, the event of the election is within your own power. You have only to say you will do justice to the public creditors, maintain the navy, and not disturb those holding offices, and the government will instantly be put into your hands. We know it is the wish of the people it should be so.” “Mr. Adams,” said I, “I know not what part of my conduct, in either public or private life, can have authorized a doubt of my fidelity to the public engagements. I say, however, I will not come into the government by capitulation. I will not enter on it, but in perfect freedom to follow the dictates of my own judgment.” I had before given the same answer to the same intimation from Gouverneur Morris. “Then,” said he, “things must take their course.” I turned the conversation to some thing else, and soon took my leave. It was the first time in our lives we had ever parted with anything like dissatisfaction. And then followed those scenes of midnight appointment, which have been condemned by all men. The last day of his political power, the last hours, and even beyond the midnight, were employed in filling all offices, and especially permanent ones, with the bitterest federalists, and providing for me the alternative, either to execute the government by my enemies, whose study it would be to thwart and defeat all my measures, or to incur the odium of such numerous removals from office, as might bear me down. A little time and reflection effaced in my mind this temporary dissatisfaction with Mr. Adams, and restored

me to that just estimate of his virtues and passions, which a long acquaintance had enabled me to fix. And my first wish became that of making his retirement easy by any means in my power; for it was understood he was not rich. I suggested to some republican members of the delegation from his State, the giving him, either directly or indirectly, an office, the most lucrative in that State, and then offered to be resigned, if they thought he would not deem it affrontive. They were of opinion he would take great offence at the offer; and moreover, that the body of republicans would consider such a step in the outset as auguring very ill of the course I meant to pursue. I dropped the idea, therefore, but did not cease to wish for some opportunity of renewing our friendly understanding.

Two or three years after, having had the misfortune to lose a daughter, between whom and Mrs. Adams there had been a considerable attachment, she made it the occasion of writing me a letter, in which, with the tenderest expressions of concern at this event, she carefully avoided a single one of friendship towards myself, and even concluded it with the wishes “of her who once took pleasure in subscribing herself your friend, Abigail Adams.” Unpromising as was the complexion of this letter, I determined to make an effort towards removing the cloud from between us. This brought on a correspondence which I now enclose for your perusal, after which be so good as to return it to me, as I have never communicated it to any mortal breathing, before. I send it to you, to convince you I have not been wanting either in the desire, or the endeavor to remove this misunderstanding. Indeed, I thought it highly disgraceful to us both, as indicating minds not sufficiently elevated to prevent a public competition from affecting our personal friendship. I soon found from the correspondence that conciliation was desperate, and yielding to an intimation in her last letter, I ceased from further explanation. I have the same good opinion of Mr. Adams which I ever had. I know him to

be an honest man, an able one with his pen, and he was a powerful advocate on the floor of Congress. He has been alienated from me, by belief in the lying suggestions contrived for electioneering purposes, that I perhaps mixed in the activity and intrigues of the occasion. My most intimate friends can testify that I was perfectly passive. They would sometimes, indeed, tell me what was going on; but no man ever heard me take part in such conversations; and none ever misrepresented Mr. Adams in my presence, without my asserting his just character. With very confidential persons I have doubtless disapproved of the principles and practices of his administration. This was unavoidable. But never with those with whom it could do him any injury. Decency would have required this conduct from me, if disposition had not; and I am satisfied Mr. Adams' conduct was equally honorable towards me. But I think it part of his character to suspect foul play in those of whom he is jealous, and not easily to relinquish his suspicions.

I have gone, my dear friend, into these details, that you might know everything which had passed between us, might be fully possessed of the state of facts and dispositions, and judge for yourself whether they admit a revival of that friendly intercourse for which you are so kindly solicitous. I shall certainly not be wanting in anything on my part which may second your efforts, which will be the easier with me, inasmuch as I do not entertain a sentiment of Mr. Adams, the expression of which could give him reasonable offence. And I submit the whole to yourself, with the assurance, that whatever be the issue, my friendship and respect for yourself will remain unaltered and unalterable.

TO COLONEL WILLIAM DUANE

Monticello, March 28, 1811

.... The last hope of human liberty in this world rests on us. We ought, for so dear a state, to sacrifice every attachment and every enmity. Leave the President free to choose his own coadjutors, to pursue his own measures, and support him and them, even if we think we are wiser than they, honester than they are, or possessing more enlarged information of the state of things. If we move in mass, be it ever so circuitously, we shall attain our object; but if we break into squads, every one pursuing the path he thinks most direct, we become an easy conquest to those who can now barely hold us in check. I repeat again, that we ought not to schismatize on either men or measures. Principles alone can justify that. If we find our government in all its branches rushing headlong, like our predecessors, into the arms of monarchy, if we find them violating our dearest rights, the trial by jury, the freedom of the press, the freedom of opinion, civil or religious, or opening on our peace of mind or personal safety the sluices of terrorism, if we see them raising standing armies, when the absence of all other danger points to these as the sole objects on which they are to be employed, then indeed let us withdraw and call the nation to its tents. But while our functionaries are wise, and honest, and vigilant, let us move compactly under their guidance, and we have nothing to fear. Things may here and there go a little wrong. It is not in their power to prevent it. But all will be right in the end, though not perhaps by the shortest means.

TO DR. BENJAMIN RUSH

Poplar Forest, August 17, 1811

DEAR SIR, —I write to you from a place ninety miles from Monticello, near the New London of this State, which I visit three or four times a year, and stay from a fortnight to a month at a time. I have fixed myself comfortably, keep some books here, bring others occasionally, am in the solitude of a hermit, and quite at leisure to attend to my absent friends. I note this to show that I am not in a situation to examine the dates of our letters, whether I have overgone the annual period of asking how you do? I know that within that time I have received one or more letters from you, accompanied by a volume of your introductory lectures, for which accept my thanks. I have read them with pleasure and edification, for I acknowledge facts in medicine as far as they go, distrusting only their extension by theory. Having to conduct my grandson through his course of mathematics, I have resumed that study with great avidity. It was ever my favorite one. We have no theories there, no uncertainties remain on the mind; all is demonstration and satisfaction. I have forgotten much, and recover it with more difficulty than when in the vigor of my mind I originally acquired it. It is wonderful to me that old men should not be sensible that their minds keep pace with their bodies in the progress of decay. Our old revolutionary friend Clinton, for example, who was a hero, but never a man of mind, is wonderfully jealous on this head. He tells eternally the stories of his younger days to prove his memory, as if memory and reason were the same faculty. Nothing betrays imbecility so much as the being insensible of it. Had not a conviction of the danger to which an unlimited occupation of the executive chair would expose the republican constitution of our government, made it conscientiously a duty to retire when I did, the

fear of becoming a dotard and of being insensible of it, would of itself have resisted all solicitations to remain. I have had a long attack of rheumatism, without fever and without pain while I keep myself still. A total prostration of the muscles of the back, hips and thighs, deprived me of the power of walking, and leaves it still in a very impaired state. A pain when I walk, seems to have fixed itself in the hip, and to threaten permanence. I take moderate rides, without much fatigue; but my journey to this place, in a hard-going gig, gave me great sufferings which I expect will be renewed on my return as soon as I am able. The loss of the power of taking exercise would be a sore affliction to me. It has been the delight of my retirement to be in constant bodily activity, looking after my affairs, if was never damped as the pleasures of reading are, by the question of *cui bono?* for what object? I hope your health of body continues firm. Your works show that of your mind. The habits of exercise which your calling has given to both, will tend long to preserve them. The sedentary character of my public occupations sapped a constitution naturally sound and vigorous, and draws it to an earlier close. But it will still last quite as long as I wish it. There is a fulness of time when men should go, and not occupy too long the ground to which others have a right to advance. We must continue while here to exchange occasionally our mutual good wishes. I find friendship to be like wine, raw when new, ripened with age, the true old man's milk and restorative cordial. God bless you and preserve you through a long and healthy old age.

TO JOHN ADAMS

Monticello, January 21 , 1812

DEAR SIR, —I thank you beforehand (for they are not yet arrived) for the specimens of homespun you have been so kind as to forward me by post. I doubt not their excellence, knowing how far you are advanced in these things in your quarter. Here we do little in the fine way, but in coarse and middling goods a great deal. Every family in the country is a manufactory within itself, and is very generally able to make within itself all the stouter and middling stuffs for its own clothing and household use. We consider a sheep for every person in the family as sufficient to clothe it, in addition to the cotton, hemp and flax which we raise ourselves. For fine stuff we shall depend on your northern manufactories. Of these, that is to say, of company establishments, we have none. We use little machinery. The spinning jenny, and loom with the flying shuttle, can be managed in a family; but nothing more complicated. The economy and thriftiness resulting from our household manufactures are such that they will never again be laid aside; and nothing more salutary for us has ever happened than the British obstructions to our demands for their manufactures. Restore free intercourse when they will, their commerce with us will have totally changed its form, and the articles we shall in future want from them will not exceed their own consumption of our produce.

A letter from you calls up recollections very dear to my mind. It carries me back to the times when, beset with difficulties and dangers, we were fellow laborers in the same cause, struggling for what is most valuable to man, his right of self-government. Laboring always at the same oar, with some wave ever ahead, threatening to overwhelm us, and yet passing harmless under our bark, we knew not how we rode through the storm with heart and hand, and made a happy port. Still

we did not expect to be without rubs and difficulties; and we have had them. First, the detention of the western posts, then the coalition of Pilnitz, outlawing our commerce with France, and the British enforcement of the outlawry. In your day, French depredations; in mine, English, and the Berlin and Milan decrees; now, the English orders of council, and the piracies they authorize. When these shall be over, it will be the impressment of our seamen or something else; and so we have gone on, and so we shall go on, puzzled and prospering beyond example in the history of man. And I do believe we shall continue to growl, to multiply and prosper until we exhibit an association, powerful, wise and happy, beyond what has yet been seen by men. As for France and England, with all their preeminence in science, the one is a den of robbers, and the other of pirates. And if science produces no better fruits than tyranny, murder, rapine and destitution of national morality, I would rather wish our country to be ignorant, honest and estimable, as our neighboring savages are. But whither is senile garrulity leading me? Into politics, of which I have taken final leave. I think little of them and say less. I have given up newspapers in exchange for Tacitus and Thucydides, for Newton and Euclid, and I find myself much the happier. Sometimes indeed, I look back to former occurrences, in remembrance of our old friends and fellow laborers, who have fallen before us. Of the signers of the Declaration of Independence, I see now living not more than half a dozen on your side of the Potomac, and on this side, myself alone. You and I have been wonderfully spared, and myself with remarkable health, and a considerable activity of body and mind. I am on horseback three or four hours of every day; visit three or four times a year a possession I have ninety miles distant, performing the winter journey on horseback. I walk little, however, a single mile being too much for me, and I live in the midst of my grandchildren, one of whom has lately promoted me to be a great-grandfather. I have heard with pleasure that you also retain good health, and a greater power of exercise in walking than I do. But I would rather have heard this from

yourself, and that, writing a letter like mine, full of egotisms, and of details of your health, your habits, occupations and enjoyments, I should have the pleasure of knowing that in the race of life, you do not keep, in its physical decline, the same distance ahead of me which you have done in political honors and achievements. No circumstances have lessened the interest I feel in these particulars respecting yourself; none have suspended for one moment my sincere esteem for you, and I now salute you with unchanged affection and respect.

TO F. A. VAN DER KEMP

Monticello, March 22, 1812

.... The only orthodox object of the institution of government is to secure the greatest degree of happiness possible to the general mass of those associated under it. The events which this work proposes to embrace will establish the fact that unless the mass retains sufficient control over those intrusted with the powers of their government, these will be perverted to their own oppression, and to the perpetuation of wealth and power in the individuals and their families selected for the trust. Whether our Constitution has hit on the exact degree of control necessary, is yet under experiment; and it is a most encouraging reflection that distance and other difficulties securing us against the brigand governments of Europe, in the safe enjoyment of our farms and firesides, the experiment stands a better chance of being satisfactorily made here than on any occasion yet presented by history. To promote, therefore, unanimity and perseverance in this great enterprise, to disdain despair, encourage trial, and nourish hope, and the worthiest objects of every political and philanthropic work; and that this would be the necessary result of that which you have delineated, the facts it will review, and the just reflections arising out of them, will sufficiently answer. I hope, therefore, that it is not in petto merely, but already completed; and that my fellow citizens, warned in it of the rocks and shoals on which other political associations have been wrecked, will be able to direct theirs with a better knowledge of the dangers in its way....

TO JAMES MAURY

Monticello, April 25, 1812

.... Our two countries are to be at war, but not you and I. And why should our two countries be at war, when by peace we can be so much more useful to one another? Surely the world will acquit our government from having sought it. Never before has there been an instance of a nation's bearing so much as we have borne. Two items alone in our catalogue of wrongs will forever acquit us of being the aggressors: the impressment of our seamen, and the excluding us from the ocean. The first, foundations of the social compact would be broken up, were we definitively to refuse to its members the protection of their persons and property, while in their lawful pursuits. I think the war will not be short, because the object of England, long obvious, is to claim the ocean as her domain, and to exact transit duties from every vessel traversing it. This is the sum of her orders of council, which were only a step in this bold experiment, never meant to be retracted if it could be permanently maintained. And this object must continue her in war with all the world. To this I see no termination, until her exaggerated efforts, so much beyond her natural strength and resources, shall have exhausted her to bankruptcy. The approach of this crisis is, I think, visible in the departure of her precious metals, and depreciation of her paper medium. We, who have gone through that operation, know its symptoms, its course, and consequences. In England they will be more serious than elsewhere, because half the wealth of her people is now in that medium, the private revenue of her money-holders, or rather of her paper-holders, being, I believe, greater than that of her land-holders. Such a proportion of property, imaginary and baseless as it is, cannot be reduced to vapor but with great explosion. She will rise out

of its ruins, however, because her lands, her houses, her arts will remain, and the greater part of her men. And these will give her again that place among nations which is proportioned to her natural means, and which we all wish her to hold. We believe that the just standing of all nations is the health and security of all, We consider the overwhelming power of England on the ocean, and of France on the land, as destructive of the prosperity and happiness of the world, and wish both to be reduced only to the necessity of observing moral duties. We believe no more in Bonaparte's fighting merely for the liberty of the seas, than in Great Britain's fighting for the liberties of mankind. The object of both is the same, to draw to themselves the power, the wealth and the resources of other nations. We resist the enterprises of England first, because they first come vitally home to us. And our feelings repel the logic of bearing the lash of George the III for fear of that of Bonaparte at some future day. When the wrongs of France shall reach us with equal effect, we shall resist them also. But one at a time is enough; and having offered a choice to the champions, England first takes up the gauntlet.

The English newspapers suppose me the personal enemy of their nation. I am not so. I am an enemy to its injuries, as I am to those of France. If I could permit myself to have national partialities, and if the conduct of England would have permitted them to be directed towards her, they would have been so....

TO JOHN MELISH

Monticello, January 13, 1813

.... I had no conception that manufactures had made such progress there [the Western States] , and particularly of the number of carding and spinning machines dispersed through the whole country. We are but beginning here to have them in our private families. Small spinning jennies of from half a dozen to twenty spindles, will soon, however, make their way into the humblest cottages, as well as the richest houses; and nothing is more certain, than that the coarse and middling clothing for our families, will forever hereafter continue to be made within ourselves. I have hitherto myself depended entirely on foreign manufactures; but I have now thirty-five spindles agoing, a hand carding machine, and looms with the flying shuttle, for the supply of my own farms, which will never be relinquished in my time. The continuance of the war will fix the habit generally, and out of the evils of impressment and of the orders of council a great blessing for us will grow. I havenot formerly been an advocate for great manufactories. I doubted whether our labor, employed in agriculture, and aided by the spontaneous energies of the earth, would not procure us more than we could make ourselves of other necessities. But other considerations entering into the question, have settled my doubts.

The candor with which you have viewed the manners and condition of our citizens, is so unlike the narrow prejudices of the French and English travellers preceding you, who, considering each the manners and habits of their own people as the only orthodox, have viewed everything differing from that test as boorish and barbarous, that your work will be read here extensively, and operate great good.

Amidst this mass of approbation which is given to every other

part of the work, there is a single sentiment which I cannot help wishing to bring to what I think the correct one; and, on a point so interesting, I value your opinion too highly not to ambition its concurrence with my own. Stating in volume one, page sixty-three, the principle of difference between the two great political parties here, you conclude it to be, “whether the controlling power shall be vested in this or that set of men.” That each party endeavors to get into the administration of the government, and exclude the other from power, is true, and may be stated as a motive of action: but this is only secondary; the primary motive being a real and radical difference of political principle. I sincerely wish our differences were but personally who should govern, and that the principles of our constitution were those of both parties. Unfortunately, it is otherwise; and the question of preference between monarchy and republicanism, which has so long divided mankind elsewhere, threatens a permanent division here.

Among that section of our citizens called federalists, there are three shades of opinion. Distinguishing between the leaders and people who compose it, the leaders consider the English constitution as a model of perfection, some, with a correction of its vices, others, with all its corruptions and abuses. This last was Alexander Hamilton’s opinion, which others, as well as myself, have often heard him declare, and that a correction of what are called its vices, would render the English an impracticable government. This government they wished to have established here, and only accepted and held fast, at first, to the present constitution, as a steppingstone to the final establishment of their favorite model. This party has therefore always clung to England as their prototype, and great auxiliary in promoting and effecting this change. A weighty MINORITY, however, of these leaders, considering the voluntary conversion of our government into a monarchy as too distant, if not desperate, wish to break off from our Union its eastern fragment, as being, in truth, the hot-bed of American monarchism, with a view to a commencement of their favorite

government, from whence the other States may gangrene by degrees, and the whole be thus brought finally to the desired point. For Massachusetts, the prime mover in this enterprise, is the last State in the Union to mean a final separation, as being of all the most dependent on the others. Not raising bread for the sustenance of her own inhabitants, not having a stick of timber for the construction of vessels, her principal occupation, nor an article to export in them, where would she be, excluded from the ports of the other States, and thrown into dependence on England, her direct, and natural, but now insidious rival? At the head of this MINORITY is what is called the Essex Junto of Massachusetts. But the MAJORITY of these leaders do not aim at separation. In this, they adhere to the known principle of General Hamilton, never, under any views, to break the Union. Anglomany, monarchy, and separation, then, are the principles of the Essex federalists. Anglomany and monarchy, those of the Hamiltonians, and Anglomany alone, that of the portion among the people who call themselves federalists. These last are as good republicans as the brethren whom they oppose, and differ from them only in their devotion to England and hatred of France which they have imbibed from their leaders. The moment that these leaders should avowedly propose a separation of the Union, or the establishment of regal government, their popular adherents would quit them to a man, and join the republican standard; and the partisans of this change, even in Massachusetts, would thus find themselves an army of officers without a soldier.

The party called republican is steadily for the support of the present constitution. They obtained at its commencement, all the amendments to it they desired. These reconciled them to it perfectly, and if they have any ulterior view, it is only, perhaps, to popularize it further, by shortening the Senatorial term, and devising a process for the responsibility of judges, more practicable than that of impeachment. They esteem the people of England and France equally,

and equally detest the governing powers of both.

This I verily believe, after an intimacy of forty years with the public councils and characters, is a true statement of the grounds on which they are at present divided, and that it is not merely an ambition for power. An honest man can feel no pleasure in the exercise of power over his fellow citizens. And considering as the only offices of power those conferred by the people directly, that is to say, the executive and legislative functions of the General and State governments, the common refusal of these, and multiplied resignations, are proofs sufficient that power is not alluring to pure minds, and is not, with them, the primary principle of contest. This is my belief of it; it is that on which I have acted; and had it been a mere contest who should be permitted to administer the government according to its genuine republican principles, there has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books.

You expected to discover the difference of our party principles in General Washington's valedictory, and my inaugural address. Not at all. General Washington did not harbor one principle of federalism. He was neither an Angloman, a monarchist, nor a separatist. He sincerely wished the people to have as much self-government as they were competent to exercise themselves. The only point on which he and I ever differed in opinion, was, that I had more confidence than he had in the natural integrity and discretion of the people, and in the safety and extent to which they might trust themselves with a control over their government. He has asseverated to me a thousand times his determination that the existing government should have a fair trial, and that in support of it he would spend the last drop of his blood. He did this the more repeatedly, because he knew General Hamilton's political bias, and my apprehensions from it. It is a mere calumny, therefore, in the monarchists, to associate General Washington with

their principles. But that may have happened in this case which has been often seen in ordinary cases, that, by oft repeating an untruth, men come to believe it themselves. It is a mere artifice in this party to bolster themselves up on the revered name of that first of our worthies. If I have dwelt longer on this subject than was necessary, it proves the estimation in which I hold your ultimate opinions, and my desire of placing the subject truly before them. In so doing, I am certain I risk no use of the communication which may draw me into contention before the public. Tranquillity is the summum bonum of a Septagenaire....

TO COLONEL WILLIAM DUANE

Monticello, January 22, 1813

DEAR SIR, —I do not know how the publication of the Review turned out in point of profit, whether gainfully or not. I know it ought to have been a book of great sale. I gave a copy to a student of William and Mary college, and recommended it to Bishop Madison, then President of the college, who was so pleased with it that he established it as a school-book, and as the young gentleman informed me, every copy which could be had was immediately bought up, and there was a considerable demand for more. You probably know best whether new calls for it have been made. President Madison was a good whig.... Your experiment on that work will enable you to decide whether you ought to undertake another, not of greater but of equal merit. I have received from France a MS. work on Political Economy, written by De Tutt Tracy, the most conspicuous writer of the present day in the metaphysical line. He has written a work entitled Ideology, which has given him a high reputation in France. He considers that as having laid a solid foundation for the present volume on Political Economy, and will follow it by one on Moral Duties. The present volume is a work of great ability. It may be considered as a review of the principles of the Economists, of Smith and of Say, or rather an elementary book on the same subject. As Smith had corrected some principles of the Economists, and Say some of Smith's, so Tracy has done as to the whole. He has, in my opinion, corrected fundamental errors in all of them, and by simplifying principles, has brought the subject within a narrow compass. I think the volume would be of about the size of the Review of Montesquieu. Although he puts his name to the work, he is afraid to publish it in France, lest its freedom should bring him into trouble. If translated and published here, he

could disavow it, if necessary. In order to enable you to form a better judgment of the work, I will subjoin a list of the chapters or heads, and if you think proper to undertake the translation and publication, I will send the work itself. You will certainly find it one of the very first order....

TO COLONEL WILLIAM DUANE

Monticello, April 4, 1813

.... It is true that I am tired of practical politics, and happier while reading the history of ancient than of modern times. The total banishment of all moral principle from the code which governs the intercourse of nations, the melancholy reflection that after the mean, wicked and cowardly cunning of the cabinets of the age of Machiavelli had given place to the integrity and good faith which dignified the succeeding one of a Chatham and Turgot, that this is to be swept away again by the daring profligacy and avowed destitution of all moral principle of a Cartouche and a Blackbeard, sickens my soul unto death. I turn from the contemplation with loathing, and take refuge in the histories of other times, where, if they also furnish their Tarquins, their Catilines and Caligulas, their stories are handed to us under the brand of a Livy, a Sallust and a Tacitus, and we are comforted with the reflection that the condemnation of all succeeding generations has confirmed the censures of the historian, and consigned their memories to everlasting infamy, a solace we cannot have with the Georges and Napoleons but by anticipation....

TO JOHN ADAMS

Monticello, May 27, 1813

.... I sincerely congratulate you on the successes of our little navy; which must be more gratifying to you than to most men, as having been the early and constant advocate of wooden walls. If I have differed with you on this ground, it was not on the principle, but the time; supposing that we cannot build or maintain a navy which will not immediately fall into the same gulf which has swallowed not only the minor navies, but even those of the great second-rate powers of the sea. Whenever these can be resuscitated, and brought so near to a balance with England that we can turn the scale, then is my epoch for aiming at a navy. In the meantime, one competent to keep the Barbary States in order, is necessary; these being the only smaller powers disposed to quarrel with us....

TO JOHN ADAMS

Monticello, June 27, 1813

.... Men have differed in opinion, and been divided into parties by these opinions, from the first origin of societies, and in all governments where they have been permitted freely to think and to speak. The same political parties which now agitate the United States, have existed through all time. Whether the power of the people or that of the aristoi should prevail, were questions which kept the States of Greece and Rome in eternal convulsions, as they now schismatize every people whose minds and mouths are not shut up by the gag of a despot. And in fact, the terms of whig and tory belong to natural as well as to civil history. They denote the temper and constitution of mind of different individuals. To come to our own country, and to the times when you and I became first acquainted, we well remember the violent parties which agitated the old Congress, and their bitter contests. There you and I were together, and the Jays, and the Dickinsons, and other anti-independents, were arrayed against us. They cherished the monarchy of England, and we the rights of our countrymen. When our present government was in the mew, passing from Confederation to Union, how bitter was the schism between the Feds and Antis! Here you and I were together again. For although, for a moment, separated by the Atlantic from the scene of action, I favored the opinion that nine States should confirm the constitution, in order to secure it, and the others hold off until certain amendments, deemed favorable to freedom, should be made. I rallied in the first instant to the wiser proposition of Massachusetts, that all should confirm, and then all instruct their delegates to urge those amendments. The amendments were made, and all were reconciled to the government. But as soon as it was put into motion, the line of

division was again drawn. We broke into two parties, each wishing to give the government a different direction; the one to strengthen the most popular branch, the other the more permanent branches, and to extend their permanence. Here you and I separated for the first time, and as we had been longer than most others on the public theatre, and our names therefore were more familiar to our countrymen, the party which considered you as thinking with them, placed your name at their head; the other, for the same reason, selected mine. But neither decency nor inclination permitted us to become the advocates of ourselves, or to take part personally in the violent contests which followed. We suffered ourselves, as you so well expressed it, to be passive subjects of public discussion....

TO DR. SAMUEL BROWN

Monticello, July 14, 1813

DEAR SIR, —Your favors of May 25th and June 13th have been duly received, as also the first supply of Capsicum, and the second of the same article with other seeds. I shall set great store by the Capsicum, if it is hardy enough for our climate, the species we have heretofore tried being too tender. The Galvance too, will be particularly attended to, as it appears very different from what we cultivate by that name. I have so many grandchildren and others who might be endangered by the poison plant, that I think the risk overbalances the curiosity of trying it. The most elegant thing of that kind known is a preparation of the Jamestown weed, *Datura-Stramonium*, invented by the French in the time of Robespierre. Every man of firmness carried it constantly in his pocket to anticipate the guillotine. It brings on the sleep of death as quietly as fatigue does the ordinary sleep, without the least struggle or motion. Condorcet, who had recourse to it, was found lifeless on his bed a few minutes after his landlady had left him there, and even the slipper which she had observed half suspended on his foot, was not shaken off. It seems far preferable to the Venesection of the Romans, the Hemlock of the Greeks, and the Opium of the Turks. I have never been able to learn what the preparation is, other than a strong concentration of its lethiferous principle. Could such a medicament be restrained to self-administration, it ought not to be kept secret. There are ills in life as desperate as intolerable, to which it would be the rational relief, e.g. the inveterate cancer. As a relief from tyranny indeed, for which the Romans recurred to it in the times of the emperors, it has been a wonder to me that they did not consider a poignard in the breast of the tyrant as a better remedy....

TO ISAAC MCPHERSON

Monticello, August 13, 1813

.... It has been pretended by some, (and in England especially,) that inventors have a natural and exclusive right to their inventions, and not merely for their own lives, but inheritable to their heirs. But while it is a moot question whether the origin of any kind of property is derived from nature at all, it would be singular to admit a natural and even an hereditary right to inventors. It is agreed by those who have seriously considered the subject, that no individual has, of natural right, a separate property in an acre of land, for instance. By an universal law, indeed, whatever, whether fixed or movable, belongs to all men equally and in common, is the property for the moment of him who occupies it, but when he relinquishes the occupation, the property goes with it. Stable ownership is the gift of social law, and is given late in the progress of society. It would be curious then, if an idea, the fugitive fermentation of an individual brain, could, of natural right, be claimed in exclusive and stable property. If nature has made any one thing less susceptible than all others of exclusive property, it is the action of the thinking power called an idea, which an individual may exclusively possess as long as he keeps it to himself; but the moment it is divulged, it forces itself into the possession of every one, and the receiver cannot dispossess himself of it. Its peculiar character, too, is that no one possesses the less, because every other possesses the whole of it. He who receives an, idea from me, receives instruction himself without lessening mine; as he who lights his taper at mine, receives light without darkening me. That ideas should freely spread from one to another over the globe, for the moral and mutual instruction of man, and improvement of his condition, seems to have been peculiarly and benevolently

designed by nature, when she made them, like fire, expansible over all space, without lessening their density in any point, and like the air in which we breathe, move, and have our physical being, incapable of confinement or exclusive appropriation. Inventions then cannot, in nature, be a subject of property. Society may give an exclusive right to the profits arising from them, as an encouragement to men to pursue ideas which may produce utility, but this may or may not be done, according to the will and convenience of the society, without claim or complaint from anybody....

TO JOHN ADAMS

Monticello, October 13, 1813

.... To compare the morals of the Old, with those of the New Testament, would require an attentive study of the former, a search through all its books for its precepts, and through all its history for its practices, and the principles they prove. As commentaries, too, on these, the philosophy of the Hebrews must be inquired into, their Mishna, their Gemara, Cabbala, Jezirah, Sohar, Cosri, and their Talmud, must be examined and understood, in order to do them full justice. Brucker, it would seem, has gone deeply into these repositories of their ethics, and Enfield, his epitomizer, concludes in these words: "Ethics were so little understood among the Jews, that in their whole compilation called the Talmud, there is only one treatise on moral subjects. Their books of morals chiefly consisted in a minute enumeration of duties. From the law of Moses were deduced six hundred and thirteen precepts, which were divided into two classes, affirmative and negative, two hundred and forty-eight in the former, and three hundred and sixty-five in the latter. It may serve to give the reader some idea of the low state of moral philosophy among the Jews in the middle age, to add that of the two hundred and forty-eight affirmative precepts, only three were considered as obligatory upon women, and that in order to obtain salvation, it was judged sufficient to fulfill any one single law in the hour of death; the observance of the rest being deemed necessary, only to increase the felicity of the future life. What a wretched depravity of sentiment and manners must have prevailed, before such corrupt maxims could have obtained credit! It is impossible to collect from these writings a consistent series of moral doctrine." Enfield, B. 4, chapter 3. It was the reformation of this "wretched depravity" of morals which Jesus undertook. In extracting

the pure principles which he taught, we should have to strip off the artificial vestments in which they have been muffled by priests, who have travestied them into various forms, as instruments of riches and power to themselves. We must dismiss the Platonists and Plotinists, the Stagyrtes, and Gamalielites, the Eclectics, the Gnostics and Scholastics, their essences and emanations, their Logos and Demiurgos, Æons and Dæmons, male and female, with a long train of etc., etc., etc., or, shall I say at once, of nonsense. We must reduce our volume to the simple evangelists, select, even from them, the very words only of Jesus, paring off the amphibologisms into which they have been led, by forgetting often, or not understanding, what had fallen from him, by giving their own misconceptions as his dicta, and expressing unintelligibly for others what they had not understood themselves. There will be found remaining the most sublime and benevolent code of morals which has ever been offered to man. I have performed this operation for my own use, by cutting verse by verse out of the printed book, and arranging the matter which is evidently his, and which is as easily distinguishable as diamonds in a dunghill. The result is an octavo of forty-six pages, of pure and unsophisticated doctrines, such as were professed and acted on by the unlettered Apostles, the Apostolic Fathers, and the Christians of the first century. Their Platonizing successors, indeed, in after times, in order to legitimate the corruptions which they had incorporated into the doctrines of Jesus, found it necessary to disavow the primitive Christians, who had taken their principles from the mouth of Jesus himself, of his Apostles, and the Fathers cotemporary with them. They excommunicated their followers as heretics, branding them with the opprobrious name of Ebionites or Beggars....

TO JOHN ADAMS

Monticello, October 28, 1813

.... I agree with you that there is a natural aristocracy among men. The grounds of this are virtue and talents. Formerly, bodily powers gave place among the aristoi. But since the invention of gunpowder has armed the weak as well as the strong with missile death, bodily strength, like beauty, good humor, politeness and other accomplishments, has become but an auxiliary ground of distinction. There is also an artificial aristocracy, founded on wealth and birth, without either virtue or talents; for with these it would belong to the first class. The natural aristocracy I consider as the most precious gift of nature, for the instruction, the trusts, and government of society. And indeed, it would have been inconsistent in creation to have formed man for the social state, and not to have provided virtue and wisdom enough to manage the concerns of the society. May we not even say, that that form of government is the best, which provides the most effectually for a pure selection of these natural aristoi into the offices of government? The artificial aristocracy is a mischievous ingredient in government, and provision should be made to prevent its ascendancy....

With respect to aristocracy, we should further consider, that before the establishment of the American States, nothing was known to history but the man of the old world, crowded within limits either small or overcharged, and steeped in the vices which that situation generates. A government adapted to such men would be one thing; but a very different one, that for the man of these States. Here every one may have land to labor for himself, if he chooses; or, preferring the exercise of any other industry, may exact for it such compensation as not only to afford a comfortable subsistence, but wherewith to

provide for a cessation from labor in old age. Every one, by his property, or by his satisfactory situation, is interested in the support of law and order. And such men may safely and advantageously reserve to themselves a wholesome control over their public affairs, and a degree of freedom, which, in the hands of the canaille of the cities of Europe, would be instantly perverted to the demolition and destruction of everything public and private. The history of the last twenty-five years of France, and of the last forty years in America, nay of its last two hundred years, proves the truth of both parts of this observation.

But even in Europe a change has sensibly taken place in the mind of man. Science had liberated the ideas of those who read and reflect, and the American example had kindled feelings of right in the people. An insurrection has consequently begun, of science, talents, and courage, against rank and birth, which have fallen into contempt. It has failed in its first effort, because the mobs of the cities, the instrument used for its accomplishment, debased by ignorance, poverty, and vice, could not be restrained to rational action. But the world will recover from the panic of this first catastrophe. Science is progressive, and talents and enterprise on the alert. Resort may be had to the people of the country, a more governable power from their principles and subordination; and rank, and birth, and tinsel-aristocracy will finally shrink into insignificance, even there. This, however, we have no right to meddle with. It suffices for us, if the moral and physical condition of our own citizens qualifies them to select the able and good for the direction of their government, with a recurrence of elections at such short periods as will enable them to displace an unfaithful servant, before the mischief he meditates may be irremediable....

TO DR. THOMAS COOPER

Monticello, January 16, 1814

.... You ask if it is a secret who wrote the commentary on Montesquieu? It must be a secret during the author's life. I may only say at present that it was written by a Frenchman, that the original MS. in French is now in my possession, that it was translated and edited by General Duane, and that I should rejoice to see it printed in its original tongue, if any one would undertake it. No book can suffer more by translation, because of the severe correctness of the original in the choice of its terms. I have taken measures for securing to the author his justly-earned fame, whenever his death or other circumstances may render it safe for him. Like you, I do not agree with him in everything, and have had some correspondence with him on particular points. But on the whole, it is a most valuable work, one which I think will form an epoch in the science of government, and which I wish to see in the hands of every American student, as the elementary and fundamental institute of that important branch of human science....

TO MONSIEUR N. G. DUFIEF

Monticello, April 19, 1814

DEAR SIR, —Your favor of the 6th instant is just received, and I shall with equal willingness and truth, state the degree of agency you had, respecting the copy of M. de Becourt's book, which came to my hands. That gentleman informed me, by letter, that he was about to publish a volume in French, "Sur la Creation du Monde, un Systeme d'Organisation Primitive," which, its title promised to be, either a geological or astronomical work. I subscribed; and, when published, he sent me a copy; and as you were my correspondent in the book line in Philadelphia, I took the liberty of desiring him to call on you for the price, which, he afterwards informed me, you were so kind as to pay him for me, being, I believe, two dollars. But the sole copy which came to me was from himself directly, and, as far as I know, was never seen by you.

I am really mortified to be told that, in the United States of America, a fact like this can become a subject of inquiry, and of criminal inquiry too, as an offence against religion; that a question about the sale of a book can be carried before the civil magistrate. Is this then our freedom of religion? and are we to have a censor whose imprimatur shall say what books may be sold, and what we may buy? And who is thus to dogmatize religious opinions for our citizens? Whose foot is to be the measure to which ours are all to be cut or stretched? Is a priest to be our inquisitor, or shall a layman, simple as ourselves, set up his reason as the rule for what we are to read, and what we must believe? It is an insult to our citizens to question whether they are rational beings or not, and blasphemy against religion to suppose it cannot stand the test of truth and reason. If M. de Becourt's book be false in its facts, disprove them; if false in its

reasoning, refute it. But, for God's sake, let us freely hear both sides, if we choose....

TO THOMAS LAW, ESQ.

Poplar Forest, June 13, 1814

DEAR SIR, —The copy of your Second Thoughts on Instinctive Impulses, with the letter accompanying it, was received just as I was setting out on a journey to this place, two or three days distant from Monticello. I brought it with me and read it with great satisfaction, and with the more as it contained exactly my own creed on the foundation of morality in man. It is really curious that on a question so fundamental, such a variety of opinions should have prevailed among men, and those, too, of the most exemplary virtue and first order of understanding. It shows how necessary was the care of the Creator in making the moral principle so much a part of our constitution as that no errors of reasoning or of speculation might lead us astray from its observation in practice. Of all the theories on this question, the most whimsical seems to have been that of Wollaston, who considers truth as the foundation of morality. The thief who steals your guinea does wrong only inasmuch as he acts a lie in using your guinea as if it were his own. Truth is certainly a branch of morality, and a very important one to society. But presented as its foundation, it is as if a tree taken up by the roots, had its stem reversed in the air, and one of its branches planted in the ground. Some have made the love of God the foundation of morality. This, too, is but a branch of our moral duties, which are generally divided into duties to God and duties to man. If we did a good act merely from the love of God and a belief that it is pleasing to Him, whence arises the morality of the Atheist? It is idle to say, as some do, that no such being exists. We have the same evidence of the fact as of most of those we act on, to wit: their own affirmations, and their reasonings in support of them. I have observed, indeed, generally, that while in

Protestant countries the defections from the Platonic Christianity of the priests is to Deism, in Catholic countries they are to Atheism. Diderot, D'Alembert, D'Holbach, Condorcet, are known to have been among the most virtuous of men. Their virtue, then, must have had some other foundation than the love of God.

The καλον [12] of others is founded in a different faculty, that of taste, which is not even a branch of morality. We have indeed an innate sense of what we call beautiful, but that is exercised chiefly on subjects addressed to the fancy, whether through the eye in visible forms, as landscape, animal figure, dress, drapery, architecture, the composition of colors, etc., or to the imagination directly, as imagery, style, or measure in prose or poetry, or whatever else constitutes the domain of criticism or taste, a faculty entirely distinct from the moral one. Self-interest, or rather self-love, or egoism, has been more plausibly substituted as the basis of morality. But I consider our relations with others as constituting the boundaries of morality. With ourselves we stand on the ground of identity, not of relation, which last, requiring two subjects, excludes self-love confined to a single one. To ourselves, in strict language, we can owe no duties, obligation requiring also two parties. Self-love, therefore, is no part of morality. Indeed it is exactly its counterpart. It is the sole antagonist of virtue, leading us constantly by our propensities to self-gratification in violation of our moral duties to others. Accordingly, it is against this enemy that are erected the batteries of moralists aid religionists, as the only obstacle to the practice of morality. Take from man his selfish propensities, and he can have nothing to seduce him from the practice of virtue. Or subdue those propensities by education, instruction or restraint, and virtue remains without a competitor. Egoism, in a broader sense, has been thus presented as the source of moral action. It has been said that we feed the hungry, clothe the naked, bind up the wounds of the man beaten by thieves, pour oil and wine into them, set him on our own beast and bring him to the inn, because we

receive ourselves pleasure from these acts. So Helvetius, one of the best men on earth, and the most ingenious advocate of this principle, after defining “interest” to mean not merely that which is pecuniary, but whatever may procure us pleasure or withdraw us from pain, [de l’esprit, 2,I,] says, [ib. 2, 2,] “the humane man is he to whom the sight of misfortune is insupportable, and who to rescue himself from this spectacle, is forced to succor the unfortunate object.” This indeed is true. But it is one step short of the ultimate question. These good acts give us pleasure, but how happens it that they give us pleasure? Because nature hath implanted in our breasts a love of others, a sense of duty to them, a moral instinct, in short, which prompts us irresistibly to feel and to succor their distresses, and protests against the language of Helvetius, [ib. 2, 5,] “what other motive than self-interest could determine a man to generous actions? It is as impossible for him to love what is good for the sake of good, as to love evil for the sake of evil.” The Creator would indeed have been a bungling artist, had he intended man for a social animal, without planting in him social dispositions. It is true they are not planted in every man, because there is no rule without exceptions; but it is false reasoning which converts exceptions into the general rule. Some men are born without the organs of sight, or of hearing, or without hands. Yet it would be wrong to say that man is born without these faculties, and sight, hearing, and hands may with truth enter into the general definition of man.

The want or imperfection of the moral sense in some men, like the want or imperfection of the senses of sight and hearing in others, is no proof that it is a general characteristic of the species. When it is wanting, we endeavor to supply the defect by education, by appeals to reason and calculation, by presenting to the being so unhappily conformed, other motives to do good and to eschew evil, such as the love, or the hatred, or rejection of those among whom he lives, and

whose society is necessary to his happiness and even existence; demonstrations by sound calculation that honesty promotes interest in the long run; the rewards and penalties established by the laws; and ultimately the prospects of a future state of retribution for the evil as well as the good done while here. These are the correctives which are supplied by education, and which exercise the functions of the moralist, the preacher, and legislator; and they lead into a course of correct action all those whose disparity is not too profound to be eradicated. Some have argued against the existence of a moral sense, by saying that if nature had given us such a sense, impelling us to virtuous actions, and warning us against those which are vicious, then nature would also have designated, by some particular ear-marks, the two sets of actions which are, in themselves, the one virtuous and the other vicious. Whereas, we find, in fact, that the same actions are deemed virtuous in one country and vicious in another. The answer is, that nature has constituted utility to man, the standard and test of virtue. Men living in different countries, under different circumstances, different habits and regimens, may have different utilities; the same act, therefore, may be useful, and consequently virtuous in one country which is injurious and vicious in another differently circumstanced. I sincerely, then, believe with you in the general existence of a moral instinct. I think it the brightest gem with which the human character is studded, and the want of it as more degrading than the most hideous of the bodily deformities. I am happy in reviewing the roll of associates in this principle which you present in your second letter, some of which I had not before met with. To these might be added Lord Kaimes, one of the ablest of our advocates, who goes so far as to say, in his Principles of Natural Religion, that a man owes no duty to which he is not urged by some impulsive feeling. This is correct, if referred to the standard of general feeling in the given case, and not to the feeling of a single individual. Perhaps I may misquote him, it being fifty years since I read his book.

The leisure and solitude of my situation here has led me to the indiscretion of taxing you with a long letter on a subject whereon nothing new can be offered you. I will indulge myself no farther than to repeat the assurances of my continued esteem and respect.

TO JOHN ADAMS

Monticello, July 5, 1814

.... Shall you and I last to see the course the sevenfold wonders of the times will take? The Attila of the age dethroned, the ruthless destroyer of ten millions of the human race, whose thirst for blood appeared unquenchable, the great oppressor of the rights and liberties of the world, shut up within the circle of a little island of the Mediterranean, and dwindled to the condition of an humble and degraded pensioner on the bounty of those he had most injured. How miserably, how meanly, has he closed his inflated career! What a sample of the bathos will his history present! He should have perished on the swords of his enemies, under the walls of Paris....

But Bonaparte was a lion in the field only. In civil life, a cold-blooded, calculating, unprincipled usurper, without a virtue; no statesman, knowing nothing of commerce, political economy, or civil government, and supplying ignorance by bold presumption....

TO EDWARD COLES

Monticello, August 25th, 1814

DEAR SIR, —Your favour of July 31, was duly received, and was read with peculiar pleasure. The sentiments breathed through the whole do honor to both the head and heart of the writer. Mine on the subject of slavery of negroes have long since been in possession of the public, and time has only served to give them stronger root. The love of justice and the love of country plead equally the cause of these people, and it is a moral reproach to us that they should have pleaded it so long in vain, and should have produced not a single effort, nay I fear not much serious willingness to relieve them & ourselves from our present condition of moral & political reprobation. From those of the former generation who were in the fulness of age when I came into public life, which was while our controversy with England was on paper only, I soon saw that nothing was to be hoped. Nursed and educated in the daily habit of seeing the degraded condition, both bodily and mental, of those unfortunate beings, not reflecting that that degradation was very much the work of themselves & their fathers, few minds have yet doubted but that they were as legitimate subjects of property as their horses and cattle. The quiet and monotonous course of colonial life has been disturbed by no alarm, and little reflection on the value of liberty. And when alarm was taken at an enterprize on their own, it was not easy to carry them to the whole length of the principles which they invoked for themselves. In the first or second session of the Legislature after I became a member, I drew to this subject the attention of Col. Bland, one of the oldest, ablest, & most respected members, and he undertook to move for certain moderate extensions of the protection of the laws to these people. I seconded his motion, and, as a younger member, was more spared in

the debate; but he was denounced as an enemy of his country, & was treated with the grossest indecorum. From an early stage of our revolution other & more distant duties were assigned to me, so that from that time till my return from Europe in 1789, and I may say till I returned to reside at home in 1809, I had little opportunity of knowing the progress of public sentiment here on this subject. I had always hoped that the younger generation receiving their early impressions after the flame of liberty had been kindled in every breast, & had become as it were the vital spirit of every American, that the generous temperament of youth, analogous to the motion of their blood, and above the suggestions of avarice, would have sympathized with oppression wherever found, and proved their love of liberty beyond their own share of it. But my intercourse with them, since my return has not been sufficient to ascertain that they had made towards this point the progress I had hoped. Your solitary but welcome voice is the first which has brought this sound to my ear; and I have considered the general silence which prevails on this subject as indicating an apathy unfavorable to every hope. Yet the hour of emancipation is advancing, in the march of time....

TO PETER CARR

Monticello, September 7, 1814

DEAR SIR, —On the subject of the academy or college proposed to be established in our neighborhood, I promised the trustees that I would prepare for them a plan, adapted, in the first instance, to our slender funds, but susceptible of being enlarged, either by their own growth or by accession from other quarters.

弗吉尼亚大学

I have long entertained the hope that this, our native State, would take up the subject of education, and make an establishment, either with or without incorporation into that of William and Mary, where every branch of science, deemed useful at this day, should be taught in its highest degree. With this view, I have lost no occasion of making myself acquainted with the organization of the best seminaries in other countries, and with the opinions of the most enlightened individuals, on the subject of the sciences worthy of a place in such an institution. In order to prepare what I have promised our trustees, I

have lately revised these several plans with attention; and I am struck with the diversity of arrangement observable in them—no two alike. Yet, I have no doubt that these several arrangements have been the subject of mature reflection, by wise and learned men, who, contemplating local circumstances, have adapted them to the conditions of the section of society for which they have been framed. I am strengthened in this conclusion by an examination of each separately, and a conviction that no one of them, if adopted without change, would be suited to the circumstances and pursuit of our country. The example they set, then, is authority for us to select from their different institutions the materials which are good for us, and, with them, to erect a structure, whose arrangement shall correspond with our own social condition, and shall admit of enlargement in proportion to the encouragement it may merit and receive. As I may not be able to attend the meetings of the trustees, I will make you the depository of my ideas on the subject, which may be corrected, as you proceed, by the better view of others, and adapted, from time to time, to the prospects which open upon us, and which cannot be specifically seen and provided for.

In the first place, we must ascertain with precision the object of our institution, by taking a survey of the general field of science, and marking out the portion we mean to occupy at first, and the ultimate extension of our views beyond that, should we be enabled to render it, in the end, as comprehensive as we would wish.

1. Elementary schools.

It is highly interesting to our country, and it is the duty of its functionaries, to provide that every citizen in it should receive an education proportioned to the condition and pursuits of his life. The mass of our citizens may be divided into two classes—the laboring and the learned. The laboring will need the first grade of education to qualify them for their pursuits and duties; the learned will need it as a

foundation for further acquirements. A plan was formerly proposed to the legislature of this State for laying off every county into hundreds or wards of five or six miles square, within each of which should be a school for the education of the children of the ward, wherein they should receive three years' instruction gratis, in reading, writing, arithmetic as far as fractions, the roots and ratios, and geography. The Legislature at one time tried an ineffectual expedient for introducing this plan, which having failed, it is hoped they will some day resume it in a more promising form.

2. General schools.

At the discharging of the pupils from the elementary schools, the two classes separate—those destined for labor will engage in the business of agriculture, or enter into apprenticeships to such handicraft art as may be their choice; their companions, destined to the pursuits of science, will proceed to the college, which will consist, 1st of general schools; and, 2d, of professional schools. The general schools will constitute the second grade of education.

The learned class may still be subdivided into two sections: 1, Those who are destined for learned professions, as means of livelihood; and, 2, The wealthy, who, possessing independent fortunes, may aspire to share in conducting the affairs of the nation, or to live with usefulness and respect in the private ranks of life. Both of these sections will require instruction in all the higher branches of science; the wealthy to qualify them for either public or private life; the professional section will need those branches, especially, which are the basis of their future profession, and a general knowledge of the others, as auxiliary to that, and necessary to their standing and association with the scientific class. All the branches, then, of useful science, ought to be taught in the general schools, to a competent degree, in the first instance. These sciences may be arranged into three departments, not rigorously scientific, indeed, but sufficiently so for

our purposes. These are, I. Language; II. Mathematics; III. Philosophy.

I. Language. In the first department, I would arrange a distinct science, 1, Languages and History, ancient and modern; 2, Grammar; 3, Belles Lettres; 4, Rhetoric and Oratory; 5, A school for the deaf, dumb and blind. History is here associated with languages, not as a kindred subject, but on the principle of economy, because both may be attained by the same course of reading, if books are selected with that view.

II. Mathematics. In the department of Mathematics, I should give place distinctly: 1, Mathematics pure; 2, Physico-Mathematics; 3, Physics; 4, Chemistry; 5. Natural History, to wit: Mineralogy; 6, Botany; and 7, Zoology; 8, Anatomy; 9, the Theory of Medicine.

III. Philosophy. In the Philosophical department, I should distinguish: 1, Ideology; 2, Ethics; 3, the Law of Nature and Nations; 4, Government; 5, Political Economy.

But, some of these terms being used by different writers, in different degrees of extension, I shall define exactly what I mean to comprehend in each of them.

I. 3. Within the term of Belles Lettres I include poetry and composition generally, and criticism.

II. 1. I consider pure mathematics as the science of, 1, Numbers, and 2, Measure in the abstract; that of numbers comprehending Arithmetic, Algebra and Fluxions; that of Measure (under the general appellation of Geometry), comprehending Trigonometry, plane and spherical, conic sections, and transcendental curves.

II. 2. Physico-Mathematics treat of physical subjects by the aid of mathematical calculation. These are Mechanics, Statics, Hydrostatics, Hydrodynamics, Navigation, Astronomy, Geography, Optics,

Pneumatics, Acoustics.

II. 3. Physics, or Natural Philosophy (not entering the limits of Chemistry) treat of natural substances, their properties, mutual relations and action. They particularly examine the subjects of motion, action, magnetism, electricity, galvanism, light, meteorology, with an etc. not easily enumerated. These definitions and specifications render immaterial the question whether I use the generic terms in the exact degree of comprehension in which others use them; to be understood is all that is necessary to the present object.

3. Professional Schools.

At the close of this course the students separate; the wealthy retiring, with a sufficient stock of knowledge, to improve themselves to any degree to which their views may lead them, and the professional section to the professional schools, constituting the third grade of education, and teaching the particular sciences which the individuals of this section mean to pursue, with more minuteness and detail than was within the scope of the general schools for the second grade of instruction. In these professional schools each science is to be taught in the highest degree it has yet attained. They are to be the

1st Department, the fine arts, to wit: Civil Architecture, Gardening, Painting, Sculpture, and the Theory of Music; the

2d Department, Architecture, Military and Naval; Projectiles, Rural Economy (comprehending Agriculture, Horticulture and Veterinary), Technical Philosophy, the Practice of Medicine, Materia Medica, Pharmacy and Surgery. In the

3d Department, Theology and Ecclesiastical History; Law, Municipal and Foreign.

To these professional schools will come those who separated at

the close of their first elementary course, to wit:

The lawyer to the law school.

The ecclesiastic to that of theology and ecclesiastical history.

The physician to those of medicine, materia medica, pharmacy and surgery.

The military man to that of military and naval architecture and projectiles.

The agricultor to that of rural economy.

The gentleman, the architect, the pleasure gardener, painter and musician to the school of fine arts.

And to that of technical philosophy will come the mariner, carpenter, shipwright, pumpmaker, clockmaker, machinist, optician, metallurgist, founder, cutler, druggist, brewer, vintner, distiller, dyer, painter, bleacher, soapmaker, tanner, powdermaker, saltmaker, glassmaker, to learn as much as shall be necessary to pursue their art understandingly, of the sciences of geometry, mechanics, statics, hydrostatics, hydraulics, hydrodynamics, navigation, astronomy, geography, optics, pneumatics, physics, chemistry, natural history, botany, mineralogy and pharmacy.

The school of technical philosophy will differ essentially in its functions from the other professional schools. The others are instituted to ramify and dilate the particular sciences taught in the schools of the second grade on a general scale only. The technical school is to abridge those which were taught there too much in extenso for the limited wants of the artificer or practical man. These artificers must be grouped together, according to the particular branch of science in which they need elementary and practical instruction; and a special lecture or lectures should be prepared for each group. And these

lectures should be given in the evening, so as not to interrupt the labors of the day, The school, particularly, should be maintained wholly at the public expense, on the same principles with that of the ward schools. Through the whole of the collegiate course, at the hours of recreation on certain days, all the students should be taught the manual exercise; military evolutions and manoeuvres should be under a standing organization as a military corps, and with proper officers to train and command them.

A tabular statement of this distribution of the sciences will place the system of instruction more particularly in view:

1st or Elementary Grade in the Ward Schools.

Reading, Writing, Arithmetic, Geography.

2d, or General Grade.

1. Language and History, ancient and modern.

2. Mathematics, viz: Mathematics pure, Physico-Mathematics, Physics, Chemistry, Anatomy, Theory of Medicine, Zoology, Botany and Mineralogy.

3. Philosophy, viz: Ideology, and Ethics, Law of Nature and Nations, Government, Political Economy.

3d, or Professional Grades.

Theology and Ecclesiastical History; Law, Municipal and Foreign; Practice of Medicine; Materia Medica and Pharmacy; Surgery; Architecture, Military and Naval, and Projectiles; Technical Philosophy; Rural Economy; Fine Arts.

On this survey of the field of science, I recur to the question, what portion of it we mark out for the occupation of our institution? With

the first grade of education we shall have nothing to do. The sciences of the second grade are our first object; and, to adapt them to our slender beginnings, we must separate them into groups, comprehending many sciences each, and greatly more, in the first instance, than ought to be imposed on, or can be competently conducted by a single professor permanently. They must be subdivided from time to time, as our means increase, until each professor shall have no more under his care than he can attend to with advantage to his pupils and ease to himself. For the present, we may group the sciences into professorships, as follows, subject, however, to be changed, according to the qualifications of the persons we may be able to engage.

I. Professorship.

Languages and History, ancient and modern.

Belles-Lettres, Rhetoric and Oratory.

II. Professorship.

Mathematics pure, Physico-Mathematics. Physics, Anatomy, Medicine, Theory.

III. Professorship.

Chemistry, Zoology, Botany, Mineralogy.

IV. Professorship.

Philosophy.

The organization of the branch of the institution which respects its government, police and economy, depending on principles which have no affinity with those of its institution, may be the subject of separate and subsequent consideration.

With this tribute of duty to the board of trustees, accept assurances of my great esteem and consideration.

TO DR. THOMAS COOPER

Monticello, September 10, 1814

.... And, first, we have no paupers, the old and crippled among us, who possess nothing and have no families to take care of them, being too few to merit notice as a separate section of society, or to affect a general estimate. The great mass of our population is of laborers; our rich, who can live without labor, either manual or professional, being few, and of moderate wealth. Most of the laboring class possess property, cultivate their own lands, have families, and from the demand for their labor are enabled to exact from the rich and the competent such prices as enable them to be fed abundantly, clothed above mere decency, to labor moderately and raise their families. They are not driven to the ultimate resources of dexterity and skill, because their wares will sell although not quite so nice as those of England. The wealthy, on the other hand, and those at their ease, know nothing of what the Europeans call luxury. They have only somewhat more of the comforts and decencies of life than those who furnish them. Can any condition of society be more desirable than this?....

TO SAMUEL H. SMITH, ESQ.

Monticello, September 21, 1814

DEAR SIR, —I learn from the newspapers that the vandalism of our enemy has triumphed at Washington over science as well as the arts, by the destruction of the public library with the noble edifice in which it was deposited. Of this transaction, as of that of Copenhagen, the world will entertain but one sentiment. They will see a nation suddenly withdrawn from a great war, full armed and full handed, taking advantage of another whom they had recently forced into it, unarmed, and unprepared, to indulge themselves in acts of barbarism which do not belong to a civilized age. When Van Ghent destroyed their shipping at Chatham, and De Ruyter rode triumphantly up the Thames, he might in like manner, by the acknowledgment of their own historians, have forced all their ships up to London bridge, and there have burnt them, the Tower, and city, had these examples been then set. London, when thus menaced, was near a thousand years old; Washington is but in its teens.

I presume it will be among the early objects of Congress to recommence their collection. This will be difficult while the war continues, and intercourse with Europe is attended with so much risk. You know my collection, its condition and extent. I have been fifty years making it, and have spared no pains, opportunity or expense, to make it what it is. While residing in Paris, I devoted every afternoon I was disengaged, for a summer or two, in examining all the principal bookstores, turning over every book with my own hand, and putting by everything which related to America, and indeed whatever was rare and valuable in every science. Besides this, I had standing orders during the whole time I was in Europe, on its principal book-marts, particularly Amsterdam, Frankfort, Madrid and London, for such

works relating to America as could not be found in Paris. So that in that department particularly, such a collection was made as probably can never again be effected, because it is hardly probable that the same opportunities, the same time, industry, perseverance and expense, with some knowledge of the bibliography of the subject, would again happen to be in concurrence. During the same period, and after my return to America, I was led to procure, also, whatever related to the duties of those in the high concerns of the nation. So that the collection, which I suppose is of between nine and ten thousand volumes, while it includes what is chiefly valuable in science and literature generally, extends more particularly to whatever belongs to the American statesman. In the diplomatic and parliamentary branches, it is particularly full. It is long since I have been sensible it ought not to continue private property, and had provided that at my death, Congress should have the refusal of it at their own price. But the loss they have now incurred, makes the present the proper moment for their accommodation, without regard to the small remnant of time and the barren use of my enjoying it. I ask of your friendship, therefore, to make for me the tender of it to the library committee of Congress, not knowing myself of whom the committee consists. I enclose you the catalogue, which will enable them to judge of its contents. Nearly the whole are well bound, abundance of them elegantly, and of the choicest editions existing. They may be valued by persons named by themselves, and the payment made convenient to the public. It may be, for instance, in such annual instalments as the law of Congress has left at their disposal, or in stock of any of their late loans, or of any loan they may institute at this session, so as to spare the present calls of our country, and await its days of peace and prosperity. They may enter, nevertheless, into immediate use of it, as eighteen or twenty wagons would place it in Washington in a single trip of a fortnight. I should be willing indeed, to retain a few of the books, to amuse the time I have yet to pass, which might be valued with the rest, but not included in

the sum of valuation until they should be restored at my death, which I would carefully provide for, so that the whole library as it stands in the catalogue at this moment should be theirs without any garbling. Those I should like to retain would be chiefly classical and mathematical. Some few in other branches, and particularly one of the five encyclopedias in the catalogue....

TO WILLIAM SHORT, ESQ.

Monticello, November 28, 1814

.... Although withdrawn from all anxious attention to political concerns, yet I will state my impressions as to the present war, because your letter leads to the subject. The essential grounds of the war were, 1st, the orders of council; and 2d, the impressment of our citizens; (for I put out of sight from the love of peace the multiplied insults on our government and aggressions on our commerce, with which our pouch, like the Indian's, had long been filled to the mouth.) What immediately produced the declaration was, 1st, the proclamation of the Prince Regent that he would never repeal the orders of council as to us, until Bonaparte should have revoked his decrees as to all other nations as well as ours; and 2d, the declaration of his minister to ours that no arrangement whatever could be devised, admissible in lieu of impressment. It was certainly a misfortune that they did not know themselves at the date of this silly and insolent proclamation, that within one month they would repeal the orders, and that we, at the date of our declaration, could not know of the repeal which was then going on one thousand leagues distant. Their determinations, as declared by themselves, could alone guide us, and they shut the door on all further negotiation, throwing down to us the gauntlet of war or submission as the only alternatives. We cannot blame the government for choosing that of war, because certainly the great majority of the nation thought it ought to be chosen, not that they were to gain by it in dollars and cents; all men know that war is a losing game to both parties. But they know also that if they do not resist encroachment at some point, all will be taken from them, and that more would then be lost even in dollars and cents by submission than resistance. It is the case of giving a part to save the whole, a limb

to save life. It is the melancholy law of human societies to be compelled sometimes to choose a great evil in order to ward off a greater; to deter their neighbors from rapine by making it cost them more than honest gains. The enemy are accordingly now disgorging what they had so ravenously swallowed. The orders of council had taken from us near one thousand vessels. Our list of captures from them is now one thousand three hundred, and, just become sensible that it is small and not large ships which gall them most, we shall probably add one thousand prizes a year to their past losses. Again, supposing that, according to the confession of their own minister in Parliament, the Americans they had impressed were something short of two thousand, the war against us alone cannot cost them less than twenty millions of dollars a year, so that each American impressed has already cost them ten thousand dollars, and every year will add five thousand dollars more to his price. We, I suppose, expend more; but had we adopted the other alternative of submission, no mortal can tell what the cost would have been. I consider the war then as entirely justifiable on our part, although I am still sensible it is a deplorable misfortune to us. It has arrested the course of the most remarkable tide of prosperity any nation ever experienced, and has closed such prospects of future improvement as were never before in the view of any people. Farewell all hopes of extinguishing public debt! farewell all visions of applying surpluses of revenue to trie improvements of peace rather than the ravages of war. Our enemy has indeed the consolation of Satan on removing our first parents from Paradise: from a peaceable and agricultural nation, he makes us a military and manufacturing one. We shall indeed survive the conflict. Breeders enough will remain to carry on population. We shall retain our country, and rapid advances in the art of war will soon enable us to beat our enemy, and probably drive him from the continent....

TO THE MARQUIS DE LAFAYETTE

Monticello, February 14, 1815

.... Possibly you may remember, at the date of the jeu de paume, how earnestly I urged yourself and the patriots of my acquaintance, to enter then into a compact with the king, securing freedom of religion, freedom of the press, trial by jury, habeas corpus, and a national legislature, all of which it was known he would then yield, to go home, and let these work on the amelioration of the condition of the people, until they should have rendered them capable of more, when occasions would not fail to arise for communicating to them more. This was as much as I then thought them able to bear, soberly and usefully for themselves. You thought otherwise, and that the dose might still be larger. And I found you were right; for subsequent events proved they were equal to the Constitution of 1791. Unfortunately, some of the most honest and enlightened of our patriotic friends, (but closet politicians merely, unpractised in the knowledge of man,) thought more could still be obtained and borne. They did not weigh the hazards of a transition from one form of government to another, the value of what they had already rescued from those hazards, and might hold in security if they pleased, nor the imprudence of giving up the certainty of such a degree of liberty, under a limited monarch, for the uncertainty of a little more under the form of a republic. You differed from them. You were for stopping there, and for securing the Constitution which the National Assembly had obtained. Here, too, you were right; and from this fatal error of the republicans, from their separation from yourself and the constitutionalists, in their councils, flowed all the subsequent sufferings and crimes of the French nation, The hazards of a second

change fell upon them by the way. The foreigner gained time to anarchise by gold the government he could not overthrow by arms, to crush in their own councils the genuine republicans, by the fraternal embraces of exaggerated and hired pretenders, and to turn the machine of Jacobinism from the change to the destruction of order; and, in the end, the limited monarchy they had secured was exchanged for the unprincipled and bloody tyranny of Robespierre, and the equally unprincipled and maniac tyranny of Bonaparte. You are now rid of him, and I sincerely wish you may continue so, But this may depend on the wisdom and moderation of the restored dynasty. It is for them now to read a lesson in the fatal errors of the republicans; to be contented with a certain portion of power, secured by formal compact with the nation, rather than, grasping at more, hazard all upon uncertainty, and risk meeting the fate of their predecessor, or a renewal of their own exile....

TO JAMES MAURY

Monticello, June 15, 1815

I congratulate you, my dear and ancient friend, on the return of peace, and the restoration of intercourse between our two countries. What has passed may be a lesson to both of the injury which either can do the other, and the peace now opened may show what would be the value of a cordial friendship; and I hope the first moments of it will be employed to remove the stumbling block which must otherwise keep us eternal enemies. I mean the impressment of our citizens. This was the sole object of the continuance of the late war, which the repeal of the orders of council would otherwise have ended at its beginning. If according to our estimates, England impressed into her navy 6,000 of our citizens, let her count the cost of the war, and a greater number of men lost in it, and she will find this resource for manning her navy the most expensive she can adopt, each of these men having cost her £30,000 sterling, and a man of her own besides. On that point we have thrown away the scabbard, and the moment an European war brings her back to this practice, adds us again to her enemies. But I hope an arrangement is already made on this subject. Have you no statesmen who can look forward two or three score years? It is but forty years since the battle of Lexington. One-third of those now living saw that day, when we were about two millions of people, and have lived to see this, when we are ten millions. One-third of those now living, who see us at ten millions, will live another forty years, and see us forty millions; and looking forward only through such a portion of time as has passed since you and I were scanning Virgil together, (which I believe is near three score years,) we shall be seen to have a population of eighty millions, and of not more than double the average density of the present. What may not such a

people be worth to England as customers and friends? and what might she not apprehend from such a nation as enemies? Now, what is the price we ask for our friendship? Justice, and the comity usually observed between nation and nation....

TO ALBERT GALLATIN

Monticello, October 16, 1815

.... I grieve for France; although it cannot be denied that by the afflictions with which she wantonly and wickedly overwhelmed other nations, she has merited severe reprisals. For it is no excuse to lay the enormities to the wretch who led to them, and who has been the author of more misery and suffering to the world, than any being who ever lived before him. After destroying the liberties of his country, he has exhausted all its resources, physical and moral, to indulge his own maniac ambition, his own tyrannical and overbearing spirit. His sufferings cannot be too great. But theirs I sincerely deplore, and what is to be their term? The will of the allies? There is no more moderation, forbearance, or even honesty in theirs, than in that of Bonaparte. They have proved that their object, like his, is plunder. They, like him, are shuffling nations together, or into their own hands, as if all were right which they feel a power to do. In the exhausted state in which Bonaparte has left France, I see no period to her sufferings, until this combination of robbers fall together by the ears. The French may then rise up and choose their side. And I trust they will finally establish for themselves a government of rational and well-tempered liberty. So much science cannot be lost; so much light shed over them can never fail to produce to them some good, in the end....

TO COLONEL CHARLES YANCEY

Monticello, January 6, 1816

.... Like a dropsical man calling out for water, water, our deluded citizens are clamoring for more banks, more banks. The American mind is now in that state of fever which the world has so often seen in the history of other nations. We are under the bank bubble, as England was under the South Sea bubble, France under the Mississippi bubble, and as every nation is liable to be, under whatever bubble, design, or delusion may puff up in moments when off their guard. We are now taught to believe that legerdemain tricks upon paper can produce as solid wealth as hard labor in the earth. It is vain for common sense to urge that nothing can produce but nothing; that it is an idle dream to believe in a philosopher's stone which is to turn everything into gold, and to redeem man from the original sentence of his Maker, "in the sweat of his brow shall he eat his bread." Not Quixote enough, however, to attempt to reason Bedlam to rights, my anxieties are turned to the most practicable means of withdrawing us from the ruin into which we have run. Two hundred millions of paper in the hands of the people, (and less cannot be from the employment of a banking capital known to exceed one hundred millions,) is a fearful tax to fall at haphazard on their heads. The debt which purchased our independence was but of eighty millions, of which twenty years of taxation had in 1809 paid but the one half. And what have we purchased with this tax of two hundred millions which we are to pay by wholesale but usury, swindling, and new forms of demoralization. Revolutionary history has warned us of the probable moment when this baseless trash is to receive its fiat. Whenever so much of the precious metals shall have returned into the circulation as that every one can get some in exchange for his produce, paper, as in

the Revolutionary war, will experience at once an universal rejection. When public opinion changes, it is with the rapidity of thought. Confidence is already on the totter, and every one now handles this paper as if playing at Robin's alive. That in the present state of the circulation the banks should resume payments in specie, would require their vaults to be like the widow's cruse. The thing to be aimed at is, that the excesses of their emissions should be withdrawn as gradually, but as speedily, too, as is practicable, without so much alarm as to bring on the crisis dreaded. Some banks are said to be calling in their paper. But ought we to let this depend on their discretion? Is it not the duty of the legislature to endeavor to avert from their constituents such a catastrophe as the extinguishment of two hundred millions of paper in their hands? The difficulty is indeed great; and the greater, because the patient revolts against all medicine. I am far from presuming to say that any plan can be relied on with certainty, because the bubble may burst from one moment to another; but if it fails, we shall be but where we should have been without any effort to save ourselves. Different persons, doubtless, will devise different schemes of relief. One would be to suppress instantly the currency of all paper not issued under the authority of our own State or of the General Government; to interdict after a few months the circulation of all bills of five dollars and under; after a few months more, all of ten dollars and under; after other terms, those of twenty, fifty, and so on to one hundred dollars, which last, if any must be left in circulation, should be the lowest denomination. These might be a convenience in mercantile transactions and transmissions, and would be excluded by their size from ordinary circulation. But the disease may be too pressing to await such a remedy. With the legislature I cheerfully leave it to apply this medicine, or no medicine at all. I am sure their intentions are faithful; and embarked in the same bottom, I am willing to swim or sink with my fellow citizens. If the latter is their choice, I will go down with them without a murmur. But my exhortation would rather be "not to give up the ship."

TO CHARLES THOMSON

Monticello, January 9, 1816

.... I retain good health, am rather feeble to walk much, but ride with ease, passing two or three hours a day on horseback, and every three or four months taking in a carriage a journey of ninety miles to a distant possession, where I pass a good deal of my time. My eyes need the aid of glasses by night, and with small print in the day also; my hearing is not quite so sensible as it used to be; no tooth shaking yet, but shivering and shrinking in body from the cold we now experience, my thermometer having been as low as 12° this morning. My greatest oppression is a correspondence afflictingly laborious, the extent of which I have been long endeavoring to curtail. This keeps me at the drudgery of the writing-table all the prime hours of the day, leaving for the gratification of my appetite for reading, only what I can steal from the hours of sleep. Could I reduce this epistolary corvée within the limits of my friends and affairs, and give the time redeemed from it to reading and reflection, to history, ethics, mathematics, my life would be as happy as the infirmities of age would admit, and I should look on its consummation with the composure of one “qui summum nec me tuit diem nec optat.” [\[13\]](#)....

TO JOSEPH C. CABELL

Monticello, February 2, 1816

.... No, my friend, the way to have good and safe government, is not to trust it all to one, but to divide it among the many, distributing to every one exactly the functions he is competent to. Let the national government be entrusted with the defence of the nation, and its foreign and federal relations; the State governments with the civil rights, laws, police, and administration of what concerns the State generally; the counties with the local concerns of the counties, and each ward direct the interests within itself. It is by dividing and subdividing these republics from the great national one down through all its subordinations, until it ends in the administration of every man's farm by himself; by placing under every one what his own eye may superintend, that all will be done for the best. What has destroyed liberty and the rights of man in every government which has ever existed under the sun? The generalizing and concentrating all cares and powers into one body, no matter whether of the autocrats of Russia or France, or of the aristocrats of a Venetian senate. And I do believe that if the Almighty has not decreed that man shall never be free, (and it is a blasphemy to believe it,) that the secret will be found to be in the making himself the depository of the powers respecting himself, so far as he is competent to them, and delegating only what is beyond his competence by a synthetical process, to higher and higher orders of functionaries, so as to trust fewer and fewer powers in proportion as the trustees become more and more oligarchical. The elementary republics of the wards, the county republics, the State republics, and the republic of the Union, would form a gradation of authorities, standing each on the basis of law, holding every one its delegated share of powers, and constituting truly a system of

fundamental balances and checks for the government. Where every man is a sharer in the direction of his ward-republic, or of some of the higher ones, and feels that he is a participator in the government of affairs, not merely at an election one day in the year, but every day; when there shall not be a man in the State who will not be a member of some one of its councils, great or small, he will let the heart be torn out of his body sooner than his power be wrested from him by a Cæsar or a Bonaparte. How powerfully did we feel the energy of this organization in the case of embargo? I felt the foundations of the government shaken under my feet by the New England townships. There was not an individual in their States whose body was not thrown with all its momentum into action; and although the whole of the other States were known to be in favor of the measure, yet the organization of this little selfish minority enabled it to overrule the Union. What would the unwieldy counties of the Middle, the South, and the West do? Call a county meeting, and the drunken loungers at and about the court-houses would have collected, the distances being too great for the good people and the industrious generally to attend. The character of those who really met would have been the measure of the weight they would have had in the scale of public opinion. As Cato, then, concluded every speech with the words, "Carthago delenda est," so do I every opinion, with the injunction, "divide the counties into wards." Begin them only for a single purpose; they will soon show for what others they are the best instruments. God bless you, and all our rulers, and give them the wisdom, as I am sure they have the will, to fortify us against the degeneracy of our government, and the concentration of all its powers in the hands of the one, the few, the well-born or the many.

TO MR. JOSEPH MILLIGAN

Monticello, April 6, 1816

SIR, —Your favor of March 6th did not come to hand until the 15th. I then expected I should finish revising the translation of Tracy's book within a week, and could send the whole together. I got through it, but, on further consideration, thought I ought to read it over again, lest any errors should have been left in it. It was fortunate I did so, for I found several little errors. The whole is now done and forwarded by this mail, with a title, and something I have written which may serve for a Prospectus, and indeed for a Preface also, with a little alteration....

My name must in nowise appear connected with the work. I have no objection to your naming me in conversation, but not in print, as the person to whom the original was communicated. Although the author puts his name to the work, yet, if called to account—for it by his government, he means to disavow it, which its publication at such a distance will enable him to do. But he would not think himself at liberty to do this if avowedly sanctioned by me here. The best open mark of approbation I can give is to subscribe for a dozen copies; or if you would prefer it, you may place on your subscription paper a letter in these words: "Sir, I subscribe with pleasure for a dozen copies of the invaluable book you are about to publish on Political Economy. I should be happy to see it in the hands of every American citizen."....

TITLE. "A Treatise on Political Economy by the Count Destutt Tracy, member of the Senate and Institute of France, and of the American Philosophical Society, to which is prefixed a supplement to a preceding work on the Understanding or Elements of Ideology, by the same author, with an analytical table, and an introduction on the

faculty of the will, translated from the unpublished French original.”

Prospectus. Political Economy in modern times assumed the form of a regular science first in the hands of the political sect in France, called the Economists. They made it a branch only of a comprehensive system on the natural order of societies. Quesnai first, Gournay, Le Frosne, Turgot and Dupont de Nemours, the enlightened, philanthropic, and venerable citizen, now of the United States, led the way in these developments, and gave to our inquiries the direction they have since observed. Many sound and valuable principles established by them, have received the sanction of general approbation. Some, as in the infancy of a science might be expected, have been brought into question, and have furnished occasion for much discussion. Their opinions on production, and on the proper subjections of taxation, have been particularly controverted; and whatever may be the merit of their principles of taxation, it is not wonderful they have not prevailed; not on the questioned score of correctness, but because not acceptable to the people, whose will must be the supreme law. Taxation is in fact the most difficult function of government—and that against which their citizens are most apt to be refractory. The general aim is therefore to adopt the mode most consonant with the circumstances and sentiments of the country.

Adam Smith, first in England, published a rational and systematic work on Political Economy, adopting generally the ground of the Economists, but differing on the subjects before specified. The system being novel, much argument and detail seemed then necessary to establish principles which now are assented to as soon as proposed. Hence his book, admitted to be able, and of the first degree of merit, has yet been considered as prolix and tedious.

In France, John Baptist Say has the merit of producing a very superior work on the subject of Political Economy. His arrangement is luminous, ideas clear, style perspicuous, and the whole subject

brought within half the volume of Smith's work. Add to this considerable advances in correctness and extension of principles.

The work of Senator Tracy, now announced, comes forward with all the lights of his predecessors in the science, and with the advantages of further experience, more discussion, and greater maturity of subjects. It is certainly distinguished by important traits; a cogency of logic which has never been exceeded in any work, a rigorous enchainment of ideas, and constant recurrence to it to keep it in the reader's view, a fearless pursuit of truth whithersoever it leads, and a diction so correct that not a word can be changed but for the worse; and, as happens in other cases, that the more a subject is understood, the more briefly it may be explained, he has reduced, not indeed all the details, but all the elements and the system of principles within the compass of an 8vo, of about 400 pages. Indeed we might say within two-thirds of that space, the one-third being taken up with some preliminary pieces now to be noticed.

Mr. Tracy is the author of a treatise on the Elements of Ideology, justly considered as a production of the first order in the science of our thinking faculty, or of the understanding. Considering the present work but as a second section to those Elements under the titles of Analytical Table, Supplement, and Introduction, he gives in these preliminary pieces a supplement to the Elements, shows how the present work stands on that as its basis, presents a summary view of it, and, before entering on the formation, distribution, and employment of property and personality, a question not new indeed, yet one which has not hitherto been satisfactorily settled. These investigations are very metaphysical, profound, and demonstrative, and will give satisfaction to minds in the habit of abstract speculation. Readers, however, not disposed to enter into them, after reading the summary view, entitled, "on our actions," will probably pass on at once to the commencement of the main subject of the work, which is

treated of under the following heads:

Of Society.

Of Production, or the formation of our riches.

Of Value, or the measure of utility.

Of change of form, or fabrication.

Of change of place, or commerce.

Of Money.

Of the distribution of our riches.

Of Population.

Of the employment of our riches, or consumption.

Of public revenue, expenses and debts.

Although the work now offered is but a translation, it may be considered in some degree as the original, that having never been published in the country in which it was written. The author would there have been submitted to the unpleasant alternative either of mutilating his sentiments, where they were either free or doubtful, or of risking himself under the unsettled regimen of the press. A manuscript copy communicated to a friend here has enabled him to give it to a country which is afraid to read nothing, and which may be trusted with anything, so long as its reason remains unfettered by law.

In the translation, fidelity has been chiefly consulted. A more correct style would sometimes have given a shade of sentiment which was not the author's, and which, in a work standing in the place of the original, would have been unjust towards him. Some Gallicisms have, therefore, been admitted, where a single word gives an idea which

would require a whole phrase of dictionary English. Indeed, the horrors of Neologism, which startle the purist, have given no alarm to the translator. Where brevity, perspicuity, and even euphony can be promoted by the introduction of a new word, it is an improvement to the language. It is thus the English language has been brought to what it is; one-half of it having been innovations, made at different times, from the Greek, Latin, French, and other languages. And is it the worse for these? Had the proposterous idea of fixing the language been adopted by our Saxon ancestors, of Pierce Plowman, of Chaucer, of Spenser, the progress of ideas must have stopped with that of the language. On the contrary, nothing is more evident than that as we advance in the knowledge of new things, and of new combinations of old ones, we must have new words to express them. Were Van Helmont, Stane, Scheele, to rise from the dead at this time, they would scarcely understand one word of their own science. Would it have been better, then, to have abandoned the science of Chemistry, rather than admit innovations in its terms? What a wonderful accession of copiousness and force has the French language attained, by the innovations of the last thirty years! And what do we not owe to Shakespeare for the enrichment of the language, by his free and magical creation of words? In giving a loose to Neologism, indeed, uncouth words will sometimes be offered; but the public will judge them, and receive or reject, as sense or sound shall suggest, and authors will be approved or condemned according to the use they make of this license, as they now are from their use of the present vocabulary. The claim of the present translation, however, is limited to its duties of fidelity and justice to the sense of its original; adopting the author's own word only where no term of our own language would convey his meaning.

TO JOHN ADAMS

Monticello, April 8, 1816

.... You ask, if I would agree to live my seventy or rather seventy-three years over again? To which I say, yea. I think with you, that it is a good world on the whole; that it has been framed on a principle of benevolence, and more pleasure than pain dealt out to us. There are, indeed, (who might say nay) gloomy and hypochondriac minds, inhabitants of diseased bodies, disgusted with the present, and despairing of the future; always counting that the worst will happen, because it may happen. To these I say, how much pain have cost us the evils which have never happened! My temperament is sanguine. I steer my bark with Hope in the head, leaving Fear astern. My hopes, indeed, sometimes fail; but not oftener than the forebodings of the gloomy. There are, I acknowledge, even in the happiest life, some terrible convulsions, heavy set-offs against the opposite page of the account. I have often wondered for what good end the sensations of grief could be intended. All our other passions, within proper bounds, have an useful object. And the perfection of the moral character is, not in a stoical apathy, so hypocritically vaunted, and so untruly too, because impossible, but in a just equilibrium of all the passions. I wish the pathologists then would tell us what is the use of grief in the economy, and of what good it is the cause, proximate or remote.

Did I know Baron Grimm while at Paris? Yes, most intimately. He was the pleasantest and most conversable member of the diplomatic corps while I was there; a man of good fancy, acuteness, irony, cunning and egoism. No heart, not much of any science, yet enough of every one to speak its language; his forte was belles-lettres, painting and sculpture. In these he was the oracle of society, and as such, was the Empress Catharine's private correspondent and factor, in all things

not diplomatic.... Although I never heard Grimm express the opinion directly, yet I always supposed him to be of the school of Diderot, D'Alembert, D'Holbach; the first of whom committed his system of atheism to writing in "Le bon sens," and the last in his "Systeme de la Nature" It was a numerous school in the Catholic countries, while the infidelity of the Protestant took generally the form of theism. The former always insisted that it was a mere question of definition between them, the hypostasis of which, on both sides, was "Nature" or "the Universe;" that both agreed in the order of the existing system, but the one supposed it from eternity, the other as having begun in time. And when the atheist descanted on the unceasing motion and circulation of matter through the animal, vegetable and mineral kingdoms, never resting, never annihilated, always changing form, and under all forms gifted with the power of reproduction; the theist pointing "to the heavens above, and to the earth beneath, and to the waters under the earth," asked, if these did not proclaim a first cause, possessing intelligence and power; power in the production, and intelligence in the design and constant preservation of the system; urged the palpable existence of final causes; that the eye was made to see, and the ear to hear, and not that we see because we have eyes, and hear because we have ears; an answer obvious to the senses, as that of walking across the room, was to the philosopher demonstrating the non-existence of motion. It was in D'Holbach's conventicles that Rousseau imagined all the machinations against him were contrived; and he left, in his Confessions, the most biting anecdotes of Grimm....

TO JOHN TAYLOR

Monticello, May 28, 1816

DEAR SIR, —On my return from a long journey and considerable absence from home, I found here the copy of your “Enquiry into the Principles of our Government,” which you had been so kind as to send me; and for which I pray you to accept my thanks. The difficulties of getting new works in our situation, inland and without a single bookstore, are such as had prevented my obtaining a copy before; and letters which had accumulated during my absence, and were calling for answers, have not yet permitted me to give to the whole a thorough reading; yet certain that you and I could not think differently on the fundamentals of rightful government, I was impatient, and availed myself of the intervals of repose from the writing-table, to obtain a cursory idea of the body of the work.

I see in it much matter for profound reflection; much which should confirm our adhesion, in practice, to the good principles of our Constitution, and fix our attention on what is yet to be made good. The sixth section on the good moral principles of our government, I found so interesting and replete with sound principles, as to postpone my letter-writing to its thorough perusal and consideration. Besides much other good matter, it settles unanswerably the right of instructing representatives, and their duty to obey. The system of banking we have both equally and ever reprobated. I contemplate it as a blot left in all our Constitutions, which, if not covered, will end in their destruction, which is already hit by the gamblers in corruption, and is sweeping away in its progress the fortunes and morals of our citizens. Funding I consider as limited, rightfully, to a redemption of the debt within the lives of a majority of the generation contracting it; every generation coming equally, by the laws of the Creator of the

world to the free possession of the earth He made for their subsistence, unincumbered by their predecessors, who, like them, were but tenants for life. You have successfully and completely pulverized Mr. Adams' system of orders, and his opening the mantle of republicanism to every government of laws, whether consistent or not with natural right. Indeed, it must be acknowledged, that the term republic is of very vague application in every language: Witness the self-styled republics of Holland, Switzerland, Genoa, Venice, Poland. Were I to assign to this term a precise and definite idea, I would say, purely and simply, it means a government by its citizens in mass, acting directly and personally, according to rules established by the majority; and that every other government is more or less republican, in proportion as it has in its composition more or less of this ingredient of the direct action of the citizens. Such a government is evidently restrained to very narrow limits of space and population. I doubt if it would be practicable beyond the extent of a New England township. The first shade from this pure element, which, like that of pure vital air, cannot sustain life of itself, would be where the powers of the government, being divided, should be exercised each by representatives chosen either pro hac vice or for such short terms as should render secure the duty of expressing the will of their constituents. This I should consider as the nearest approach to a pure republic, which is practicable on a large scale of country or population. And we have examples of it in some of our State Constitutions, which, if not poisoned by priest-craft, would prove its excellence over all mixtures with other elements; and, with only equal doses of poison, would still be the best. Other shades of republicanism may be found in other forms of government, where the executive, judiciary and legislative functions, and the different branches of the latter, are chosen by the people more or less directly, for longer terms of years, or for life, or made hereditary; or where there are mixtures of authorities, some dependent on, and others independent of the people. The further the departure from direct and constant control by the

citizens, the less has the government of the ingredient of republicanism; evidently none where the authorities are hereditary, as in France, Venice, etc., or self-chosen, as in Holland; and little, where for life, in proportion as the life continues in being after the act of election.

The purest republican feature in the government of our own State, is the House of Representatives. The Senate is equally so the first year, less the second, and so on. The Executive still less, because not chosen by the people directly. The Judiciary seriously anti-republican, because for life; and the national arm wielded, as you observe, by military leaders, irresponsible but to themselves. Add to this the vicious constitution of our county courts (to whom the justice, the executive administration, the taxation, police, the military appointments of the county, and nearly all our daily concerns are confided), self-appointed, self-continued, holding their authorities for life, and with an impossibility of breaking in on the perpetual succession of any faction once possessed of the bench. They are in truth, the executive, the judiciary, and the military of their respective counties, and the sum of the counties makes the State. And add, also, that one-half of our brethren who fight and pay taxes, are excluded, like Helots, from the rights of representation, as if society were instituted for the soil, and not for the men inhabiting it; or one-half of these could dispose of the rights and the will of the other half, without their consent.

“What constitutes a State?

Not high-raised battlements, or labor'd mound,

Thick wall, or moated gate;

Not cities proud, with spires and turrets crown'd;

No: men, high-minded men;

Men, who their duties know;

But know their rights; and knowing, dare maintain.

These constitute a State.”

In the General Government, the House of Representatives is mainly republican; the Senate scarcely so at all, as not elected by the people directly, and so long secured even against those who do elect them; the Executive more republican than the Senate, from its shorter term, its election by the people, in practice, (for they vote for A only on an assurance that he will vote for B,) and because, in practice also, a principle of rotation seems to be in a course of establishment; the judiciary independent of the nation, their coercion by impeachment being found nugatory.

If, then, the control of the people over the organs of their government be the measure of its republicanism, and I confess I know no other measure, it must be agreed that our governments have much less of republicanism than ought to have been expected; in other words, that the people have less regular control over their agents, than their rights and their interests require. And this I ascribe, not to any want of republican dispositions in those who formed these Constitutions, but to a submission of true principle to European authorities, to speculators on government, whose fears of the people have been inspired by the populace of their own great cities, and were unjustly entertained against the independent, the happy, and therefore orderly citizens of the United States. Much I apprehend that the golden moment is past for reforming these heresies. The functionaries of public power rarely strengthen in their dispositions to abridge it, and an unorganized call for timely amendment is not likely to prevail against an organized opposition to it. We are always told that things are going on well; why change them? “*Chista bene, non si muove*”

said the Italian, "let him who stands well, stand still." This is true; and I verily believe they would go on well with us under an absolute monarch, while our present character remains, of order, industry and love of peace, and restrained, as he would be, by the proper spirit of the people. But it is while it remains such, we should provide against the consequences of its deterioration. And let us rest in the hope that it will yet be done, and spare ourselves the pain of evils which may never happen.

On this view of the import of the term republic, instead of saying, as has been said, "that it may mean anything or nothing," we may say with truth and meaning, that governments are more or less republican, as they have more or less of the element of popular election and control in their composition; and believing, as I do, that the mass of the citizens is the safest depository of their own rights and especially, that the evils flowing from the duperies of the people, are less injurious than those from the egoism of their agents, I am a friend to that composition of government which has in it the most of this ingredient. And I sincerely believe, with you, that banking establishments are more dangerous than standing armies; and that the principle of spending money to be paid by posterity, under the name of funding, is but swindling futurity on a large scale.

I salute you with constant friendship and respect.

TO SAMUEL KERCHEVAL

Monticello, July 12, 1816

.... I am not among those who fear the people. They, and not the rich, are our dependence for continued freedom. And to preserve their independence, we must not let our rulers load us with perpetual debt. We must make our election between economy and liberty, or profusion and servitude. If we run into such debts, as that we must be taxed in our meat and in our drink, in our necessities and our comforts, in our labors and our amusements, for our callings and our creeds, as the people of England are, our people, like them, must come to labor sixteen hours in the twenty-four, give the earnings of fifteen of these to the government for their debts and daily expenses; and the sixteenth being insufficient to afford us bread, we must live, as they now do, on oatmeal and potatoes; have no time to think, no means of calling the mismanagers to account; but be glad to obtain subsistence by hiring ourselves to rivet their chains on the necks of our fellow sufferers. Our land-holders, too, like theirs, retaining indeed the title and stewardship of estates called theirs, but held really in trust for the treasury, must wander, like theirs, in foreign countries, and be contented with penury, obscurity, exile, and the glory of the nation. This example reads to us the salutary lesson, that private fortunes are destroyed by public as well as by private extravagance. And this is the tendency of all human governments. A departure from principle in one instance becomes a precedent for a second; that second for a third; and so on, till the bulk of the society is reduced to be mere automatons of misery, to have no sensibilities left but for sinning and suffering. Then begins, indeed, the bellum omnium in omnia, which some philosophers observing to be so general in this world, have mistaken it for the natural, instead of the abusive state of man. And

the fore horse of this frightful team is public debt. Taxation follows that, and in its train wretchedness and oppression.

Some men look at constitutions with sanctimonious reverence, and deem them like the ark of the covenant, too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment. I knew that age well; I belonged to it, and labored with it. It deserved well of its country. It was very like the present, but without the experience of the present; and forty years of experience in government is worth a century of book-reading; and this they would say themselves, were they to rise from the dead. I am certainly not an advocate for frequent and untried changes in laws and constitutions. I think moderate imperfections had better be borne with; because, when once known, we accommodate ourselves to them, and find practical means of correcting their ill effects. But I know also, that laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths disclosed, and manners and opinions change with the change of circumstances, institutions must advance also, and keep pace with the times. We might as well require a man to wear still the coat which fitted him when a boy, as civilized society to remain ever under the regimen of their barbarous ancestors. It is this preposterous idea which has lately deluged Europe in blood. Their monarchs, instead of wisely yielding to the gradual change of circumstances, of favoring progressive accommodation to progressive improvement, have clung to old abuses, entrenched themselves behind steady habits, and obliged their subjects to seek through blood and violence rash and ruinous innovations, which, had they been referred to the peaceful deliberations and collected wisdom of the nation, would have been put into acceptable and salutary forms. Let us follow no such examples, nor weakly believe that one generation is not as capable as another of taking care of itself, and of ordering its own affairs. Let us,

as our sister States have done, avail ourselves of our reason and experience, to correct the crude essays of our first and unexperienced, although wise, virtuous, and well-meaning councils. And lastly, let us provide in our Constitution for its revision at stated periods. What these periods should be, nature herself indicates. By the European tables of mortality, of the adults living at any one moment of time, a majority will be dead in about nineteen years. At the end of that period then, a new majority is come into place; or, in other words, a new generation. Each generation is as independent of the one preceding, as that was of all which had gone before. It has then, like them, a right to choose for itself the form of government it believes most promotive of its own happiness; consequently, to accommodate to the circumstances in which it finds itself, that received from its predecessors; and it is for the peace and good of mankind, that a solemn opportunity of doing this every nineteen or twenty years, should be provided by the Constitution; so that it may be handed on, with periodical repairs, from generation to generation, to the end of time, if anything human can so long endure. It is now forty years since the constitution of Virginia was formed. The same tables inform us, that, within that period, two-thirds of the adults then living are now dead. Have then the remaining third, feven if they had the wish, the right to hold in obedience to their will, and to laws heretofore made by them, the other two-thirds, who, with themselves, compose the present mass of adults? If they have not, who has? The dead? But the dead have no rights. They are nothing; and nothing cannot own something. Where there is no substance, there can be no accident. This corporeal globe, and everything upon it, belong to its present corporeal inhabitants, during their generation. They alone have a right to direct what is the concern of themselves alone, and to declare the law of that direction; and this declaration can only be made by their majority. That majority, then, has a right to depute representatives to a convention, and to make the Constitution what they think will be the best for themselves. But how collect their voice? This is the real

difficulty. If invited by private authority, or county or district meetings, these divisions are so large that few will attend; and their voice will be imperfectly, or falsely, pronounced. Here, then, would be one of the advantages of the ward divisions I have proposed. The mayor of every ward, on a question like the present, would call his ward together, take the simple yea or nay of its members, convey these to the county court, who would hand on those of all its wards to be the proper general authority; and the voice of the whole people would be thus fairly, fully, and peaceably expressed, discussed, and decided by the common reason of the society. If this avenue be shut to the call of sufferance, it will make itself heard through that of force, and we shall go on, as other nations are doing, in the endless circle of oppression, rebellion, reformation; and oppression, rebellion, reformation, again; and so on forever....

TO JOHN ADAMS

Monticello, August 1, 1816

.... We shall have our follies without doubt. Some one or more of them will always be afloat. But ours will be the follies of enthusiasm, not of bigotry, not of Jesuitism. Bigotry is the disease of ignorance, of morbid minds; enthusiasm of the free and buoyant. Education and free discussion are the antidotes of both. We are destined to be a barrier against the returns of ignorance and barbarism. Old Europe will have to lean on our shoulders, and to hobble along by our side, under the monkish trammels of priests and kings, as she can. What a colossus shall we be when the southern continent comes up to our mark! What a stand will it secure as a ralliance for the reason and freedom of the globe! I like the dreams of the future better than the history of the past, —so good night! I will dream on, always fancying that Mrs. Adams and yourself are by my side marking the progress and the obliquities of ages and countries.

TO MRS. ABIGAIL ADAMS

Monticello, January 11, 1817

I owe you, dear Madam, a thousand thanks for the letters communicated in your favor of December 15th, and now returned. They give me more information than I possessed before, of the family of Mr. Tracy. But what is infinitely interesting, is the scene of the exchange of Louis X VIII for Bonaparte. What lessons of wisdom Mr. Adams must have read in that short space of time! More than fall to the lot of others in the course of a long life. Man, and the man of Paris, under those circumstances, must have been a subject of profound speculation! It would be a singular addition to that spectacle, to see the same beast in the cage of St. Helena, like a lion in the tower. That is probably the closing verse of the chapter of his crimes. But not so with Louis. He has other vicissitudes to go through.

I communicated the letters, according to your permission, to my grand-daughter, Ellen Randolph, who read them with pleasure and edification. She is justly sensible of, and flattered by your kind notice of her; and additionally so, by the favorable recollections of our northern visiting friends. If Monticello has anything which has merited their remembrance, it gives it a value the more in our estimation; and could I, in the spirit of your wish, count backwards a score of years, it would not be long before Ellen and myself would pay our homage personally to Quincy. But those twenty years! Alas! where are they? With those beyond the flood. Our next meeting must then be in the country to which they have flown, —a country for us not now very distant. For this journey we shall need neither gold nor silver in our purse, nor scrip, nor coats, nor staves. Nor is the provision for it more easy than the preparation has been kind. Nothing proves more than this that the Being who presides over the world is essentially

benevolent. Stealing from us, one by one, the faculties of enjoyment, searing our sensibilities, leading us, like the horse in his mill, round and round the same beaten circle,

—To see what we have seen,

To taste the tasted, and at each return

Less tasteful; o'er our palates to decant

Another vintage—

Until satiated and fatigued with this leaden iteration, we ask our own congé. I heard once a very old friend, who had troubled himself with neither poets nor philosophers, say the same thing in plain prose, that he was tired of pulling off his shoes and stockings at night, and putting them on again in the morning. The wish to stay here is thus gradually extinguished; but not so easily that of returning once, in awhile, to see how things have gone on. Perhaps, however, one of the elements of future felicity is to be a constant and unimpassioned view of what is passing here. If so, this may well supply the wish of occasional visits. Mercier has given us a vision of the year 2440; but prophecy is one thing, and history another. On the whole, however, perhaps it is wise and well to be contented with the good things which the master of the feast places before us, and to be thankful for what we have, rather than thoughtful about what we have not. You and I, dear Madam, have already had more than an ordinary portion of life, and more, too, of health than the general measure. On this score I owe boundless thankfulness. Your health was, some time ago, not so good as it has been; and I perceive in the letters communicated some complaints still. I hope it is restored; and that life and health may be continued to you as many years as yourself shall wish, is the sincere prayer of your affectionate and respectful friend.

TO CHARLES THOMSON

Monticello, Janry. 29, 1817

.... It is a singular anxiety which some people have that we should all think alike. Would the world be more beautiful were all our faces alike? were our tempers, our talents, our tastes, our forms, our wishes, aversions and pursuits cast exactly in the same mould? If no varieties existed in the animal, vegetable or mineral creation, but all move strictly uniform, catholic & orthodox, what a world of physical and moral monotony it would be! These are the absurdities into which those run who usurp the throne of God and dictate to Him what He should have done. May they with all their metaphysical riddles appear before that tribunal with as clean hands and hearts as you and I shall. There, suspended in the scales of eternal justice, faith and works will show their worth by their weight. God bless you and preserve you long in life & health.

TO JOSEPH DELAPLAINE

Monticello, April 12, 1817

DEAR SIR, —My repugnance is so invincible to be saying anything of my own history as if worthy to occupy the public attention that I have suffered your letter of March 17, but not received till March 28, to lie thus long without resolution enough to take it up. I indulged myself at some length on a former occasion because it was to repel a calumny still sometimes repeated after the death of its numerous brethren, by which a party at one time thought they could vote me down, deeming even science itself as well as my affection for it a fit object of ridicule and a disqualification for the affairs of government. I still think that many of the objects of our inquiry are too minute for public notice. The number of names and ages of my children, grandchildren, great-grandchildren, etc., would produce fatigue and disgust to your readers of which I would be an unwilling instrument, it will certainly be enough to say that from one daughter living and another deceased, I have a numerous family of grandchildren and an increasing one of great-grandchildren.

I was married on New Year's day of 1772, and Mrs. J. died in the autumn of 1782. I was educated at William and Mary College, in Williamsburg. I read Greek, Latin, French, Italian, Spanish and English of course, with something of its radics, the Anglo-Saxon. I became a member of the legislature of Virginia in 1769 at the accession of Lord Botetourt to our government. I could not readily make a statement of the literary societies of which I am a member, they are many and would be long to enumerate and would savor too much of vanity and pedantry. Would it not be better to say merely that I am a member of many literary societies in Europe and America.

Your statements of the corrections of the Declaration of Independence by Dr. Franklin and Mr. Adams are neither of them at all exact. I should think it better to say generally that the rough draft was communicated to those two gentlemen, who each of them made two or three short and verbal alterations only, but even this is laying more stress on mere composition than it merits, for that alone was mine. The sentiments were of all America....

TO BARON ALEXANDER VON HUMBOLDT

Monticello, June 13, 1817

.... The physical information you have given us of a country [Spain] hitherto so shamefully unknown, has come exactly in time to guide our understandings in the great political revolution now bringing it into prominence on the stage of the world. The issue of its struggles, as they respect Spain, is no longer matter of doubt. As it respects their own liberty, peace and happiness, we cannot be quite so certain. Whether the blinds of bigotry, the shackles of the priesthood, and the fascinating glare of rank and wealth, give fair play to the common sense of the mass of their people, so far as to qualify them for self-government, is what we do not know. Perhaps our wishes may be stronger than our hopes. The first principle of republicanism is, that the *lex majoris partis* ^[14] is the fundamental law of every society of individuals of equal rights; to consider the will of the society enounced by the majority of a single vote, as sacred as if unanimous, is the first of all lessons in importance, yet the last which is thoroughly learnt. This law once disregarded, no other remains but that of force, which ends necessarily in military despotism. This has been the history of the French Revolution, and I wish the understanding of our Southern brethren may be sufficiently enlarged and firm to see that their fate depends on its sacred observance.

TO MONSIEUR BARBÉ DE MARBOIS

Monticello, June 14, 1817

.... When I left France at the close of '89, your revolution was, as I thought, under the direction of able and honest men. But the madness of some of their successors, the vices of others, the malicious intrigues of an envious and corrupting neighbor, the tracasserie of the Directory, the usurpations, the havoc, and devastations of your Attila, and the equal usurpations, depredations and oppressions of your hypocritical deliverers, will form a mournful period in the history of man, a period of which the last chapter will not be seen in your day or mine, and one which I still fear is to be written in characters of blood. Had Bonaparte reflected that such is the moral construction of the world, that no national crime passes unpunished in the long run, he would not now be in the cage of St. Helena; and were your present oppressors to reflect on the same truth, they would spare to their own countries the penalties on their present wrongs which will be inflicted on them on future times. The seeds of hatred and revenge which they are now sowing with a large hand, will not fail to produce their fruits in time. Like their brother robbers on the highway, they suppose the escape of the moment a final escape, and deem infamy and future risk countervailed by present gain. Our lot has been happier. When you witnessed our first struggles in the War of Independence, you little calculated, more than we did, on the rapid growth and prosperity of this country; on the practical demonstration it was about to exhibit, of the happy truth that man is capable of self-government, and only rendered otherwise by the moral degradation designedly superinduced on him by the wicked acts of his tyrants.

I have much confidence that we shall proceed successfully for ages to come, and that, contrary to the principle of Montesquieu, it will be seen that the larger the extent of country, the more firm its republican structure, if founded, not on conquest, but in principles of compact and equality. My hope of its duration is built much on the enlargement of the resources of life going hand in hand with the enlargement of territory, and the belief that men are disposed to live honestly, if the means of doing so are open to them. With the consolation of this belief in the future result of our labors, I have that of other prophets who foretell distant events, that I shall not live to see it falsified. My theory has always been, that if we are to dream, the flatteries of hope are as cheap, and pleasanter than the gloom of despair. I wish to yourself a long life of honors, health and happiness.

TO GEORGE TICKNOR

Poplar Forest near Lynchburg, Nov. 25, 1817

.... I had before heard of the military ingredients which Bonaparte had infused into all the schools of France, but have never so well understood them as from your letter. The penance he is now doing for all his atrocities must be soothing to every virtuous heart. It proves that we have a god in heaven. That he is just, and not careless of what passes in this world. And we cannot but wish to this inhuman wretch, a long, long life, that time as well as intensity may fill up his sufferings to the measure of his enormities. But indeed what sufferings can atone for his crimes against the liberties & happiness of the human race; for the miseries he has already inflicted on his own generation, & on those yet to come, on whom he has rivetted the chains of despotism!....

TO JOHN TRUMBULL

Monticello, Jan. 8, 1818

DEAR SIR, —I can have no hesitation in placing my name on the roll of subscribers to the print of your Declaration of Independence, & I desire to do it for two copies, the advance of price from 18.66 to 20. D. cannot be objected to by anyone because of the disproportionate decrease in the value of the money, what discourages our citizens in the purchase of prints is the tawdry taste prevailing for gew-gaw gilt frames. these flaring things injure greatly the effect of the print, a narrow fillet of gilt on the inner & outer edge, merely to relieve the black of the main breadth, permits the eye to rest in composure on the field of the print, undisturbed by the glare of a massive, refulgent border. Frames of the prevailing style cost as much, & often more than the print itself, while it is right to indulge the luxury of the rich with copies of exquisite & perfect execution would it not be worth your while to have one of mere outline engraved which could be sold for a dollar apiece? were such to be had, scarcely a hovel in the U. S. would be without one, and 50. of them would be sold for one of the superior, however you understand the public taste better than I do, and will do what is for your own best interest, which I sincerely wish to see prompted, because you possess my sincere and affectionate esteem....

TO COUNT DUGNANI

(PAPAL NUNCIO)

Monticello, February 14, 1818

.... During the terrible revolutions of Europe I felt great anxiety for you, and have never yet learnt with certainty how far they affected you. Your letter to the Archbishop being from Rome and so late as September makes me hope that all is well, and thanks be to God the tiger who revelled so long in the blood and spoils of Europe is at length, like another Prometheus, chained to his rock, where the vulture of remorse for his crimes will be preying on his vitals and in like manner without consuming them. Having been, like him, intrusted with the happiness of my country, I feel the blessing of resembling him in no other point. I have not caused the death of five or ten millions of human beings, the devastation of other countries, the depopulation of my own, the exhaustion of all its resources, the destruction of its liberties, nor its foreign subjugation. All this he has done to render more illustrious the atrocities perpetrated for illustrating himself and his family with plundered diadems and sceptres. On the contrary, I have the consolation to reflect that during the period of my administration not a drop of the blood of a single fellow citizen was shed by the sword of war or of the law, and that after cherishing for eight years their peace and prosperity I laid down their trust of my own accord and in the midst of their blessings and importunities to continue in it. But, beginning to be sensible of the effect of age, I feared that its infirmities might injure their interests and believed the example would be salutary against inveteration in office, and I now enjoy in retirement the comfort of their good will and of a conscience calm and without reproach....

TO DR. BENJAMIN WATERHOUSE

Monticello, March 3, 1818

DEAR SIR, —I have just received your favor of February 20th, in which you observe that Mr. Wirt, on page 47 of his *Life of Patrick Henry*, quotes me as saying that “Mr. Henry certainly gave the first impulse to the ball of revolution.” I well recollect to have used some such expression in a letter to him, and am tolerably certain that our own State being the subject under contemplation, I must have used it with respect to that only. Whether he has given it a more general aspect I cannot say, as the passage is not in the page you quote, nor, after thumbing over much of the book, have I been able to find it. In page 417 there is something like it, but not the exact expression, and even there it may be doubted whether Mr. Wirt had his eye on Virginia alone, or on all the colonies. But the question, who commenced the Revolution? is as difficult as that of the first inventors of a thousand good things. For example, who first discovered the principle of gravity? Not Newton; for Galileo, who died the year that Newton was born, had measured its force in the descent of gravid bodies. Who invented the Lavoisierian chemistry? The English say Dr. Black, by the preparatory discovery of latent heat. Who invented the steamboat? Was it Gerbert, the Marquis of Worcester, Newcomen, Savary, Papin, Fitch, Fulton? The fact is, that one new idea leads to another, that to a third, and so on through a course of time until some one, with whom no one of these ideas was original, combines all together, and produces what is justly called a new invention. I suppose it would be as difficult to trace our Revolution to its first embryo. We do not know how long it was hatching in the British Cabinet before they ventured to make the first of the experiments

which were to develop it in the end and to produce complete parliamentary supremacy. Those you mention in Massachusetts as preceding the stamp act, might be the first visible symptoms of that design. The proposition of that act in 1764, was the first here. Your opposition, therefore, preceded ours, as occasion was sooner given there than here, and the truth, I suppose, is, that the opposition in every colony began whenever the encroachment was presented to it. This question of priority is as the inquiry would be who first, of the three hundred Spartans, offered his name to Leonidas? I shall be happy to see justice done to the merits of all, by the unexceptionable umpirage of date and facts, and especially from the pen which is proposed to be employed in it.

I rejoice, indeed, to learn from you that Mr. Adams retains the strength of his memory, his faculties, his cheerfulness, and even his epistolary industry. This last is gone from me. The aversion has been growing on me for a considerable time, and now, near the close of seventy-five, is become almost insuperable. I am much debilitated in body, and my memory sensibly on the wane. Still, however, I enjoy good health and spirits, and am as industrious a reader as when a student at college. Not of newspapers. These I have discarded. I relinquish, as I ought to do, all intermeddling with public affairs, committing myself cheerfully to the watch and care of those for whom, in my turn, I have watched and cared. When I contemplate the immense advances in science and discoveries in the arts which have been made within the period of my life, I look forward with confidence to equal advances by the present generation, and have no doubt they will consequently be as much wiser than we have been as we than our fathers were, and they than the burners of witches. Even the metaphysical contest, which you so pleasantly described to me in a former letter, will probably end in improvement, by clearing the mind of Platonic mysticism and unintelligible jargon. Although age is

taking from me the power of communicating by letter with my friends as industriously as heretofore, I shall still claim with them the same place they will fever hold in my affections, and on this ground I, with sincerity and pleasure, assure you of my great esteem and respect.

TO NATHANIEL BURWELL, ESQ.

Monticello, March 14, 1818

DEAR SIR, —Your letter of February 17th found me suffering under an attack of rheumatism, which has but now left me at sufficient ease to attend to the letters I have received, A plan of female education has never been a subject of systematic contemplation with me. It has occupied my attention so far only as the education of my own daughters occasionally required. Considering that they would be placed in a country situation, where little aid could be obtained from abroad, I thought it essential to give them a solid education, which might enable them, when become mothers, to educate their own daughters, and even to direct the course for sons, should their fathers be lost, or incapable, or inattentive. My surviving daughter accordingly, the mother of many daughters as well as sons, has made their education the object of her life, and being a better judge of the practical part than myself, it is with her aid and that of one of her élèves, that I shall subjoin a catalogue of the books for such a course of reading as we have practiced.

A great obstacle to good education is the inordinate passion prevalent for novels, and the time lost in that reading which should be instructively employed. When this poison infects the mind, it destroys its tone and revolts it against wholesome reading. Reason and fact, plain and unadorned, are rejected. Nothing can engage attention unless dressed in all the figments of fancy, and nothing so bedecked comes amiss. The result is a bloated imagination, sickly judgment, and disgust towards all the real businesses of life. This mass of trash, however, is not without some distinction; some few modelling their narratives, although fictitious, on the incidents of real life, have been able to make them interesting and useful vehicles of a sound morality.

Such, I think, are Marmontel's new moral tales, but not his old ones, which are really immoral. Such are the writings of Miss Edgeworth, and some of those of Madame Genlis. For a like reason, too, much poetry should not be indulged. Some is useful for forming style and taste. Pope, Dryden, Thompson, Shakespeare, and of the French, Moliere, Racine, the Corneilles, may be read with pleasure and improvement.

The French language, become that of the general intercourse of nations, and from their extraordinary advances, now the depository of all science, is an indispensable part of education for both sexes. In the subjoined catalogue, therefore, I have placed the books of both languages indifferently, according as the one or the other offers what is best.

The ornaments too, and the amusements of life, are entitled to their portion of attention. These, for a female, are dancing, drawing, and music. The first is a healthy exercise, elegant and very attractive for young people. Every affectionate parent would be pleased to see his daughter qualified to participate with her companions, and without awkwardness at least, in the circles of festivity, of which she occasionally becomes a part. It is a necessary accomplishment, therefore, although of short use; for the French rule is wise, that no lady dances after marriage. This is founded in solid physical reasons, gestation and nursing leaving little time to a married lady when this exercise can be either safe or innocent. Drawing is thought less of in this country than in Europe. It is an innocent and engaging amusement, often useful, and a qualification not to be neglected in one who is to become a mother and an instructor. Music is invaluable where a person has an ear. Where they have not, it should not be attempted. It furnishes a delightful recreation for the hours of respite from the cares of the day, and lasts us through life. The taste of this country, too, calls for this accomplishment more strongly than for

either of the others.

I need say nothing of household economy, in which the mothers of our country are generally skilled, and generally careful to instruct their daughters. We all know its value, and that diligence and dexterity in all its processes are inestimable treasures. The order and economy of a house are as honorable to the mistress as those of the farm to the master, and if either be neglected, ruin follows, and children destitute of the means of living.

This, Sir, is offered as a summary sketch on a subject on which I have not thought much. It probably contains nothing but what has already occurred to yourself, and claims your acceptance on no other ground than as a testimony of my respect for your wishes, and of my great esteem and respect.

TO JOHN ADAMS

Monticello, November 13, 1818

The public papers, my dear friend, announce the fatal event of which your letter of October the 20th had given me ominous foreboding. Tried myself in the school of affliction, by the loss of every form of connection which can rive the human heart, I know well, and feel what you have lost, what you have suffered, are suffering, and have yet to endure. The same trials have taught me that for ills so immeasurable, time and silence are the only medicine. I will not, therefore, by useless condolences, open afresh the sluices of your grief, nor, although mingling sincerely my tears with yours, will I say a word more where words are vain, but that it is of some comfort to us both, that the term is not very distant, at which we are to deposit in the same cerement, our sorrows and suffering bodies, and to ascend in essence to an ecstatic meeting with the friends we have loved and lost, and whom we shall still love and never lose again. God bless you and support you under your heavy affliction.

TO DOCTOR VINE UTLEY

Monticello, March 21, 1819

SIR, —Your letter of February the 18th came to hand on the 1st instant; and the request of the history of my physical habits would have puzzled me not a little, had it not been for the model with which you accompanied it, of Doctor Rush's answer to a similar inquiry. I live so much like other people, that I might refer to ordinary life as the history of my own. Like my friend the Doctor, I have lived temperately, eating little animal food, and that not as an aliment, so much as a condiment for the vegetables, which constitute my principal diet. I double however, the Doctor's glass and a half of wine, and even treble it with a friend; but halve its effects by drinking the weak wines only. The ardent wines I cannot drink, nor do I use ardent spirits in any form. Malt liquors and cider are my table drinks, and my breakfast, like that also of my friend, is of tea and coffee. I have been blest with organs of digestion which accept and concoct, without ever murmuring, whatever the palate chooses to consign to them, and I have not yet lost a tooth by age. I was a hard student until I entered on the business of life, the duties of which leave no idle time to those disposed to fulfil them; and now, retired, and at the age of seventy-six, I am again a hard student. Indeed, my fondness for reading and study revolts me from the drudgery of letter-writing. And a stiff wrist, the consequence of an early dislocation, makes writing both slow and painful. I am not so regular in my sleep as the Doctor says he was, devoting to it from five to eight hours, according as my company or the book I am reading interests me; and I never go to bed without an hour, or half hour's previous reading of something moral, whereon to ruminate in the intervals of sleep. But whether I retire to bed early or late, I rise with the sun. I use spectacles at night, but not necessarily in

the day, unless in reading small print. My hearing is distinct in particular conversation, but confused when several voices cross each other, which unfits me for the society of the table. I have been more fortunate than my friend in the article of health. So free from catarrhs that I have not had one, (in the breast, I mean) on an average of eight or ten years through life. I ascribe this exemption partly to the habit of bathing my feet in cold water every morning, for sixty years past. A fever of more than twenty-four hours I have not had above two or three times in my life. A periodical headache has afflicted me occasionally, once, perhaps, in six or eight years, for two or three weeks at a time, which seems now to have left me; and except on a late occasion of indisposition, I enjoy good health; too feeble, indeed, to walk much, but riding without fatigue six or eight miles a day, and sometimes thirty or forty. I may end these egotisms, therefore, as I began, by saying that my life has been so much like that of other people, that I might say with Horace, to every one “*nomine mutato, narratur fabula de te*” [15] I must not end, however, without due thanks for the kind sentiments of regard you are so good as to express towards myself; and with my acknowledgments for these, be pleased to accept the assurances of my respect and esteem.

TO MR. LAPORTE

Montkello, June 4, 1819

SIR, —In answer to your request to be informed of the particular style of dieting the students which would be approved by the visitors of the University, I can only say that, the University not being yet in action, nor the Hotels for boarding houses in readiness which will be at their disposal, no style of dieting has been agreed on: but if I may form a judgment from the conversations we have had on the subject I think something like the following course will meet their approbation.

for breakfast, wheat or cornbread, at the choice of each particular, with butter, and milk, or Coffee-au-lait, at the choice of each, no meat.

for dinner, a soup, a dish of salt meat, a dish of fresh meat, & as great a variety of vegetables well cooked as you please.

for supper, corn or wheat bread at their choice, & milk, or Coffee-au lait, also at their choice, but no meat.

their drink at all times water, a young stomach needing no stimulating drinks, and the habit of using them being dangerous.

and I should recommend as late a dinner as the rules of their school will permit.

no game of chance to be permitted in the house.

TO WILLIAM SHORT

Monticello, October 31, 1819

DEAR SIR, —Your favor of the 21st is received. My late illness, in which you are so kind as to feel an interest, was produced by a spasmodic stricture of the ileum, which came upon me on the 7th inst. The crisis was short, passed over favorably on the fourth day, and I should soon have been well but that a dose of calomel and jalap, in which were only eight or nine grains of the former, brought on a salivation. Of this, however, nothing now remains but a little soreness of the mouth. I have been able to get on horseback for three or four days past.

As you say of yourself, I too am an Epicurian. I consider the genuine (not the imputed) doctrines of Epicurus as containing everything rational in moral philosophy which Greece and Rome have left us. Epictetus indeed, has given us what was good of the Stoics; all beyond, of their dogmas, being hypocrisy and grimace. Their great crime was in their calumnies of Epicurus and misrepresentations of his doctrines; in which we lament to see the candid character of Cicero engaging as an accomplice. Diffuse, vapid, rhetorical, but enchanting. His prototype Plato, eloquent as himself, dealing out mysticisms incomprehensible to the human mind, has been deified by certain sects usurping the name of Christians; because, in his foggy conceptions, they found a basis of impenetrable darkness whereon to rear fabrications as delirious, of their own invention. These they fathered blasphemously on Him whom they claimed as their Founder, but who would disclaim them with the indignation which their caricatures of His religion so justly excite. Of Socrates we have nothing genuine but in the Memorabilia of Xenophon; for Plato makes him one of his Collocutors merely to cover his own whimsies under

the mantle of his name; a liberty of which we are told Socrates himself complained. Seneca is indeed a fine moralist, disfiguring his work at times with some Stoicisms, and affecting too much of antithesis and point, yet giving us on the whole a great deal of sound and practical morality. But the greatest of all the reformers of the depraved religion of His own country, was Jesus of Nazareth. Abstracting what is really His from the rubbish in which it is buried, easily distinguished by its lustre from the dross of His biographers, and as separable from that as the diamond from the dunghill, we have the outlines of a system of the most sublime morality which has ever fallen from the lips of man; outlines which it is lamentable He did not live to fill up. Epictetus and Epicurus give laws for governing ourselves, Jesus a supplement of the duties and charities we owe to others. The establishment of the innocent and genuine character of this benevolent Moralist, and the rescuing it from the imputation of imposture, which has resulted from artificial systems, ^[16] invented by ultra-Christian sects, unauthorized by a single word ever uttered by Him, is a most desirable object, and one to which Priestley has successfully devoted his labors and learning. It would in time, it is to be hoped, effect a quiet euthanasia of the heresies of bigotry and fanaticism which have so long triumphed over human reason, and so generally and deeply afflicted mankind; but this work is to be begun by winnowing the grain from the chaff of the historians of His life. I have sometimes thought of translating Epictetus (for he has never been tolerably translated into English) by adding the genuine doctrines of Epicurus from the Syntagma of Gassendi, and an abstract from the Evangelists of whatever has the stamp of the eloquence and fine imagination of Jesus. The last I attempted too hastily some twelve or fifteen years ago. It was the work of two or three nights only, at Washington, after getting through the evening task of reading the letters and papers of the day. But with one foot in the grave, these are now idle projects for me. My business is to beguile the wearisomeness of declining life, as I endeavor to do, by the delights of classical reading and of

mathematical truths, and by the consolations of a sound philosophy, equally indifferent to hope and fear.

I take the liberty of observing that you are not a true disciple of our master Epicurus, in indulging the indolence to which you say you are yielding. One of his canons, you know, was that "that indulgence which presents a greater pleasure, or produces a greater pain, is to be avoided." Your love of repose will lead, in its progress, to a suspension of healthy exercise, a relaxation of mind, an indifference to everything around you, and finally to a debility of body, and hebetude of mind, the farthest of all things from the happiness which the well-regulated indulgences of Epicurus ensure; fortitude, you know, is one of his four cardinal virtues. That teaches us to meet and surmount difficulties; not to fly from them, like cowards; and to fly, too, in vain, for they will meet and arrest us at every turn of our road. Weigh this matter well; brace yourself up; take a seat with Correa, and come and see the finest portion of your country, which, if you have not forgotten, you still do not know, because it is no longer the same as when you knew it. It will add much to the happiness of my recovery to be able to receive Correa and yourself, and prove the estimation in which I hold you both. Come, too, and see our incipient University, which has advanced with great activity this year. By the end of the next, we shall have elegant accommodations for seven professors, and the year following the professors themselves. No secondary character will be received among them. Either the ablest which America or Europe can furnish, or none at all. They will give us the selected society of a great city separated from the dissipations and levities of its ephemeral insects.

I am glad the bust of Condorcet has been saved and so well placed. His genius should be before us; while the lamentable, but singular act of ingratitude which tarnished his latter days, may be thrown behind us.

I will place under this a syllabus of the doctrines of Epicurus, somewhat in the lapidary style, which I wrote some twenty years ago; a like one of the philosophy of Jesus, of nearly the same age, is too long to be copied. Vale, et tibi persuade carissimum te esse mihi.

Syllabus of the doctrines of Epicurus

Physical. —The Universe eternal.

Its parts, great and small, interchangeable.

Matter and Void alone.

Motion inherent in matter which is weighty and declining.

Eternal circulation of the elements of bodies.

Gods, an order of beings next superior to man, enjoying in their sphere, their own felicities; but not meddling with the concerns of the scale of beings below them.

Moral. — Happiness the aim of life.

Virtue the foundation of happiness.

Utility the test of virtue.

Pleasure active and In-do-lent.

In-do-lence is the absence of pain, the true felicity.

Active, consists in agreeable motion; it is not happiness, but the means to produce it.

Thus the absence of hunger is an article of felicity; eating the means to obtain it.

The summum bonum is to be not pained in body, nor troubled in

mind.

i.e. In-do-lence of body, tranquillity of mind.

To procure tranquillity of mind we must avoid desire and fear, the two principal diseases of the mind.

Man is a free agent.

Virtue consists in 1. Prudence. 2. Temperance. 3. Fortitude. 4. Justice.

To which are opposed, 1. Folly. 2. Desire. 3. Fear, 4. Deceit.

TO DR. THOMAS COOPER

Monticello, March 13, 1820

.... I must explain to you the state of religious parties with us. about 1/3 of our state is Baptist, 1/3 Methodist, and of the remaining third two parts may be Presbyterian and one part Anglican. The Baptists are sound republicans and zealous supporters of their government. The Methodists are republican mostly, satisfied with their government. meddling with nothing out the concerns of their own calling and opposing nothing, these two sects are entirely friendly to our university, the anglicans are the same, the Presbyterian clergy alone (not their followers) remain bitterly federal and malcontent with their government, they are violent, ambitious of power, and intolerant in politics as in religion and want nothing but license from the laws to kindle again the fires of their leader John Knox, and to give us a 2d blast from his trumpet. Having a little more monkish learning than the clergy of the other sects, they are jealous of the general diffusion of science, and therefore hostile to our Seminary lest it should qualify their antagonists of the other sects to meet them in equal combat. Not daring to attack the institution with the avowal of their real motives, they peck at you, at me, and every feather they can spy out. but in this they have no weight, even with their own followers, excepting a few old men among them who may still be federal & Anglomen, their main body are good citizens, friends to their government, anxious for reputation, and therefore friendly to the University....

TO JOHN HOLMES

Monticello, April 22, 1820

I thank you, dear Sir, for the copy you have been so kind as to send me of the letter to your constituents on the Missouri question. It is a perfect justification to them. I had for a long time ceased to read newspapers, or pay any attention to public affairs, confident they were in good hands, and content to be a passenger in our bark to the shore from which I am not distant. But this momentous question, like a fire-bell in the night, awakened and filled me with terror. I considered it at once as the knell of the Union. It is hushed, indeed, for the moment. But this is a reprieve only, not a final sentence. A geographical line, coinciding with a marked principle, moral and political, once conceived and held up to the angry passions of men, will never be obliterated; and every new irritation will mark it deeper and deeper. I can say, with conscious truth, that there is not a man on earth who would sacrifice more than I would to relieve us from this heavy reproach, in any practicable way. The cession of that kind of property, for so it is misnamed, is a bagatelle which would not cost me a second thought, if, in that way, a general emancipation and expatriation could be effected; and, gradually, and with due sacrifices, I think it might be. But as it is, we have the wolf by the ears, and we can neither hoi a him, nor safely let him go. Justice is in one scale, and self preservation in the other. Of one thing I am certain, that as the passage of slaves from one State to another, would not wake a slave of a single human being who would not be so without it, so their diffusion over a greater surface would make them individually happier, and proportionally facilitate the accomplishment of their emancipation, by dividing the burden on a greater number of coadjutors. An abstinence too, from this act of power, would remove

the jealousy excited by the undertaking of Congress to regulate the condition of the different descriptions of men composing a State. This certainly is the exclusive right of every State, which nothing in the Constitution has taken from them and given to the General Government. Could Congress, for example, say, that the non-freemen of Connecticut shall be freemen, or that they shall not emigrate into any other State?

I regret that I am now to die in the belief, that the useless sacrifice of themselves by the generation of 1776, to acquire self-government and happiness to their country, is to be thrown away by the unwise and unworthy passions of their sons, and that my only consolation is to be, that I live not to weep over it. If they would but dispassionately weigh the blessings they will throw away, against an abstract principle more likely to be Effected by union than by scission, they would pause before they would perpetrate this act of suicide on themselves, and of treason against the hopes of the world. To yourself, as the faithful advocate of the Union, I tender the offering of my high esteem and respect.

TO WILLIAM SHORT

Monticello, August 4, 1820

.... The day is not distant, when we may formally require a meridian of partition through the ocean which separates the two hemispheres, on the hither side of which no European gun shall ever be heard, nor an American on the other; and when, during the rage of the eternal wars of Europe, the lion and the lamb, within our regions, shall lie down together in peace. The excess of population in Europe, and want of room, render war, in their opinion, necessary to keep down that excess of numbers. Here, room is abundant, population scanty, and peace the necessary means for producing men, to whom the redundant soil is offering the means of life and happiness. The principles of society there and here, then, are radically different, and I hope no American patriot will ever lose sight of the essential policy of interdicting in the seas and territories of both Americas, the ferocious and sanguinary contests of Europe. I wish to see this coalition begun. I am earnest for an agreement with the maritime powers of Europe, assigning them the task of keeping down the piracies of their seas and the cannibalisms of the African coasts, and to us, the suppression of the same enormities within our seas; and for this purpose, I should rejoice to see the fleets of Brazil and the United States riding together as brethren of the same family, and pursuing the same object. And indeed it would be of happy augury to begin at once this concert of action here, on the invitation of either to the other government, while the way might be preparing for withdrawing our cruisers from Europe, and preventing naval collisions there which daily endanger our peace....

TO JOHN ADAMS

Monticello, August 15, 1820

.... But enough of criticism: let me turn to your puzzling letter of May the 12th, on matter, spirit, motion, etc. Its crowd of scepticisms kept me from sleep. I read it, and laid it down; read it, and laid it down, again and again; and to give rest to my mind, I was obliged to recur ultimately to my habitual anodyne, "I feel, therefore I exist." I feel bodies which are not myself: there are other existences then. I call them matter. I feel them changing place. This gives me motion. Where there is an absence of matter, I call it void, or nothing, or immaterial space. On the basis of sensation, of matter and motion, we may erect the fabric of all the certainties we can have or need. I can conceive thought to be an action of a particular organization of matter, formed for that purpose by its Creator, as well as that attraction is an action of matter, or magnetism of loadstone. When he who denies to the Creator the power of endowing matter with the mode of action called thinking, shall show how He could endow the sun with the mode of action called attraction, which reins the planets in the track of their orbits, or how an absence of matter can have a will, and by that will put matter into motion, then the Materialist may be lawfully required to explain the process by which matter exercises the faculty of thinking. When once we quit the basis of sensation, all is in the wind. To talk of immaterial existences, is to talk of nothings. To say that the human soul, angels, God, are immaterial, is to say, they are nothings, or that there is no God, no angels, no soul. I cannot reason otherwise: but I believe I am supported in my creed of materialism by the Lockes, the Tracys and the Stewarts. At what age ^[17] of the Christian Church this heresy of immaterialism, or masked atheism, crept in, I do not exactly know. But a heresy it certainly is. Jesus taught nothing of it.

He told us, indeed, that “God is a Spirit,” but He has not defined what a spirit is, nor said that it is not matter. And the ancient fathers generally, of the three first centuries, held it to be matter, light and thin indeed, an ethereal gas; but still matter....

Rejecting all organs of information, therefore, but my senses, I rid myself of the pyrrhonisms with which an indulgence in speculations hyperphysical and antiphysical, so uselessly occupy and disquiet the mind. A single sense may indeed be sometimes deceived, but rarely; and never all our senses together, with their faculty of reasoning. They evidence realities, and there are enough of these for all the purposes of life, without plunging into the fathomless abyss of dreams and phantasms. I am satisfied, and sufficiently occupied with the things which are, without tormenting or troubling myself about those which may indeed be, but of which I have no evidence. I am sure that I really know many, many things, and none more surely than that I love you with all my heart, and pray for the continuance of your life until you shall be tired of it yourself.

TO WILLIAM ROSCOE

Monticello, December 27, 1820

.... Your Liverpool institution will also aid us in the organization of our new University, an establishment now in progress in this State, and to which my remaining days and faculties will be devoted. When ready for its professors, we shall apply for them chiefly to your island. Were we content to remain stationary in science, we should take them from among ourselves; but, desirous of advancing, we must seek them in countries already in advance; and identity of language points to our best resource. To furnish inducements, we provide for the professors separate buildings, in which themselves and their families may be handsomely and comfortably lodged, and to liberal salaries will be added lucrative perquisites. This institution will be based on the illimitable freedom of the human mind. For here we are not afraid to follow truth wherever it may lead, nor to tolerate any error so long as reason is left free to combat it....

TO JOHN ADAMS

Monticello, September 12, 1821

.... Yet I will not believe our labors are lost. I shall not die without a hope that light and liberty are on steady advance. We have seen, indeed, once within the records of history, a complete eclipse of the human mind continuing for centuries. And this, too, by swarms of the same northern barbarians, conquering and taking possession of the countries and governments of the civilized world. Should this be again attempted, should the same northern hordes, allured again by the corn, wine, and oil of the south, be able again to settle their swarms in the countries of their growth, the art of printing alone, and the vast dissemination of books, will maintain the mind where it is, and raise the conquering ruffians to the level of the conquered, instead of degrading these to that of their conquerors. And even should the cloud of barbarism and despotism again obscure the science and liberties of Europe, this country remains to preserve and restore light and liberty to them. In short, the flames kindled on the 4th of July, 1776, have spread over too much of the globe to be extinguished by the feeble engines of despotism; on the contrary, they will consume these engines and all who work them....

TO JAMES SMITH

Monticello, December 8, 1822

SIR, —I have to thank you for your pamphlets on the subject of Unitarianism, and to express my gratification with your efforts for the revival of primitive Christianity in your quarter. No historical fact is better established, than that the doctrine of one God, pure and uncompounded, was that of the early ages of Christianity; and was among the efficacious doctrines which gave it triumph over the polytheism of the ancients, sickened with the absurdities of their own theology. Nor was the unity of the Supreme Being ousted from the Christian creed by the force of reason, but by the sword of civil government, wielded at the will of the fanatic Athanasius. The hocus-pocus phantasm of a God like another Cerberus, with one body and three heads, had its birth and growth in the blood of thousands and thousands of martyrs. And a strong proof of the solidity of the primitive faith, is its restoration, as soon as a nation arises which vindicates to itself the freedom of religious opinion, and its external divorce from the civil authority. The pure and simple unity of the Creator of the universe, is now all but ascendant in the Eastern States; it is dawning in the West, and advancing towards the South; and I confidently expect that the present generation will see Unitarianism become the general religion of the United States. The Eastern presses are giving us many excellent pieces on the subject, and Priestley's learned writings on it are, or should be, in every hand. In fact, the Athanasian paradox that one is three, and three but one, is so incomprehensible to the human mind, that no candid man can say he has any idea of it, and how can he believe what presents no idea? He who thinks he does, only deceives himself. He proves, also, that man, once surrendering his reason, has no remaining guard against

absurdities the most monstrous, and like a ship without rudder, is the sport of every wind. With such persons, gullibility which they call faith, takes the helm from the hand of reason, and the mind becomes a wreck.

I write with freedom, because while I claim a right to believe in one God, if so my reason tells me, I yield as freely to others that of believing in three. Both religions, I find, make honest men, and that is the only point society has any right to look to. Although this mutual freedom should produce mutual indulgence, yet I wish not to be brought in question before the public on this or any other subject, and I pray you to consider me as writing under that trust. I take no part in controversies, religious or political. At the age of eighty, tranquillity is the greatest good of life, and the strongest of our desires that of dying in the good will of all mankind. And with the assurance of all my good will to Unitarian and Trinitarian, to Whig and Tory, accept for yourself that of my entire respect.

TO ROBERT WALSH

Monticello, April 5, 1823

DEAR SIR, —Your favor of Mar. 18 has been duly recieved [sic]. I have had several applications, within a few years past, from different persons, to furnish them with materials for writing my life, and have uniformly declined it on the ground of the decay of my memory, the decline of the powers of body & mind, the heaviness of age, and the crippled state of both my hands, which renders writing the most painful labor I can undertake, these causes are becoming every day stronger; and I assure you, dear Sir, that they should not be urged in answer to a request from you but from their unwelcome and absolute reality. I am greatly changed since I had the pleasure of seeing you here; and am going down hill so rapidly as to be sensible of it from month to month, were my biography worth the desire of the public, there is certainly no pen by which I could be more flattered to have it given them than your's. with these uncontrollable [sic] obstacles, I must moreover question an opinion stated in your prospectus. I do not think a biography should be written, or at least not published, during the life of the person the subject of it. it is impossible that the writer's delicacy should permit him to speak as freely of the faults or errors of a living, as of a dead character, there is still however a better reason, the letters of a person, especially of one whose business has been chiefly transacted by letters, form the only full and genuine journal of his life; and few can let them go out of their own hands while they live, a life written after these hoards become opened to investigation must supercede any previous one. it may be observed too that before you will have got through with the dead, the living will be dying off and furnishing fresh matter, however I do not pretend but to suggest these considerations to you, nor to urge more than my regrets at my

own disability....

TO JOHN ADAMS

Monticello, April 11, 1823

.... I can never join Calvin in addressing his God. He was indeed an atheist, which I can never be or rather his religion was dæmonism. If ever man worshiped a false God, he did. The Being described in his five points, is not the God whom you and I acknowledge and adore, the Creator and benevolent Governor of the world; but a dæmon of malignant spirit. It would be more pardonable to believe in no God at all, than to blaspheme Him by the atrocious attributes of Calvin. Indeed, I think that every Christian sect gives a great handle to atheism by their general dogma, that, without a revelation, there would not be sufficient proof of the being of a God. Now one-sixth of mankind only are supposed to be Christians; the other five-sixths then, who do not believe in the Jewish and Christian revelation, are without a knowledge of the existence of a God! This gives completely a gain de cause to the disciples of Ocellus, Timæus, Spinoza, Diderot and D'Holbach. The argument which they rest on as triumphant and unanswerable is, that in every hypothesis of cosmogony, you must admit an eternal pre-existence of something; and according to the rule of sound philosophy, you are never to employ two principles to solve a difficulty when one will suffice. They say then, that it is more simple to believe at once in the eternal pre-existence of the world, as it is now going on, and may forever go on by the principle of reproduction which we see and witness, than to believe in the eternal pre-existence of an ulterior cause, or Creator of the world, a Being whom we see not and know not, of whose form, substance and mode, or place of existence, or of action, no sense informs us, no power of the mind enables us to delineate or comprehend. On the contrary, I hold, (without appeal to revelation) that when we take a view of the

universe, in its parts, general or particular, it is impossible for the human mind not to perceive and feel a conviction of design, consummate skill, and indefinite power in every atom of its composition. The movements of the heavenly bodies, so exactly held in their course by the balance of centrifugal and centripetal forces; the structure of our earth itself, with its distribution of lands, waters and atmosphere; animal and vegetable bodies, examined in all their minutest particles; insects, mere atoms of life, yet as perfectly organized as man or mammoth; the mineral substances, their generation and uses; it is impossible, I say, for the human mind not to believe, that there is in all this, design, cause and effect, up to an ultimate cause, a Fabricator of all things from matter and motion, their Preserver and Regulator while permitted to exist in their present forms, and their regeneration into new and other forms. We see, too, evident proofs of the necessity of a superintending power, to maintain the universe in its course and order. Stars, well known, have disappeared, new ones have come into view; comets, in their incalculable courses, may run foul of suns and planets, and require renovation under other laws; certain races of animals are become extinct; and were there no restoring power, all existences might extinguish successively, one by one, until all should be reduced to a shapeless chaos. So irresistible are these evidences of an intelligent and powerful Agent, that, of the infinite numbers of men who have existed through all time, they have believed, in the proportion of a million at least to unit, in the hypothesis of an eternal pre-existence of a Creator, rather than in that of a self-existent universe. Surely this unanimous sentiment renders this more probable, than that of the few in the other hypothesis. Some early Christians, indeed, have believed in the co-eternal pre-existence of both the Creator and the world, without changing their relation of cause and effect....

TO GENERAL SAMUEL SMITH

Monticello, May 3, 1823

.... A tax on whiskey is to discourage its consumption; a tax on foreign spirits encourages whiskey by removing its rival from competition. The price and present duty throw foreign spirits already out of competition with whiskey, and accordingly they are used but to a salutary extent. You see no persons besotting themselves with imported spirits, wines, liquors, cordials, etc. Whiskey claims to itself alone the exclusive office of sot-making. Foreign spirits, wines, teas, coffee, segars, salt, are articles of as innocent consumption as broadcloths and silks; and ought, like them, to pay but the average ad valorem duty of other imported comforts. All of them are ingredients in our happiness, and the government which steps out of the ranks of the ordinary articles of consumption to select and lay under disproportionate burdens a particular one, because it is a comfort, pleasing to the taste, or necessary to health, and will therefore be bought, is, in that particular, a tyranny....

TO THE PRESIDENT OF THE UNITED STATES (JAMES MONROE)

Monticello, October 24, 1823

DEAR SIR, —The question presented by the letters you have sent me, is the most momentous which has ever been offered to my contemplation since that of Independence. That made us a nation, this sets our compass and points the course which we are to steer through the ocean of time opening on us. And never could we embark on it under circumstances more auspicious. Our first and fundamental maxim should be, never to entangle ourselves in the broils of Europe. Our second, never to suffer Europe to intermeddle with cis-Atlantic affairs. America, North and South, has a set of interests distinct from those of Europe, and peculiarly her own. She should therefore have a system of her own, separate and apart from that of Europe. While the last is laboring to become the domicile of despotism, our endeavors should surely be, to make our hemisphere that of freedom. One nation, most of all, could disturb us in this pursuit; she now offers to lead, aid, and accompany us in it. By acceding to her proposition, we detach her from the bands, bring her mighty weight into the scale of free government, and emancipate a continent at one stroke, which might otherwise linger long in doubt and difficulty. Great Britain is the nation which can do us the most harm of any one, or all on earth; and with her on our side we need not fear the whole world. With her then, we should most sedulously cherish a cordial friendship; and nothing would tend more to knit our affections than to be fighting once more, side by side, in the same cause. Not that I would purchase even her amity at the price of taking part in her wars. But the war in which the present proposition might engage us, should that be its

consequence, is not her war, but ours. Its object is to introduce and establish the American system, of keeping out of our land all foreign powers, of never permitting those of Europe to intermeddle with the affairs of our nations. It is to maintain our own principle, not to depart from it. And if, to facilitate this, we can effect a division in the body of the European powers, and draw over to our side its most powerful member, surely we should do it. But I am clearly of Mr. Canning's opinion, that it will prevent instead of provoking war. With Great Britain withdrawn from their scale and shifted into that of our two continents, all Europe combined would not undertake such a war. For how would they propose to get at either enemy without superior fleets? Nor is the occasion to be slighted which this proposition offers, of declaring our protest against the atrocious violations of the rights of nations, by the interference of any one in the internal affairs of another, so flagitiously begun by Bonaparte, and now continued by the equally lawless Alliance, calling itself Holy.

But we have first to ask ourselves a question. Do we wish to acquire to our own confederacy any one or more of the Spanish provinces? I candidly confess, that I have ever looked on Cuba as the most interesting addition which could ever be made to our system of States. The control which, with Florida Point, this island would give us over the Gulf of Mexico, and the countries and isthmus bordering on it, as well as all those whose waters flow into it, would fill up the measure of our political well-being. Yet, as I am sensible that this can never be obtained, even with her own consent, but by war; and its independence, which is our second interest, (and especially its independence of England,) can be secured without it, I have no hesitation in abandoning my first wish to future chances, and accepting its independence, with peace and the friendship of England, rather than its association, at the expense of war and her enmity.

I could honestly, therefore, join in the declaration proposed, that

we aim not at the acquisition of any of those possessions, that we will not stand in the way of any amicable arrangement between them and the Mother country; but that we will oppose, with all our means, the forcible interposition of any other power, as auxiliary, stipendiary, or under any other form or pretext, and most especially, their transfer to any power by conquest, cession, or acquisition in any other way. I should think it, therefore, advisable, that the Executive should encourage the British government to a continuance in the dispositions expressed in these letters, by an assurance of his concurrence with them as far as his authority goes; and that as it may lead to war, the declaration of which requires an act of Congress, the case shall be laid before them for consideration at their first meeting, and under the reasonable aspect in which it is seen by himself.

I have been so long weaned from political subjects, and have so long ceased to take any interest in them, that I am sensible I am not qualified to offer opinions on them worthy of any attention. But the question now proposed involves consequences so lasting, and effects so decisive of our future destinies, as to rekindle all the interest I have heretofore felt on such occasions, and to induce me to the hazard of opinions, which will prove only my wish to contribute still my mite towards anything which may be useful to our country. And praying you to accept it at only what it is worth, I add the assurance of my constant and affectionate friendship and respect.

TO MONSIEUR A. CORAY

Monticello, October 31, 1823

.... The government of Athens, for example, was that of the people of one city making laws for the whole country subjected to them. That of Lacedaemon was the rule of military monks over the laboring class of the people, reduced to abject slavery. These are not the doctrines of the present age. The equal rights of man, and the happiness of every individual, are now acknowledged to be the only legitimate objects of government. Modern times have the signal advantage, too, of having discovered the only device by which these rights can be secured, to wit: government by the people, acting not in person, but by representatives chosen by themselves, that is to say, by every man of ripe years and sane mind, who either contributes by his purse or person to the support of his country. The small and imperfect mixture of representative government in England, impeded as it is by other branches, aristocratical and hereditary, shows yet the power of the representative principle towards improving the condition of man. With us, all the branches of the government are elective by the people themselves, except the judiciary, of whose science and qualifications they are not competent judges. Yet, even in that department, we call in a jury of the people to decide all controverted matters of fact, because to that investigation they are entirely competent, leaving thus as little as possible, merely the law of the case, to the decision of the judges. And true it is that the people, especially when moderately instructed, are the only safe, because the only honest, depositories of the public rights, and should therefore be introduced into the administration of them in every function to which they are sufficient they will err sometimes and accidentally, but never designedly, and with a systematic and persevering purpose of overthrowing the free

principles of the government. Hereditary bodies, on the contrary, always existing, always on the watch for their own aggrandizement, profit of every opportunity of advancing the privileges of their order, and encroaching on the rights of the people....

TO THE MARQUIS DE LAFAYETTE

Monticello, November 4, 1823

.... For in truth, the parties of Whig and Tory, are those of nature. They exist in all countries, whether called by these names, or by those of Aristocrats and Democrats, Coté Droite and Coté Gauche, Ultras and Radicals, Serviles and Liberals. The sickly, weakly, timid man, fears the people, and is a Tory by nature. The healthy, strong and bold, cherishes them, and is formed a Whig by nature. On the eclipse of federalism with us, although not its extinction, its leaders got up the Missouri question, under the false front of lessening the measure of slavery, but with the real view of producing a geographical division of parties, which might insure them the next President. The people of the North went blindfold into the snare, followed their leaders for awhile with a zeal truly moral and laudable, until they became sensible that they were injuring instead of aiding the real interests of the slaves, that they had been used merely as tools for electioneering purposes; and that trick of hypocrisy then fell as quickly as it had been got up. To that is now succeeding a distinction, which, like that of Republican and Federal, or Whig and Tory, being equally intermixed through every State, threatens none of those geographical schisms which go immediately to a separation. The line of division now, is the preservation of State rights, as reserved in the Constitution, or by strained constructions of that instrument, to merge all into a consolidated government. The Tories are for strengthening the Executive and General Government; the Whigs cherish the representative branch, and the rights reserved by the States, as the bulwark against consolidation, which must immediately generate monarchy. And although this division excites, as yet, no warmth, yet

it exists, is well understood, and will be a principle of voting at the ensuing election, with the reflecting men of both parties....

TO MR. DAVID HARDING, PRESIDENT OF THE JEFFERSON DEBATING SOCIETY OF HINGHAM

Monticello April 20, 1824

SIR, —I have duly received your favor of the 6th instant, informing me of the institution of a debating society in Hingham, composed of adherents to the republican principles of the Revolution; and I am justly sensible of the honor done my name by associating it with the title of the society. The object of the society is laudable, and in a republican nation, whose citizens are to be led by reason and persuasion, and not by force, the art of reasoning becomes of first importance. In this line antiquity has left us the finest models for imitation; and he who studies and imitates them most nearly, will nearest approach the perfection of the art. Among these I should consider the speeches of Livy, Sallust, and Tacitus, as pre-eminent specimens of logic, taste, and that sententious brevity which using not a word to spare, leaves not a moment for inattention to the hearer. Amplification is the vice of modern oratory. It is an insult to an assembly of reasonable men, disgusting and revolting instead of persuading. Speeches measured by the hour, die with the hour. I will not, however, further indulge the disposition of the age to sermonize, and especially to those surrounded by so much better advice....

TO MAJOR JOHN CARTWRIGHT

Monticello, June 5, 1824

.... Can one generation bind another, and all others, in succession forever? I think not. The Creator has made the earth for the living, not the dead. Rights and powers can only belong to persons, not to things, not to mere matter, unendowed with will. The dead are not even things. The particles of matter which composed their bodies, make part now of the bodies of other animals, vegetables, or minerals, of a thousand forms. To what then are attached the rights and powers they held while in the form of men? A generation may bind itself as long as its majority continues in life; when that has disappeared, another majority is in place, holds all the rights and powers their predecessors once held, and may change their laws and institutions to suit themselves. Nothing then is unchangeable but the inherent and unalienable rights of man....

TO HENRY LEE

Monticello, August 10, 1824

.... As to myself, it is many years since I have ceased to read but a single paper. I am no longer, therefore, a general subscriber for any other. Yet, to encourage the hopeful in the outset, I have sometimes subscribed for the first year on condition of being discontinued at the end of it, without further warning. I do the same now with pleasure for yours; and unwilling to have outstanding accounts, which I am liable to forget, I now enclose the price of the tri-weekly paper. I am no believer in the amalgamation of parties, nor do I consider it as either desirable or useful for the public; but only that, like religious differences, a difference in politics should never be permitted to enter into social intercourse, or to disturb its friendships, its charities, or justice. In that form, they are censors of the conduct of each other, and useful watchmen for the public. Men by their constitutions are naturally divided into two parties: 1. Those who fear and distrust the people, and wish to draw all powers from them into the hands of the higher classes. 2. Those who identify themselves with the people, have confidence in them, cherish and consider them as the most honest and safe, although not the most wise depository of the public interests. In every country these two parties exist, and in every one where they are free to think, speak, and write, they will declare themselves. Call them, therefore, Liberals and Serviles, Jacobins and Ultras, Whigs and Tories, Republicans and Federalists, Aristocrats and Democrats, or by whatever name you please, they are the same parties still, and pursue the same object. The last appellation of Aristocrats and Democrats is the true one expressing the essence of all. A paper which shall be governed by the spirit of Mr. Madison's celebrated report, of which you express in your prospectus so just and high an approbation,

cannot be false to the rights of all classes. The grandfathers of the present generation of your family I knew well. They were friends and fellow laborers with me in the same cause and principle. Their descendants cannot follow better guides. Accept the assurance of my best wishes and respectful consideration.

TO CHARLES SIGOURNEY

Monticello, August 15, 1824

.... in April last we were enabled to send an Agent to Great Britain to procure some professors, those of the first order not being to be had in this country, for had it been in our power to seduce from their present situations some of the eminent characters established in our American seminaries, it was forbidden by every honorable principle; and a resort to secondary and unemployed characters would not have fulfilled the object of our institution, we considered too that a country which is willing that it's [sic] science should be stationary where it is, may employ it's own elites [sic]; but if it wishes to advance, it must seek instructors from countries already in advance of them. I know that our pride & prejudices bristle up at the employment of foreigners, but it is science we want, and to this we must sacrifice our pride and prejudices, some difficulties will arise in accommodating to our habits the ideas, methods and manners of those we employ, this too is a part of the price we are to pay for their aid. we must meet the difficulty, compromise with it, and make up our minds, with the honey, to swallow the few dregs we can not separate from it. no good in life can be obtained pure and unmixed we must take it as it is offered, alloyed always with some evil, and at what other price have we obtained all our arts and sciences?

TO JOHN ADAMS

Monticello, January 8, 1825

.... I have lately been reading the most extraordinary of all books, and at the same time the most demonstrative by numerous and unequivocal facts. It is Flourend's experiments on the functions of the nervous system, in vertebrated animals. He takes out the cerebrum completely, leaving the cerebellum and other parts of the system uninjured. The animal loses all its senses of hearing, seeing, feeling, smelling, tasting, is totally deprived of will, intelligence, memory, perception, etc., yet lives for months in perfect health, with all its powers of motion, but without moving but on external excitement, starving even on a pile of grain, unless crammed down its inroat; in short, in a state of the most absolute stupidity. He takes the cerebellum out of others, leaving the cerebrum untouched. The animal retains all its senses, faculties, and understanding, but loses the power of regulated motion, and exhibits all the symptoms of drunkenness. While he makes incisions in the cerebrum and cerebellum, lengthwise and crosswise, which heal and get well, a puncture in the medulla elongata is instant death; and many other most interesting things too long for a letter. Cabanis had proved by the anatomical structure of certain portions of the human frame, that they might be capable of receiving from the hand of the Creator the faculty of thinking; Flourend proves that they have received it; that the cerebrum is the thinking organ; and that life and health may continue, and the animal be entirely without thought, if deprived of that organ. I wish to see what the spiritualists will say to this. Whether in this state the soul remains in the body, deprived of its essence of thought? or whether it leaves it, as in death, and where it goes? His memoirs and experiments have been reported on with approbation by a committee of the

Institute, composed of Cuvier, Bertholet, Dumaril, Portal and Pinel. But all this, you and I shall know better when we meet again, in another place, and at no distant period. In the meantime, that the revived powers of your frame, and the anodyne of philosophy may preserve you from all suffering, is my sincere and affectionate prayer.

TO THOMAS JEFFERSON SMITH

Monticello, February 21, 1825

This letter will, to you, be as one from the dead. The writer will be in the grave before you can weigh its counsels. Your affectionate and excellent father has requested that I would address to you something which might possibly have a favorable influence on the course of life you have to run, and I too, as a namesake, fed an interest in that course. Few words will be necessary, with good dispositions on your part. Adore God. Reverence and cherish your parents. Love your neighbor as yourself, and your country more than yourself. Be just. Be true. Murmur not at the ways of Providence. So shall the life into which you have entered, be the portal to one of eternal and ineffable bliss. And if to the dead it is permitted to care for the things of this world, every action of your life will be under my regard. Farewell.

The portrait of a good man by the most sublime of poets, for your imitation.

Lord, who's the happy man that may to Thy blest courts repair,
Not stranger-like to visit them, but to inhabit there?

'Tis he whose every thought and deed by rules of virtue moves,
Whose generous tongue disdains to speak the thing his heart disproves.

Who never did a slander forge, his neighbor's fame to wound,

Nor hearken to a false report, by malice whispered round.

Who vice, in all its pomp and power, can treat with just neglect;

And piety, though clothed in rags, religiously respect.

Who to his plighted vows and trust has ever firmly stood,

And though he promise to his loss, he makes his promise good.

Whose soul in usury disdains his treasure to employ,

Whom no rewards can ever bribe the guiltless to destroy.

The man who, by this steady course, has happiness insur'd,

When earth's foundations shake, shall stand, by Providence secur'd.

A Decalogue of Canons for observation in practical life

1. Never put off till to-morrow what you can do to-day.

2. Never trouble another for what you can do yourself.

3 . Never spend your money before you have it.

4. Never buy what you do not want, because it is cheap; it will be dear to you.

5. Pride costs us more than hunger, thirst, and cold.

6. We never repent of having eaten too little.

7. Nothing is troublesome that we do willingly.

8. How much pain have cost us the evils which have never happened.

9. Take things always by their smooth handle.

10. When angry, count ten, before you speak; if very angry, an hundred.

TO HENRY LEE

Monticello, May 8, 1825

.... But with respect to our rights, and the acts of the British government contravening those rights, there was but one opinion on this side of the water. All American Whigs thought alike on these subjects. When forced, therefore, to resort to arms for redress, an appeal to the tribunal of the world was deemed proper for our justification. This was the object of the Declaration of Independence. Not to find out new principles, or new arguments, never before thought of, not merely to say things which had never been said before; but to place before mankind the common sense of the subject, in terms so plain and firm as to command their assent, and to justify our selves in the independent stand we are compelled to take. Neithet aiming at originality of principle or sentiment, nor yet copied from any particular and previous writing, it was intended to be an expression of the American mind, and to give to that expression the proper tone and spirit called for by the occasion. All its authority rests then on the harmonizing sentiments of the day, whether expressed in conversation, in letters, printed essays, or in the elementary books of public right, as Aristotle, Cicero, Locke, Sidney, etc. The historical documents which you mention as in your possession, ought all to be found, and I am persuaded you will find, to be corroborative of the facts and principles advanced in that Declaration....

TO ELLEN W. COOLIDGE

Monticello, August 27, 1825

Your affectionate letter, my dear Ellen, of the 1st inst. came to hand in due time. The assurances of your love, so feelingly expressed, were truly soothing to my soul, and none were ever met with warmer sympathies. We did not know until you left us what a void it would make in our family. Imagination had illy sketched its full measure to us; and, at this moment, everything around serves but to remind us of our past happiness, only consoled by the addition it has made to yours. Of this we are abundantly assured by the most excellent and amiable character to which we have committed your future well-being, and by the kindness with which you have been received by the worthy family into which you are now engrafted. We have no fear but that their affections will grow with their growing knowledge of you, and the assiduous cultivation of these becomes the first object in importance to you. I have no doubt you will find also the state of society there more congenial with your mind than the rustic scenes you have left although these do not want their points of endearment. Nay, one single circumstance changed, and their scale would hardly be the lightest. One fatal stain deforms what nature had bestowed on us of her fairest gifts.

I am glad you took the delightful tour which you describe in your letter. It is almost Exactly that which Mr. Madison and myself pursued in May and June, 1791. Setting out from Philadelphia, our course was to New York, up the Hudson to Albany, Troy, Saratoga, Fort Edward, Fort George. Lake George, Ticonderoga, Crown Point, penetrated into Lake Champlain, returned the same way to Saratoga, thence crossed the mountains to Bennington, Northampton, along Connecticut River to its mouth, crossed the Sound into Long Island, and along its

northern margin to Brooklyn, re-crossed to New York, and returned. But from Saratoga till we got back to Northampton was then mostly desert. Now it is what thirty-four years of free and good government have made it. It shows how soon the labor of men would make a paradise of the whole earth, were it not for misgovernment, and a diversion of all his energies from their proper object—the happiness of man, —to the selfish interests of kings, nobles, and priests.

Our University goes on well. We have passed the limit of 100 students some time since. As yet it has been a model of order and good behavior, having never yet had occasion for the exercise of a single act of authority. We studiously avoid too much government. We treat them as men and gentlemen, under the guidance mainly of their own discretion. They so consider themselves, and make it their pride to acquire that character for their institution. In short, we are as quiet on that head as the experience of six months only can justify. Our professors, too, continue to be what we wish them. Mr. Gilmer accepts the Law chair, and all is well.

My own health is what it was when you left me. I have not been out of the house since, except to take the turn of the Roundabout twice; nor have I any definite prospect when it will be otherwise.

I shall not venture into the region of small news, of which your other correspondents of the family are so much better informed. I am expecting to hear from Mr. Coolidge on the subject of the clock for the Rotunda. Assure him of my warmest affections and respect, and pray him to give you ten thousand kisses for me, and they will still fall short of the measure of my love to you. If his parents and family can set any store by the esteem and respect of a stranger, mine are devoted to them.

TO DR. JAMES MEASE

Monticello, September 26, 1825

DEAR SIR, —It is not for me to estimate the importance of the circumstances concerning which your letter of the 8th makes inquiry. They prove, even in their minuteness, the sacred attachments of our fellow citizens to the event of which the paper of July 4th, 1776, was but the Declaration, the genuine effusion of the soul of our country at that time. Small things may, perhaps, like the relics of saints, help to nourish our devotion to this holy bond of our Union, and keep it longer alive and warm in our affections. This effect may give importance to circumstances, however small. At the time of writing that instrument, I lodged in the house of a Mr. Graaf, a new brick house, three stories high, of which I rented the second floor, consisting of a parlor and bed-room, ready furnished. In that parlor I wrote habitually, and in it wrote this paper, particularly. So far I state from written proofs in my possession. The proprietor, Graaf, was a young man, son of a German, and then newly married. I think he was a bricklayer, and that his house was on the south side of Market street, probably between Seventh and Eighth streets, and if not the only house on that part of the street, I am sure there were few others near it. I have some idea that it was a corner house, but no other recollections throwing light on the question, or worth communication. I am ill, therefore only add assurance of my great respect and esteem.

TO [GEORGE WASHINGTON LEWIS?]

Monticello, October 25, 1825

DEAR SIR, —I know not whether the professors to whom ancient and modern history are assigned in the University, have yet decided on the course of historical reading which they will ecommend to their schools. If they have, I wish this letter to be considered as not written, as their course, the result of maure consideration, will be preferable to anything I could recomend. Under this uncertainty, and the rather as you are of icither of these schools, I may hazard some general ideas, to be corrected by what they may recommend hereafter.

In all cases I prefer original authors to compilers. For a course of ancient history, therefore, of Greece and Rome espeially, I should advise the usual suite of Heredotus, Thucydides. enophon, Diodorus, Livy, Caesar, Suetonius, Tacitus, and Dion, in their originals if understood, and in translations if not For its continuation to the final destruction of the empire we must then be content with Gibbon, a compiler, and with Segur, for a judicious recapitulation of the whole. After this general course, there are a number of particular histories filling up the chasms, which may be read at leisure in the progress of life. Such is Arrian, 2 Curtius, Polybius, Sallust, Plutarch, Dionysius. Halicarnassus, Micasì, etc. The ancient universal history should be on our shelves as a book of general reference, the most learned and most faithful perhaps that ever was written. Its style is very plain but perspicuous.

In modern history, there are but two nations with whose course it is interesting to us to be intimately acquainted, to wit: France and England. For the former, Millot's General History of France may be

sufficient to the period when I Davila commences. He should be followed by Perefixe, Sully, Voltaire's Louis X IV and X V, la Cretelles XVIII^{me} siècle, Marmontel's Regence, Foulongion's French Revolution, and Madame de Stael's, making up by a succession of particular history, the general one which they want.

Of England there is as yet no general history so faithful as Rapin's. He may be followed by Ludlow, Fox, Belsham, Hume, and Brodie. Hume's, were it faithful, would be the finest piece of history which has ever been written by man. Its unfortunate bias may be partly ascribed to the accident of his having written backwards. His maiden work was the History of the Stuarts. It was a first essay to try his strength before the public. And whether as a Scotchman he had really a partiality for that family, or thought that the lower their degradation, the more fame he should acquire by raising them up to some favor, the object of his work was an apology for them. He spared nothing, therefore, to wash them white, and to palliate their misgovernment. For this purpose he suppressed truths, advanced falsehoods, forged authorities, and falsified records. All this is proved on him unanswerably by Brodie. But so bewitching was his style and manner, that his readers were unwilling to doubt anything, swallowed everything, and all England became Tories by the magic of his art. His pen revolutionized the public sentiment of that country more completely than the standing armies could ever have done, which were so much dreaded and deprecated by the patriots of that day.

Having succeeded so eminently in the acquisition of fortune and fame by this work, he undertook the history of the two preceding dynasties, the Plantagenets and Tudors. It was all-important in this second work, to maintain the thesis of the first, that "it was the people who encroached on the sovereign, not the sovereign who usurped on the rights of the people." And, again, chapter 53d, "the grievances under which the English labored [to wit: whipping, pillorying,

cropping, imprisoning, fining, etc.,] when considered in themselves, without regard to the Constitution, scarcely deserve the name, nor were they either burdensome on the people's properties, or anywise shocking to the natural humanity of mankind." During the constant wars, civil and foreign, which prevailed while these two families occupied the throne, it was not difficult to find abundant instances of practices the most despotic, as are wont to occur in times of violence. To make this second epoch support the third, therefore, required but a little garbling of authorities. And it then remained, by a third work, to make of the whole a complete history of England, on the principles on which he had advocated that of the Stuarts. This would comprehend the Saxon and Norman conquests, the former exhibiting the genuine form and political principles of the people constituting the nation and founded in the rights of man; the latter built on conquest and physical force, not at all affecting moral rights, nor even assented to by the free will of the vanquished. The battle of Hastings, indeed, was lost, but the natural rights of the nation were not staked on the event of a single battle. Their will to recover the Saxon constitution continued unabated, and was at the bottom of all the unsuccessful insurrections which succeeded in subsequent times. The victors and vanquished continued in a state of living hostility, and the nation may still say, after losing the battle of Hastings,

"What though the field is lost?

All is not lost; the unconquerable will

And study of revenge, immortal hate

And courage never to submit or yield."

The government of a nation may be usurped by the forcible intrusion of an individual into the throne. But to conquer its will, so as to rest the right on that, the only legitimate basis, requires long acquiescence and cessation of all opposition. The Whig historians of

England, therefore, have always gone back to the Saxon period for the true principles of their constitution, while the Tories and Hume, their Coryphaeus, date it from the Norman conquest, and hence conclude that the continual claim by the nation of the good old Saxon laws, and the struggles to recover them, were “encroachments of the people on the crown, and not usurpations of the crown on the people.” Hume, with Brodie, should be the last histories of England to be read. If first read, Hume makes an English Tory, from whence it is an easy step to American Toryism. But there is a history, by Baxter, in which, abridging somewhat by leaving out some entire incidents as less interesting now than when Hume wrote, he has given the rest in the identical words of Hume, except that when he comes to a fact falsified, he states it truly, and when to a suppression of truth, he supplies it, never otherwise changing a word. It is, in fact, an editic expurgation of Hume. Those who shrink from the volume of Rapin, may read this first, and from this lay a first foundation in a basis of truth.

For modern continental history, a very general idea may be first aimed at, leaving for future and occasional reading the particular histories of such countries as may excite curiosity at the time. This may be obtained from Mollet’s Northern Antiquities, Vol. *Esprit et Mœurs des Nations*, Millot’s Modern History, Russel’s Modern Europe, Hallam’s Middle Ages, and Robertson’s Charles V....

TO JAMES MADISON

Monticello, February 17, 1826

.... In the selection of our Law Professor, we must be rigorously attentive to his political principles. You will recollect that before the Revolution, Coke Littleton was the universal elementary book of law students, and a sounder Whig never wrote, nor of profounder learning in the orthodox doctrines of the British constitution, or in what were called English liberties. You remember also that our lawyers were then all Whigs. But when his black-letter text, and uncouth but cunning learning got out of fashion, and the honeyed Mansfieldism of Blackstone became the students' hornbook, from that moment, that profession (the nursery of our Congress) began to slide into toryism, and nearly all the young brood of lawyers now are of that hue. They suppose themselves, indeed, to be Whigs, because they no longer know what Whigism or republicanism means. It is in our seminary that that vestal flame is to be kept alive; it is thence to spread anew over our own and the sister States. If we are true and vigilant in our trust, within a dozen or twenty years a majority of our own legislature will be from one school, and many disciples will have carried its doctrines home with them to their several States, and will have leavened thus the whole mass. New York has taken strong ground in vindication of the Constitution; South Carolina had already done the same. Although I was against our leading, I am equally against omitting to follow in the same line, and backing them firmly; and I hope that yourself or some other will mark out the track to be pursued by us.

You will have seen in the newspapers some proceedings in the legislature, which have cost me much mortification. My own debts had become considerable, but not beyond the effect of some lopping

of property, which would have been little felt, when our friend Nicholas gave me the coup de grace. Ever since that I have been paying twelve hundred dollars a year interest on his debt, which, with my own, was absorbing so much of my annual income, as that the maintenance of my family was making deep and rapid inroads on my capital, and had already done it. Still, sales at a fair price would leave me completely provided. Had crops and prices for several years been such as to maintain a steady competition of substantial bidders at market, all would have been safe. But the long succession of years of stunted crops, of reduced prices, the general prostration of the farming business, under levies for the support of manufacturers, etc., with the calamitous fluctuations of value in our paper medium, have kept agriculture in a state of abject depression, which has peopled the Western States by silently breaking up those on the Atlantic, and glutted the land market, while it drew off its bidders. In such a state of things, property has lost its character of being a resource for debts. High land in Bedford, which, in the days of our plethory, sold readily for from fifty to one hundred dollars the acre, (and such sales were many then,) would not now sell for more than from ten to twenty dollars, or one-quarter or one-fifth of its former price. Reflecting on these things, the practice occurred to me, of selling, on fair valuation, and by way of lottery, often resorted to before the Revolution to effect large sales, and still in constant usage in every State for individual as well as corporation purposes. If it is permitted in my case, my lands here alone, with the mills, etc., will pay everything, and leave me Monticello and a farm free. If refused, I must sell everything here, perhaps considerably in Bedford, move thither with my family, where I have not even a log hut to put my head into, and whether ground for burial, will depend on the depredations which, under the form of sales, shall have been committed on my property. The question then with me was *ultrum horum*? But why afflict you with these details? Indeed, I cannot tell, unless pains are lessened by communication with a friend. The friendship which has subsisted between us, now half a

century, and the harmony of our political principles and pursuits, have been sources of constant happiness to me through that long period. And if I remove beyond the reach of attentions to the University, or beyond the bourne of life itself, as I soon must, it is a comfort to leave that institution under your care, and an assurance that it will not be wanting. It has also been a great solace to me, to believe that you are engaged in vindicating to posterity the course we have pursued for preserving to them, in all their purity, the blessings of self-government, which we had assisted too in acquiring for them. If ever the earth has beheld a system of administration conducted with a single and steadfast eye to the general interest and happiness of those committed to it, one which, protected by truth, can never know reproach, it is that to which our lives have been devoted. To myself you have been a pillar of support through life. Take care of me when dead, and be assured that I shall leave with you my last affections.

TO ROGER C. WEIGHTMAN

Monticello, June 24, 1826

RESPECTED SIR, —The kind invitation I receive from you, on the part of the citizens of the city of Washington, to be present with them at their celebration on the fiftieth anniversary of American Independence, as one of the surviving signers of an instrument pregnant with our own, and the fate of the world, is most flattering to myself, and heightened by the honorable accompaniment proposed for the comfort of such a journey. It adds sensibly to the sufferings of sickness, to be deprived by it of a personal participation in the rejoicings of that day. But acquiescence is a duty, under circumstances not placed among those we are permitted to control. I should, indeed, with peculiar delight, have met and exchanged there congratulations personally with the small band, the remnant of that host of worthies, who joined with us on that day, in the bold and doubtful election we were to make for our country, between submission or the sword; and to have enjoyed with them the consolatory fact, that our fellow citizens, after half a century of experience and prosperity, continue to approve the choice we made. May it be to the world, what I believe it will be (to some parts sooner, to others later, but finally to all), the signal of arousing men to burst the chains under which monkish ignorance and superstition had persuaded them to bind themselves, and to assume the blessings and security of self-government. That form which we have substituted, restores the free right to the unbounded exercise of reason and freedom of opinion. All eyes are opened, or opening, to the rights of man. The general spread of the light of science has already laid open to every view the palpable truth, that the mass of mankind has not been born with saddles on their backs, nor a favored few booted and spurred, ready to ride them

legitimately, by the grace of God. These are grounds of hope for others. For ourselves, let the annual return of this day forever refresh our recollections of these rights, and an undiminished devotion to them.

I will ask permission here to express the pleasure with which I should have met my ancient neighbors of the city of Washington and its vicinities, with whom I passed so many years of a pleasing social intercourse; an intercourse which so much relieved the anxieties of the public cares, and left impressions so deeply engraved in my affections, as never to be forgotten. With my regret that ill health forbids me the gratification of an acceptance, be pleased to receive for yourself and those for whom you write, the assurance of my highest respect and friendly attachment.

[1] “How changed from what it was!”

[2] “The mind shudders to recall it.”

[3] “Pierced through by the many wounds of fate, I felt myself unequal to this one and succumbed utterly!”

[4] Livy, Sallust, Caesar, Cicero’s epistles, Suetonius, Tacitus, Gibbon. [Jefferson’s footnote.]

[5] “Without brains or feeling, / Without beauty or youth, / In France; one may have the first of lovers: / There’s Pompadour for proof.”

[6] I prefer freedom with danger to slavery with ease.

[7] The beautiful.

[8] “The wayward zeal of the ruling citizens.”

[9] The irritable tribe of priests.

[10] To explain, I will exhibit the heads of Seneca’s and Cicero’s philosophical works, the most extensive of any we have received from the ancients. Of ten heads in Seneca, seven relate to ourselves, viz. de ira, consolatio, de tranquillitate, de constantia sapientis, de otio sapientis, de vita beata, de brevitae vitae; two relate to others, de dementia, de beneficiis; and one relates to the government of the world, de providentia. Of eleven tracts of Cicero, five respect ourselves, viz. de finibus, Tusculana, academica, paradoxa, de Senectute; one, de officiis, relates partly to ourselves, partly to others; one, de amicitia, relates to others; and four are on different subjects, to wit, de natura deorum, de divinatione, de fato, and somnium Scipionis. [Jefferson’s footnote.]

[11] With the help of the gods.

[12] The beautiful.

[13] “Who neither fear nor desire my last day.”

[14] Law of the majority.

[15] “With a change of name, the tale can be told of you.”

[16] E.g. The immaculate conception of Jesus, His deification, the creation of the world by Him, His miraculous powers, His resurrection and visible ascension, His corporeal presence in the Eucharist, the Trinity, original sin, atonement, regeneration, election, orders of Hierarchy, etc. [Jefferson’s note.]

[17] That of Athanasius and the Council of Nicæa, anno 324. [Jefferson’s note.]

中国人民大学出版社外语出版分社读者信息反馈表

尊敬的读者：

感谢您购买和使用中国人民大学出版社外语出版分社的_____一书，我们希望通过这张小小的反馈卡来获得您更多的建议和意见，以改进我们的工作，加强我们双方的沟通和联系。我们期待着能为更多的读者提供更多的好书。

请您填妥下表后，寄回或传真回复我们，对您的支持我们不胜感激！

1. 您是从何种途径得知本书的：

☐书店 ☐网上 ☐报纸杂志 ☐朋友推荐

2. 您为什么决定购买本书：

☐工作需要 ☐学习参考 ☐对本书主题感兴趣 ☐随便翻翻

3. 您对本书内容的评价是：

☐很好 ☐好 ☐一般 ☐差 ☐很差

4. 您在阅读本书的过程中有没有发现明显的专业及编校错误，如果有，它们是：

5. 您对哪些专业的图书信息比较感兴趣：

一、休谟：英国经验论的“逻辑终局”

对西方哲学史稍有了解的读者，一听到经验主义这个词，首先想到的就是英国经验主义，就像在有教养的欧洲人心中，尤其在黑格尔一代的德国人心中，一提到希腊这个名字，自然会有一种家园之感一样。当然，英国近代哲学并不能完全归之于经验主义，但英国的确有重视感觉、强调经验的悠久传统。I按照通常排列的英国经验主义谱系，弗兰西斯·培根（Francis Bacon，1561～1626）可谓先驱，奠基人自然非约翰·洛克（John Locke，1632～1704）莫属，爱尔兰的乔治·贝克莱主教（George Berkeley，1685～1753）犀利深刻，独树一帜，大卫·休谟（David Hume，1711～1776）则是最后一位主要代表。他生活在启蒙时代，与法国的伏尔泰和卢梭是同时代人。他与贝克莱一样是从洛克的经验论出发的，不过他在经验论上比洛克和贝克莱更彻底，合乎逻辑地得出了怀疑主义的结论。罗素称他是英国经验论的“逻辑终局”，[1]康德则认为“自从有形而上学以来，对于这一科学的命运来说，它所遭受的没有什么能比休谟所给予的打击更为致命”。[2]经验的谦恭与温和的怀疑不仅是休谟思想的特色，而且是他的人生态度，甚至是英国哲学气质的写照。

休谟生于苏格兰首府爱丁堡，父母皆出自名门望族。休谟从小就被爱好文学的热情所支配，这种热情是他一生的主要情的思想天才。当他15岁离开爱丁堡大学时，除了哲学和一般学问的钻研外，他对任何东西都感到一种不可抑制的嫌恶。在深入研究他所喜爱的东西的过程中，他形成了完整的哲学体系——1739年A Treatise of 他28岁的时候匿名出版了哲学巨著《人性论》（Human Nature）。与贝克莱一样，休谟也是少年老成、大器早成然而，休谟对他这本革命性著作出版后所受到的冷遇深感遗憾，他期待的是好评如潮，但听到的却只是一片反对声，遇到的只是漠视、嘲弄和不解。尽管初出茅庐就遭此惨败，天性愉快而乐观的休谟还是不久就恢复了常态。他首先把这种冷遇归咎于文字上的不成熟，因此他后来又于分别1748年和1751年出版了《人类理解研究》和《道德原理研究》。除了上述著作和大约写于1750年但死后才敢发表的《自然宗教对话录》以外，休谟实际上已金盆洗手，不再在哲学园地上耕耘了。其原因主要是他一生的支配性情感与其说是科学上的好奇心，用他自己的话倒不如说是“追求文名”（love of literary fame）。这一情感使休谟成为哲学家中的文学家。他的文笔在清新流畅之中融入了委婉

缜密的精细分析，在舒卷自如的笔调之中流露出温文尔雅的俊逸风格，他思想深刻而绝无晦涩臃肿的毛病，复杂的思想经他娓娓道来则恰如剥茧抽丝，细腻可读。康德不无羡慕地说：“并不是所有人的文笔都能像休谟那样既漂亮又人性论动人。”

当他在哲学上获得了自我满足之后，就开始在其他领域内追求他的文名了。首先是历史，他撰写的《大不列颠史》（History of Great Britain）等著作使他声名鹊起，当然也受到不少攻击。休谟在当时作为历史学家的名声要比他作为哲学家的名声大得多。其次是道德和政治，还包括经济学——在这一领域他也许可与他伟大的朋友经济学家和道德哲学家亚当·斯密媲美。

1775年春天，休谟得了肠胃病，这种病最终成了他的致命杀手。在临终前，他读到了亚当·斯密的名著《国富论》。1776年8月25日，这位不朽的思想家和他不朽的文名一起告别了不朽的18世纪。

二、《人性论》的核心理论

休谟的代表作就是这部《人性论》。从这部书我们可以看到17世纪那些伟大的理性主义形而上学体系的影响，如笛卡尔、莱布尼茨、斯宾诺莎和马勒布郎士等人的思想；其次是物理学家牛顿的影响，他采取了以实验来验证假说的方法，揭开了自然界神秘的面纱；第三则是英国经验主义者的影响，这些思想家总是带着怀疑的眼光去审视大陆理性主义者堂皇的体系，试图不带任何偏见地考察人类心智的能力和原则，以确立人类知识的限制和人类义务的基础；最后但并不是最不重要的是宗教之间的重大冲突和宗教论争，先是天主教和新教之间的矛盾，后来是有神论和自然神论者之间的对立，还有怀疑主义与理性主义之争。

1. 方法论：实验方法、怀疑主义、自然主义。在《人性论》中，休谟的策略都是把牛顿式的实验方法融入英国经验主义对人类心智的力量和原则的探究之中，其目的是要建立一种关于人性的真正的实验科学。这种科学试图提供一块试金石，以检验理性主义形而上学各种武断的假设。在《人性论》的引言中，年青气盛的休谟甚至宣称“提出一个建立在几乎是全新的基础上的完整的科学体系，而这个基础也正是一切科学唯一稳固的基础。”但在《人性论》第一卷第四部分中，又出现了一种新的武器——怀疑主义。休谟先是用它来攻击敌人，然后再解除其武装使之与自己和平共处。怀疑主义的论断在逻辑上是无法回答的，但相对于统治我们日常生活的自然情感和信念而言，它们就失去效力了。因此，怀疑主义可以用来揶揄神学家们，或者使他们相互争吵，并可以用作任何一种独断论的解毒剂。同时，它们对常识、数学、道德和实验科学是没有威胁的，这是由自然情感和信念来保证的。基于常识和情感的自然主义把这位怀疑论者身上的刺拔掉了，使他与经验科学家相和谐。

2. 认识论：“显微镜”、“剃刀”和“叉子”。《人性论》以一种近乎独断论和先天知识的手法开篇：“人类心灵中的一切知觉（perception）可以分为显然不同的两种，这两种我将称之为印象（impression）和观念（idea）。”前者是强烈而生动的，而后者是比较不强烈而生动的。任何彻底的二分法总是值得怀疑的，这次也不例外。

休谟的经验论思想也许可以归结为两个命题：（1）我们的所有观念均源于感觉印象和内在情感，也就是说，我们甚至无法设想不同于我们经验的任何事物。（2）事实无法由推理先天地得到，而必须从经验中发现或由经验推断出来。从这两个命题可以得出这样一个结论：形而上学体系所告诉我们的关于上帝存在、世界本原以及其他超验事物的说法是没有意义的，即使就算有意义，也无法被证明为真。

为了证明他的观点，休谟使用了三个工具——“显微镜”、“剃刀”和“叉子”。

“显微镜”是分析和还原，它的作用是：如要检验和理解一个观念，首先应把它还原为组成它的简单观念，如果此后还有模糊不清的，则唤起它由以起源的印象。这相当于用具体的事例来澄清一般的概念问题或特殊的哲学问题。

“剃刀”与“显微镜”相关，是一把锋利的手术刀。如果一个名词唤起了一个观念，而这个观念却无法被分析成能够产生印象的简单部分，那么这个名词就是无意义的。如果要理解一个语词或表达式，我们必须知道如何把它们与我们碰到的或可能碰到的具体事例联系在一起。可以说，休谟之所以能够在哲学上取得许多重要的成果，在很大程度上要归功于他的剃刀术。

休谟的“叉子”把知识的对象分成了两种类型：“观念的关系”和“实际的事情”，由此产生了两种知识：逻辑知识和经验知识。他认为这两种知识就是可发现的全部真理的领域。它与传统意义上必然真理与偶然真理的区分相对应，与稍早莱布尼茨提出的推理的真理和事实的真理以及后来的分析命题和综合命题的区分则更为接近。

首先，某些真理依赖于我们的观念。它们说明了我们观念间的关系，观念不变，关系亦不变。这种观念间的关系是知识和科学研究的主要对象，如几何、代数、算术诸学科。其次，另外一种真理并不依赖于有关的观念，而决定于事实的情况；事实的反面总是可能的，因为它本身不含有任何矛盾。观念间的关系可以通过两种方式发现，一种是直观（intuition），另一种是证明（demonstration）。事实的知识也可以通过两种方式发现，一是观察，一是推断（inference）。休谟着重考察的是经验推断的性质，他认为这种推断总是要依赖于因果关系。如果

我观察到A 而由此推断出B，那么只是因为我相信 A 和B 之间存在着因果联系。

从这种理论出发，休谟可以解释4 个问题。（1）推理就是从印象A 到生动的观念B 的推论；（2）与当下的印象A 相联系的生动的观念B 产生了B 的信念；（3）使我们决意从观念A 向观念B 转移、或从印象A 向观念B 转移的情感倾向，就是必然联系观念的起源；（4）既然使我们“决意”去这样做的原因仅仅是过去的观念结合的不断重复，而不是任何推理，那么这个原因就是习惯。习惯联想就是因重复而造成的观念结合。在休谟看来，所谓“设想（conceive）”、“知道”或“相信”不过是拥有观念而已，即拥有恒常结合的观念或生动而稳定的观念；而观念仅仅是印象的复制品，我们无法设想、知道或相信印象的事物。因此，我们没有关于心灵的印象，心灵只是“一束知觉”——印象或观念。对我们的身体来说也是如此。所以“心灵实体”和“肉体实体”根本就是毫无意义的形而上学的呓语，而且，贝克莱为上帝保留的超越的实体地位也十分可疑了。

3. 自然主义：习惯是人生的伟大指南。休谟提出的实际上是一个基本的人性原则：因果推断是由于习惯（custom）而发生的——“因果的必然联系是我们在因果之间进行推断的基础。我们推断的基础就是发生于习惯性的结合的推移过程。因此，它们是一回事。”[3] 根据经验来的一切推论都是习惯的结果，而不是理性的结果。传统哲学中有关世界的“必然真理”、“绝对真理”其实不过是习惯的联想而已。在这里，我们固然可以说，休谟贬抑了理性的作用，但不能说这是非理性的。因为“习惯是人生的伟大指南”、“理性是情感的奴隶”固然是一个结论或原则，但更是一个经验事实；因为习惯固然是人生的伟大指南，但并不意味着理性不是一种人性和指南，而毋宁说休谟在这里是指出了人的理性能力的局限，并为之划界——一方面使不作超验的使用，不去探究那些终极的、无限的东西，另一方面在习惯和自然情感的基础上，谦恭地发挥它应有的作用。

休谟认为，数学和经验推理都是自然的，因为它们都遵循自然的心灵的决定作用；而且，他发现如果把自己限定在“日常生活（common life）”之中的话，他既可以保持怀疑主义态度，也可以去感知、记忆、计算和推论，日常生活中的问题凭借自然的推理就可以解决。因为“自然凭借一种绝对而不可控制的必然性，不但决定我们要呼吸和感觉，而且也决定我们要进行判断。”[4]

这种怀疑论有两个基本特征：一是温和的非独断性，二是拒绝超越常识。它允许丰富的理智生活，允许在此基础上建立关于人的科学。如果形而上学能够包含对其“崇高”观念的经验研究的话，那也是自然的。因为好奇心是人类的自然动机，好奇心的满足也会带来自然的愉快。因

此，要想使我们得到有益的一个结论，怀疑的力量是必须的；但还要进一步相信，除了自然本能的强大力量外，没有任何东西可以使我们摆脱这种怀疑的力量。

4. 道德哲学：理性与情感；是与应当。休谟的道德理论是其人性理论的重要部分，大致可以概括为三个论点：（1）理性自身无法解决道德问题；（2）道德情感决定道德问题；（3）道德情感仅仅为快乐的或有用的东西所驱动。在理性与激情的关系上，休谟说出了一句石破天惊的著名断语：“理性是，而且只应当是情感的奴隶。”还可以补充一句：“心里的激情，欲念的搅扰，爱憎的激荡，都足以把它（理性哲学）的结论消散了，都足以使深奥的哲学家成为一个凡夫俗子。”

另一方面，休谟还提出一条关于伦理判断的原则：从“是”中无法推出“应当”（No ought is from an is.）。休谟说在他所遇到的每一个道德体系中，作者都是照平常的推理方式开始的，然后或者确证了上帝的存在，或者对人事作了一番议论；可是突然之间，他大吃一惊地发现，作者由“是”或“不是”转换为“应当”或“不应当”，例如从“上帝是造物主”转换为“我们应当服从上帝”。既然这个“应当”或“不应当”表示一种新的关系或肯定，所以就必须加以说明，虽然这往往得不到充分的说明。

三、《人性论》论题谱系

《人性论》分为三卷，分别探讨三大主题：知觉、情感和道德。

1. 知觉一元论。在第一卷“论知觉”的第一章，休谟论述了经验主义的基本原则：唯一可靠的经验就是知觉。如前所述，知觉分为印象和观念。印象指的是“进入心灵时最强最猛的那些知觉”，包括了初次出现于灵魂中的一切感觉（sensations）、情感（passions）和情绪（emotions）。印象的特点是十分强烈和生动，而观念则较为微弱，观念指的是“我们的感觉、情感和情绪在思维和推理中的微弱的意象。”休谟在定义印象和观念时，没有通过感觉和思维的来源差别来区分它们，而是认为“两者的差别在于：当它们刺激心灵，进入我们的思想或意识中时，它们的强烈程度和生动程度各不相同。”一般情况下，我们认为感觉是外物刺激我们的感官而形成的，而思维是心灵（或灵魂、大脑）自身作用的结果。为什么休谟不直接以来源的不同区分印象和观念呢？为什么不说印象来源于心灵之外，而观念来源于心灵自身呢？我们知道，洛克正是把观念的来源分为感觉和反省，感觉把外界物质的性质传达给心灵；而反省则是心灵自身的活动，内在的感觉。

但是休谟敏锐地看到了洛克学说的漏洞。说感觉来源于心灵之外，则必将导致心物二元论，而在休谟看来，心物二元论中的心灵实体和物质实体都是虚构出来的，没有经验根据。因此，心物二元论与经验论的

原则相冲突。说观念可以由反省获得，又容易被指责为天赋观念论，比如莱布尼茨就是这样反驳洛克的。

因此，休谟比洛克更彻底地坚持了经验论原则。他把经验严格限制在知觉之内，不讨论知觉之外是否有外物存在的问题。休谟认为感觉印象“是由我们所不知的原因开始产生于心中”。因此，他无法以来源的不同区分印象和观念。而休谟所谓的知觉“进入心灵”，不过是为了方便读者理解的一种说法。因为，在休谟看来，真正存在的只是一束连续的知觉，没有必要区分心灵和外物。休谟的彻底经验论最终导致了知觉一元论。

2. 人性的基本原则。第一个原则：我们的全部简单观念在初出现时都是来自简单印象，这种简单印象和简单观念相应，而且为简单观念所精确地复现。这一原则与唯理主义的天赋观念说是相冲突的。按照休谟的思路，考察观念就要看它是从何种印象得来的，如果找不到这种印象，那么这个观念就是完全没有意义的。休谟特别举到了一个反例，可以证明简单观念并非总是从相应的印象得来的，但是它不构成对经验原则的反驳，因为经验原则允许一些反例。

第二个原则：想象可以自由地移植和改变它的观念。这里，想象是指观念的呈现。

第三个原则，也被称为联想原则。观念之间有类似、时空接近或因果关系容易被心灵关联起来。哲学上的关系有七种：类似关系、同一关系、时空临近、数量或数目关系、程度关系、相反关系和因果关系。只有类似、时空临近和因果关系是自然的关系，会影响我们的心灵活动。休谟认为联想原则是他的伟大发明。

第四个原则：相似的心理过程容易混淆。

3. 否定抽象观念。抽象观念或一般观念是否存在的问题，与共相是否实在的问题相关。贝克莱经过细致的考察否认心灵中有抽象观念的存在，指出抽象观念只是一种虚构，真正存在的只有特殊观念。休谟认同贝克莱的思想，他论证道我们不能在印象中把线和有长度的线分开，观念上也无法做到。因此我们想象一条线总是想象一条有长度的线，也就是一条特殊的线。

因此，抽象观念本身就是特殊的，不论它们在表象作用上变得如何一般。心中的意象只是一个特殊对象的意象，虽然在我们的推理中应用意象时好像它具有普遍性似的。特殊事物通过相似性联系起来，形成一个类，与特殊观念相对应。休谟认为抽象观念所表达的与特殊观念没有什么不同，都是想到了特殊对象。我们由于生活的需要，给某一类相似

的特殊观念命名，就形成了所谓的一般观念。这个名词与一些特殊观念相联系。简言之，休谟在抽象观念的问题上采取了唯名论的立场：他认为抽象观念只是一些名词，它们和一些特殊名词建立起联想关系，在必要时可以唤起其中的一个特殊观念。这种联想的倾向性可以形成习惯。总之，休谟否定了抽象观念的存在，不论是在心灵之中的存在还是在心灵之外的。

4. 时空观念与存在观念。第一卷第二章考察了时间和空间观念。休谟否认广延的无限可分性。他指出物理点是有广延的，有广延即可分。因此不可分的物理点这个概念是自相矛盾的。另外广延也不是由数学点所构成，因为数学点是无广延的色斑，所以没有广延就没有部分，没有内外之分，没有边界。所以两个数学点靠近会渗透，多个点就会渗透在一起，无法形成大的东西。

在第二章的最后，休谟分析了“存在观念和外界存在的观念”，试图揭示出“存在”这个词意味着什么。休谟的知觉一元论导致他对存在的界定也很特别：他承认知觉的存在，并且认为外在对象是否存在是不可知的。由于我们会将存在赋予我们头脑中任何一个的印象和观念，因此存在观念只能来源于以下两种情况，一种是它是由一个独立的印象而来，这个独立印象和每一个观念或印象都是联结在一起的；另一种情况是存在观念不是一个独立的观念，它是和每一个印象或观念同一的。

对于第一种情况，我们从来没有发现过和每一个观念或印象都是联结在一起的独立印象。因为如果它是一个独立印象的话，那么我们一定可以把它从它所伴随的印象或观念中分离出来。这就是说存在观念只可能是第二种情况：它和它所伴随的印象或观念是同一的。因此，休谟认为观念的存在不会给观念增加任何东西，即存在不是一种性质。休谟认为有关存在的推理同样可以用来说明“外界存在”的观念。因此，休谟只承认心灵中的印象和观念的存在，认为外界对象的性质是通过它们所引起那些知觉被我们认识的。看起来休谟有关存在的观点继承了贝克莱的“存在就是被感知”的观点，将存在等同于被感知。但他也说明，一般人的自然思维不区分对象和知觉，他们相信他们知觉到的就是外界对象。这一论述体现出他的哲学维护常识、尊重普通人的观点的特点。

5. 因果关系与习惯性联想。在第三章，休谟首先区分了两种知识，一是数学知识，另一个是物理学知识。数学知识是观念间的关系，物理学知识是可以由经验证实的知识，除此之外没有知识。经验主义认为知识来源于观察和归纳，所以认识事物间的因果关系非常重要。休谟仔细地考察了因果关系，怀疑了因果关系的客观必然性。休谟认为前后相继的两个观念的“恒常结合”会使我们产生的一种习惯性的联想，并把在前的观念称为“原因”、在后的观念称为“结果”，这就是因果关系的本质。其实原因和结果之间并没有必然的联系，也不是原因具有一种“能

力”或者“性质”造成了结果。

休谟的对因果关系的考察是这样的：因果关系追问不下去，转而追问因果推理，先搞清楚因果推理的过程。要考察因果关系，必须先考察因果判断。休谟的解释在发生学意义上是有道理的。习惯是自然形成的，自然形成的就是合理的，是人生的指南。习惯的根源和动物本能的根源一样，都来自于自然。因果问题涉及自然齐一律，即我们所没有经验过的例子类似于我们所经验过的例子。按照休谟的理论，太阳明天会升起，这是证明了的概然推断，是自然上的必然性，而非逻辑上的必然性。它已经形成了牢固的习惯，不容怀疑，或者说没有人会真正的反对。

在联想原则的三种关系中，类似关系和接近关系具有主动性、随意性，而因果关系是稳定的、基于习惯的。接近关系和类似关系的作用比由因果关系来的作用小得多，但是它们都有一种共同的作用，那就是增加任何信念和任何概念的活泼性。

习惯性联想所产生的是信念作用于我们的情感，并进而影响行动。信念的定义是：和现前一个印象关联着的或联结着的一个生动的观念。信念是真实的心灵感受，对生活更加重要，对情感和行为上的影响更大。在这里休谟提出了人性科学中的一个一般原理：当任何印象呈现于我们的时候，它不但把心灵转移到和那个印象关联的那样一些观念，并且也把印象的一部分强力和活泼性传给观念。信念对观念确实没有增加什么，它只是改变了我们想像它的方式，使观念变得比较强烈而生动。形成信念是人的自然本性，它有利于我们的生存，比如逃避预感到的危险。

休谟在考察观念的常用的方法是看我们如何在经验中学习相应的语词的。比如，要考察因果观念，就要看我们是如何使用“因果关系”、“必然性”这样的语词的。在休谟那里，语词对应于观念，观念则来自于相应的印象。但是这种对应关系过于简单，问题出在“一切观念来自于印象”这个人性论的第一原则。

6. 心灵是一束知觉。在第四章，休谟否定了心灵实体的存在。他认为心灵只不过是一束知觉，它们结合在一起，不具有完全的同一性。实体观念是一种虚构，比如一个桃子的观念，不过是特殊的滋味、颜色、形状、大小和密度而已。

自我是一种不可感知的东西，没有知觉就没有自我。因为凡是差异的事物都是可以区分的，而凡是可以区分的事物都是可以被想象所分离的，所以知觉可以互相分别、互相分离，因此可以被认为是独立存在的。

休谟总结了他的理论哲学主旨和理论特点。自然倾向指导我们的日常生活，而哲学思辨只会带来问题和困惑。像日常生活中的其他人一样去生活。哲学的作用：可以帮助我们驱除迷信。哲学的用途不是要改造生活。即使哲学犯了错也不会影响日常生活的信念。而迷信会影响日常生活。休谟对哲学作用的界定类似于维特根斯坦，哲学的作用是治疗，消除错误，没有任何问题留给哲学来解决。休谟揭示出了日常生活中所必需的稳定的信念。信念本身具有自然的合理性，虽然缺乏逻辑的、理性的论证，但是在人的本性中有其根基。

7. 理性是情感的奴隶。从古希腊的哲学研究开始，人们就发现情感不如理性可靠，因此将其置于次要地位。休谟认为，一直以来“理性的永恒性、不变性和它的神圣来源，已经被人们渲染得淋漓尽致；情感的盲目性，变幻性和欺骗性，也同样受到了极度的强调。”因此，即使在日常生活中，人们也会强调理性高于情感，主张让理性支配人的行为而不是情感。休谟认为这是长久以来的偏见，因为真正决定人的行为的恰恰是情感而不是理性：“理性是并且也应该是情感的奴隶，除了服务和服从情感之外，再不能有任何其他的职务。”

在第二卷“论情感”中，休谟对情感的探讨是为探讨道德做准备的，因为情感是我们行动的动机。休谟认为人们趋乐避苦，快乐和痛苦是驱动我们行动的力量。他区分了平静的情感和强烈的情感，平静的情感包括道德感、美感等，而强烈的情感则包括爱与恨、骄傲与谦卑、悲伤与快乐。道德感因其平静，被有些哲学家认为是源自于理性的，在休谟看来，他们混淆了平静的情感和理性。同样地，道德只有作用于情感才能影响行为。

值得注意的是，不论是平静的情感还是强烈的情感都是属于印象的，所以比一般的观念都要强烈和生动。另外休谟还区分了直接情感和间接情感，直接情感包括：厌恶、欲望、喜悦、悲伤、希望、恐惧、绝望等，而间接的情感指的是：谦卑、骄傲、爱、恨、嫉妒、怜悯、慷慨等。间接情感的产生同样以联想原则为基础，由于相似性，我们的心灵从一种反省印象或情感过渡到另一种反省印象或情感过渡。

8. 骄傲与谦卑、爱与恨。在第二卷的开始，为了探讨情感，休谟又再一次探讨了观念和印象的定义和关系。这些段落历来为研究者所重视。休谟首先探讨了骄傲和谦卑以及它们的对象。

认为能够引起这两种情感的对象是多种多样的。骄傲的对象与自我有关，比如自己的美丽花园或者有才华的孩子。另外，骄傲是令人愉悦的。同样的，谦卑也和自我有关，不过是一种不快的感情。休谟论述了动物的骄傲和谦卑，认为它们身上发生情感的原因和过程与人类是十分类似的，相当于再一次论证了人只是一种特殊的动物。

第二章所谈到爱与恨。与骄傲和谦卑不同，爱与恨的对象是别人。之所以爱某人，是由于他或她身上的某种属性，比如机智、幽默、美丽、知识渊博、品德高尚等。恨一个人则是因为一些相反的属性。休谟还发现，爱与恨往往还伴随着其他情感，比如爱一个人就希望所爱之人幸福，害怕他或她不幸。恨一个人就希望他或她不幸，而不希望他或她幸福。而骄傲和谦卑就没有伴随其他情感。爱与恨在情感中有着重要的地位，因为它们总是和慈善和愤怒一起出现。休谟还做了一些“实验”佐证他的结论，这就是他所说的在人性科学中引入实验的尝试。与自然科学中的实地实验有所不同，休谟仅仅是设想或回忆各种不同的情形，或者查看历史记录，描述下情感的变化和发展。由于休谟所举的例子都是自然的、正常的、合情合理的，所以比较能让人信服。此外论述的情感还有怜悯、恶意与妒忌。恶意类似于恨的结果，正如怜悯类似于爱的结果一样。在论述妒忌时，休谟特别强调妒忌的对象往往不是自己不成比例的他人，而是与自己接近的人。

在第三章，休谟关于自由意志的讨论建立在对因果关系的说明上。必然性意味着恒常结合和习惯性的联想。因为特定的行为和特定的行为动机总是恒常结合在一起，所以我们就能够从其中一个推断出另一个。

9. 同情是我们进行道德判断的基础。在第三卷道德哲学中，休谟所做的工作也是揭示事物之间的联系，描述和解释道德现象，而不是为人类建立道德规范。休谟继承了沙夫茨伯利（Shaftesbury, 1671 ~ 1713）和哈奇森（Hutcheson, 1694 ~ 1746）的“道德感”理论以及由此理论生发而成的情感主义伦理学。沙夫茨伯利是最早提出道德感（moral sense）概念的哲学家，这一概念后来在哈奇森那里得到系统的阐述。哈奇森和休谟之间有着大量的书信来往，他极大地影响了休谟的伦理学思想。苏格兰启蒙运动在道德领域的另一个代表是亚当·斯密（Adam Smith, 1723 ~ 1790 年）。亚当·斯密是哈奇森的学生，同时也是休谟的好友，他和休谟的伦理学都十分强调“同情”（sympathy）概念。休谟认为同情是我们进行道德判断的基础。别人的快乐和痛苦都会引起我内心相应的情感反应。同情也是一种自然倾向，会受到联想原则的影响，比如我更同情和我相似的人，以及和我临近的人。同情原则是休谟情感主义伦理学的基础。

除此之外还有比较原则。快乐和不快乐的感觉之产生符合比较原则，并在此基础上产生道德判断。更重要的是通则，或一般规则（general rules），指的是心灵遵循因果关系的自然倾向。比如，有时虽然人为之德不能继续给我们带来利益（利益为一种自然的约束力），但是我们仍然对之表示赞许。

10. 德与恶、正义与非正义。第三卷第一章总体论述德与恶。休谟认为，道德的区别不是从理性中得来的。理性的作用在于发现真伪。真

伪在于观念的实在关系或对实际存在和事实的符合和不符合。但是我们的情感、意志和行为不存在符合或不符合，所以它们没有真伪，不是理性的对象。休谟区分了事实判断和价值判断，他发现事实判断都是由“是”来连接的命题，而价值判断都是由“应当”来连接的命题。事实判断是由理性做出的，而价值判断则依赖于情感。理性与情感的关系不是对立关系，因为理性不能产生任何动机，所以它不会阻止来自情感的冲动。

虽然一切行为都有其情感上的动机，但并不是所有情感都导致行动。各种不同的动机相互竞争，最后力量最大的那个促成了我们的行动。由于情感是一个自然的心理事实，虽然情感是行为的原因，它也不应当成为批判的对象，或者是宽恕的对象。

第二章休谟探讨了正义与非正义。正义并非自然的，而是由于应付人类的环境和需要所采用的人为的措施或设计。在正义与财产权的起源问题上，休谟认为财产安全的习俗的动机只能是私利。因为如果没有正义，社会就会解体，每个人都会陷入野蛮和孤立无援的状态。在正义的体系中，我们认为遵守正义是善，违反正义是恶。我们对公共利益的同情导致了我们的道德区分。这种同情心是可以培养的，只要我们反思正义体系的益处。在论述许诺的约束力时，休谟指出人们遵守许诺不是自然的，因为在人类确立许诺之前，许诺是不理解的，即使可以理解，它也不具有约束力。在政府起源的问题上，休谟不赞同社会契约论，认为忠顺这种义务不能还原到遵守承诺这条自然法则。

在第三章，休谟谈到了自然的德和恶的起源。他认为首要的自然之德是仁爱，仁爱包括了慈善和人道，友谊和感激，自然感情和公共精神，或发端于对他人的温柔同情和对我们人类种族的慷慨关怀的东西。其他的自然之德有：骄傲和自尊，适度的骄傲对日常生活是有益的，它使我们对自己的事业和计划充满信心。休谟认为反对了把自然才能与德性区分开来的做法，认为它们在最重要的条件方面都是一致的，它们都同样是心理性质，同样产生快乐，并且自然都有获得他人的爱和尊重的倾向。

人们之所以重视自然才能，在于这些才能使具有它们的人获得重要性和势力。在第三卷的结论中，休谟提到德性大部分都有促进社会福利的倾向，或者有促进具有这些德性的人的福利的倾向。心灵的有用的性质之所以是善良，乃是由于它们的效用。

虽然人类的大部分发明都容易变化，但是作为正义的基础的那种利益是最大的利益，是适合于一切时间和地点的。因此，正义的规则和人性的原则一样稳定不变，它们是建立在原始本能之上的。

让我们用休谟的一段名言来结束本书的导读：“由此看来，自然似乎指示给我们说，……你可以尽量爱好科学，但是你必须让你的科学成为人的科学，必须使它对于行为和社会有直接关系。它又说，奥妙的思想和深刻的研究，我是禁止的，如其不然，那我将严厉地惩罚你，我将说它们给你带来沉思的忧郁，将使它们把你陷在迷离恍惚的境地，将使你的自命的发明在发表出去以后受到人们的冷淡的待遇。你如果愿意做哲学家，尽管做好了，但是你在你的全部哲学思维中，仍然要做一个**人**。”^[5]

ADVERTISEMENT TO BOOK I AND II

My design in the present work is sufficiently explain'd in the Introduction. The reader must only observe, that all the subjects I have there plann'd out to myself, are not treated of in these two volumes. The subjects of the Understanding and Passions make a compleat chain of reasoning by themselves; and I was willing to take advantage of this natural division, in order to try the taste of the public. If I have the good fortune to meet with success, I shall proceed to the examination of Morals, Politics, and Criticism; which will compleat this Treatise of Human Nature. The approbation of the public I consider as the greatest reward of my labours; but am determin'd to regard its judgment, whatever it be, as my best

instruction.

INTRODUCTION

Nothing is more usual and more natural for those, who pretend to discover anything new to the world in philosophy and the sciences[1], than to insinuate the praises of their own systems, by decrying all those, which have been advanced before them. And indeed were they content with lamenting that ignorance, which we still lie under in the most important questions, that can come before the tribunal of human reason, there are few, who have an acquaintance with the sciences[2], that would not readily agree with them. 'Tis easy for one of judgment and learning, to perceive the weak foundation even of those systems, which have obtained the greatest credit, and have carried their pretensions highest to accurate and profound reasoning. Principles taken upon trust, consequences lamely deduced from them, want of coherence in the parts, and of evidence in the whole, these are every where to be met with in the systems of the most eminent philosophers, and seem to have drawn disgrace upon philosophy itself.

Nor is there requir'd such profound knowledge to discover the present imperfect condition of the sciences, but even the rabble without doors may, judge from the noise and clamour, which they hear, that all goes not well within. There is nothing which is not the subject of debate, and in which men of learning are not of contrary opinions. The most trivial question escapes not our controversy, and in the most momentous we are not able to give any certain decision.

Disputes are multiplied, as if every thing was uncertain; and these disputes are managed with the greatest warmth, as if every thing was certain. Amidst all this bustle 'tis not. reason, which carries the prize, but eloquence; and no man needs ever despair of gaining proselytes to the most extravagant hypothesis, who has art enough to represent it in any favourable colours. The victory is not gained by the men at arms, who manage the pike and the sword; but by the trumpeters, drummers, and musicians of the army.

From hence in my opinion arises that common prejudice against metaphysical reasonings of all kinds, even amongst those, who profess themselves scholars, and have a just value for every other part of literature. By metaphysical reasonings, they do not understand those

on any particular branch of science, but every kind of argument, which is any way abstruse, and requires some attention to be comprehended. We have so often lost our labour in such researches, that we commonly reject them without hesitation, and resolve, if we must for ever be a prey to errors and delusions, that they shall at least be natural and entertaining. And indeed nothing but the most determined scepticism[3], along with a great degree of indolence, can justify this aversion to metaphysics. For if truth be at all within the reach of human capacity, 'tis certain it must lie very deep and abstruse: and to hope we shall arrive at it without pains, while the greatest geniuses have failed with the utmost pains, must certainly be esteemed sufficiently vain and presumptuous. I pretend to no such advantage in the philosophy I am going to unfold, and would esteem it a strong presumption against it, were it so very easy and obvious. 'Tis evident, that all the sciences have a relation, greater or less, to human nature: and that however wide any of them may seem to run from it, they still return back by one passage or another.

Even. Mathematics, Natural Philosophy, and Natural Religion, are in some measure dependent on the science of MAN; since the lie under the cognizance of men, and are judged of by their powers and faculties. 'Tis impossible to tell what changes and improvements we might make in these sciences were we thoroughly acquainted with the extent and force of human understanding, and cou'd explain the nature of the ideas we employ, and of the operations we perform in our reasonings. And these improvements are the more to be hoped for in natural religion, as it is not content with instructing us in the nature of superior powers, but carries its views farther, to their disposition towards us, and our duties towards them; and consequently we ourselves are not only the beings, that reason, but also one of the objects, concerning which we reason.

If therefore the sciences of Mathematics, Natural Philosophy, and Natural Religion, have such a dependence on the knowledge of man, what may be expected in the other sciences, whose connexion with human nature is more close and intimate? The sole end of logic is to explain the principles and operations of our reasoning faculty, and the nature of our ideas: morals and criticism regard our tastes and sentiments: and politics consider men as united in society, and dependent on each other. In these four sciences of Logic, Morals, Criticism, and Politics, is comprehended almost everything,

which it can any way import us to be acquainted with, or which can tend either to the improvement or ornament of the human mind.

Here then is the only expedient, from which we can hope for success in our philosophical researches, to leave the tedious lingering method, which we have hitherto followed, and instead of taking now and then a castle or village on the frontier, to march up directly to the capital or center of these sciences, to human nature itself; which being once masters of, we may every where else hope for an easy victory. From this station we may extend our conquests over all those sciences, which more intimately concern human life, and may afterwards proceed at leisure to discover more fully those, which are the objects of pore curiosity. There is no question of importance, whose decision is not compriz'd in the science of man; and there is none, which can be decided with any certainty, before we become acquainted with that science. In pretending, therefore, to explain the principles of human nature, we in effect propose a compleat system of the sciences, built on a foundation almost entirely new, and the only one upon which they can stand with any security.

And as the science of man is the-only solid foundation for the other sciences, so the only solid foundation we can (live to this science itself must be laid on experience and observation.'Tis no astonishing reflection to consider, that the application of experimental philosophy to moral subjects should come after that to natural at the distance of above a whole century; since we find in fact, that there was about the same interval betwixt the origins of these sciences; and that reckoning from THALES[4] to SOCRATES[5], the space of time is nearly equal to that betwixt, my Lord Bacon[6] and some late philosophers[7] in England, who have begun to put the science of man on a new footing, and have engaged the attention, and excited the curiosity of the public. So true it is, that however other nations may rival us in poetry, and excel us in some other agreeable arts, the improvements in reason and philosophy can only be owing to a land of toleration and of liberty. Nor ought we to think, that this latter improvement in the science of man will do less honour to our native country than the former in natural philosophy, but ought rather to esteem it a greater glory, upon account of the greater importance of that science, as well as the necessity it lay under of such a reformation. For to me it seems evident, that the essence of the mind being equally unknown to us with that of external bodies, it must be equally impossible to form any

notion of its powers and qualities otherwise than from careful and exact experiments, and the observation of those particular effects, which result from its different circumstances and situations.

And tho' we must endeavour to render all our principles as universal as possible, by tracing up our experiments to the utmost, and explaining all effects from the simplest and fewest causes, 'tis still certain we cannot go beyond experience; and any hypothesis, that pretends to discover the ultimate original qualities of human nature,ought at first to be rejected as presumptuous and chimerical.

I do not think a philosopher, who would apply himself so earnestly to the explaining the ultimate principles of the soul, would show himself a great master in that very science of human nature,which he pretends to explain, or very knowing 'm what is naturally satisfactory to the mind of man. For nothing is more certain, than that despair has almost the same effect upon us with enjoyment,and that we are no sooner acquainted with the impossibility of satisfying any desire, than the desire itself vanishes. When we see,that we have arrived at the utmost extent of human reason, we sit down contented, tho' we be perfectly satisfied in the main of our ignorance, and perceive that we can give no reason for our most general and most refined principles, beside our experience of their reality; which is the reason of the mere vulgar, and what it required no study at first to have discovered for the most particular and most extraordinary phaenomenon. And as this impossibility of making any farther progress is enough to satisfy the reader, so the writer may derive a more delicate satisfaction from the free confession of his ignorance, and from his prudence in avoiding that error, into which so many have fallen, of imposing their conjectures and hypotheses on the world for the most certain principles. When this mutual contentment and satisfaction can be obtained betwixt the master and scholar, I know not what more we can require of our philosophy.

But if this impossibility of explaining ultimate principles should be esteemed a defect in the science of man, I will venture to affirm, that 'tie a defect common to it with all the sciences, and all the arts, in which we can employ ourselves, whether they be such as are cultivated in the schools of the philosophers, or practised in the shops of the meanest artizans. None of them can go beyond experience, or

establish any principles which are not founded on that authority. Moral philosophy has, indeed, this peculiar disadvantage, which is not found in natural, that in collecting its experiments, it cannot make them purposely, with premeditation, and after such a manner as to satisfy itself concerning every particular difficulty which may be. When I am at a loss to know the effects of one body upon another in any situation, I need only put them in that situation, and observe what results from it. But should I endeavour to clear up after the same manner any doubt in moral philosophy, by placing myself in the same case with that which I consider, 'tis evident this reflection and premeditation would so disturb the operation of my natural principles, as must render it impossible to form any just conclusion from the phenomenon. We must therefore glean up our experiments in this science from a cautious observation of human life, and take them as they appear in the common course of the world, by men's behaviour in company, in affairs, and in their pleasures. Where experiments of this kind are judiciously collected and compared, we may hope to establish on them a science which will not be inferior in certainty, and will be much superior in utility to any other of human comprehension.

David Hume (1711—1776)

[1] 这句拉丁文的意思是：当你能够感觉你愿意感觉的东西，能够说出你所感觉到的东西的时候，这是非常幸福的时候。

[2] 普布利乌斯· 科尔奈利乌斯· 塔西佗 (Publius 或Gaius Cornelius Tacitus, 55年? —117 年?)，罗马帝国执政官、雄辩家、元老院元老，也是著名的历史学家与文体系，他的最主要的著作是《历史》和《编年史》。

[3] 怀疑论，对客观世界是否存在、客观真理能否被人们认识表示怀疑的哲学理论和体系。古代的怀疑主义不是把怀疑作为达到真知识的手段，而是作为认识的结果。古希腊哲学家皮浪主张对一切都应该不作判断。在近代，休谟把怀疑主义融入其哲学体系，称自己的哲学被称为“温和的怀疑主义”。

[4] 泰勒斯 (约前624 年—约前546 年)，又译为泰利斯，公元前7至6 世纪的古希腊哲学家，西方思想史上第一个有名字留下来的哲学家。他提出了水的本原说，即“万物源于水”，是古希腊第一个提出“什么是万物本原”这个哲学问题的人。

PART I OF IDEAS, THEIR ORIGIN, COMPOSITION, CONNEXION, ABSTRACTION, ETC.

SECT. I

Of the origin of our Ideas

All the perceptions of the human mind resolve themselves into two distinct kinds, which I shall call IMPRESSIONS and IDEAS. The difference betwixt these consists in the degrees of force and liveliness, with which they strike upon the mind, and make their way into our thought or consciousness. Those perceptions, which enter with most force and violence, we may name impressions: and under this name I comprehend all our sensations, passions and emotions, as they make their first appearance in the soul. By ideas I mean the faint images of these in thinking and reasoning; such as, for instance, are all the perceptions excited by the present discourse, excepting only those which arise from the sight and touch, and excepting the immediate pleasure or uneasiness it may occasion. I believe it will not be very necessary to employ many words in explaining this distinction. Every one of himself will readily perceive the difference betwixt feeling and thinking. The common degrees of these are easily distinguished; tho' it is not impossible but in particular instances they may very nearly approach to each other. Thus in sleep, in a fever, in madness, or in any very violent emotions of soul, our ideas may approach to our impressions, As on the other hand it sometimes happens, that our impressions are so faint and low, that we cannot distinguish them from our ideas. But mark the difference. each other. accuracy their qualities and relations. The first circumstance, that strikes my eye, is the great resemblance betwixt our impressions and ideas in every other particular, except their degree of force and vivacity. The one seem to be in a manner the reflexion of the other; so that all the perceptions of the mind are double., and appear notwithstanding this near resemblance in a few instances, they are in general so very different, that no-one can make a scruple to rank them under distinct heads, and assign each peculiar to to a name There is another division of perceptions, which it will our be convenient observe, and which

extends itself both to our impressions and ideas. This division is into SIMPLE and COMPLEX. Simple perceptions or impressions and ideas are such as admit of no distinction nor separation. The complex are the to these, contrary and may be distinguished into parts. Tho' a particular colour, taste, and smell, are qualities all united together in this apple, 'tis easy to perceive they are not the same, but are at least distinguishable from Having by these divisions given order and arrangement to an our objects, we may now apply ourselves to consider with the more both impressions and ideas. When I shut and think as my eyes of my chamber, the ideas I form are exact representations of the impressions I felt; nor is there any circumstance of the one, which is not to be found in the other. In running over my other perceptions, I find still the same resemblance and representation. Ideas and impressions appear always to correspond to each other. This circumstance seems to me remarkable, and engages my attention for a moment.

Upon a more accurate survey I find I have been carried away too far by the first appearance, and that I must make use of the distinction of perceptions into simple and complex, to limit this general decision, that all our ideas and impressions are resembling. I observe, that many of our complex ideas never had impressions, that corresponded to them, and that many of our complex impressions never are exactly copied in ideas. I can imagine to myself such a city as the New Jerusalem^[1], whose pavement is gold and walls are rubies, tho' I never saw any such. I have seen Paris; but shall I affirm I can form such an idea of that city, as will perfectly represent all its streets and houses in their real and just proportions?

I perceive, therefore, that tho' there is in general a great, resemblance betwixt our complex impressions and ideas, yet the rule is not universally true, that they are exact copies of each other. We may next consider how the case stands with our simple, perceptions. After the most accurate examination, of which I am capable, I venture to affirm, that the rule here holds without any exception, and that every simple idea has a simple impression, which resembles it, and every simple impression a correspondent idea. That idea of red, which we form in the dark, and that impression which strikes our eyes in sun-shine, differ only in degree, not in nature. That the case is the same with all our simple impressions and ideas, 'tis impossible to prove by a particular enumeration of them. Every one may satisfy

himself in this point by running over as many as he pleases. But if any one should deny this universal resemblance, I know no way of convincing him, but by desiring him to shew a simple impression, that has not a correspondent idea, or a simple idea, that has not a correspondent impression. If he does not answer this challenge, as 'tis certain he can-not, we may from his silence and our own observation establish our conclusion.

Thus we find, that all simple ideas and impressions resemble each other; and as the complex are formed from them, we may affirm in general, that these two species of perception are exactly which effects a correspondent impression. From this constant conjunction of resembling perceptions I immediately conclude, that there is a great connexion betwixt our correspondent impressions and ideas, and that the existence of the one has a -considerable influence upon that of the other. Such a constant conjunction, in such an infinite correspondent. Having discovered this relation, which requires farther examination, I curious find other of their to no am some qualities. Let consider how. they stand with regard their to us existence, and which of the impressions and ideas and are causes, The full examination of this question is the subject of the present treatise; and therefore we shall here content ourselves with establishing general proposition, That all our simple ideas in one their first appearance are deriv'd from simple impressions, which are correspondent to them, and which they exactly represent[2] . In seeking for phenomena to prove this proposition, I find only those of kinds; but in each kind the phenomena obvious, two are and conclusive. I first make myself certain, by numerous, a new, review, of what I have already asserted, that every simple impression is attended with correspondent idea, and simple idea with a every number of instances, can never arise from chance; but clearly proves a dependence of the impressions on the ideas, or of the ideas on the impressions. That I may know on which side this dependence lies, I consider the order of their first appearance; and find by constant experience, that the simple impressions always take the precedence of their correspondent ideas, but never appear in the contrary order. To give a child an idea of scarlet or orange, of sweet or bitter, I present the objects, or in other words, convey to him these impressions; but proceed not so absurdly, as to endeavour to produce -the impressions by exciting the ideas. Our ideas upon their appearance produce not their correspondent impressions, nor do we perceive any colour[3], or feel any sensation

merely upon thinking of them. On the other hand we find, that any impression either of the mind or body is constantly followed by an idea, which resembles it, and is only different in the degrees of force and liveliness, The constant conjunction of our resembling perceptions, is a convincing proof, that the one are the causes of the other; and this priority of the impressions is an equal proof, that our impressions are the causes of our ideas, not our ideas .of our, impressions.

To confirm this I consider Another plain and convincing phaenomenon; which is, that, where-ever by any accident the faculties, which give rise to any impressions, are obstructed in their operations, as when one is born blind or deaf; not only the impressions are lost, but also their correspondent ideas; so that there never appear in the mind the least traces of either of them. Nor is this only true, where the organs of sensation are entirely destroy'd, but likewise where they have never been put in action to produce a particular impression. We cannot form to ourselves a just idea of the taste of a pine apple, without having actually tasted it.

There is however one contradictory phaenomenon, which may prove, that 'tis not absolutely impossible for ideas to go before their correspondent impressions. I believe it will readily be allow'd that the several distinct ideas of colours, which enter by the eyes, or those of sounds, which are convey'd by the hearing, are really different from each other, tho' at the same time resembling. Now if this be true of different colours, it must be no less so of the different shades of the same colour, that each of them produces a distinct idea, independent of the rest. For if this shou'd be deny'd, 'tis possible, by the continual gradation of shades, to run a colour insensibly into what is most remote from it; and if you will not allow the different shades of the same colour , any of the means to be different, you cannot without absurdity deny particular and singular, that 'tis scarce worth our observing, and does not merit that for it alone we should alter our general maxim.

But besides this exception, it may not be amiss to remark on this head, that the principle of the priority of impressions to ideas must be understood with another limitation, viz., that as our ideasthe be the Suppose therefore have extremes to to same. a person enjoyed his sight for thirty years, and to have become perfectly well acquainted

with colours of all kinds, excepting one particular shade of blue, for instance, which it has been his fortune to meet never with. Let all the different shades of that colour, that single except be plac'd before him, descending gradually from the deepest one, to the lightest; 'tis plain, that he will perceive blank, where that a shade is wanting, said will be sensible, that there is a greater distance in that place betwixt the contiguous colours, than in other. any Now I ask, whether 'tis possible for him, from his own imagination, supply this deficiency, and raise himself the idea of that to to up particular shade, tho' it had been conveyed him by his to never senses? I believe i here are few but will be of opinion that he can; and this as a proof, that the simple ideas always not may serve are derived from the correspondent impressions; tho' the instance is so images of impressions, form secondary ideas, are our so we can which are images of the primary; as appears from this very reasoning concerning them. This is not, properly speaking, an exception to the rule so much as an explanation of it. Ideas produce the images of them. selves in new ideas; but as the first ideas are supposed to be derived from impressions, it still remains true, that all our simple ideas proceed either mediately or immediately, from their correspondent impressions.

This then is the first principle I establish in the science of human nature; nor ought we to despise it because of the simplicity of its appearance. For 'tis remarkable, that the present question concerning the precedency of our impressions or ideas, is the same with what has made so much noise in other terms, when it has been disputed whether there be any innate ideas, or whether all ideas be derived from sensation and reflexion. We may observe, that in order to prove the ideas of extension and colour not to be innate, philosophers do nothing but shew that they are conveyed by our senses. To prove the ideas of passion and desire not to be innate, they observe that we have a preceding experience of these emotions in ourselves., Now if we carefully examine these arguments, we shall find that they prove nothing but that ideas are preceded by other more lively perceptions, from which the are derived, and which they represent. I hope this clear stating of the question will remove all disputes concerning it, and win render this principle of more use in our reasonings, than it seems hitherto to have been.

SECT. II

Division of the subject

Since it appears, that our simple impressions are prior to their correspondent ideas, and that the exceptions are very rare, method seems to require we should examine our impressions, before we consider our ideas. Impressions may be divided into two kinds, those Of SENSATION[4] and those of REFLEXION[5]. The first kind arises in the soul originally, from unknown causes. The second is derived in a great measure from our ideas, and that in the following order. An impression first strikes upon the senses, and makes us perceive heat or cold, thirst or hunger, pleasure or pain of some kind or other. Of this impression there is a copy taken by the mind, which remains after the impression ceases; and this we call an idea. This idea of pleasure or pain, when it returns upon the soul, produces the new impressions of desire and aversion, hope and fear, which may properly be called impressions of reflexion, because derived from it.

SECT. III

Of the ideas of the memory and imagination

We find by experience, that when any impression has been present with the mind, it again makes its appearance there as an idea; and this it may do after two different ways: either when in its new appearance it retains a considerable degree of its first vivacity,

These again are copied by the memory and imagination, and become ideas; which perhaps in their turn give rise to other impressions and ideas. So that the impressions of reflexion only antecedent to are their correspondent ideas; but posterior those of sensation, and to deriv'd from them. The examination of our sensations belongs more to anatomists and natural philosophers than to moral; and therefore shall be enter'd And the impressions of not at present upon. as reflexion, viz. passions, desires, and emotions, which principally deserve our attention, arise mostly from ideas, 'twill be necessary to reverse that method, which at first sight seems most natural; and in order to explain the nature and principles of the human mind, give a particular account of ideas, before we proceed to impressions. For this reason I have here chosen to begin with ideas. and is somewhat intermediate betwixt an impression and an idea: or when it entirely loses that vivacity, and is a perfect idea. The faculty, by which we repeat our impressions in the first manner, is

called the MEMORY, and the other the IMAGINATION. 'Tis evident at first sight, that the ideas of the memory are much more lively and strong than those of the imagination, and that the former faculty paints its objects in more distinct colours, than any which are employ'd by the latter. When we remember any past event, the idea of it flows in upon the mind in a forcible manner; whereas in the imagination the perception is faint and languid, and cannot without difficulty be preserv'd by the mind steady and uniform for any considerable time.

Here then is a sensible difference betwixt one species of ideas and another. But of this more fully hereafter. There is another difference betwixt these two kinds of ideas, which:-s no less evident, namely that tho' neither the ideas, of the memory nor imagination, neither the lively nor faint ideas can make their appearance in the mind, unless their correspondent impressions have gone before to prepare the way for them, yet the imagination is not restrain'd to the same order and form with the original impressions; while the memory is in a manner ty'd down in that respect, without any power of variation. 'Tis evident, that the memory preserves the original form, in which its objects were presented, and that where-ever we depart from it in recollecting any thing, it proceeds from some defect or imperfection in that faculty. An historian may, perhaps, for the more convenient Carrying on of his narration, relate an event before another, to which it was in fact posterior; but then he takes notice of this disorder, if he be exact; and by that means replaces the idea in its due position. 'Tis the same case in our recollection of those places and persons, with which we were formerly acquainted. The chief exercise of the memory is not to preserve the simple ideas, but their order and position. In short, this principle is supported by such a number of common and vulgar phaenomena, that we may spare ourselves the trouble of insisting on it any farther.

The same evidence follows us in our second principle, of the liberty of the imagination[6] to transpose and change its ideas. The fables we meet with in poems and romances put this entirely out of the question. Nature there is totally confounded, and nothing mentioned but winged horses, fiery dragons, and monstrous giants. Nor will this liberty of the fancy appear strange, when we consider, that all our ideas are copy'd from our impressions, and that there are not any two impressions which are perfectly inseparable.

Not to mention, that this is an evident consequence of the division of ideas into simple and complex. Where-ever the imagination perceives a difference among ideas, it can easily produce a separation.

SECT. IV

Of the connexion or association of ideas

As all simple ideas may be separated by the imagination, and may be united again in what form it pleases, nothing wou'd be more unaccountable than the operations of that faculty, were it not guided by some universal principles, which render it, in some measure, uniform with itself in all times and places. Were ideas entirely loose and unconnected, chance alone wou'd join them; and 'tis impossible the same simple ideas should fall regularly into complex ones (as they Commonly do) without some bond of union among them, some associating quality, by which one idea naturally introduces another. This uniting principle among ideas is not to be consider'd as an inseparable connexion; for that has been already excluded from the imagination: Nor yet are we to conclude, that without it the mind cannot join two ideas; for nothing is more free than that faculty: but we are only to regard it as a gentle force, which commonly prevails, and is the cause why, among other things, languages so nearly correspond to each other; nature in a manner pointing out to every one those simple ideas, which are most proper to be united in a complex one. The qualities, from which this association arises, and by which the mind is after this manner convey'd from one idea to another, are three, viz. RESEMBLANCE., CONTIGUITY in time or place, and CAUSE and EFFECT.

I believe it will not be very necessary to prove, that these qualities produce an association among ideas, and upon the appearance of one idea naturally introduce another. 'Tis plain, that in the course of our thinking, and in the constant revolution of our ideas, our imagination runs easily from one idea to any other that resembles it, and that this quality alone is to the fancy a sufficient bond and association.' Tis likewise evident that as the senses, in changing their objects, are necessitated to change them regularly, and take them as they lie contiguous to each other, the imagination must by long custom acquire the same method of thinking, and run along the parts of space and time in conceiving its objects. As to the connexion, that is made by the relation of cause and effect, we shall have occasion

afterwards to examine it to the bottom, and therefore shall not at present insist upon it. 'Tis sufficient to observe, that there is no relation, which produces a stronger connexion in the fancy, and makes one idea more readily recall another, than the relation of cause and effect betwixt their objects.

That we may understand the full extent of these relations, we must consider, that two objects are connected together in the imagination, not only when the one is immediately resembling, contiguous to, or the cause of the other, but also when there is interposed betwixt them a third object, which bears to both of them any of these relations. This may be carried on to a great length; tho' at the same time we may observe, that each remove considerably weakens the relation. Cousins in the fourth degree^[7] are connected by causation, if I may be allowed to use that term; but not so closely as brothers, much less as child and parent. In general we may observe, that all the relations of blood depend upon cause and effect, and are esteemed near or remote, according to the number of connecting causes interpos'd betwixt the persons.

Of the three relations above-mention'd this of causation is the most extensive. Two objects may be considered as plac'd in this relation, as well when one is the cause of any of the actions or motions of the other, as when the former is the cause of the existence of the latter. For as that action or motion is nothing but the object itself, consider'd in a certain light, and as the object them in the imagination. no more required to convert it into action, but the exertion of the will; and that in every case is considered as possible, and in many as probable; especially in the case of authority, where the obedience of the subject is a pleasure and advantage to the superior.

These are therefore the principles of union or cohesion among continues the same in all its different situations, 'tis easy to imagine how such influence of objects another connect an upon one may We this farther, and remark, only that not two may carry objects connected by the relation of and effect, when are cause the produces motion action in the other, but also one a or any when it has of producing it. And this observe to a power we may be the of all the relation,; of interest and duty, by which source influence each other in society, and plac'd in the ties of men are and subordination. A is such-a-one by his government master as situation, arising either from force

has of agreement, or a power directing in certain particulars the actions of another, whom we call servant. A judge is one, who in all disputed cases can fix by his opinion the possession or property of any thing betwixt any members of the society. When is possess'd of there is a person any power, simple ideas, and in the imagination supply the place of that our inseparable connexion, by which they are united in our memory. Here is a kind of **ATTRACTION**, which in the mental world will be found to have as extraordinary effects as in the natural, and to shew itself in as many and as various forms. Its effects are every where conspicuous; but as to its causes, they are mostly unknown, and must be resolv'd into original qualities of human nature, which I pretend not to explain. Nothing is more requisite for a true philosopher, than to restrain the intemperate desire of searching into causes, and having established any doctrine upon a sufficient number of experiments, rest contented with that, when he sees a farther examination would lead him into obscure and uncertain speculations. In that case his enquiry wou'd be much better employ'd in examining the effects than the causes of his principle.

Amongst the effects of this union or association of ideas, there are none more remarkable, than those complex ideas, which are the common subjects of our thoughts and reasoning, and generally arise from some principle of union among our simple ideas. These complex ideas may be divided into **Relations**, **Modes**, and **Substances**. We shall briefly examine each of these in order, and shall subjoin some considerations concerning our general and particular ideas, before we leave the present subject, which may be consider'd as the elements of this philosophy.

SECT. V

Of Relations

The word **RELATION** is commonly used in two senses considerably different from each other. Either for that quality, by which two ideas are connected together in the imagination, and the one naturally introduces the other, after the manner above-explained: or for that particular circumstance, in which, even upon the arbitrary union of two ideas in the fancy, we may think proper to compare them. In common language the former is always the sense, in which we use the word, relation; and tis only in philosophy, that we extend it to mean any particular subject of comparison, without a connecting

principle. Thus distance will be allowed by philosophers to be a true relation, because we acquire an idea of it by the comparing of objects: But in a common way we say, that nothing can be more distant than such or such things from each other, nothing can have less relation: as if distance and relation were incompatible.

It may perhaps be esteemed an endless task to enumerate all those qualities, which make objects admit of comparison, and by which the ideas of philosophical relation are produced. But if and foundation of personal identity[8], which shall find its place afterwards. Of all relations the most universal is that of identity, being common to every being whose existence has any duration.

(1) The first is : a which philosophical relation exist; since objects will no can no admit of comparison, but what have degree of resemblance. some But tho' resemblance be all philosophical relation, it to necessary does not follow, that it always produces a connexion or association of ideas. When quality becomes very general, and is to a common individuals, it leads not the mind directly to any one great many a of them; but by presenting at once too great a choice, does thereby prevent the imagination from fixing on any single object.

(2) Identity may be esteem'd a second species of relation. This relation I here consider as apply'd in its strictest sense to constant and unchangeable objects; without examining the nature and foundation of personal identity[8], which shall find its place afterwards. Of all relations the most universal is that of identity, being common to every being whose existence has any duration.

(3) After identity the most universal and comprehensive relations are those of Space and Time, which are the sources of an infinite number of comparisons, such as distant, contiguous, above,below, before, after, etc.

(4) All those objects, which admit of quantity, or number, may be compar'd in that particular; which is another very fertile source of relation.

(5) When any two objects possess the same quality in common,the degrees, in which they possess it, form a fifth species of relation.

Thus of two objects, which are both heavy, the one may be either of greater, or less weight than the other. Two colours, that are of the same kind, may yet be of different shades, and in that respect admit of comparison.

(6) The relation of contrariety may at first sight be regarded as an exception to the rule, that no relation of any kind can subsist without some degree of resemblance. But let us consider, that no two ideas are in themselves contrary, except those of existence and non-existence, which are plainly resembling, as implying both of them an idea of the object; tho' the latter excludes the object from all times and places, in which it is supposed not to exist.

(7) All other objects, such as fire and water, heat and cold, are only found to be contrary from experience, and from the contrariety of their causes or effects; which relation of cause and effect is a seventh philosophical relation, as well as a natural one. The resemblance implied in this relation, shall be explain'd afterwards.

It might naturally be expected, that I should join difference to the other relations. But that I consider rather as a negation of relation, than as anything real or positive. Difference is of two kinds as oppos'd either to identity or resemblance. The first is call'd a difference of number; the other of kind.

SECT. VI

Of modes and substances

I wou'd fain ask those philosophers, who found so much of their reasonings on the distinction of substance and accident, and imagine we have clear ideas of each., whether the idea of substance be deriv'd from the impressions of sensation pr of reflection? If it be convey'd to us by our senses, I ask, which of them; and after what manner? If it be perceiv'd by the eyes, it must be a colour; if by the ears, a sound; if by the palate, a taste; and so of the other senses. But I believe none will assert, that substance is either a colour, or sound, or a taste. The idea, of substance must therefore be deriv'd from an impression of reflection, if it really exist. But the impressions of reason concerning it.'discover to have the same connexion with the rest, we immediately comprehend it among them, even tho' it did not enter into the first conception of the substance. Thus our idea of gold may at first be a

yellow colour, weight, malleableness, fusibility; but upon the discovery of its dissolubility in aqua regia[9], we join that to the other reflection resolve themselves in to our passions and emotions: none of which can possibly be a substance. We have therefore represent no idea of substance, distinct from that of collection of particular qualities, have other meaning when either talk nor we any we or The idea of substance well that of mode, is nothing as as a but a collection of Simple ideas, that are united by the imagination, and have particular assigned them, by which able a name we are recall, either ourselves others, that collection. But the to to or difference betwixt these ideas consists in this, that the particular qualities, which form substance, commonly referred to are an unknown something, in which they supposed inhere; to are or granting this fiction should not take place, are at least supposed to be closely and inseparably connected by the relations of contiguity and causation. The effect of this is, that whatever new simple quality we qualities, and suppose it to belong to the substance as much as if its idea had from the beginning made a part of the compound one. The principal of union being regarded as the chief part of the complex idea, gives entrance to whatever quality afterwards occurs, and is equally comprehended by it, as are the others, which first presented themselves. themselves.

That this cannot take place in modes, is evident from considering their nature. The simple ideas of which modes are formed, either represent qualities, which are not united by contiguity and causation, but are dispersed in different subjects; or if they be all united together, the uniting principle is not regarded as the foundation of the complex idea. The idea of a dance is an instance of the first kind of modes; that of beauty of the second. The reason is obvious, why such complex ideas cannot receive any new idea, without changing the name, which distinguishes the mode.

SECT. VII

Of abstract ideas

A very material question has been started concerning abstract or general ideas, whether they be general or particular in the mind's conception of them. A great philosopher³ has disputed the received opinion in this particular, and has asserted, that all general ideas are nothing but particular ones, annexed to a certain term, which gives them a more extensive signification, and makes them recall upon

occasion other individuals, which are similar to them. As I look upon this to be one of the greatest and most valuable discoveries that has been made of late years in the republic of letters, I shag here endeavour to confirm it by some arguments, which I hope will put it beyond all doubt and controversy.'Tis evident, that in forming most of our general ideas, if not all of them, we abstract from every particular degree of quantity and quality, and that an object ceases not to be of any particular species on account of every small alteration in its extension[10], duration and other properties. It may therefore be thought, that here is a plain dilemma, that decides concerning the nature of those abstract ideas, which have afforded so much speculation to philosophers. The abstract idea of a man represents men of all sizes and all qualities; which 'tis concluded it cannot do, but either by representing at once all possible sizes and all possible qualities, or by, representing

no particular one at all. Now it having been esteemed absurd to reflection and conversation.objects are different are distinguishable, and that whatever objects are distinguishable are separable by the thought and imagination. And we may here add, that these propositions are equally true in the inverse, and that whatever objects are separable are also distinguishable, and that whatever objects are distinguishable, defend the former proposition, as implying an infinite capacity in the mind, it has been commonly infer'd in favour of the letter: and our abstract ideas have been suppos'd particular degree to represent no either of quantity quality. But that this inference is or erroneous, I shall endeavour to make appear, first, by proving, that 'tis utterly impossible conceive quantity quality, without forming to any or a precise notion of its degrees: And secondly by showing, that tho' the capacity of the mind be infinite, form not yet at we can once notion of all possible degrees of quantity and quality, in such a a manner at least, as, however imperfect, may serve all the purposes of. To begin with the first proposition, that the mind cannot for many notion of quantity or quality without for minga precise notion of degree so feach we may prove this by the three ; following First, We have observ'd, that whatever arguments. also different. For how is it possible what is separate are we can not distinguishable, or distinguish what is not different? In order therefore to know, whether abstraction implies a separation, we need only consider it in this view, and examine, whether all the circumstances, which we abstract from in our general

ideas, be such as are distinguishable and different from those, which we retain as essential parts of them. But 'tis evident at first sight, that the precise length of a line is not different nor distinguishable from the line itself. nor the precise degree of any quality from the quality. These ideas, therefore, admit no more of separation than they do of distinction and difference. They are consequently conjoined with each other in the conception; and the general idea of a. line, notwithstanding all our abstractions and refinements, has in its appearance in the mind a precise degree of quantity and quality; however it may be made to represent others, which have different degrees of both.

Secondly, 'tis contest, that no object can appear to the senses; or in other words, that no impression can become present to the mind, without being determined in its degrees both of quantity and quality. The confusion, in which impressions are sometimes involv'd, proceeds only from their faintness and unsteadiness, not from any capacity in the mind to receive any impression, which in its real existence has no particular degree nor proportion. That is a contradiction in terms; and even implies the flattest of all contradictions, viz. that 'tis possible for the same thing both to be and not to be.

Now since all ideas are deriv'd from impressions, and are nothing but copies and representations of them, whatever is true of the one must be acknowledg'd concerning the other. Impressions and ideas differ only in their strength and vivacity. The foregoing conclusion is not founded on any particular degree of vivacity. It cannot therefore be affected by any variation in that particular. An idea is a weaker impression:2 and as a strong impression must necessarily have a determinate quantity and quality, the case must be the same with its copy or representative.

Thirdly, 'tis a principle generally receiv'd in philosophy that everything in nature is individual, and that 'tis utterly absurd to suppose a triangle really existent, which has no precise proportion of sides and angles. If this therefore be absurd in fact and reality, it must also be absurd in idea; since nothing of which we can form a clear and distinct idea is absurd and impossible. But to form the idea of an object, and to form an idea simply, is the same thing; the reference of the idea to an object being an extraneous denomination, of which in itself it bears no mark or character. Now as 'tis impossible were

universal. other differences may appear among them. After we have acquired a custom of this kind, the hearing of that name revives the idea of one of these objects, and makes the imagination conceive it with all its particular circumstances and proportions. But as the same word is suppos'd to have been frequently applied to other individuals, that

to form an idea of an object, that is possest of quantity and quality, and yet is possest of no precise degree of either; it follows that there is an equal impossibility of forming an idea, that is not limited and confin'd in both these particulars. Abstract ideas therefore in are themselves individual, however they become general in their may representation. The image[11] in the mind is only that of a particular object, tho' the application of it in our reasoning be the same, as if it This application of ideas beyond their proceeds from nature collecting all their possible degrees of quantity and quality in our such an imperfect manner as may serve the purposes of life, which is the second proposition I propos'd to explain. When we have found 4several objects, that often resemblanceto among occur us, we a apply the all of them, whatever differences to same name we may observe in the degrees of their quantity and quality, and whatever are different in many from that idea, which is immediately respects present to the mind; the word not being able to revive the idea of all these individuals, but only touches the soul, if I may be allow'd so to speak, and revives that custom, which we have acquir'd by surveying them. They are not really and in fact present to the mind, but only in power; nor do we draw them all out distinctly in the imagination, but keep ourselves in a readiness to survey any of them, as we may be prompted by a present design or necessity. The word raises up an individual idea, along with a certain custom; and that custom produces any other individual one, for which we may have occasion.

But as the production of all the ideas, to which the name may be apply'd, is in most eases impossible, we abridge that work by a more partial consideration, and find but few inconveniences to arise in our reasoning from that abridgment.

For this is one of the most extraordinary circumstances in the present affair, that after the mind has produc'd an individual idea, upon which we reason, the attendant custom, reviv'd by the general or abstract term, readily suggests any other individual, if by chance we

form any reasoning, that agrees not with it. Thus shou'd we mention the word triangle, and form the idea of a particular equilateral one to correspond to it, and shou'd we afterwards assert, that the three angles of a triangle are equal to each other, the other individuals of a scalenum and isosceles, which we overlooked at first, immediately crowd in upon us, and make us perceive the falshood of this proposition, tho' it be true with relation to that idea, which we had form'd. If the mind suggests not always these ideas upon occasion, it proceeds from some imperfection in its faculties; and such a one as is often the source of false reasoning and sophistry. But this is principally the case with those ideas which are abstruse and compounded. On other occasions the custom is more entire, and 'tis seldom we run into such errors.

Nay so entire is the custom, that the very same idea may be annex to several different words, and may be employ'd in different reasonings, without any danger of mistake. Thus the idea of an equilateral triangle of an inch perpendicular may serve us in talking of a figure, of a rectilinear figure, of a regular figure, of a triangle, and of an equilateral triangle. AR these terms, therefore, are in this case attended with the same idea; but as they are wont to be apply'd in a greater or lesser compass, they excite their particular habits, and thereby keep the mind in a readiness to observe, that no conclusion be form'd contrary to any ideas, which are usually compriz'd under them.

Before those habits have become entirely perfect, perhaps being annex'd to a general term; that is, to a term, which from a customary conjunction has a relation to many other particular ideas, and readily recalls them in the imagination.

The only difficulty, that can remain on this subject, must be with regard to that custom, which so readily recalls every particular the mind be with forming the idea of only not content may one individual, but several, in order make itself to may run over comprehend its meaning, and the compass of that collection, own which it intends to express by the general term. That we may fix the meaning of the word, figure, we may revolve in our mind the ideas of circles, parallelograms, triangles of different sizes and squares, proportions, and image or idea. However this not rest may on one may be, 'tis certain that form the idea of individuals, whenever we we use any general term; that we seldom or never can exhaust these individuals;

and that those, which remain, are only represented by means of that habit, by which we recall them, whenever any present occasion requires it. This then is the nature of our abstract ideas and general terms; and 'tis after this manner we account for the foregoing paradox, that some ideas are particular in their nature, but general in their representation [12]. A particular idea becomes general by . idea, for which we may have occasion, and is excited by any word or sound, to which we commonly annex it. The most proper method, in my opinion, of giving a satisfactory explication of this act of the mind, is by producing other instances, which are analogous to it, and other principles, which facilitate its operation. To explain the ultimate causes of our mental actions is impossible. 'Tis sufficient, if we can give any satisfactory account of them from experience and analogy.

First then I observe, that when we mention any great number, such as a thousand, the mind has generally no adequate idea of it, but only a power of producing such an idea, by its adequate idea of the decimals, under which the number is comprehended. This imperfection, however, in our ideas, is never felt in our reasonings; which seems to be an instance parallel to the present one of universal ideas.

Secondly, we have several instances of habits, which may be reviv'd by one single word; as when a person, who has by rote any periods of a discourse, or any number of verses, will be put in remembrance of the whole, which he is at a loss to recollect, by that single word or expression, with which they begin.

Thirdly, I believe every one, who examines the situation of his mind in reasoning' will agree with me, that we do not annex distinct and compleat ideas to every term we make use of, and that in talking of government, church, negotiation, conquest, we seldom spread out in our minds all the simple ideas, of which these complex ones are compos'd. 'Tis however observable, that notwithstanding this imperfection we may avoid talking nonsense on these subjects, and may perceive any repugnance among the ideas, as well as if we had a fall comprehension of them. Thus if instead of saying, that in war the weaker have always recourse to negotiation, we shou'd say, that they have always recourse to conquest, the custom, which we have acquir'd of attributing certain relations to ideas, still follows the words, and makes us immediately perceive the absurdity of that proposition; in

the same manner as one particular idea may serve us in reasoning concerning other ideas, however different from it in several circumstances.

Fourthly, As the individuals are collected together, said plac'd under a general term with a view to that resemblance, which they bear to each other, this relation must facilitate their entrance in the imagination, and make them be suggested more readily upon occasion. And indeed if we consider the common progress of the thought, either in reflection or conversation, we shall find great reason to be satisfy'd in this particular. Nothing is more admirable, prov'd concerning the impossibility of general ideas, according to the common method of explaining them. We must certainly seek some new system on this head, and there plainly is none beside what I have propos'd. If ideas be particular in their nature, and at the same time finite in their number, 'tis only by custom they can become than the readiness, with which the imagination its ideas, suggests and them the instant, in which they become presents at very useful. The fancy from end of the universe necessary or runs one the other in collecting those ideas, which belong to any subject. to One would think the whole intellectual world of ideas was at once subjected to our view, and that we did nothing but pick out such as for our purpose. There may not, however, be most proper were any beside those ideas, that thus collected by kind present, very are a of magical faculty in the soul, which, tho' it be always most perfect in the geniuses, and is properly what call genius, is greatest we a however inexplicable by the utmost efforts of human understanding. Perhaps these four reflections may help to remove an difficulties the hypothesis I have propos'd concerning abstract ideas, to so that, which has hitherto prevail'd in philosophy, But, contrary to to tell the truth I place my chief confidence in what I have already general in their representation, and contain an infinite number of other ideas under them.

Before I leave this subject I shall employ the same principles to explain that distinction of reason [\[13\]](#), which is so much talk'd of, and is so little understood, in the schools. Of this kind is the distinction betwixt figure and the body figur'd; motion and the body mov'd. The difficulty of explaining this distinction arises from the principle above explain'd, that all ideas, which are different, are separable. For it follows from thence, that if the figure be different from the body, their

ideas must be separable as well as distinguishable: if they be not that distinction of reason : different, their ideas can neither be separable nor distinguishable. What then is meant by a distinction of reason, since it implies neither a difference nor separation.

To remove this difficulty we must have recourse to the foregoing explication of abstract ideas. 'Tis certain that the mind wou'd never have dream'd of distinguishing a figure from the body figur'd, as being in reality neither distinguishable, nor different, nor separable; did it not observe, that even in this simplicity there might be contain'd many different resemblances and relations.' Thus when a globe of white marble is presented, we receive only the impression of a white colour dispos'd in a certain form, nor are we able to separate and distinguish the colour from the form. But observing afterwards a globe of black marble and a cube of white, and comparing them with our former object, we find two separate resemblances, in what formerly seemed, and really is, perfectly inseparable. After a little more practice of this kind, we begin to distinguish the figure from the colour by a distinction of reason; that is, we consider the figure and colour together, since they are in effect the same and undistinguishable; but still view them in different aspects, according to the resemblances, of which they are susceptible. When we wou'd consider only the figure of the globe of white marble, we form in reality an idea both of the figure and colour, but tacitly carry our eye to its resemblance with the globe of black marble: And in the same manner, when we wou'd consider its colour only, we turn our view to its resemblance with the cube of white marble. By this means we accompany our ideas with a kind of reflection, of which custom renders us, in a great measure, insensible. A person, who desires us to consider the figure of a globe of white marble without thinking on its colour, desires an impossibility but his meaning is, that we shou'd consider the figure and colour together, but still keep in our eye the resemblance to the globe of black marble, or that to any other globe of whatever colour or substance.

ReneDescartes (1596—1650)

[1] 新耶路撒冷：新耶路撒冷是指当耶稣再临的时候，新天新地的首都所在。不同的基督教宗派对新耶路撒冷的准确定义有不同的解释：可能在今日的圣殿山、整个耶路撒冷，甚至任何一个完全和今日的耶路撒冷毫无关系的地方；也可能并不是真的指某个城市。

[2] 休谟将人类知觉分为印象和观念两类，并认为简单观念在初次出现的时候都是来自于简单印象，这种简单印象和简单观念相对应。

[3] the different shades of the same colour，不同深浅的颜色，即色调。

[4] Impressions of sensation，感觉印象。

[5] Impressions of reflexion，反省印象。

[6] 想像（imagination），与记忆、理性、经验相对立，通过分解和组合观念以形成复合观念。

[7] 英语中用“degree”来表示表兄弟之间的确切的层级关系。

[8] personal identity：人格同一性，属哲学探讨的一个主题。指肉体与灵魂的同一、身心同一或单一普遍的持久性与变易性的同一。休谟探讨了人的思维的同一性、自我的同一性。

[9] 王水：一种腐蚀性，气味浓烈，易挥发的盐酸及硝酸混合物，用于测定金属（活泼性）并溶化铂和金。

[10] extension：广延，指物体在空间上的延展，通常以此定义物体，物体都具有长宽高，占据空间。

[11] image：意象。

[12] representation：表象。表象说是认识理论的一种，它认为心灵以观念为中介而认识实在，这些中介观念被称为表象。

[13] that distinction of reason：理性的区别。

PART II OF THE IDEAS OF SPACE AND TIME

SECT. I

Of the infinite divisibility of our ideas of space and time

Whatever has the air of a paradox, and is contrary to the first and most unprejudiced notions of mankind, is often greedily embrac'd by philosophers, as shewing the superiority of their science, which cou'd discover opinions so remote from vulgar conception. On the other hand, anything propos'd to us, which causes surprize and admiration, gives such a satisfaction to the mind, that it indulges itself in those agreeable emotions, and will never be persuaded that its pleasure is entirely without foundation. From these dispositions in philosophers and their disciples arises that mutual complaisance betwixt them; while the former furnish such plenty of strange and unaccountable opinions, and the latter so readily believe them. Of this mutual complaisance I cannot give a more evident instance than in the doctrine of infinite divisibility[1], with the examination of which I shall begin this subject of the ideas of space and time.

'Tis universally allow'd, that the capacity of the mind is limited, and can never attain a full and adequate conception of infinity: And tho' it were not allow'd, 'twould be sufficiently evident from the plainest observation and experience.' 'Tis also obvious, that whatever is capable of being divided in infinitum, must consist of an infinite number of parts, and that 'tis impossible to set any bounds to the number of parts, without setting bounds at the same time to the division. It requires scarce any, induction to conclude from hence, exceed them. What consists of parts is distinguishable into them, and what is distinguishable is separable. But whatever we may imagine of the thing, the idea of a grain of sand is not distinguishable, nor separable into twenty, much less into a thousand, ten thousand, or an infinite number of different ideas. that the idea, which we form of any finite equality, is not infinitely divisible, but that by distinctions and separations proper we may run up this idea to inferior ones, which will be perfectly simple and indivisible. In rejecting the infinite capacity of the mind, we suppose it

may arrive at an end in the division of its ideas; nor are there any possible means of evading the evidence of this conclusion. 'Tis therefore certain, that the imagination reaches a minimum, and raise itself idea, of which it conceive to cannot may up an sub-division, and which be diminished without cannot any a total annihilation. When tell of the thousandth and ten you me thousandth of grain of sand, I have distinct idea of these part a a, numbers and of their different proportions; but the images, which I form in mind to the things themselves, are nothing represent my different from each other, inferior that image, by which I to nor the grain of sand itself, which is suppos'd vastly represent to so 'Tis the same case with the impressions of the senses as with the ideas of the imagination. Put a spot of ink upon paper, fix your eye upon that spot, and retire to such a distance, that, at last you lose sight of it; 'tis plain, that the moment before it vanish'd the image or impression was perfectly indivisible. 'Tis not for want of rays of light striking on our eyes, that the minute parts of distant bodies convey not any sensible impression; but because they are remov'd beyond that distance, at which their impressions were reduc'd to a minimum, and were incapable of any farther diminution. A microscope or telescope, which renders them visible, produces not any new rays of light, but only spreads those, which always flow'd from them; and by that means both gives parts to impressions, which to the naked eye appear simple and uncompounded, and advances to a minimum, what was formerly imperceptible.

We may hence discover the error of the common opinion, that the capacity of the mind is limited on both sides, and that 'tis impossible for the imagination to form an adequate idea, of what goes beyond a certain degree of minuteness as well as of greatness. Nothing can be more minute, than some ideas, which we form in the fancy; and images, which appear to the senses; since there are ideas and images perfectly simple and indivisible. The only defect of our senses is, that they give us disproportion'd images of things, and represent as minute and uncompounded what is really great and compos'd of a vast number of parts. This mistake we are not sensible of: but taking the impressions of those minute objects, which appear to the senses, to be equal or nearly equal to the objects, and finding by reason, that there are other objects vastly more minute, we too hastily conclude, that these are inferior to any idea of our imagination or impression of our senses. This however is certain, that we can form ideas, which shall be no greater than the smallest atom of the animal spirits[2] of an insect

a thousand times less than a mite: And we ought rather to conclude, that the difficulty lies in enlarging our conceptions so much as to form a just notion of a mite, or even of an insect a thousand times less than a mite. For in order to form a just notion of these animals, we must have a distinct idea representing every part of them; which, according to the system of infinite divisibility, is utterly impossible, and, according to that of indivisible parts or atoms, is extremely difficult, by reason of the vast number and multiplicity of these parts.

SECT. II

Of the infinite divisibility of space and time

Wherever ideas adequate representations of objects, are the relations, contradictions and of the ideas all agreements are applicable to the objects; and this we may in general observe to be the foundation of all human knowledge. But our ideas are adequate representations of the minute of extension; and thro' most parts whatever divisions and subdivisions we may suppose these parts to be arriv'd at, they can never become inferior ideas, which to some we form. The plain consequence is, that whatever appears impossible and contradictory upon the comparison of these ideas, must be really impossible and contradictory, without any farther excuse or evasion.

Every thing capable of being infinitely divided contains an infinite number of parts; otherwise the division would be stopt short by the indivisible which should immediately arrive. If parts, at. we therefore finite extension be infinitely divisible, it be any can no contradiction to suppose, that a finite extension contains an infinite number of parts: And vice versa, if it be a contradiction to suppose, that a finite extension contains an infinite number of parts, no finite extension can be infinitely divisible. But that this latter supposition is absurd, I easily convince myself by the consideration of my clear ideas. I first take the least idea I form of extension, part can a and being certain that there is nothing more minute than this idea, I conclude, that whatever I discover by its means must be a real quality of extension. I then repeat this idea once, twice, thrice, et and find the compound idea of extension, arising from its repetition, always to augment, and become double, triple, quadruple, etc. till at last it swells up to a considerable bulk, greater or smaller, in proportion as I repeat more or less the same idea. When I stop in the addition of parts, the idea of extension ceases to augment; and were I

to carry on the addition in infinitum, I clearly perceive, that the idea of extension must also become infinite. Upon the whole, I conclude, that the idea of all infinite number of parts is individually the same idea with that of an infinite extension; that no finite extension is capable of containing an infinite number of parts; and consequently that no finite extension is infinitely divisible.

I may subjoin another argument propos'd by a noted author, which seems to me very strong and beautiful. 'Tis evident, that existence in itself belongs only to unity, and is never applicable to number, but on account of the unites, of which the number is compos'd. Twenty men may be said to exist; but 'tis only because one, two, three, four, etc. are existent, and if you deny the existence of the latter, that of the former falls of course. 'Tis therefore utterly absurd to suppose any number to exist, and yet deny the existence of unites; and as extension is always a number, according to the common sentiment of metaphysicians, and never resolves itself into any unite or indivisible quantity, it follows, that extension can never at all exist. 'Tis in vain to reply, that any determinate quantity of extension is an unite; but such-a-one as admits of an infinite number of fractions, and is inexhaustible in its sub-divisions. For by the same rule these twenty men may be consider'd as an unite. The whole globe of the earth, nay the whole universe, may be consider'd as an unite,. That term of unity is merely a fictitious denomination, which the mind may apply to any quantity of objects it collects together; nor can such an unity any more exist alone than number can, as being in reality a true number. But the unity, which can exist alone, and whose existence is necessary to that of all number, is of another kind, and must be perfectly indivisible, and incapable of being resolved into any lesser unity.

All this reasoning takes place with regard to time; along with an additional argument, which it may be proper to take notice of. 'Tis a property inseparable from time, and which in a manner constitutes its essence, that each of its parts succeeds another, and that none of them, however contiguous, can ever be co-existent. For the same reason, that the year 1737 cannot concur with the present year 1738 to be an arrant contradiction. of calling a difficulty what pretends to be a demonstration, and endeavouring by that means to elude its force and evidence. 'Tis not in demonstrations as in probabilities[3], that difficulties can take place, and one argument counter-balance another, and diminish its authority. A demonstration, if just, admits of

no opposite difficulty; every moment must be distinct from, and posterior or antecedent to another. 'Tis certain then, that time, as it exists, must be compos'd of indivisible For if in time could arrive moments. at we never an end of division, and if each moment, as it succeeds another, were not perfectly single and indivisible, there would be an infinite number of co-existent moments, or parts of time; which I believe will be allow'd The infinite divisibility of implies that of time, is space as evident from the of motion. If the latter, therefore, be nature impossible, the former must be equally so. I doubt not but, it will readily be allow'd by the most obstinate defender of the doctrine of infinite divisibility, that these arguments difficulties, and that 'tis impossible give to to are any answer them which will be perfectly clear and satisfactory. But here we observe, that nothing be absurd, than this custom may can more and if not just, 'tis a mere sophism, and consequently can never be a difficulty. 'Tis either irresistible, or has no manner of force. To talk therefore of objections and replies, and ballancing of arguments in such a question as this, is to confess, either that human reason is nothing but a play of words, or that the person himself, who talks so, has not a Capacity equal to such subjects. Demonstrations may be difficult to be comprehended, because of abstractedness of the subject; but can never have such difficulties as will weaken their authority, when once they are comprehended.

'Tis true, mathematicians are wont to say, that there are here equally strong arguments on the other side of the question, and that the doctrine of indivisible points is also liable to unanswerable objections. Before I examine these arguments and objections in detail, I will here take them in a body, and endeavour by a short and decisive reason to prove at once, that 'tis utterly impossible they can have any just foundation.

'Tis an establish'd maxim in metaphysics, That whatever the mind clearly conceives, includes the idea of possible existence, or in other words, that nothing we imagine is absolutely impossible. We can form the idea of a golden mountain, and from thence conclude that such a mountain may actually exist. We can form no idea of a mountain without a valley, and therefore regard it as impossible.

Now 'tis certain we have an idea of extension; for otherwise why do we talk and reason concerning it? 'Tis likewise certain that this

idea, as conceiv'd by the imagination, tho' divisible into parts or inferior ideas, is not infinitely divisible, nor consists of an infinite number of parts: For that exceeds the comprehension of our limited capacities. Here then is an idea of extension, which consists of parts or inferior ideas, that are perfectly, indivisible: consequently this idea implies no contradiction: consequently 'tis possible for extension really to exist conformable to it: and consequently all the arguments employ'd against the possibility of mathematical points are mere scholastick quibbles, and unworthy of our attention.

These consequences we may carry one step farther, and conclude that all the pretended demonstrations for the infinite divisibility of extension are equally sophistical; since 'tis certain these demonstrations cannot be just without proving the impossibility of mathematical points; which 'tis an evident absurdity to pretend to.

SECT. III

Of the other qualities of our idea of space and time

No discovery cou'd have been made more happily for deciding all controversies concerning ideas, than that abovemention'd, that ideas of space and time. Our internal impressions are our passions, emotions, desires and aversions; none of which, I believe, will ever be asserted to be the model, from which the idea of space is deriv'd. There remains therefore nothing but the senses, which can convey to us this original impression. Now what impression do our senses here convey impressions always take the precedence of them, and that every idea, with which the imagination is furnish'd, first makes its appearance in a correspondent impression. These latter perceptions are all so clear and evident, that they admit of tho' of controversy; no many our ideas are so obscure, that 'tis almost impossible even for the mind, which forms them, to tell exactly their nature and composition. Let us apply this principle, in order to discover farther the nature of our Upon opening and turning them the surrounding to my eyes, objects, I perceive visible bodies; and shutting them many upon again, and considering the distance betwixt these bodies, I acquire the idea of extension. As every idea is deriv'd from some impression, which is exactly similar to it, the impressions similar to this idea of extension, must either be some sensations deriv'd from the sight, or some internal impressions arising from these sensations., us? This is the principal question, and decides without appeal to concerning the

nature of the idea. The table before me is alone sufficient by its view to give me the idea of extension. This idea, then, is borrow'd from, and represents some impression, which this moment appears to the senses. But my senses convey to me only the impressions of colour'd points[4], dispos'd in a, certain manner. If the eye is sensible of any thing farther, I desire it may be pointed out to me. But if it be impossible to shew any thing farther, we may conclude with certainty, that the idea of extension is nothing but a copy of these colour'd points, and of the manner of their appearance.

Suppose that in the extended object, or composition of colour'd points, from which we first receiv'd the idea of extension, the points were of a purple colour; it follows, that in every repetition of that idea we wou'd not only place the points in the same order with respect to each other, but also bestow on them that precise colour, with which alone we are acquainted. But afterwards having experience of the other colours of violet, green, red, white, black, and of all the different compositions of these, and finding a resemblance in the disposition of colour'd points, of which they are compos'd, we omit the peculiarities of colour, as far as possible, and found an abstract idea merely on that disposition of points, or manner of appearance, in which they agree. Nay even when the resemblance is carry'd beyond the objects of one sense, and the impressions of touch are found to be Similar to those of sight in the disposition of their parts; this does not hinder the abstract idea from representing both, upon account of their resemblance. All abstract ideas are really nothing but particular ones, consider'd in a certain light; but being annexed to general terms, they are able to represent a vast variety, and to comprehend objects, which, as they are alike in some particulars, are in others vastly wide of each other.

The idea of time, being deriv'd from the succession of our perceptions of every kind, ideas as well as impressions, and impressions of reflection as well as of sensations will afford us an instance of an abstract idea, which comprehends a still greater variety than that of space, and yet is represented in the fancy by some particular individual idea of a determinate quantity and quality.

As 'tis from the disposition of visible and tangible objects we receive the idea of space, so from the succession of ideas and impressions we form the idea of time, nor is it possible for time alone ever to make its appearance, or be taken notice of by the mind. A man

in a sound sleep, or strongly occupy'd with one thought, its appearance to the mind, either alone, or attended with a steady unchangeable object, but is always discovered some perceivable succession of changeable objects.

To confirm this we may add the following argument, which to me seems perfectly decisive and convincing. 'Tis evident, that is insensible of time; and according his perceptions succeed as each other with less rapidity, the duration greater or same appears longer shorter his imagination. It has been remark'd by to or that our perceptions have certain bounds in this great philosopher, particular, which fix'd by the original and constitution nature are of the mind, and beyond which no influence of external objects on the senses is ever able to hasten or retard our thought. If you wheel about burning coal with rapidity, it will the present to a senses image of circle of fire; will there be interval to an a nor seem any of time betwixt its revolutions; meerly because 'tis impossible for perceptions succeed each other with the same rapidity, that to our motion be communicated external objects. Wherever to may we have no successive perceptions, we have no notion of time, even tho' there be a real succession in the objects. From these phenomena, as well as from many others, we may conclude, that time cannot make time or duration consists of different For otherwise we cou'd parts: not conceive a longer or shorter duration. 'Tis also evident, that these parts are not co-existent: For that quality of the co-existence of parts belongs to extension, and is what distinguishes it from duration. Now as time is compos'd of parts, that are not coexistent[5]: an unchangeable object, since it produces none but coexistent impressions, produces none that can give us the idea of time; and consequently that idea must be deriv'd from a succession of changeable objects, and time in its first appearance can never be sever'd from such a succession.

Having therefore found, that time in its first appearance to the mind is always conjoin'd with a succession of changeable objects, and that otherwise it can never fall under our notice, we must now examine whether it can be conceiv'd without our conceiving any succession of objects, and whether it can alone form a distinct idea in the imagination.

In order to know whether any objects, which are join'd in impression, be inseparable in idea, we need only consider, if they be

different from each other; in which case, 'tis plain they may be conceiv'd apart. Every thing, that is different is distinguishable: and everything, that is distinguishable, may be separated, according to the maxims above-explain'd. If on the contrary they be not different, they are not distinguishable: and if they be not distinguishable, they cannot be separated. But this is precisely the case with respect to time, compar'd with our successive perceptions. The idea of time is not deriv'd from a particular impression mix'd up with others, and plainly distinguishable from them; but arises altogether from the manner, in which impressions appear to the mind, without making one of the number. Five notes play'd on a flute give us the impression and idea of time; tho' time be not a sixth impression, which presents itself to the hearing or any other of the senses. Nor is it a sixth impression, which the mind by reflection finds in itself. These five sounds making their appearance in this particular manner, excite no emotion in the mind, nor produce an affection of any kind, which being observ'd by it can give rise to a new idea. For that is necessary to produce a new idea of reflection, nor can the mind, by revolving over a thousand times all its ideas of sensation, ever extract from them any new original idea, unless nature has so fram'd its faculties, that it feels some new original impression arise from such a contemplation. But here it only takes notice of the manner, in which the different sounds make their appearance; and that it may afterwards consider without considering these particular sounds, but may conjoin it with any other objects. The ideas of some objects it certainly must have, nor is it possible for it without these ideas ever to arrive at any conception of time; which since it, appears not as any primary distinct impression, can plainly be nothing but different succeeding each other. thing unchangeable be ever said to have duration. Ideas always represent the Objects or impressions, from which they are deriv'd, and can never without a fiction represent or be apply'd to any other. By what fiction we apply the idea of time, even to what is unchangeable, and suppose, as is common, that duration is a measure ideas, or impressions, or objects dispos'd in a certain manner, that is, I know there some who pretend, that the idea of duration are is applicable in objects, which perfectly to a proper sense are unchangeable; and this I take be the opinion of to common philosophers well of the vulgar. But be convinc'd of its to as as falsehood we need but reflect on the foregoing conclusion, that the idea of duration is always deriv'd from succession of changeable a objects, and can never be convey'd to the mind by any thing stedfast and unchangeable. For it inevitably follows

from thence, that since the idea of duration be deriv'd from such object, it cannot an never-in propriety be apply'd it, exactness to any or nor can any of rest as well as of motion, we shall consider afterwards.

There is another very decisive argument, which establishes the present doctrine concerning our ideas of space and time, and is founded only on that simple principle, that our ideas of them are compounded of parts, which are indivisible. This argument may be worth the examining.

Every idea, that is distinguishable, being also separable, let us take one of those simple indivisible ideas, of which the compound one of extension is form'd, and separating it from all others, and considering it apart, let us form a judgment of its nature and qualities.

'Tis plain it is not the idea of extension. For the idea of extension consists of parts; and this idea, according to the supposition, is perfectly simple and indivisible. Is it therefore nothing? That is absolutely impossible. For as the compound idea of extension, which is real, is compos'd of such ideas; were these so many non-entities[6], there wou'd be a real existence compos'd of non-entities; which is absurd. Here therefore I must ask, What is our idea of a simple and indivisible point? No wonder if my answer appear somewhat new, since the question itself has scarce ever yet been thought of. We are wont to dispute concerning the nature of mathematical points, but seldom concerning the nature of their ideas.

The idea of space is convey'd to the mind by two senses, the sight and touch; nor does anything ever appear extended, that is not either visible or tangible. That compound impression, which represents extension, consists of several lesser impressions, that are indivisible to the eye or feeling, and may be call'd impressions of atoms or corpuscles endow'd with colour and solidity. But this is not all. 'Tis not only requisite, that these atoms shou'd be colour'd or tangible, in order to discover themselves to our senses; 'tis also necessary we shou'd preserve the idea of their colour or tangibility in order to comprehend them by our imagination. There is nothing but the idea of their colour or tangibility, which can render them conceivable by the mind. Upon the removal of the ideas of these sensible qualities, they are utterly annihilated to the thought or imagination.' Now such as the parts are, such is the whole. If a point be not consider'd as colour'd or

tangible, it can convey to us no idea; and consequently the idea of extension, which is compos'd of the ideas of these points, can never possibly exist. But if the idea of extension really can exist, as we are conscious it does, its parts must also exist; and in order to that, must be consider'd as colour'd or tangible. We have therefore no idea of space or extension, but when we regard it as an object either of our sight or feeling.

The same reasoning will prove, that the indivisible moments of time must be fill'd with some real object or existence, whose succession forms the duration, and makes it be conceivable by the mind.

SECT. IV

Objections answer'd

Our concerning and time consists of system two parts, space which intimately connected together. The first depends are on this chain of reasoning. The capacity of the mind is infinite; not consequently no idea of extension or duration consists of an infinite number of parts or inferior ideas, but of a finite number, and these simple and indivisible: 'Tis therefore possible for space and time to exist conformable to this idea: And if it be possible, 'tis certain they actually do exist conformable to it; since their infinite divisibility is utterly impossible and contradictory.

The other part of our system is a consequence of this. The parts, into which the ideas of space and time resolve themselves, become at last indivisible; and these indivisible parts, being nothing in themselves, are inconceivable when not fill'd with something real and existent. The ideas of space and time are therefore no separate or distinct ideas, but merely those of the manner or order, in which objects exist: Or in other words, 'tis impossible to conceive either a vacuum and extension without matter, or a time, when there was no succession or change in any real existence. The intimate connexion betwixt these parts of our system is the reason why we shall examine together the objections, which have been urg'd against both of them, beginning with those against the finite divisibility of extension.

I. The first of these objections, which I shall take notice of, is more proper to prove this connexion and dependence of the one part upon the other, than to destroy either of them. It has often been

maintained in the schools, that extension must be divisible, in infinitum, because the system of mathematical points is absurd; and that system is absurd, because a mathematical point^[7] is a non-entity, and consequently can never by its conjunction with others form a real existence. This wou'd be perfectly decisive, were there no medium betwixt the infinite divisibility of matter, and the non entity of mathematical points. But there is evidently a medium, viz. the bestowing a colour or solidity on these points; and the absurdity of both the extremes is a demonstration of the truth and reality of this medium. The system of physical points, which is another medium, is too absurd to need a refutation. A real extension, such as a physical point is suppos'd to be, can never exist without parts, different from each other; and wherever objects are different, they are distinguishable and separable by the imagination.

II. The second objection is deriv'd from the necessity there wou'd be of penetration, if extension consisted of mathematical points. A simple and indivisible atom, that touches another, must necessarily penetrate it; for 'tis impossible it can touch it by its external parts, from the very supposition of its perfect simplicity, which excludes all parts. It must therefore touch it intimately, and in its whole essence, *secundum se, tota, & totaliter*; which is the very definition of penetration. But penetration is impossible: Mathematical points are of consequence equally impossible. I answer this objection by substituting a juster idea of penetration. Suppose two bodies containing no void within their circumference, to approach each other, and to unite in such a manner that the body, which results from their union, is no more extended than either of them; 'tis this we must mean when we talk of penetration. But 'tis evident this penetration is nothing but the annihilation of one of these bodies, and the preservation of the other, without our being able to distinguish particularly which is preserv'd and which annihilated. Before the approach we have the idea of two bodies. After it we have the idea only of one. 'Tis impossible for the mind to preserve any notion of difference betwixt two bodies of the same nature existing in the same place at the same time.

Taking then penetration in this sense, for the annihilation of one body its approach to another, I ask if he upon any one, sees a necessity, that colour'd tangible point shou'd be annihilated or the approach of another colour'd tangible point? On the upon or does he

evidently perceive, that from the union of contrary, not these points there results object, which is compounded and an divisible, and be distinguished into of which each two parts, may its existence distinct and notwithstanding its separate, preserves contiguity the other? Let him aid his fancy by conceiving these to points to be of different colours, the better to prevent their coalition and confusion. A blue and red point surely lie contiguous a may without penetration annihilation. For if they what cannot, any or possibly can become of them? Whether shall the red or the blue be annihilated? Or if these colours unite into one, what new colour will they produce by their union?

What chiefly gives rise to these objections, and at the same time renders it so difficult to give a satisfactory answer to them, is the natural infirmity and unsteadiness both of our imagination and senses,when employ'd such minute objects. Put of ink spot senses, on a upon paper, and retire to such a distance, that the spot becomes altogether invisible; you will find, that upon your return and nearer approach the spot first becomes visible by short intervals; and afterwards becomes always visible; and afterwards acquires only a new force in its colouring without augmenting its bulk; and afterwards, when it has encreas'd to such a degree as to be really extended, 'tis still difficult for the imagination to break it into its component parts, because of the uneasiness it finds in the conception of such a minute object as a single point. This infirmity affects most of our reasonings on the present subject, and makes it almost impossible to answer in an intelligible manner, and in proper expressions, many questions which may arise concerning it. III. There have been many objections drawn from the mathematics against the indivisibility of the parts of extension:tho' at first sight that science seems rather favourable to the present doctrine; and if it be contrary in its demonstrations,[8] 'tis perfectly conformable in its definitions. My present business then must be to defend the definitions, and refute the demonstrations.

A surface is defin'd [9]to be length and breadth without depth: A line to be length without breadth or depth: A point to be what has neither length, breadth nor depth. 'Tis evident that all this is perfectly unintelligible upon any other supposition than that of the composition of extension by indivisible points or atoms. How else cou'd any thing exist without length, without breadth, or without

depth?

Two different answers, I find, have been made to this argument; neither of which is in my opinion satisfactory. The first is, that the objects of geometry, those surfaces, lines and points, whose proportions and positions it examines, are mere ideas in the mind; I and not only never did, but never can exist in nature. They never did exist; for no one will pretend to draw a line or make a surface entirely conformable to the definition: They never can exist; for we may produce demonstrations from these very ideas to prove, that they are impossible.

But can anything be imagin'd more absurd and contradictory than this reasoning? Whatever can be conceiv'd by a clear and distinct idea necessarily implies the possibility of existence; and he who pretends to prove the impossibility of its existence by any argument derived from the clear idea, in reality asserts, that we have no clear idea of it, because we have a clear idea. 'Tis in vain to search for a contradiction in any thing that is distinctly conceiv'd; ever be conceiv'd. for the mind to arrive at a minimum in its ideas, its capacity must be infinite, in order to comprehend the infinite number of parts, of which its idea of any extension wou'd be compos'd. I shall here endeavour to find some new absurdities in this reasoning.

A surface terminates a solid; a line terminates a surface; a point by the mind. Did it imply any contradiction, 'tis impossible it cou'd. There is therefore medium betwixt allowing least the at no possibility of indivisible points, and denying their idea; and 'tis this latter principle, that the second the foregoing to on answer 9 is founded. It has been pretended, that tho' it be argument impossible conceive length without breadth, by to yet a any an abstraction without separation, consider the one without a we can regarding the other; in the think of the same manner as we may length of the betwixt and overlook its breadth. two towns, way The length is inseparable from the breadth both in and nature in minds; but this excludes partial consideration, and not our a a distinction of reason, after the manner above explain'd. In refuting this I shall insist the not argument, answer on which I have already sufficiently explained, that if it be impossible terminates line; but I that if the ideas of point, line assert, a or surface were not indivisible, 'tis impossible we shou'd ever conceive these terminations: For let these ideas be suppos'd infinitely divisible; and

then let the fancy endeavour to fix itself on the idea of the last surface, line or point; it immediately finds this idea to break into parts; and upon its seizing the last of these parts, it loses its hold by a new division, and so on in infinitum, without any possibility of its arriving at a concluding idea. The number of fractions bring it no nearer the last division, than the first idea it form'd. Every particle eludes the grasp by a new fraction; like quicksilver, when we endeavour to seize it. But as in fact there must be something, which erminates the idea of every finite quantity; and as this terminating idea cannot itself consist of parts or inferior ideas; otherwise it wou'd be the last of its parts, which finish'd the idea, and so on; this is a clear proof, that the ideas of surfaces, lines and points admit not of any division; those of surfaces in depth; of lines in breadth and depth; and of points in any dimension.

The school were so sensible of the force of this argument, that some of them maintained, that nature has mix'd among those particles of matter, which are divisible in infinitum, a number of mathematical points, in order to give a termination to bodies; and others eluded the force of this reasoning by a heap of unintelligible cavils and distinctions. Both these adversaries equally yield the victory. A man who hides himself, confesses as evidently the superiority of his enemy, as another, who fairly delivers his arms.

Thus it appears, that the definitions of mathematics destroy the pretended demonstrations; and that if we have the idea of indivisible points, lines and surfaces conformable to the definition, their existence is certainly possible: but if we have no such idea, 'tis impossible we can ever conceive the termination of any figure; without which conception there can be no geometrical demonstration.

But I go farther, and maintain, that none of these demonstra-tions can have sufficient weight to establish such a principle, as this of infinite divisibility; and that because with regard to such minute objects, they are not properly demonstrations, being built on ideas, which are not exact, and maxims, which are not precisely true. When geometry decides anything concerning the proportions of quantity, we ought not to look for the utmost precision and exactness. None of its proofs extend so far. It takes the dimensions and proportions of figures justly; but roughly, and with some liberty. Its errors are never considerable; nor wou'd it err at all, did it not aspire to such an

absolute perfection.

I first ask mathematicians, what they mean when they say one line or surface is EQUAL to, or GREATER or LESS than another? Let of them give to whatever he belongs, and sect any an answer, whether he maintains the composition of extension by indivisible points, by quantities divisible in infinitum. This question will embarrass both of them.

There are few or no mathematicians, who defend the hypothesis of indivisible points; and yet these have the readiest and justest answer to the present question. They need only reply, that lines or surfaces are equal, when the numbers of points in each are equal; and that as the proportion of the numbers varies, the proportion of the lines and surfaces is also vary'd. But tho' this answer be just, as well as obvious; yet I may affirm, that this standard of equality is entirely useless, and that it never is from such a comparison we determine objects to be equal or unequal with respect to each other. For as the points, which enter into the composition of any line or surface, whether perceiv'd by the sight or touch, are so minute and so confounded with each other, that 'tis utterly impossible for the mind to compute their number, such a computation will Never afford us a standard by which we may judge of proportions. No one will ever be able to determine by an exact numeration, that an inch has fewer points than a foot, or a foot fewer than an ell[10] or any greater measure: for which reason we seldom or never consider this as the standard of equality or inequality.

As to those, who imagine, that extension is divisible in infinitum, 'tis impossible they can make use of this answer, or fix the equality of any line or surface by a numeration of its component parts. For since, according to their hypothesis, the least as well as greatest figures contain an infinite number of parts; and since infinite numbers, properly speaking, can neither be equal nor unequal with respect to each other; the equality or inequality of any portions of space can never depend on any proportion in the number of their parts. 'Tis true, it may be said, that the inequality of an ell and a yard consists in the different numbers of the feet, of which they are compos'd; and that of a foot and a yard in the number of the inches. Bat as that quantity we call an inch in the one is suppos'd equal to what we call an inch in the other, and as 'tis impossible for the mind to find this equality by

proceeding in infinitum with these references to inferior quantities: 'tis evident, that at last we must fix some standard of equality different from an enumeration of the parts.

There are some,¹⁰ who pretend, that equality is best defin'd by congruity, and that any two figures are equal, when upon the placing of one upon the other, all their parts correspond to and touch each other. In order to judge of this definition let us consider, that since equality is a relation, it is not, strictly speaking, a property in the figures themselves, but arises merely from the comparison, which the mind makes betwixt them.' If it consists, therefore, in this imaginary application and mutual contact of parts, we must at least have a distinct notion of these parts, and must conceive their contact. Now 'tis plain, that in this conception we wou'd run up these parts to the greatest minuteness, which can possibly be conceiv'd; since the contact of large parts wou'd never render the figures equal. But the minutest parts we can conceive are mathematical points; and consequently this standard of equality is the same with that deriv'd from the equality of the number of points; which we have already determined to be a just but an useless standard. We must therefore look to some other quarter for a solution of the present difficulty.

The following paragraph is added from the appendix to Book III] There are many philosophers, who refuse to assign any standard of equality, but assert, that 'tis sufficient to present two objects, that are equal, in order to give us a just notion of this proportion. All definitions, say they, are fruitless, without the perception of such objects; and where we perceive such objects, we no longer stand in need of definition. To this reasoning, I entirely and agree.; any assert, that the only useful notion of equality, or inequality, is deriv'd from the whole united appearance and the comparison of particular objects.

'Tis evident, that the rather the mind is often able at eye, or view determine the proportions of bodies, and to one pronounce them equal to, or greater or less than each other, without examining or comparing the number of their minute parts. Such judgments are only common, but in many certain and infallible. When not cases the measure of a yard and that of a foot are presented, the mind can nomorequestion,thatthefirstislongerthanthesecond,thanitcan doubt of those principles, which are the most clear and self-evident.

There therefore three proportions, which the mind are

distinguishes in the general appearance of its objects, and calls by the names of greater, less and equal. But tho' its decisions concerning these proportions be sometimes infallible, they are not always so; nor are our judgments of this kind more exempt from doubt and error than those on any other subject. We frequently correct our first opinion by a review and reflection; and pronounce those objects to be equal, which at first we esteem'd unequal; and regard an object as less, tho' before it appear'd greater than another. Nor is this the only correction, which these judgments of our senses undergo; but we often discover our error by a juxtaposition of the objects; or where that is impracticable, by the use of some common and invariable measure, which being successively apply'd to each, informs us of their different proportions. And even this correction is susceptible of a new correction., and of different degrees of exactness, according to the nature of the instrument, by which we measure the bodies, and the care which we employ in the comparison.'When therefore the mind is accustomed to these judgments and their corrections, and finds that the same proportion which makes two figures have in the eye that appearance, which we call equality, makes them also correspond to each other, and to any common measure, with which they are compar'd, we form a mix'd notion of equality deriv'd both from the looser and stricter methods of comparison. But we are not content with this. For as sound reason convinces us that there are bodies vastly more minute than those, which appear to the senses; and as a false reason wou'd persuade us, that there are bodies infinitely more minute; we clearly perceive, that we are not possess'd of any instrument or art of measuring, which can secure us from ill error and uncertainty. We are sensible, that the addition or removal of one of these minute parts, is not discernible either in the appearance or measuring; and as we imagine, that two figures, which were equal before, cannot be equal after this removal or addition, we therefore suppose some imaginary standard of equality, by which the appearances and measuring are exactly corrected, and the figures reduc'd entirely to that proportion. This standard is plainly imaginary. For as the very idea of equality is that of such a particular appearance corrected by juxtaposition or a common measure. the notion of any correction beyond what we have instruments and art to make, is a mere fiction of the mind, and useless as well as incomprehensible. But tho' this standard be only imaginary, the fiction however is very natural; nor is anything more usual, than for the mind to proceed after this manner with any action, even after the reason has ceas'd, which

first determined it to begin. This appears very conspicuously with regard to time; where tho' 'tis evident we have no exact method of determining the proportions of parts, not even so exact as in extension, yet the various corrections of our measures, and their different degrees of exactness, have given as an obscure and implicit notion of a perfect and entire equality. The case is the same in many other subjects. A musician finding his ear becoming every day more delicate, and correcting himself by reflection and attention, proceeds with the same act of the mind, even when the subject fails him, and entertains a notion of a compleat tierce[11] or octave[12], without being octave or able to tell whence he derives his standard. A painter forms the same fiction with regard to colours. A mechanic with regard to motion. To the one light and shade; to the other swift and slow are imagin'd be capable of comparison and equality beyond the judgments of the senses.

We may apply the same reasoning to CURVE and RIGHT lines[13]. Nothing is more apparent to the senses, than the distinction betwixt a curve and a right line; nor are there any ideas we more easily form than the ideas of these objects. But however easily we may form these ideas, 'tis impossible to produce any definition of them, which will fix the precise boundaries betwixt them. When we draw lines upon paper, or any continu'd surface, there is a certain order, by which the lines run along from one point to another, that they may produce the entire impression of a curve or right line; but this order is perfectly unknown, and nothing is observ'd but the united appearance. Thus even upon the system of indivisible points, we can only form a distant notion of some unknown standard to these objects. Upon that of infinite divisibility we cannot go even this length; but are reduc'd merely to the general appearance, as the rule by which we determine lines to be either curve or right ones. but the rule by which determine lines be either right to we curve or right ones. But tho' we can give no perfect definition of these lines, nor produce any very exact method of distinguishing the one from the other; yet this hinders us not from correcting the first appearance by a more accurate consideration, and by a comparison with some rule, of whose rectitude from repeated trials we have a greater assurance. And 'tis from these corrections, and by carrying on the same action of the mind, even when its reason fails us, that we form the loose idea of a perfect standard to these figures, without being able to explain or comprehend it.

'Tis true, mathematicians pretend they give an exact definition of a right line, when they say, it is the shortest way betwixt two points. But in the first place I observe, that this is more properly the discovery of one of the properties of a right line, than a just deflation of it. For I ask any one, if upon mention of a right line he thinks not immediately on such a particular appearance, and if 'tis not by accident only that he considers this property? A right line can be comprehended alone; but this definition is unintelligible without a comparison with other lines, which we conceive to be more extended. In common life 'tis established as a maxim, that the straightest way is always the shortest; which wou'd be as absurd as to say, the shortest way is always the shortest, if our idea of a right line was not different from that of the shortest way betwixt two points.

Secondly, I repeat what I have already established, that we have no precise idea of equality and inequality, shorter and longer, more than of a right line or a curve; and consequently that the one can never afford us a perfect standard for the other. An exact idea can never be built on such as are loose and undetermined.

The idea of a plain surface is as little susceptible of a precise standard as that of a right line; nor have we any other means of distinguishing such a surface, than its general appearance. 'Tis in vain, that mathematicians represent a plain surface as produc'd by the flowing of a right line. 'Twill immediately be objected, that our idea of a surface is as independent of this method of forming a surface, as our idea of an ellipse is of that of a cone; that the idea of a right line is no more precise than that of a plain surface; that a right line may flow irregularly, and by that means form a figure quite different from a plane; and that therefore we must suppose it to flow along two right lines, parallel to each other, and on the same plane; which is a description, that explains a thing by itself, and returns in a circle.

It appears, then, that the ideas which are most essential to geometry, viz. those of equality and inequality, of a right line and a plain surface, are far from being exact and determinate, according to our common method of conceiving them. Not only we are incapable of telling, if the case be in any degree doubtful, when such particular figures are equal; when such a line is a right one, and such a surface a plain one; but we can form no idea of that proportion, or of these figures, which is firm and invariable. Our appeal is still to the weak

and fallible judgment, which we make from the appearance of the objects, and correct by a compass or common measure; and if we join the supposition of any farther correction, 'tis of such-a-one as is either useless or imaginary. In vain shou'd we have recourse to the common topic, and employ the supposition of a deity, whose omnipotence may enable him to form a perfect geometrical figure, and describe a right line without any curve or inflexion. As the ultimate standard of these figures is deriv'd from nothing but the senses and imagination, 'tis absurd to talk of any perfection beyond what these faculties can judge of; since the true perfection of any thing consists in its conformity to its standard.

Now since these ideas are so loose and uncertain, I wou'd fain ask any mathematician what infallible assurance he has, not only of the more intricate, and obscure propositions of his science, but of the most vulgar and obvious principles? How can he prove to me, for instance, that two right lines cannot have one common segment? Or that 'tis impossible to draw more than one right line betwixt any two points? Shou'd he tell me, that these opinions are obviously absurd, and repugnant to our clear ideas; I would answer, that I do not deny, where two right lines incline upon each other with a sensible angle, but 'tis absurd to imagine them to have a common segment. But supposing these two lines to approach at the rate of an inch in twenty leagues, I perceive no absurdity in asserting, that upon their contact they become one. For, I beseech you, by what rule or standard do you judge, when you assert, that the line, in which I have suppos'd them to concur, cannot make the same right line with those two, that form so small an angle betwixt them? You must surely have some idea of a right line, to which this line does not agree. Do you therefore mean that it takes not the points in the same order and by the same rule., as is peculiar and essential to a right line? If so, I must inform you, that besides that in judging after this manner you allow, that extension is compos'd of indivisible points (which, perhaps, is more than you intend) besides this, I say, I must inform you, that neither is this the standard from which we form the idea of a right line; nor, if it were, is there any such firmness in our- senses or imagination, as to determine when such an order is violated or preserv'd. The original standard of a right line is in reality nothing but a certain general appearance; and 'tis evident right lines may be made to concur with each other, and yet correspond to this standard, tho' corrected by all the means either practicable or imaginable.

This paragraph is inserted from the appendix to Book III]To whatever side mathematicians turn, this dilemma still meets them. If they judge of equality, or any other proportion, by the accurate and exact standard, viz. the enumeration of the minute indivisible parts, they both employ a standard, which is useless in practice, and actually establish the indivisibility of extension, which they endeavour to explode. Or if they employ, as is usual, the inaccurate standard, deriv'd from a comparison of objects, upon their general appearance, corrected by measuring and juxtaposition; their first principles, tho' certain and infallible, are too coarse to afford any such subtle inferences as they commonly draw from them. The first principles are founded on the imagination and senses: The conclusion, therefore, can never go beyond, much less contradict these faculties.

This may open our eyes a little, and let us see, that no geometrical demonstration for the infinite divisibility of extension can have so much force as what we naturally attribute to every argument, which is supported by such magnificent pretensions.

At the same time we may learn the reason, why geometry falls of evidence in this single point, while all its other reasonings command our fullest assent and approbation. And indeed it seems more requisite to give the reason of this exception, than to shew, that we really must make such an exception, and regard all the mathematical arguments for infinite divisibility as utterly sophistical. For 'tis evident, that as no idea of quantity is infinitely divisible, there cannot be imagin'd a more glaring absurdity, than to endeavour to prove, that quantity itself admits of such a division; and to prove this by means of ideas, which are directly opposite in that particular.

And as this absurdity is very glaring in itself, so there is no argument founded on it'. which is not attended with a new absurdity, and involves not an evident contradiction.

I might give as instances those arguments for infinite divisibility, which are deriv'd from the point of contact[14]. I know there is no mathematician, who will not refuse to be judg'd by the diagrams he describes upon paper, these being loose draughts, as he will tell us, and serving only to convey with greater facility certain ideas, which are the true foundation of all our reasoning. This I am satisfy'd with, and am willing to rest the controversy merely upon these ideas. I desire therefore our mathematician to form, as

accurately as possible, the ideas of a circle and a right line; and I then ask, if upon the conception of their contact he can conceive them as touching in a mathematical point, or if he must necessarily imagine them to concur for some space. Whichever side he chuses, he runs himself into equal difficulties. If he affirms, that in tracing these figures in his imagination, he can imagine them to touch only in a point, he allows the possibility of that idea, and consequently of the thing.

If he says, that in his conception of the contact of those lines he must make them concur, he thereby acknowledges the fallacy of geometrical demonstrations, when carry'd beyond a certain degree of minuteness; since 'tis certain he has such demonstrations against the concurrence of a circle and a right line; that is, in other words, he can prove an idea, viz. that of concurrence, to be incompatible with two other ideas, those of a circle and right line;tho'at the same time he acknowledges these ideas to be inseparable.

SECT. V

The same subject continued

If the second part of my system be true, that the idea of space or extension is nothing but the idea of visible or tangible points distributed in a certain order; it follows, that we can form no idea of a vacuum, or space, where there is nothing visible or tangible. 'This gives rise to three objections, which I shall examine together,because the answer I shall give to one is a consequence of that which I shall make use of for the others.

First, It may be said, that men have disputed for many ages concerning a vacuum[15] and a plenum[16], without being able to bring the affair to a final decision; and philosophers, even at this day, think themselves at liberty to take part on either side, as their fancy leads them. But whatever foundation there may be for a controversy concerning the things themselves, it may be pretended, that the very dispute is decisive concerning the idea, and that 'tis impossible men cou'd so long reason about a vacuum, and either refute or defend it, without having a notion of what they refuted or defended.

Secondly, If this argument shou'd be contested, the reality or at least the possibility of the idea of a vacuum may be prov'd by the

following reasoning. Every idea is possible, which is a necessary and infallible consequence of such as are possible. Now tho' we allow the world to be at present a plenum, we may easily conceive it to be depriv'd of motion; and this idea will certainly be allow'd possible.

It must also be allow'd possible, to conceive the annihilation of any part of matter by the omnipotence of the deity, while the other parts remain at rest. For as every idea, that is distinguishable, is separable by the imagination; and as every idea, that is separable by the imagination, may be conceiv'd to be separately existent; 'tis evident, that the existence of one particle of matter, no more implies the existence of another, than a square figure in one body implies a square figure in every one. This being granted, I now demand what results from the concurrence of these two possible ideas of rest and annihilation, and what must we conceive to follow upon the annihilation of all the air and subtile matter in the chamber, supposing the walls to remain the same, without any motion or alteration? There are some metaphysicians, who answer, that since matter and extension are the same, the annihilation of one necessarily implies that of the other; and there being now no distance [17] betwixt the walls of the chamber, they touch each other; in the same manner as my hand touches the paper, which is immediately 'before me. But tho' this answer be very common, I defy these metaphysicians to conceive the matter according to their hypothesis, or imagine the floor and roof, with all the opposite sides of the chamber, to touch each other, while they continue in rest, and preserve the same position. For how can the two walls, that run from south to north, touch each other, while they touch the opposite ends of two walls, that run from east to west? And how can the floor and roof ever meet, while they are separated by the four walls, that lie in a contrary position? If you change their position, you suppose a motion. If you conceive any thing betwixt them, you suppose a new creation. But keeping strictly to the two ideas of rest and annihilation, 'tis evident, that the idea, which results from them, is not that of a contact of parts, but something else; which is concluded to be the idea of a vacuum.

The third objection carries the matter still farther, and not only asserts, that the idea of a vacuum is real and possible, but also necessary and unavoidable. This assertion is founded on the motion we observe in bodies, which, 'tis maintain'd, wou'd be impossible and inconceivable without a vacuum, into which one body must move in

order to make way for another.. I shall not enlarge upon this objection, because it principally belongs to natural philosophy, which lies without our present sphere.

In order to answer these objections, we must take the matter pretty deep, and consider the nature and origin of several ideas, lest we dispute without understanding perfectly the subject of the controversy. 'Tis evident the idea of darkness is no positive idea, but merely the negation of .light, or more properly speaking, of colour'd and visible objects. A man, who enjoys his sight, receives no other perception from turning his eyes on every side, when entirely depriv'd of light, than what is common to him with one born blind; and 'tis certain such-a-one has no idea either of light or darkness. The consequence of this is, that 'tis not from the mere removal of visible objects we receive the impression of extension without matter; and that the idea of utter darkness can never be the same with that of vacuum.

Suppose again a man to be Supported in the air, and to be softly convey'd along by some invisible power; 'tis evident 'he is sensible of nothing, and never receives the idea of extension, nor indeed any idea, from this invariable motion. Even supposing he moves his limbs to and fro, this cannot convey to him that idea. He feels in that case a certain sensation or impression, the parts of which are successive to each other, and may give him the idea of time: But certainly are not dispos'd in such a manner, as is necessary to convey the idea of space or extension.visible and tangible?

We must form a parallel supposition concerning the objects of our feeling. 'Tie not proper to suppose a perfect removal of all tangible objects: we must allow something to be perceiv'd by the Since then it appears, that darkness and motion, with the utter removal of thing visible and tangible, give the every can never us idea of extension without matter, or of a vacuum; the next question is, whether they convey this idea, when mix'd with something can 'Tis commonly allow'd by philosophers, that all bodies, which discover themselves the if painted plain to eye, appear as on a surface, and that their different degrees of remoteness from ourselves discovered by than by the When I hold are more reason senses. hand before and spread fingers, they separated up my me, my are perfectly by the blue colour of the firmament, they cou'd be as as by visible object, which I cou'd

place betwixt them. In order, any therefore, to know whether the sight can convey the impression and idea of that amidst an entire darkness, we must suppose, a vacuum, there are luminous bodies presented to us, whose light discovers only feeling; and after an interval and motion of the hand or other organ of sensation, another object of the touch to be met with; and upon leaving that, another; and so on, as often as we please. The question is, whether these intervals do not afford us the idea of extension without body?

To begin with the first case; 'tis evident, that when only two luminous bodies appear to the eye, we can perceive, whether they be conjoin'd or separate: whether they be separated by a great or small distance; and if this distance varies, we can perceive its increase or diminution, with the motion of the bodies. But as the distance is not in this case any thing colour'd or visible, it may be thought that 15:48:44there is here a vacuum or pure extension, not only intelligible to the mind, but obvious to the very senses.

This is our natural and most familiar way of thinking; but which we shall learn to correct by a little reflection. We may observe, that when two bodies present themselves, where there was formerly an entire darkness, the only change, that is discoverable, is in the appearance of these two objects, and that all the rest continues to be as before, a perfect negation of light, and of every colour'd or visible object. This is not only true of what may be said to be remote from these bodies, but also of the very distance; which is interposed betwixt them; that being nothing but darkness, or the negation of light; without parts, without composition, invariable and indivisible. Now since this distance causes no perception different from what a blind man receives from his eyes, or what is convey'd to us in the darkest night, it must partake of the same properties: And as blindness and darkness afford us no ideas of extension, 'tis impossible 7that the dark and undistinguishable distance betwixt two bodies can ever produce that idea.

The sole difference betwixt an absolute darkness and the appearance of two or more visible luminous objects consists, as I said, in the objects themselves, and in the manner they affect our senses. The angles, which the rays of light flowing from them, form with each other; the motion that is requir'd in the eye, in its passage from one to the other; and the different parts of the organs, which are affected by

them; these produce the only perceptions, from which we can judge of the distance. But as these perceptions are each of them simple and indivisible, they can never give us the idea of extension.

We may illustrate this by considering the sense of feeling, and the imaginary distance or interval interpos'd betwixt tangible or solid objects. I suppose two cases, viz. that of a man supported in the air, and moving his limbs to and fro, without meeting any thing tangible; and that of a man, who feeling something tangible, leaves it, and after a motion, of which he is sensible, perceives another tangible object; and I then ask, wherein consists the difference betwixt these two cases? No one will make any scruple to affirm, that it consists merely in the perceiving those objects, and that the sensation, which arises from the motion, is in both cases the same: And as that sensation is not capable of conveying to us an idea of extension, when unaccompany'd with some other perception, it can no more give us that idea, when mix'd with the impressions of tangible objects; since that mixture produces no alteration upon it.

But tho' motion and darkness, either alone, or attended with tangible and visible objects, convey no idea of a vacuum or extension without matter, yet they are the causes why we falsely imagine we can form such an idea. For there is a close relation' betwixt that motion and darkness, and a real extension, or composition of visible and tangible objects.

First, We may observe, that two visible objects appearing in the midst of utter darkness, affect the senses in the same manner, and form the same angle by the rays, which flow from them, and meet in the eye, as if the distance betwixt them were find with visible objects, that give us a true idea of extension. The sensation of motion is likewise the same, when there is nothing tangible interpos'd betwixt two bodies, as when we feel a compounded body, whose different parts are plac'd beyond each other.

Secondly, We find by experience, that two bodies, which are so plac'd as to affect the senses in the same manner with two others, that have a certain extent of visible objects interpos'd betwixt them, are capable of receiving the same extent, without any sensible impulse or penetration, and without any change on that angle, under which they appear to the senses. In like manner, where there is one object, which we cannot feel after another without an interval, and the perceiving of

that sensation we call motion in our hand or organ of sensation; experience shews us, that 'tis possible the same object may be felt with the same sensation of motion, along with the interpos'd impression of solid and tangible objects, attending the sensation. That is, in other words, an invisible and intangible distance may be converted into a visible and tangible one, without any change on the distant objects.

Thirdly, We may observe, as another relation betwixt these two kinds of distance, that they have nearly the same effects on every natural phaenomenon. For as all qualities, such as heat, cold, light, attraction[18], etc. diminish in proportion to the distance; there is but little difference observ'd, whether this distance be marled out by compounded and sensible objects, or be known only by the manner, in which the distant objects affect the senses.

Here then are three relations betwixt that distance, which conveys the idea of extension, and that other, which is not fill'd with any colour'd or solid object. The distant objects affect the senses in the same manner, whether separated by the one distance or the 7other; the second species of distance is found capable of receiving the first; and they both equally diminish the force of every quality.

These relations betwixt the two kinds of distance will afford us an easy reason, why the one has so often been taken for the other, and why we imagine we have an idea of extension without the idea of any object either of the sight or feeling. For we may establish it as a general maxim in this science of human nature, that wherever there is a close relation betwixt two ideas, the mind is very apt to mistake them, and in all its discourses and reasonings to use the one for the other. This phaenomenon occurs on so many occasions, and is of such consequence, that I cannot forbear stopping a moment to examine its causes. I shall only premise, that we must distinguish exactly betwixt the phaenomenon itself, and the causes, which I shall assign for it; and must not imagine from any uncertainty in the latter, that the former is also uncertain. The phaenomenon may be real, tho' my explication be chimerical. The falshood of the one is endeavour to explain. recourse to it, in order to account for the mistakes that arise from these relations. I shall therefore observe, that as the mind is endow'd with a power of exciting any idea it pleases; whenever it dispatches the spirits into that region of the brain, in which the idea is plac'd; these

spirits always excite the idea, when they run precisely into the no consequence of that of the other; tho' at the same time we may observe, that 'tis natural for draw such to consequence; very us a which is evident instance of that principle, which I an very When I receiv'd the relations of resemblance, contiguity and causation, principles of union ideas, without examining as among into their causes, 'twas more in prosecution of my first maxim, that in the end contented with experience, than for must rest want we of something specious and plausible, which I might have display'd on that subject. 'Twou'd have been easy to have made an imaginary dissection of the brain, and have shewn, why upon our conception of idea, the animal spirits into all the contiguous traces, any run and rouze the other ideas, that are related to it. But tho' I have up neglected any advantage, which I might have drawn from this topic in explaining the relations of ideas, I afraid I here have must am and that cell, which belongs the idea. traces, to proper rummage But as their motion is seldom direct, and naturally turns a little to the one side or the other; for this reason the animal spirits, falling into the contiguous traces, present other related ideas in lieu of that, which the mind desir'd at first to survey. This change we are not always sensible of; but continuing still the same train of thought, make use of the related idea, which is presented to us, and employ it in our reasoning, as if it were the same with what we demanded. This is the cause of many mistakes and sophisms in philosophy; as will naturally be imagin'd, and as it wou'd be easy to show, if there was occasion.

Of the three relations above-mention'd that of resemblance is the most fertile source of error; and indeed there are few mistakes in reasoning, which do not borrow largely from that origin. Resembling ideas are not only related together, but the actions of the mind, which we employ in considering them, are so little different, that we are not able to distinguish them. This last circumstance is of great consequence, and we may in general observe, that wherever the actions of the mind in forming any two ideas are the same or resembling, we are very apt to confound these ideas, and take the one for the other. Of this we shall see many instances in the progress of this treatise. But tho' resemblance be the relation, which most readily produces a mistake in ideas, yet the others of causation and contiguity may also concur in the same influence. We might produce the figures of poets and orators, as sufficient proofs of this, were it as usual, as it is reasonable, in metaphysical subjects to draw our arguments from

that quarter. But lest metaphysicians shou'd esteem[19] this below their dignity, I shall borrow a proof from an observation, which may be made on most of their own discourses, viz. that 'tis usual for men to use words for ideas, and to talk instead of thinking in their reasonings. We use words for ideas, because they are commonly so closely connected that the mind easily mistakes them. And this likewise is the reason, why we substitute the idea of a distance, which is not considered either as visible or tangible, in the room of extension, which is nothing but a composition of visible or tangible points dispos'd in a certain order. In causing this mistake there concur both the relations of causation and resemblance. As the first species of distance is found to be convertible into the second, 'tis in this respect a kind of cause; and the similarity of their manner of affecting the senses, and diminishing every quality, forms the relation of resemblance.

After this chain of reasoning and explication of my principles, I am now prepar'd to answer all the objections that have been offer'd, whether deriv'd from metaphysics or mechanics. The frequent disputes concerning a vacuum, or extension without matter prove not the reality of the idea, upon which the dispute turns; there being nothing more common, than to see men deceive themselves in this particular; especially when by means of any close relation, there is another idea presented, which may be the occasion of their mistake. We may make almost the same answer to the second objection, deriv'd from the conjunction of the ideas of rest and annihilation[20]. When every thing is annihilated in the chamber, and the walls continue immoveable, the chamber must be conceiv'd much in the same manner as at present, when the air that fills it, is not an object of the senses. This annihilation leaves to the eye, that fictitious distance, which is discovered by the different parts of the organ, that are affected, and by the degrees of light and shade; and to the feeling, that which consists in a sensation of motion in the hand, or other member of the body. In vain shou'd we. search any farther.

On whichever side we turn this subject, we shall find that these are the only impressions such an object can produce after the suppos'd annihilation; and it has already been remark'd, that impressions can give rise to no ideas, but to such as resemble them.

Since a body interposed betwixt two others may be suppos'd to be

annihilated, without producing any change upon such as lie on each hand of it, 'tis easily conceiv'd, how it may be created anew, and yet produce as little alteration. Now the motion of a body has much the same effect as its creation. The distant bodies are no more affected in the one case, than in the other. This suffices to satisfy the imagination, and proves there is no repugnance in such a motion.

Afterwards experience comes in play to persuade us that two bodies, situated in the manner above-describ'd, have really such a capacity of receiving body betwixt them, and that there is no obstacle to the conversion of the invisible and intangible distance into one that is visible and tangible. However natural that conversion may seem, we cannot be sure it is practicable, before we have had experience of it.

Thus I seem to have answer'd the three objections abovemention'd; tho' at the same time I am sensible, that few will be satisfy'd with these answers, but will immediately propose new objections and difficulties. 'Twill probably be said, that my reasoning makes nothing to the matter in hands and that I explain only the manner in which objects affect the senses, without endeavouring to account for their real nature and operations. Tho' there be nothing visible or tangible interposed betwixt two bodies, yet we find by experience, that the bodies may be plac'd in the same manner, with regard to the eye, and require the same motion of the hand in passing from one to the other, as if divided by something visible and tangible. This invisible and intangible distance is also found by experience to contain a capacity of receiving body, or of becoming visible and tangible. Here is the whole of my system; and in no part of it have I endeavour'd to explain the cause, which separates bodies after this manner, and gives them a capacity of receiving others betwixt them, without any impulse or penetration.

I answer this objection, by pleading guilty, and by confessing that my intention never was to penetrate into the nature of bodies, or explain the secret causes of their operations. For besides that this belongs not to my present purpose, I am afraid, that such an enterprise is beyond the reach of human understanding[21], and that we can never pretend to know body otherwise than by those external properties, which discover themselves to the senses. As to those who attempt any thing farther, I cannot approve of their ambition, till I see, in some one instance at least, that they have met with success.

But at present I content myself with knowing perfectly the manner in which objects affect my senses, and their connections with each other, as far as experience informs me of them. This suffices for the conduct of life; and this also suffices for my philosophy, which pretends only to explain the nature and causes of our perceptions, or impressions and ideas.

I shall conclude this subject of extension with a paradox, which will easily be explain'd from the foregoing reasoning. This paradox is, that if you are pleas'd to give to the in-visible and intangible distance, or in other words, to the capacity of becoming a visible and tangible distance, the name of a vacuum, extension and matter are the same, and yet there is a vacuum. If you will not give it that name, motion is possible in a plenum, without any impulse in infinitum, without returning in a circle, and without penetration.

But however we may express ourselves, we must always confess, that we have no idea of any real extension without filling it with sensible objects, and conceiving its parts as visible or tangible.

As to the doctrine, that time is nothing but the manner, in which some real objects exist; we may observe, that 'tis liable to the same objections as the similar doctrine with regard to extension. If it be a sufficient proof, that we have the idea of a vacuum, because we dispute and reason concerning it; we must for the same reason have the idea of time without any changeable existence; since there is no subject of dispute more frequent and common.' But that we really have no such idea, is certain. For whence shou'd it be deriv'd? Does it arise from an impression of sensation or of reflection? Point it out distinctly to us, that we may know its nature and qualities. But if you cannot point out any such impression, you may be certain you are mistaken, when you imagine you have any such idea.

But tho' it be impossible to shew the impression, from which the idea of time without a changeable existence is deriv'd; yet we can easily point out those appearances, which make us fancy we have that idea. For we may observe, that there is a continual succession of perceptions in our mind; so that the idea of time being for ever present with us; when we consider a stedfast object at five-a-clock, and regard the same at six; we are apt to apply to it that idea in the same manner as if every moment were distinguish'd by a different position, or an alteration of the object. The: first and second appearances of the

object, being compar'd with the succession of our perceptions, seem equally remov'd as if the object had really chang'd.

To which we may add, what experience shews us, that the object was susceptible of such a number of changes betwixt these appearances; as also that the unchangeable or rather fictitious duration has the same effect upon every quality, by encreasing or diminishing it, as that succession, which is obvious to the senses. From these three relations we are apt to confound our ideas, and imagine we can form the idea of a time and duration, without any change or succession.

SECT. VI

Of the idea of existence[22], and of external existence

It may not be amiss, before we leave this subject, to explain the ideas of existence and of external existence; which have their difficulties, as well as the ideas of space and time. By this means we shall be the better prepar'd for the examination of knowledge and probability, when we understand perfectly all those particular ideas, which may enter into our reasoning.

There is no impression nor idea of any kind, of which we have any consciousness or memory, that is not conceiv'd as existent; and 'tis evident, that from this consciousness the most perfect idea and assurance of being[23] is deriv'd. From hence we may form a dilemma,

the most clear and conclusive that can be imagin'd, viz. that since we never remember any idea or impression without attributing existence to it, the idea of existence must either be deriv'd from a distinct impression, conjoin'd with every perception or object of our thought, or must be the very same with the idea of the perception or object.

As this dilemma is an evident consequence of the principle, that every idea arises from a similar impression, so our decision betwixt the propositions of the dilemma is no more doubtful. go far from there being any distinct impression, attending every impression and every idea, that I do not think there are any two distinct impressions, which are inseparably conjoin'd. Tho' certain sensations may at one time be united, we quickly find they admit of a separation, and may be

presented apart. And thus, tho' every impression and idea we remember be considered as existent, the idea of existence is not deriv'd from any particular impression.

The idea of existence, then, is the very same with the idea of what we conceive to be existent. To reflect on any thing simply, and to reflect on it as existent, are nothing different from each other.

That idea, when conjoin'd with the idea of any object, makes no addition to it. Whatever we conceive, we conceive to be existent. Any idea we please to form is the idea of a being; and the idea of a being is any idea we please to form.

Whoever opposes this, must necessarily point out that distinct impression, from which the idea of entity is deriv'd, and must prove, that this impression is inseparable from every perception we believe to be existent. This we may without hesitation conclude to be impossible.

Our foregoing reasoning concerning the distinction of ideas without any real difference will not here serve us in any stead. That kind of distinction is founded on the different resemblances, which the same simple idea may have to several different ideas. But no object can be presented resembling some object with respect to its existence, and different from others in the same particular; since every object, that is presented, must necessarily be existent. A like reasoning will account for the idea of external existence. We may observe, that 'tis universally allow'd by philosophers, and is besides pretty obvious of itself, that nothing is ever really present with the mind but its perceptions or impressions and ideas, and that external objects become known to us only by those perceptions they occasion. To hate, to love, to think, to feel, to see; all this is nothing but to perceive.

Now since nothing is ever present to the mind but perceptions, and since all ideas are deriv'd from something antecedently present to the mind; it follows, that 'tis impossible for us so much as to conceive or form an idea of any thing specifically [\[24\]](#) different from ideas and impressions. Let us fix our attention out of ourselves as much as possible: Let us chase our imagination to the heavens, or to the utmost limits of the universe; we never really advance a step beyond ourselves, nor can conceive any kind of existence, but those perceptions, which have appear'd in that narrow

compass. This is the universe of the imagination, nor have we any idea but what is there produc'd.

The farthest we can go towards a conception of external objects, when suppos'd specifically different from our perceptions, is to form a relative idea of them, without pretending to comprehend the related objects. Generally speaking we do not suppose them specifically different; but only attribute to them different relations, connections and durations. But of this more fully hereafter.

Francis Bacon (1561—1626)

[1] the doctrine of infinite divisibility : 无限可分说。

[2] the animal spirits : 来自拉丁语 spiritus animales , 意指驱动思想、感觉和行动的精神或气流, 可理解为神经活动。

[3] probabilities : 可能性, 这里指的是或然判断, 与必然判断相对。

[4] colour'd points : 色点 , 或称之为色斑。

[5] coexistent : 共存 , 时间上的或空间上的共同存在。

[6] non- entities : 非实际存在物。 entity : 独立存在体 , 实际存在物。

[7] mathematical point : 数学点 , 休谟指的是无广延的色斑。

[8] demonstrations : 理证 , 与概然推理相对。

[9] defin'd : 定义。

[10] ell: 厄尔 : 英国长度单位 , 等于 45 英寸 (114 厘米) 。

[11] tierce : 第三音。

[12] octave : 第八音。

[13] CURVE and RIGHT lines : 曲线与直线。

[14] the point of contact : 接触点。

[15] vacuum : 真空。真空是一种不存在任何物质的空间状态 , 是一种物理现象。

[16] plenum : 充实。与真空相对。

[17] 距离 , 为理性所发现 , 而非被感官所发现。

[18] attraction : 引力。

[19] 重视 , 主要由同情发生而不是由希冀利得心发生。

[20] rest and annihilation : 静止和消灭。

[21] understanding : 知性 , 也翻译作“理智”、“理解力”。指取得知识的能力 , 也指 认识、辨别、判断和解释的能力。

[22] Existence : 存在、实存 , 与本质相对 , 源于拉丁文 ex (外) 和 sistere (出现) , 有 “存在物”之意。

[23] being : 存在。有两种含义 : 1. 源于拉丁文 esse。与“思维”、“意识”相对 , 是物质的同义语。存在于意识的关系是哲学的基本问题。 2. 亦译“有”。源自拉丁文 esse 或 ens。译为“有”时与“无”相对 , 译

为“存在”时与“非存在”相对。是对非存在的否定。意指世界上的一切物质现象和精神想象。

[24] specifically：种类。

PART III OF KNOWLEDGE AND PROBABILITY

SECT. I

Of knowledge[1]

There are seven different kinds of philosophical relation, viz. resemblance, identity, relations of time and place, proportion in quantity or number, degrees in any quality, contrariety and causation. These relations may be divided into two classes; into such as depend entirely on the ideas, which we compare together, and such as may be chang'd without any change in the ideas. 'Tis from the idea of a triangle, that we discover the relation of equality, which its three angles bear to two right ones; and this relation is invariable, as long as our idea remains the same. On the contrary, the relations of contiguity and distance betwixt two objects may be chang'd merely by an alteration of their place, without any change on the objects themselves or on their ideas; and the place depends on a hundred different accidents[2], which cannot be foreseen by the mind. 'Tis the same case with identity and causation. Two objects, tho' perfectly resembling each other, and even appearing in the same place at different times, may be numerically different: And as the power, by which one object produces another, is never discoverable merely from their idea, 'tis evident cause and effect are relations, of which we receive information from experience, and not from any abstract reasoning or reflection. There is no single phaenomenon, even the most simple, which can be accounted for from the qualities of the objects, as they appear to us; or which we cou'd foresee without the help of our memory and experience.

It appears, therefore, that of these seven philosophical relations, there remain only four, which depending solely upon ideas, can be the objects of knowledge said certainty. These four are resemblance, contrariety, degrees in quality, and proportions in quantity or number. Three of these relations are discoverable at first sight, and fall more properly under the province of intuition than demonstration. When any objects resemble each other, the resemblance will at first strike the eye, or rather the mind; and seldom requires a second

examination. The case is the same with contrariety, and with the degrees of any quality. No one can once doubt but existence and non-existence destroy each other, and are perfectly incompatible and contrary. And tho' it be impossible to judge exactly of the degrees of any quality, such as colour, taste, heat, cold, when the difference betwixt them is very small: yet 'tis easy to decide, that any of them is superior or inferior to another, when their difference is considerable. And this decision we always pronounce at first sight, without any enquiry or reasoning.

We might proceed, after the same manner, in fixing the proportions of quantity or number, and might at one view observe a superiority or inferiority betwixt any numbers, or figures; especially where the difference is very great and remarkable. As to equality or any exact proportion, we can only guess at it from a single consideration; except in very short numbers, or very limited portions of extension; which are comprehended in an instant, and where we perceive an impossibility of falling into any considerable error. In all other cases we must settle the proportions with some liberty, or proceed in a more artificial manner.

I have already observ'd, that geometry, or the art, by which we fix the proportions of figures; tho' it much excels both in universality and exactness, the loose judgments of the senses and imagination; yet never attains a perfect precision and exactness.

It's first principles are still drawn from the general appearance of the objects; and that appearance can never afford us any security, when we examine, the prodigious minuteness of which nature is susceptible. Our ideas seem to give a perfect assurance, that no two right lines can have a common segment; but if we consider these ideas, we shall find, that they always suppose a sensible inclination of the two lines, and that where the angle they form is extremely small, we have no standard of a right line so precise as to assure us of the truth of this proposition. 'Tis the same case with most of the primary decisions of the mathematics.

There remain, therefore, algebra and arithmetic as the only sciences, in which we can carry on a chain of reasoning to any degree of intricacy, and yet preserve a perfect exactness and certainty. We are possess of a precise standard, by which we can judge of the equality and proportion of numbers; and according as they correspond or not

to that standard, we determine their relations, without any possibility of error.' When two numbers are so combin'd, as that the one has always an unite answering to every unite of the other, we pronounce them equal; and 'tis for want of such a standard of equality in extension, that geometry can scarce be esteem'd a perfect and infallible science.

But here it may not be amiss to obviate a difficulty, which may arise from my asserting, that tho' geometry falls short of that perfect precision and certainty, which are peculiar to arithmetic and algebra, yet it excels the imperfect judgments of our senses and imagination. The reason why I impute any defect to geometry, is, because its original and fundamental principles are deriv'd merely from appearances; and it may perhaps be imagin'd, that this defect must always attend it, and keep it from ever reaching a greater exactness in the comparison of objects or ideas, than what our eye or imagination alone is able to attain. I own that this defect so far attends it, as to keep it from ever aspiring to a full certainty: But since these fundamental principles depend on the easiest and least deceitful appearances, they bestow on their consequences a degree of exactness, of which these consequences are singly incapable. 'Tis impossible for the eye to determine the angles of a chiliagon[3] to be equal to 1996 right angles, or make any conjecture, that approaches this proportion; but when it determines, that right lines cannot concur; that we cannot draw more than one right line between two given points; it's mistakes can never be of any consequence. And this is the nature and use of geometry, to run us up to such appearances, as, by reason of their simplicity, cannot lead us into any considerable error.

I shall here take occasion to propose a second observation concerning our demonstrative reasonings, which is suggested by the same subject of the mathematics. 'Tis usual with mathematicians, to pretend, that those ideas, which are their objects, are of so refin'd and spiritual a nature, that they fall not under the conception of the fancy, but must be comprehended by a pure and intellectual view, of which the superior faculties of the soul are alone capable. The same notion runs thro' most parts of philosophy, and is principally made use of to explain oar abstract ideas, and to shew how we can form an idea of a triangle, for instance, which shall neither be an isoceles nor scalenum, nor be confin'd to any particular length and proportion of sides. 'Tis easy to see, why philosophers are so fond of this notion of some

spiritual and refin'd perceptions; since by that means they cover many of their absurdities, and may refuse to submit to the decisions of clear ideas, by appealing to such as are obscure and uncertain. But to destroy this artifice, we need but reflect on that principle so oft insisted on, that all our ideas are copy'd from our impressions. For from thence we may immediately conclude, that since all impressions are clear and precise, the ideas, which are copy'd from them, must be of the same nature, and can never, but from our fault, contain any thing so dark and intricate. An idea is by its very nature weaker and fainter than an impression; but being in every other respect the same, cannot imply any very great mystery. If its weakness render it obscure, 'tis our business to remedy that defect, as much as possible, by keeping the idea steady and precise; and till we have done so, 'tis in vain to pretend to reasoning and philosophy.

SECT. II

Of probability; and of the idea of cause and effect

This is all I think necessary to observe concerning those four relations, which are the foundation of science; but as to the other three, which depend not upon the idea, and may be absent or present even while that remains the same, 'twill be proper to explain them more particularly. These three relations are identity, the situations in time and place, and causation.

All kinds of reasoning consist in nothing but a comparison, and a discovery of those relations, either constant or inconstant, which two or more objects bear to each other. This comparison we may make, either when both the objects are present to the senses, or when neither of them is present, or when only one. When both the objects are present to the senses along with the relation, we call this perception rather than reasoning; nor is there in this case any exercise of the thought, or any action, properly speaking, but a mere passive admission of the impressions thro' the organs of sensation.

According to this way of thinking, we ought not to receive as reasoning any of the observations we may make concerning identity, and the relations of time and place; since in none of them the mind can go beyond what is immediately present to the senses, either to discover the real existence or the relations of objects. 'Tis only causation, which produces such a connexion, as to give us assurance

from the existence or action of one object, that 'twas follow'd or preceded by any other existence or action; nor can the other two relations be ever made use of in reasoning, except so far as they either affect or are affected by it. There is nothing in any objects to perswade us, that they are either always remote or always contiguous; and when from experience and observation we discover, that their relation in this particular is invariable, we, always conclude there is some secret cause, which separates or unites them. The same reasoning extends to identity. We readily suppose an object may continue individually the same, tho' several times absent from and present to the senses; and ascribe to it an identity, notwithstanding the interruption of the perception, whenever we conclude, that if we had kept our eye or hand constantly upon it, it wou'd have convey'd an invariable and uninterrupted perception. But this conclusion beyond the impressions of our senses can be founded only on the connexion of cause and effect; nor can we otherwise have any security, that the object is not chang'd upon us, however much the new object may resemble that which was formerly present to the senses. "Whenever we discover such a perfect resemblance, we consider, whether it be common in that species of objects; whether possibly or probably any cause cou'd operate in producing the change and resemblance; and according as we determine concerning these causes and effects, we form our judgment concerning the identity of the object.

Here then it appears, that of those three relations, which depend not upon the mere ideas, the only one, that can be trac'd beyond our senses ' and informs us of existences and objects, which we do not see or feel, is causation. This relation, therefore, we shall endeavour to explain fully before we leave the subject of the understanding.

To begin regularly, we must consider the idea of causation, and see from what origin it is deriv'd. 'Tis impossible to reason justly, without understanding perfectly the idea concerning which we reason; and 'tis impossible perfectly to understand any idea, without tracing it up to its origin, and examining that primary impression, from which it arises. The examination of the impression bestows a clearness on the idea; and the examination of the idea bestows a like clearness on all our reasoning.

Let us therefore cast our eye on any two objects, which we call cause and effect, and turn them on all sides, in order to find that

impression, which produces an idea, of such prodigious consequence.

At first sight I perceive, that I must not search for it in any of the particular qualities of the objects; since, which-ever of these qualities I pitch on, I find some object, that is not possest of it, and yet falls under the denomination of cause or effect. And indeed there is nothing existent, either externally or internally, which is not to be considered either as a cause or an effect; tho' 'tis plain there is no one quality[4], which universally belongs to all beings, and gives them a title to that denomination.

The idea, then, of causation must be deriv'd from some relation among objects; and that relation we must now endeavour to discover. I find in the first place, that whatever objects are considered as causes or effects, are contiguous; and that nothing can operate in a time or place, which is ever so little remov'd from those of its existence. Tho' distant objects may sometimes seem productive of each other, they are commonly found upon examination to be link'd by a chain of causes, which are contiguous among themselves, and to the distant objects; and when in any particular instance we cannot discover this connexion, we still presume it to exist. We may therefore consider the relation of CONTIGUITY as essential to that of causation; at least may suppose it such, according to the general opinion, till we can find a more proper occasion to clear up this matter, by examining what objects are or are not susceptible of juxtaposition and conjunction.

The second relation I shall observe as essential to causes and effects, is not so universally acknowledged, but is liable to some controversy. 'Tis that of PRIORITY Of time in the cause before the effect. Some pretend that 'tis not absolutely necessary a cause shou'd precede its effect; but that any object or action, in the very first moment of its existence, may exert its productive quality, and give rise to another object or action, perfectly co-temporary with itself.

But beside that experience in most instances seems to contradict this opinion, we may establish the relation of priority by a kind of inference or reasoning. 'Tis an established maxim both in natural and moral philosophy, that an object, which exists for any time in its full perfection without producing another, is not its sole cause; but is assisted by some other principle, which pushes it from its state of inactivity, and makes it exert that energy, of which it was secretly possest. Now if any cause may be perfectly co-temporary with its

effect, 'tis certain, according to this maxim, that they must all of them be so; since any one of them, which retards its operation for a single moment, exerts not itself at that very individual time, in which it might have operated; and therefore is no proper cause. The consequence of this wou'd be no less than the destruction of that succession of causes, which we observe in the world; and indeed, the utter annihilation of time. For if one cause were co-temporary with its effect, and this effect with its effect, and so on, 'tis plain there wou'd be no such thing as succession, and all objects must be co-existent.

If this argument appear satisfactory, 'tis well. If not, I beg the reader to allow me the same liberty, which I have us'd in the preceding case, of supposing it such. For he shall find, that the affair is of no great importance.

Having thus discovered or suppos'd the two relations of contiguity and succession to be essential to causes and effects, I find I am stopt short, and can proceed no farther in considering any single instance of cause and effect. Motion in one body is regarded upon impulse as the cause of motion in another. When we consider these objects with utmost attention, we find only that the one body approaches the other; and that the motion of it precedes that of the other, but without any, sensible interval. 'Tis in vain to rack ourselves with farther thought and reflection upon this subject. We can go no farther in considering this particular instance.

Shou'd any one leave this instance, and pretend to define a cause, by saying it is something productive of another, 'tis evident he wou'd say nothing. For what does he mean by production? Can he give any definition of it, that will not be the same with that of causation? If he can; I desire it may be produc'd. If he cannot; he here runs in a circle, and gives a synonymous term instead of a definition.

Shall we then rest contented with these two relations of contiguity and succession, as affording a complete idea of causation? By, no means. An object may be contiguous and prior [\[5\]](#) to another, without being considered as its cause. There is a NECESSARY CONNEXION to be taken into consideration; and that relation is of much greater importance, than any of the other two above-mention'd.

Here again I turn the object on all sides, in order to discover the nature of this necessary connexion, and find the impression, or

impressions, from which its idea may be deriv'd. When I cast my eye on the known Qualities of objects, I immediately discover that the relation of cause and effect depends not in the least on them. When I consider their relations, I can find none but those of contiguity and succession; which I have already regarded as imperfect and unsatisfactory. Shall the despair of success make me assert, that I am here possess'd of an idea, which is not preceded by any similar impression? This wou'd be too strong a proof of levity and inconstancy; since the contrary principle has been already so firmly established, as to admit of no farther doubt; at least, till we have more fully examin'd the present difficulty.

We must, therefore, proceed like those, who being in search of any thing, that lies conceal'd from them, and not finding it in the place they expected, beat about all the neighbouring fields, without any certain view or design, in hopes their good fortune will at last guide them to what they search for. 'Tis necessary for us to leave the direct survey of this question concerning the nature of that necessary connexion[6], which enters into our idea of cause and effect; and endeavour to find some other questions, the examination of which will perhaps afford a hint, that may serve to clear up the present difficulty. Of these questions there occur two, which I shall proceed to examine, viz.

First, For what reason we pronounce it necessary, that every thing whose existence has a beginning, shou'd also have a cause.

Secondly, Why we conclude, that such particular causes must necessarily have such particular effects; and what is the nature of that inference we draw from the one to the other, and of the belief we repose in it?

I shall only observe before I proceed any farther, that tho' the ideas of cause and effect be deriv'd from the impressions of reflection as well as from those of sensation, yet for brevity's sake, I commonly mention only the latter as the origin of these ideas; tho' I desire that whatever I say of them may also extend to the former. Passions are connected with their objects and with one another; no less than external bodies are connected together. The same relation, then, of cause and effect, which belongs to one, must be common to all of them.

Why a cause is always necessary

To begin with the first question concerning the necessity of a cause: 'Tis a general maxim in philosophy, that whatever begins to exist, must have a cause of existence. This is commonly taken for granted in all reasonings, without any proof given or demanded. 'Tis suppos'd to be founded on intuition, and to be one of those maxims, which tho' they may be deny'd with the lips, 'tis impossible for men in their hearts really to doubt of. But if we examine this maxim by the idea of knowledge above- explain'd, we shall discover in it no mark of any such intuitive certainty; but on the contrary shall find, that 'tis of a nature quite foreign to that species of conviction.

All certainty arises from the comparison of ideas, and from the discovery of such relations as are unalterable, so long as the ideas continue the same. These relations are resemblance, proportions in quantity and number, degrees of any quality, and contrariety; none of which are imply'd in this proposition, Whatever has a beginning has also a cause of existence. That proposition therefore is not intuitively[7] certain. At least any one, who wou'd assert it to be intuitively certain, must deny these to be the only infallible relations, and must find some other relation of that kind to be imply'd in it; which it will then be time enough to examine.

But here is an argument, which proves at once, that the foregoing proposition is neither intuitively nor demonstrably certain. We can never demonstrate the necessity of a cause to every new existence, or new modification of existence, without shewing at the same time the impossibility there is, that any thing can ever begin to exist without some productive principle; and where the latter proposition cannot be prov'd, we must despair of ever being able to prove the former.

Now that the latter proposition is utterly incapable of a demonstrative proof, we may satisfy ourselves by considering that as all distinct ideas are separable from each other, and as the ideas of cause and effect are evidently distinct, 'twill be easy for us to conceive any object to be nonexistent this moment, and existent the next, without conjoining to it the distinct idea of a cause or productive principle. The separation, therefore, of the idea of a cause from that of a beginning of existence, is plainly possible for the imagination; and

consequently the actual separation of these objects is so far possible, that it implies no contradiction nor absurdity; and is therefore incapable of being refuted by any reasoning from mere ideas; without which 'tis impossible to demonstrate the necessity of a cause.

Accordingly we shall find upon examination, that every demonstration, which has been produc'd for the necessity of a cause, is fallacious and sophistical. All the points of time and place, say some philosophers, in which we can suppose any object to begin to exist, are in themselves equal; and unless there be some cause, which is peculiar to one time and to one place, and which by that means determines and fixes the existence, it must remain in eternal suspence; and the object can never begin to be, for want of something to fix its beginning. But I ask; Is there any more difficulty in supposing the time and place to be fix'd without a cause, than to suppose the existence to be determined in that manner? The first question that occurs on this subject is always, whether the object shall exist or not: The next, when and where it shall begin to exist.

If the removal of a cause be intuitively absurd in the one case, it must be so in the other: And if that absurdity be not clear without a proof in the one case, it will equally require one in the other. The absurdity, then, of the one supposition can never be a proof of that of the other; since they are both upon the same footing, and must stand or fall by the same reasoning.

The second argument, which I find us'd on this head, labours under an equal difficulty. Every thing, 'tis said, must have a cause; for if any thing wanted a cause, it wou'd produce itself; that is, exist before it existed; which is impossible. But this reasoning is plainly unconvulsive; because it supposes, that in our denial of a cause we still grant what we expressly deny, viz. that there must be a cause; which therefore is taken to be the object itself; and that, no doubt, is an evident contradiction. But to say that any thing is produc'd, or to express myself more properly, comes into existence, without a cause, is not to affirm, that 'tis itself its own cause; but on the contrary in excluding all external causes, excludes a fortiori the thing itself, which is created. An object, that exists absolutely without any cause, certainly is not its own cause; and when you assert, that the one follows from the other, you suppose the very point in question and take it for granted, that 'tis utterly impossible any thing

can ever begin to exist without a cause, but that, upon the exclusion of one productive principle, we must still have recourse to another.

'Tis exactly the same case with the third argument, which has been employ'd to demonstrate the necessity of a cause. Whatever is produc'd without any cause, is produc'd by nothing; or in other words, has nothing for its cause. But nothing can never be a cause, no more than it can be something, or equal to two right angles. By the same intuition, That we perceive nothing not to be equal to two right angles, or not to be something, we perceive, that it can never be a cause; and consequently must perceive, that every object has a real cause of its existence.

I believe it will not be necessary to employ many words in shewing the weakness of this argument, after what I have said of the foregoing. They are all of them founded on the same fallacy, and are deriv'd from the same turn of thought. 'Tis sufficient only to observe, that when we exclude all causes we really do exclude them, and neither suppose nothing nor the object itself to be the causes of the existence; and consequently can draw no argument from the absurdity of these suppositions to prove the absurdity of that exclusion. If every thing must have a cause, it follows, that upon the exclusion of other causes we must accept of the object itself or of nothing as causes. But 'tis the very point in question, whether every thing must have a cause or not; and therefore, according to all just reasoning, it ought never to be taken for granted.

They are still more frivolous, who say, that every effect must have a cause, because 'tis imply'd in the very idea of effect. Every effect necessarily pre-supposes a cause; effect being a relative term, of which cause is the correlative. But this does not prove, that every being must be preceded by a cause; no more than it follows, because every husband must have a wife, that therefore every man must be marry'd. The true state of the question is, whether every object, which begins to exist, must owe its existence to a cause: and this I assert neither to be intuitively nor demonstratively certain, and hope to have prov'd it sufficiently by the foregoing arguments.

Since it is not from knowledge or any scientific reasoning, that we derive the opinion of the necessity of a cause to every new production, that opinion must necessarily arise from observation and experience. The next question, then, shou'd naturally be, how experience gives

rise to such a principle? But as I find it will be more convenient to sink this question in the following, Why we conclude, that such particular causes must necessarily have such particular effects, and why we form an inference from one to another? we shall make that the subject of our future enquiry. 'Twill, perhaps, be found in the end, that the same answer will serve for both questions.

SECT. IV

Of the component parts of our reasonings concerning cause and effect

Tho' the mind in its reasonings from causes or effects carries its view beyond those objects, which it sees or remembers, it must never lose sight of them entirely, nor reason merely upon its own ideas, without some mixture of impressions, or at least of ideas of the memory^[8], which are equivalent to impressions. When we infer effects from causes, we must establish the existence of these causes; which we have only two ways of doing, either by an immediate perception of our memory or senses, or by an inference from other causes; which causes again we must ascertain in the same manner, either by a present impression, or by an inference from their causes, and so on, till we arrive at some object, which we see or remember. 'Tis impossible for us to carry on our inferences in infinitum; and the only thing, that can stop them, is an impression of the memory or senses, beyond which there is no room for doubt or enquiry.

To give an instance of this, we may chuse any point of history, and consider for what reason we either believe or reject it. Thus we believe that Caesar was kill'd in the senate-house on the ides of March; and that because this fact is established on the unanimous testimony of historians, who agree to assign this precise time and place to that event. Here are certain characters and letters present either to our memory or senses; which characters we likewise remember to have been us'd as the signs of certain ideas; and these ideas were either in the minds of such as were immediately present at that action, and receiv'd the ideas directly from its existence; or they were deriv'd from the testimony of others, and that again from another testimony, by a visible gradation, 'till we arrive at those who were eyewitnesses and spectators of the event. 'Tis obvious all this chain of argument or connexion of causes and effects, is at first

founded on those characters or letters, which are seen or remembered, and that without the authority either of the memory or senses our whole reasoning wou'd be chimerical and without foundation. Every link of the chain wou'd in that case hang upon another; but there wou'd not be any thing fix'd to one end of it, capable of sustaining the whole; and consequently there wou'd be no belief nor evidence. And this actually is the case with all hypothetical arguments, or reasonings upon a supposition; there being in them, neither any present impression, nor belief of a real existence, I need not observe, that 'tis no just objection to the present doctrine, that we can reason upon our past conclusions or principles, without having recourse to those impressions, from which they first arose. For even supposing these impressions shou'd be entirely effac'd from the memory, the conviction they produc'd may still remain; and 'tis equally true, that all reasonings concerning causes and effects are originally deriv'd from some impression; in the same manner, as the assurance of a demonstration proceeds always from a comparison of ideas, tho' it may continue after the comparison is forgot.

SECT. V

Of the impressions of the senses and memory

In this kind of reasoning, then, from causation, we employ materials, which are of a mix'd and heterogeneous nature, and which, however connected, are yet essentially different from each other. All our arguments concerning causes and effects consist both of an impression of the memory or, senses, and of the idea of that existence, which produces the object of the impression, or is produc'd by it. Here therefore we have three things to explain, viz. First, The original impression. Secondly, The transition to the idea of the connected cause or effect. Thirdly, The nature and qualities of that idea.

As to those impressions, which arise from the senses, their ultimate cause is, in my opinion, perfectly inexplicable by human reason, and 'twill always be impossible to decide with certainty, whether they arise immediately from the object, or are produc'd by the creative power^[9] of the mind, or are deriv'd from the author of our being. Nor is such a question any way material to our present purpose. We may draw inferences from the coherence of our perceptions, whether they be true or false; whether they represent nature justly, or be mere illusions of the senses.

When we search for the characteristic, which distinguishes the memory from the imagination, we must immediately perceive, that it cannot lie in the simple ideas it presents to us; since both these faculties borrow their simple ideas from the impressions, and can never go beyond these original perceptions. These faculties are as little distinguished from each other by the arrangement of their complex ideas. For tho' it be a peculiar property of the memory to preserve the original order and position of its ideas, while the imagination transposes and changes them, as it pleases; yet this difference is not sufficient to distinguish them in their operation, or make us know the one from the other; it being impossible to recal the past impressions, in order to compare them with our present ideas, and see whether their arrangement be exactly similar. Since therefore the memory, is known, neither by the order of its complex ideas, nor the nature of its simple ones; it follows, that the difference betwixt it and the imagination lies in its superior force and vivacity. A man may indulge his fancy in feigning any past scene of adventures; nor wou'd there be any possibility of distinguishing this from a remembrance of a like kind, were not the ideas of the imagination fainter and more obscure.

[The following two paragraphs are inserted from the appendix.] It frequently happens, that when two men have been engag'd in any scene of action, the one shall remember it much better than the other, and shall have all the difficulty in the world to make his companion recollect it. He runs over several circumstances in vain; mentions the time, the place, the company, what was said, what was done on all sides; till at last he hits on some lucky circumstance, that revives the whole, and gives his friend a perfect memory of every thing. Here the person that forgets receives at first all the ideas from the discourse of the other, with the same circumstances of time and place; tho' he considers them as mere fictions of the imagination. But as soon as the circumstance is mention'd, that touches the memory, the very same ideas now appear in a new light, and have, in a manner, a different feeling from what they had before. Without any other alteration, beside that of the feeling, they become immediately ideas of the memory, and are assented to.

Since, therefore, the imagination can represent all the same objects that the memory can offer to us, and since those faculties are only distinguished by the different feeling of the ideas they present, it may be proper to consider what is the nature of that feeling. And here

I believe every one will readily agree with me, that the ideas of the memory are more strong and lively than those of the fancy.

A painter, who intended to represent a passion or emotion of any kind, wou'd endeavour to get a sight of a person actuated by a like emotion, in order to enliven his ideas, and give them a force and vivacity superior to what is found in those, which are mere fictions of the imagination. The more recent this memory is, the clearer is the idea; and when after a long interval he wou'd return to the contemplation of his object, he always finds its idea to be much decay'd, if not wholly obliterated. We are frequently in doubt concerning the ideas of the memory, as they become very weak and feeble; and are at a loss to determine whether any image proceeds from the fancy or the memory, when it is not drawn in such lively colours as distinguish that latter faculty. I think, I remember such an event, says one; but am not sure. A long tract of time has almost worn it out of my memory, and leaves me uncertain whether or not it be the pure offspring of my fancy.

And as an idea of the memory, by losing its force and vivacity, may degenerate to such a degree, as to be taken for an idea of the imagination; so on the other hand an idea of the imagination may acquire such a force and vivacity, as to pass for an idea of the memory,, and counterfeit its effects on the belief[\[10\]](#) and judgment.

This is noted in the case of liars; who by the frequent repetition of their lies, come at last to believe and remember them, as realities; custom and habit having in this case, as in many others, the same influence on the mind as nature, and infixing the idea with equal force and vigour.

Thus it appears, that the belief or assent, which always attends the memory and senses, is nothing but the vivacity of those perceptions they present; and that this alone distinguishes them from the imagination. To believe is in this case to feel an immediate impression of the senses, or a repetition of that impression in the memory. 'Tis merely the force and liveliness of the perception, which constitutes the first act of the judgment, and lays the foundation of that reasoning, which we build upon it, when we trace the relation of cause and effect.

Of the inference [11] from the impression to the idea

'Tis easy to observe, that in tracing this relation, the inference we draw from cause to effect, is not deriv'd merely from a survey of these particular objects, and from such a penetration into their essences as may discover the dependance of the one upon the other.

There is no object., which implies the existence of any other if we consider these objects in themselves, and never look beyond the ideas which we form of them. Such an inference wou'd amount to knowledge, and wou'd imply the absolute contradiction and impossibility of conceiving any thing different. But as all distinct ideas are separable, 'tis evident there can be no impossibility of that kind. When we pass from a present impression to the idea of any object, we might possibly have separated the idea from the impression, and have substituted any other idea in its room.

'Tis therefore by EXPERIENCE only, that we can infer the existence of one object from that of another. The nature of experience is this. We remember to have had frequent instances of the existence of one species of objects; and also remember, that the individuals of another species of objects have always attended them, and have existed in a regular order of contiguity- and succession with regard to them. Thus we remember, to have seen that species of object we call flame, and to have felt that species of sensation we call heat. We likewise call to mind their constant conjunction in all past instances. Without any farther ceremony, we call the one cause and the other effect, and infer the existence of the one from that of the other.' In all those instances, from which we learn the conjunction of particular causes and effects, both the causes and effects have been perceiv'd by the senses, and are remembered But in all cases, wherein we reason concerning them, there is only one perceiv'd or remembered, and the other is supply'd in conformity to our past experience.

Thus in advancing we have insensibly discovered a new relation betwixt cause and effect, when we least expected it, and were entirely employ'd upon another subject. This relation is their CONSTANT CONJUNCTION. Contiguity and succession are not sufficient to make us pronounce any two objects to be cause and effect, unless we perceive, that these two relations are preserv'd in several instances. We may now see the advantage of quitting the direct survey of this relation, in order to discover the nature of that necessary connexion,

which makes so essential a part of it. There are hopes, that by this means we may at last arrive at our propos'd end; tho' to tell the truth, this new- discover'd relation of a constant conjunction seems to advance us but very little in our way. For it implies no more than this, that like objects have always been plac'd-in like relations of contiguity and succession; and it seems evident,at least at first sight, that by this means we can never discover any new idea, and can only multiply, but not enlarge the objects of our mind. It may be thought, that what we learn not from one object, we can never learn from a hundred, which are all of the same kind, and are perfectly resembling in every circumstance. As our senses shew us in one instance two bodies, or motions[12], or qualities in certain relations of success] and contiguity; so our memory presents us only with a multitude of instances, wherein we always find like bodies,motions, or qualities in like relations. From the mere repetition of any past impression, even to infinity, there never will arise any new original idea, such as that of a necessary connexion; and the number of impressions has in this case no more effect than if we confin'd ourselves to one only. But tho' this reasoning seems just and obvious;yet as it wou'd be folly to despair too soon, we shall continue the thread of our discourse; and having found, that after the discovery of the constant conjunction of any objects, we always draw an inference from one object to another, we shall now examine the nature of that inference, and of the transition from the impression to the idea. Perhaps 'twill appear in the end, that the necessary connexion depends on the inference, instead of the inference's depending on the necessary connexion.

Since it appears, that the transition from an impression present to the memory or senses to the idea of an object, which we call cause or effect, is founded on past experience, and on our remembrance of their constant conjunction, the next question is, Whether experience produces the idea by means of the understanding or imagination; whether we are determin'd by reason to make the transition, or by a certain association and relation of perceptions.

If reason determined us, it wou'd proceed upon that principle, that instances, of which we have had no experience, must resemble those,of which we have had experience, and that the course of nature continues always uniformly the same. In order therefore to clear up this matter, let us consider all the arguments, upon which such a proposition may be suppos'd to be founded; and as these must be

deriv'd either from knowledge or probability, let us cast our eye on each of these degrees of evidence, and see whether they afford any just conclusion of this nature.

Our foregoing method of reasoning will easily convince us, that there can be no demonstrative arguments to prove, that those instances, of which we have, had no experience, resemble those, of which we have had experience. We can at least conceive a change in the course of nature; which sufficiently proves, that such a change is not absolutely impossible. To form a clear idea of any thing, is an undeniable argument for its possibility, and is alone a refutation of any pretended demonstration against it.

Probability, as it discovers not the relations of ideas, considered as such, but only those of objects, must in some respects be founded on the impressions of our memory and senses, and in some respects on our ideas. Were there no mixture of any impression in our probable reasonings, the conclusion wou'd be entirely chimerical: And were there no mixture of ideas, the action of the mind, in observing the relation, wou'd, properly speaking, be sensation, not reasoning. 'Tis therefore necessary, that in all probable reasonings there be something present to the mind, either seen or remember'd; and that from this we infer something connected with it, which is not seen nor remember'd.

The only connexion or relation of objects, which can lead us beyond the immediate impressions of our memory and senses, is that of cause and effect; and that because 'tis the only one, on which we can found a just inference from one object to another. The idea of cause and effect is deriv'd from experience, which informs us, that such particular objects, in all past instances, have been constantly conjoin'd with each other: And as an object similar to one of these is suppos'd to be immediately present in its impression, we thence presume on the existence of one similar to its usual attendant.

According to this account of things, which is, I think, in every point unquestionable, probability is founded on the presumption[13] of a resemblance betwixt those objects, of which we have had experience, and those, of which we have had none; and therefore 'tis impossible this presumption can arise from probability. The same principle cannot be both the cause and effect of another; and this is, perhaps, the only proposition concerning that relation, which is either intuitively or demonstratively certain.

Shou'd any one think to elude this argument; and without determining whether our reasoning on this subject be deriv'd from demonstration or probability, pretend that all conclusions from causes and effects are built on solid reasoning: I can only desire, that this reasoning may be produc'd, in order to be expos'd to our examination. It may, perhaps, be said, that after experience of the constant conjunction of certain objects, we reason in the following manner. Such an object is always found to produce another. 'Tis impossible it cou'd have this effect, if it was not endow'd with a power of production. The power necessarily implies the effect; and therefore there is a just foundation for drawing a conclusion from the existence of one object to that of its usual attendant. The past production implies a power: The power implies a new production: And the new production is what we infer from the power and the past production.

'Twere easy for me to shew the weakness of this reasoning, were I willing to make use of those observations, I have already made, that the idea of production is the same with that of causation, and that no existence certainly and demonstratively implies a power in any other object; or were it proper to anticipate what I shall have occasion to remark afterwards concerning the idea we form of power and efficacy. But as such a method of proceeding may seem either to weaken my system, by resting one part of it on another, or to breed a confusion in my reasoning, I shall endeavour to maintain my present assertion without any such assistance.

It shall therefore be allow'd for a moment, that the production of one object by another in any one instance implies a power; and that this power is connected with its effect. But it having been already prov'd, that the power lies not in the sensible qualities of the cause; and there being nothing but the sensible qualities present to us; I ask, why in other instances you presume that the same power still exists, merely upon the appearance of these qualities? Your appeal to past experience decides nothing in the present case; and at the utmost can only prove, that that very object, which produc'd any other, was at that very instant endow'd with such a power; but can never prove, that the same power must continue in the same object or collection of sensible qualities; much less, that a like power is always conjoin'd with like sensible qualities. Shou'd it be said, that we have experience, that the same power continues united with the same object, and that like objects are endow'd with like powers, I wou'd renew my question,

why from this experience we form any conclusion beyond those past instances, of which we have had experience. If you answer this question in, the same manner as the preceding, your answer gives still occasion to a -new question of the same kind, even in infinitum; which clearly proves, that the foregoing reasoning had no just foundation.

Thus not only our reason fails us in the discovery of the ultimate connexion of causes and effects, but even after experience has inform'd us of their constant conjunction, 'tis impossible for us to satisfy ourselves by our reason, why we shou'd extend that experience beyond those particular instances, which have fallen under our observation. We suppose, but are never able to prove, that there must be a resemblance betwixt those objects, of which we have had experience, and those which lie beyond the reach of our discovery.

We have already taken notice of certain relations, which make us pass from one object to another, even tho' there be no reason to determine us to that transition; and this we may establish for a general rule[14], that wherever the mind constantly and uniformly makes a transition without any reason, it is influenc'd by these relations. Now this is exactly the present case. Reason can never shew us the connexion of one object with another, tho' aided by experience, and the observation of their constant conjunction in all past instances. When the mind, therefore, passes from the idea or impression of one object to the idea or belief of another, it is not determined by reason, but by certain principles, which associate together the ideas of these objects, and unite them in the imagination. Had ideas no more union in the fancy than objects seem to have to the understanding, we cou'd never draw any inference from causes to effects, nor repose belief in any matter of fact. The inference, therefore, depends solely on the union of ideas.

The principles of union among ideas, I have reduc'd to three general ones, and have asserted, that the idea or impression of any object naturally introduces the idea of any other object, that is resembling, contiguous to, or connected with it. These principles I allow to be neither the infallible nor the sole causes of an union among ideas. They are not the infallible causes. For one may fix his attention during Sometime on any one object without looking farther. They are not the sole causes. For the thought has evidently a very irregular motion in running along its objects, and may leap from the

heavens to the earth, from one end of the creation to the other, without any certain method or order. But tho' I allow this weakness in these three relations, and this irregularity in the imagination; yet I assert that the only general principles, which associate ideas, are resemblance, contiguity and causation.

There is indeed a principle of union among ideas, which at first sight may be esteem'd different from any of these, but will be found at the bottom to depend on the same origin. When ev'ry individual of any species of objects is found by experience to be constantly united with an individual of another species, the appearance of any new individual of either species naturally conveys the thought to its usual attendant. Thus because such a particular idea is commonly annex'd to such a particular word, nothing is requir'd but the hearing of that word to produce the correspondent idea; and 'twill scarce be possible for the mind, by its utmost efforts, to prevent that transition.

In this case it is not absolutely necessary, that upon hearing such a particular sound" we shou'd reflect on any past experience, and consider what idea has been usually connected with the sound. The imagination of itself supplies the place of this reflection, and is so accustomed to pass from the word to the idea, that it interposes not a moment's delay betwixt the hearing of the one, and the conception of the other.

But tho' I acknowledge this to be a true principle of association among ideas, I assert it to be the very same with that betwixt the ideas of cause and effects and to be an essential part in all our reasonings from that relation. We have no other notion of cause and effect, but that of certain objects, which have been always conjoin'd together, and which in all past instances have been found inseparable. We cannot penetrate into the reason of the conjunction. We only observe the thing itself, and always find that from the constant conjunction the objects acquire an union in the imagination. When the impression of one becomes present to us, we immediately form an idea of its usual attendant; and consequently we may establish this as one part of the definition of an opinion or belief, that 'tis an idea related to or associated with a present impression.

Thus tho' causation be a philosophical relation, as implying contiguity, succession, and constant conjunction, yet 'tis only so far as it is a natural relation, and produces an union among our ideas, that

we are able to reason upon it, or draw any inference from it.

SECT. VII

Of the nature of the idea or belief

The idea of an object is an essential^[15] part of the belief of it, but not the whole. We conceive many things, which we do not believe. In order then to discover more fully the nature of belief, or the qualities of those ideas we assent to, let us weigh the following considerations.

'Tis evident, that all reasonings from causes or effects terminate in conclusions, concerning matter of fact; that is, concerning the existence of objects or of their qualities. 'Tis also evident, that the idea, of existence is nothing different from the idea of any object, and that when after the simple conception of any thing we wou'd conceive it as existent, we in reality make no addition to or alteration on our first idea. Thus when we affirm, that God is existent, we simply form the idea of such a being, as he is represented to us; nor is the existence, which we attribute to him, conceiv'd by a particular idea, which we join to the idea of his other qualities, and can again separate and distinguish from them. But I go farther; and not content with asserting, that the conception of the existence of any object is no addition to the simple conception of it, I likewise maintain, that the belief of the existence joins no new ideas to those which compose the idea of the object. When I think of God, when I think of him as existent, and when I believe him to be existent, my idea of him neither encreases nor diminishes.' But as 'tis certain there is a great difference betwixt the simple conception of the existence of an object, and the belief of it, and as this difference lies not in the parts or composition of the idea, which we conceive; it follows, that it must lie in the manner, in which we conceive it.

Suppose a person present with me, who advances propositions, to which I do not assent, that Caesar dy'd in his bed, that silver is more fusible, than lead, or mercury heavier than gold; 'tis evident, that notwithstanding my incredulity, I clearly understand his meaning, and form all the same ideas, which he forms. My imagination is endow'd with the same powers as his; nor is it possible for him to conceive any idea, which I cannot conceive; nor conjoin any, which I cannot conjoin. I therefore ask, Wherein consists the difference betwixt believing and disbelieving any proposition?

The answer is easy with regard to propositions, that are prov'd by intuition or demonstration. In that case, the person, who assents, not only conceives the ideas according to the proposition, but is necessarily determined to conceive them in that particular manner, either immediately or by the interposition of other ideas. Whatever is absurd is unintelligible; nor is it possible for the imagination to conceive any thing contrary to a demonstration. But as in reasonings from causation, and concerning matters of fact, this absolute necessity cannot take place, and the imagination is free to conceive both sides of the question, I still ask, Wherein consists the deference betwixt incredulity and belief? since in both cases the conception of the idea is equally possible and requisite.

'Twill not be a satisfactory answer to say, that a person, who does not assent to a proposition you advance; after having conceiv'd the object in the same manner with you; immediately conceives it in a different manner, and has different ideas of it. This answer is unsatisfactory; not because it contains any falshood, but because it discovers not all the truth. 'Tis contest, that in all cases, wherein we dissent from any person, we conceive both sides of the question; but as we can believe only one, it evidently follows, that the belief must make some difference betwixt that conception to which we assent, and that from which we dissent. We may mingle, and unite, and separate, and confound, and vary our ideas in a hundred different ways; but 'till there appears some principle, which fixes one of these different situations, we have in reality no opinion: And this principle, as it plainly makes no addition to our precedent ideas, can only change the manner of our conceiving them.

All the perceptions^[16] of the mind are of two kinds, viz. impressions and ideas, which differ from each other only in their different degrees of force and vivacity. Our ideas are copy'd from our impressions, and represent them in all their parts. When you wou'd any way vary the idea of a particular object, you can only encrease or diminish its force and vivacity.]If you make any other change on it, it represents a different object or impression. The case is the same as in colours. A particular shade of any colour may acquire a new degree of liveliness or brightness without any other variation.

But when you produce any other variation, 'tis no longer the same shade or colour. So that as belief does nothing but vary the

manner, in which we conceive any object, it can only bestow on our ideas an additional force and vivacity. An opinion, therefore, or belief may be most accurately defined, a lively idea related to or associated with a present impression.

Here are the heads of those arguments, which lead us to this conclusion. When we infer the existence of an object from that of others, some object must always be present either to the memory or senses, in order to be the foundation of our reasoning; since the mind cannot run up with its inferences in infinitum[17]. Reason can never satisfy us that the existence of any one object does ever imply that of another; so that when we pass from the impression of one to the idea or belief of another, we are not determin'd by reason, but by custom or a principle of association. But belief is somewhat more than a simple idea. 'Tis a particular manner of forming an idea: And as the same idea can only be vary'd by a variation of its degrees of force and vivacity; it follows upon the whole, that belief is a lively idea produc'd by a relation to a present impression, according to the foregoing definition.

[This paragraph is inserted from the appendix] This operation of the mind, which forms the belief of any matter of fact, seems hitherto to have been one of the greatest mysteries of philosophy; tho' no one has so much as suspected, that there was any difficulty in explaining it. For my part I must own, that I find a considerable difficulty in the case; and that even when I think I understand the subject perfectly, I am at a loss for terms to express my meaning. I conclude, by an induction which seems to me very evident, that an opinion or belief is nothing but an idea, that is different from a fiction, not in the nature ' or the order of its parts, but in the manner of its being conceiv'd. But when I wou'd explain this manner, I scarce find any word that fully answers the case, but am oblig'd to have recourse to every one's feeling, in order to give him a perfect notion of this operation of the mind. An idea assented to feels different from a fictitious idea, that the fancy alone presents to us: And this different feeling I endeavour to explain by calling it a superior force, or vivacity, or solidity, or firmness, or steadiness.

This variety of terms, which may seem so unphilosophical, is intended only to express that act of the mind, which renders realities more present to us than fictions, causes them to weigh more in the

thought, and gives them a superior influence on the passions and imagination. Provided we agree about the thing, 'tis needless to dispute about the terms. The imagination has the command over all its ideas, and can join, and mix, and vary them in all the ways possible. It may conceive objects with all the circumstances of place and time. It may set them, in a manner, before our eyes in their true colours, just as they might have existed. But as it is impossible, that that faculty can ever, of itself, reach belief, 'tis evident, that belief consists not in the nature and order of our ideas, but in the manner of their conception, and in their feeling to the mind. I confess, that 'tis impossible to explain perfectly this feeling or manner of conception. We may make use of words, that express something near it. But its true and proper name is belief, which is a term that every one sufficiently understands in common life. And in philosophy we can go no farther, than assert, that it is something felt by the mind, which distinguishes the ideas of the judgment from the fictions of the imagination. It gives them more force and influence; makes them appear of greater importance; infixes them in the mind; and renders them the governing principles^[18] of all our actions.

This definition will also be found to be entirely conformable to every one's feeling and experience. Nothing is more evident, than that those ideas, to which we assent, are more strong, firm and vivid, than the loose reveries of a castle-builder. If one person sits down to read a book as a romance, and another as a true history, they plainly receive the same ideas, and in the same order; nor does the incredulity of the one, and the belief of the other hinder them from putting the very same sense upon their author. His words produce the same ideas in both; tho' his testimony has not the same influence on them. The latter has a more lively conception of all the incidents.

He enters deeper into the concerns of the persons: represents to himself their actions, and characters, and friendships, and enmities: He even goes so far as to form a notion of their features, and air, While the former, who gives no credit to the testimony of the author, has a more faint and languid conception of all these particulars; and except on account of the style and ingenuity of the composition, can receive little entertainment from it.

SECT. VIII

Of the causes of belief

Having thus explain'd the nature of belief, and shewn that it consists in a lively idea related to a present impression; let us now proceed to examine from what principles it is deriv'd, and what bestows the vivacity on the idea.

I wou'd willingly establish it as a general maxim in the science of human nature, that when any impression becomes present to us, it not only transports the mind to such ideas as are related to it, but likewise communicates to them a share of its force and vivacity.

All the operations of the mind depend in a great measure on its disposition, when it performs them; and according as the spirits are more or less elevated, and the attention more or less fix'd, the action will always have more or less vigour and vivacity. When therefore any object is presented, which elevates and enlivens the thought, every action, to which the mind applies itself, will be more strong and vivid, as long as that disposition continues. Now 'tis evident the continuance of the disposition depends entirely on the objects, about which the mind is employ'd; and that any new object naturally gives a new direction to the spirits, and changes the disposition; as on the contrary, when the mind fixes constantly on the same object, or passes easily and insensibly along related objects, the disposition has a much longer duration. Hence it happens, that when the mind is once inviv'd by a present impression, it proceeds to form a more lively idea of the related objects, by a natural transition of the disposition from the one to the other. The change of the objects is so easy, that the mind is scarce sensible of it, but applies itself to the conception of the related idea with all the force and 'vivacity it acquir'd from the present impression.

If in considering the nature of relation, and that facility of transition, which is essential to it, we can satisfy ourselves concerning the reality of this phaenomenon, 'tis well: But I must confess I place my chief confidence in experience to prove so material a principle. We may, therefore, observe, as the first experiment to our present purpose, that upon the appearance of the picture of an absent friend, our idea of him is evidently inviv'd by the resemblance, and that every passion, which that idea occasions, whether of joy or sorrow, acquires new force and vigour.

In producing this effect there concur both a relation and a present impression. Where the picture bears him no resemblance, or at least

was not intended for him, it never so much as conveys our thought to him: And where it is absent, as well as the person; tho' the mind may pass from the thought of the one to that of the other; it feels its idea to be rather weak than inviv'd by that transition. We take a pleasure in viewing the picture of a friend, when 'tis set before us; but when 'tis remov'd, rather choose to consider him directly, than by reflexion in an image, which is equally distinct and obscure.

The ceremonies of the Roman Catholic^[19] religion may be consider'd as experiments of the same nature. The devotees of that strange superstition usually plead in excuse of the mummeries, with which they are upbraided, that they feel the good effect of those external motions, and postures, and actions, in enlivening their devotion, and quickening their fervour, which otherwise wou'd decay away, if directed entirely to distant and immaterial objects.

We shadow out the objects of our faith, say they, in sensible types and images, and render them more present to us by the immediate presence of these types, than 'tis possible for us to do, merely by an intellectual view and contemplation. Sensible objects have always a greater influence on the fancy than any other; and this influence they readily convey to those ideas, to which they are related, and which they Resemble. I shall only infer from these practices, and this reasoning, that the effect of resemblance in invivening the idea is very common; and as in every case a resemblance and a present impression must concur, we are abundantly supply'd with experiments to prove the reality of the foregoing principle.

We may add force to these experiments by others of a different kind, in considering the effects of contiguity, as well as of resemblance. 'Tis certain, that distance diminishes the force of every idea, and that upon our approach to any object; tho' it does not discover itself to our senses; it operates upon the mind with an influence that imitates an immediate impression. The thinking on any object readily transports the mind to what is contiguous; but 'tis only the actual presence of an object, that transports it with a superior vivacity. When I am a few miles from home, whatever relates to it touches me more nearly than when I am two hundred leagues distant; tho' even at that distance the reflecting on any thing in the neighbourhood of my friends and family naturally produces an idea of them. But as in this latter case, both the objects of the mind are ideas;

notwithstanding there is an easy transition betwixt them; that transition alone is not able to give a superior vivacity to any of the ideas, for want of some immediate impression. No one can doubt but causation has the same influence as the other two relations; of resemblance and contiguity. Superstitious people are fond of the relicks of saints and holy men, for the same reason that they seek after types and images, in order to enliven their devotion, and give them a more intimate and strong conception of those exemplary lives, which they desire to imitate. Now 'tis evident, one of the best relicks a devotee cou'd procure, wou'd be the handywork of a saint; and if his cloaths and furniture are ever to be consider'd in this light, 'tis because they were once at his disposal, and were mov'd and affected by him; in which respect they are to be consider'd as imperfect effects, and as connected with him by a shorter chain of consequences than any of those, from which we learn the reality of his existence. This phaenomenon clearly proves, that a present impression with a relation of causation may, inliven any idea, and consequently produce belief or assent, according to the precedent definition of it.

But why need we seek for other arguments to prove, that a present impression with a relation or transition of the fancy may inliven any idea, when this very instance of our reasonings[20] from cause and effect will alone suffice to that purpose? 'Tis certain we must have an idea of every matter of fact, which we believe. 'Tis certain, that this idea arises only from a relation to a present impression. 'Tis certain, that the belief super-adds nothing to the idea, but only changes our manner of conceiving it, and renders it more strong and lively. The present conclusion concerning the influence of relation is the immediate consequence of all these steps; and every step appears to me sure end infallible. There enters nothing into this operation of the mind but a present impression, a lively idea, and a relation or association in the fancy betwixt the impression and idea; so that there can be no suspicion of mistake.

In order to put this whole affair in a fuller light, let us consider it as a question in natural philosophy, which we must determine by experience and observation. I suppose there is an object presented, from which I draw a certain conclusion, and form to myself ideas, which I am said to believe or assent to. Here 'tis evident, that however that object, which is present to my senses, and that other, whose existence I infer by reasoning, may be thought to influence

each other by their particular powers or qualities; yet as the phenomenon of belief, which we at present examine, is merely internal, these powers and qualities, being entirely unknown, can have no hand in producing it. 'Tis the present impression, which is to be consider'd as the true and real cause of the idea, and of the belief which attends it. We must therefore endeavour to discover by experiments the particular qualities, by which 'tis enabled to produce so extraordinary an effect.

First then I observe, that the present impression has not this effect by its own proper power and efficacy, and when considered alone, as a single perception, limited to the present moment. I find, that an impression, from which, on its first appearance, I can draw no conclusion, may afterwards become the foundation of belief, when I have had experience of its usual consequences. We must in every case have observ'd the same impression in past instances, and have found it to be constantly conjoin'd with some other impression.

This is confirm'd by such a multitude of experiments, that it admits not of the smallest doubt. From a second observation I conclude, that the belief, which attends the present impression, and is produc'd by a number of past impressions and conjunctions; that this belief, I say, arises immediately, without any new operation of the reason or imagination. Of this I can be certain, because I never am conscious of any such operation, and find nothing in the subject, on which it can be founded. Now as we call every thing CUSTOM, which proceeds from a past repetition, without any new reasoning or conclusion, we may establish it as a certain truth, that all the belief, which follows upon any present impression, is deriv'd solely from that origin. When we are accustomed to see two impressions conjoin'd together, the appearance or idea of the one immediately carries us to the idea of the other.
